ACCREDITED!

AMSDALE CLOTHILDE HENGERVERELD

AMSDALE HERD is now Accredited, has been established nearly 30 years, and, with the exception of the herdsires, every animal was born on the place.

We would like to sell our coming crop of calves. They are sired by the 30-lb. bull

KING ECHO SYLVIA COLANTHA SPOFFORD

His dam produced 30.55 lb. butter, 700.7 lb. milk in 7 days and is a grand cow.

His sire is the grandly bred bull SIR CHAMPION SYLVIA, one of the best sons of Champion Echo Sylvia Pontiac.

If you are interested in calf club work or desire stock you can depend on at reasonable prices, don't miss this chance.

AMSDEN BROTHERS

CUBA

NEW YORK

Two Members of Waldron Herd

Beauty De Kol Korndyke Burke and Lyons Walker Pietje.

Study their apparent strength of constitution, depth of body, udder and teat placing. Notice their straight top-lines, their type and beauty.

There are 60 head in our *Accredited Herd*.

Come and take your pick.

MRS. MAUD DWIGHT

Chenango County

South Otselic, N. Y.

MERRYALL HERD

is headed by Traverse Echo Sylvia King

His dam produced 33.27 lb. butter, 736.4 lb. milk in 7 days, averaged 102 lb. daily for 30 days, has made over 30 lb. butter in a week two different years. She has 6 tested daughters, one above 35 lb., two above 32 lb., five above 24 lb.

The dams back of this bull have made wonderful records in official work.

His 3 nearest dams average 33.03 lb.

His 7 nearest dams average 32.72 lb.

His 10 nearest dams average 33.67 lb.

His 14 nearest dams average 30.18 lb.

He is being mated with cows and heifers that combine exquisite type and symmetry with great productive powers. One member of this herd had twice produced more than 20,000 lb. milk in 10 months, once in C. T. A. work and then in long time test in which she is credited with 20,447.5 lb. milk, 858.47 lb. butter.

In addition MERRYALL HERD is ACCREDITED

A. L. BURLINGTON

Bradford County

WYALUSING, PA.

NELLIE MECHTHILDE PONTIAC

Cows of her type, quality and producing capacity are bred to our herdsire

KING VALDESSA MCKINLEY PONDYKE whose three nearest dams, all tested as heifers, average 1,052.34 lb. butter in yearly work. His three direct descendant maternal dams, average 937.16 lb. butter in year test, and all were heifers when tested.

In addition, he is a show bull and our herd is ACCREDITED.

Can spare a Few Good Ones.

Hill Crest View Farm

Home of a Bradford County Herd of Accredited Holsteins

REFERENCE has already been made in this series of stories on Holstein establishments to the fact that many of the present owners are descendants of the men and women who settled in the primeval wilderness and reclaimed the land from the original forest. If there is such a thing as American aristocracy, it would seem that the men and women now on these farms are entitled to be so called. Their claims to the title are by right of possession and right of succession. They still hold the ground won by their ancestors and handed down from generation to generation. The story of John H. Howard of Wyalusing, Pa., is an instance of this kind.

JOHN H. HOWARD,
Owner of Hillcrest View Farm.

Mr. Howard lives on a farm that has been owned by his ancestors for at least seventy-five years. His mother's maiden name was Homet. Owing to political and religious troubles a large party of French refugees left their own country and came to America. Among these people were some attendants of an ex-Queen of France who followed their mistress and her fortunes to the new land. At least one of these attendants was an ancestor of John Howard. He settled in Bradford County on the banks of the Susquehanna. Whether he operated a ferry or not we do not know but a ferry was operated in that vicinity and was called Homet's Ferry, and today the Lehigh Valley Railroad has a station with that name a little more than a mile from the farm now owned by the Howards.

John H. Howard was born in Binghamton, New York. His parents moved to the Homet farm in

1908, and John, then a minor, went along. In 1911 Mr. Howard entered Cornell University to take a four year course in agriculture but owing to the illness and death of his father, his studies were interrupted but he went back and graduated in 1917 with the degree of Bachelor of Science in Agriculture. The next year he took over the farm and has been his own manager and herdsman since that time.

While Mr. Howard was studying at Cornell he had a Holstein herd growing up. A few years previously he purchased a few Holstein-Friesian females, obtaining four heifers from Charles W. Newman of his town for \$625. One of these heifers was a granddaughter and another a great-granddaughter of Sir Veeman Hengerveld while another one of this bunch was a daughter of King Korndyke Hengerveld Veeman, a son of Sir Korndyke Pontiac Artis from a 30 lb. daughter of Sir Veeman Hengerveld. This bull has a large number of daughters in northern Pennsylvania noted for production. From Ernest Brown of LeRaysville, was purchased a daughter of Prince Segis Korndyke, Jr., another bull whose daughters are famous in Bradford County. A few females were also purchased from another near-by breeder and one of these was a daughter of King Pontiac Alcartra Wayne from a daughter of Spring Farm King Pontiac 5th. Mr. Howard attended the 1919 Dairyman's Guaranty Sale held at Syracuse, N. Y. and purchased several more animals as foundation stock.

At the head of the present herd is a very handsome

THE HILLCREST VIEW DAIRY

well-marked bull, King Onyx Pledge Ormsby, No. 324660. He is a son of Ormsby Lilith Clothilde and Onyx Pledge Segis 626.9 lb. milk, 27.83 lb. butter in seven days, 2,604.2 milk, 115.27 lb. butter in thirty days as a junior four-year-old. She was kept on test for ten months and is credited with 19,851.8 lb. milk, 789.50 lb. butter in that length of time. She is a daughter of King Pledge Segis from Onyx Pledge Dawning, a cow that has a strictly official year record of 26,927.5 lb. milk, 1,100.21 lb. butter. Two different years she made over 32 lb. butter in seven days, her highest record being 32.24 lb. Ormsby Lilith Clothilde has a number

YOUNG STOCK AT HILLCREST VIEW FARM

of good record daughters including Onyx Lilith, 699 lb. milk, 30.20 lb. butter in seven days, 21,357.2 lb. milk, 909.38 lb. butter in ten months as a junior three-year-old. This cow has 75% the same blood as King Onyx Pledge Ormsby as she is from Onyx Pledge Dawning. Her ten months' record was the world's record in class at time of making and we believe has only been exceeded by one other animal of her age. Ormsby Lilith Clothilde is by King Korndyke Hengerveld Ormsby from K. P. Lilith Clothilde, 1,043.27 lb. butter, 22,229.8 lb. milk in a year as a junior four-year-old, world's butter record at time of making while her milk record was second highest in class at that time.

JOHN AND HIS FAVORITE COW, QUEEN LYONS WAYNE DE KOL

She has the distinction of being one of the few cows to have four sons that each sired a 30 lb. daughter.

Onyx Pledge Dawning and her descendants have a great reputation for individuality as well as production. When the Oneida Community herd was dispersed this cow, five daughters and one of her sons were sold at public auction and the seven brought \$10,680, the old cow herself being struck off for \$1,000.

The three nearest dams of King Onyx Pontiac Ormsby have long time records that average 977.66 lb. butter and more than 23,000 lb. milk, despite the fact that the dam and sire's dam were both tested as heifers

and the dam's test was for only ten months. His five nearest dams have seven day records that average 31.41 lb. butter.

The Howard herd was enrolled in the local cow testing association for two full years and the cows made a splendid showing both as producers and profit earners. Maplebrook Susie Veeman is credited with 13,057 lb. milk in ten months and her full sister, Maplebrook Susie Pontiac, has 12,367 lb. milk credited to her in eleven months. These two handsome cows were sired by Sir Pontiac Artis Count. Mabel Hannah Veeman produced 13,676 lb. milk and made \$150 profit over cost of feed. Dorothy Alcartra Wayne, a daughter of King Pontiac Alcartra Wayne, as a three-year-old produced 12,447 lb. milk in eleven months. Princess Veeman Artis, a daughter of Sir Veeman Hengerveld Artis in ten months produced 15,616 lb. milk. Queen Lyons Wayne De Kol, a cow of splendid proportions, in eight months was credited with 11,560 lb. milk while several heifers in their first lactation period gave 8,000 or more lb. milk in eight months. These records are

LUCY HOWARD,
the Pet of Hillcrest View Farm.

all the more creditable as the cows did not receive any grain at all for about five months of the time they were on pasture.

Mr. Howard has made a few official records with his cattle. Maplebrook Susie Veeman has a seven-day record of 517.7 lb. milk, 21.39 lb. butter and her full sister, Maplebrook Susie Pontiac as a junior four-year-old made 525.7 lb. milk, 25.18 lb. butter in a week. Princess Aaggie Lorie Titus as a junior two-year-old made 451.8 lb. milk, 17.98 lb. butter in seven days. Dorothy Alcartra Pontiac as a senior three-year-old is credited with 530.7 lb. milk, 23.41 lb. butter. Queen Lyons Wayne De Kol as an eight-year-old made 25.88 lb. butter, 536.3 lb. milk in seven days and as a nine-year-old raised her seven-day figures to 26.30 lb. butter, 542.9 lb. milk and also made a 30 day record of 105.90 lb. butter, 2,326.8 lb. milk.

While the farm is sometimes called the Howard Farm, and sometimes the Homet Farm, its correct name is Hill Crest View. It is located on a hill about a mile from the Susquehanna River and contains 225 acres of which nearly 200 acres are tillable. At present

about sixty acres are in pasture and there are twenty-five acres in timber. It would not be fair to end this story without saying something about the taste and skill evident in the dooryard. The residence sets back a little from the road. A spacious lawn sets off the house and there are many beautiful flowers, rosebushes and flowering shrubs that gladden the eye. The representatives of the BREEDER AND DAIRYMAN made several attempts to photograph animals, having for a background a magnificent rosebush in full bloom. These attempts to combine the beauty of the bush and the form of the animals resulted in practical failures, but in the picture of Queen Lyon Wayne De Kol a glimpse of the rosebush can be seen.

The Howard herd, which at present contains around fifty head, is accredited. The milk produced is shipped from the local station at Homet's Ferry, Mr. Howard being a member of the Dairymen's League.

The most important denizens of Hill Crest View Farm, however, have not yet been mentioned. They are Lucy, now three years old and James, usually called Jimmie, about a year and a half old. Mrs. Howard was a farm girl and was raised on a farm near Spring Hill, Pa. She is a real partner in the business for, besides looking after the house and the children, finds time to do quite a little work on the accounts. Whenever you are in the neighborhood of Wyalusing make it a point to visit Hill Crest View. You will be well repaid for your time and trouble.

A Pair of Young Champions

JENNIE DeKol Segis Walker and her young owner, Antone Vandecoevering, were very much in evidence at the Oregon State Fair and the Pacific International last fall. At the Oregon State Fair she won first in her class and carried off the grand championship. At the Pacific International, held at Portland, Oregon, she was first prize two-year-old in milk and was defeated by the noted Madam Artis Wayne Denver for the grand championship. Her picture here

ANTONE VANDECOEVERING AND JENNIE DE KOL SEGIS WALKER
This heifer was grand champion at the Oregon State Fair, first prize milking two-year-old at the 1924 Pacific International.

shown was taken after she won at the Pacific International and when she was dry, but in her first and only lactation period she produced 12,773.7 lb. milk, 422.29 lb. of fat in 305 days freshening as a senior two-year-old.

Antone Vandecoevering has been enrolled in calf club work for three years and is a member of the Banks 4-H Calf Club. He obtained this heifer March 1st, 1922 and took care of her that spring and summer. In the fall he showed her at a dairy show held at Banks and there she won first in the club members' class and also first in the open class and was then made junior champion, winning a silver cup donated by the Washington County Holstein Calf Club. Later the calf was shown at the Oregon State Fair, being placed third in the club class and second in the open class. Taken to Portland to compete in the Pacific International she won first and junior championship in the calf club classes. The next year Jennie won first at the Oregon State Fair in calf club work and was second in the open classes and at the Pacific International, exhibited as a senior yearling, she won third in the open class. Among the prizes won are two silver cups offered by the Washington County Holstein Breeders' Club for the best showing made by an animal owned by a Holstein club member living in Washington County. Antone is the son of J. P. Vandecoevering, a Holstein breeder and dairyman who lives at Forest Grove, Oregon.

Of Championship Timber

WESTTOWN Aaggie Colantha, No. 684,697, is the property of Mrs. M. L. Jones of Westtown, Penna. Although Aaggie is only a four-year-old heifer she is of grand champion calibre and was the grand champion at the Chester County Fair both in 1922 and 1924. For winning last fall she was

WESTTOWN AAGGIE COLANTHA
Grand Champion at the Chester County Fair, 1922 and 1924. Owned by Mrs. M. L. Jones, Westtown, Penna.

awarded the special prize ribbon donated by the Pennsylvania Federation of Holstein-Friesian Clubs.

Westtown Aaggie Colantha was born December 17, 1920. She is a daughter of Buttonwood Colantha Statesman and King Fairview Aaggie Colantha, formerly at the head of the Jones herd.

There is an honor in business that is the fine gold of it; that reckons with every man justly; that loves light; that regards kindness and fairness more highly than goods or prices or profits. It becomes a man more than his furnishings or his house. It speaks for him in the heart of every one. His friendships are serene and secure. His strength is like a young tree by a river.—*Business Year Book.*

well-marked bull, King Onyx Pledge Ormsby, No. 324660. He is a son of Ormsby Lilith Clothilde and Onyx Pledge Segis 626.9 lb. milk, 27.83 lb. butter in seven days, 2,604.2 milk, 115.27 lb. butter in thirty days as a junior four-year-old. The Howard herd, which at present contains around fifty head, is accredited. The milk produced is shipped from the local station at Homet's Ferry, Mr. Howard being a member of the Dairymen's League.

The most important denizens of Hill Crest View Farm, however, have not yet been mentioned. They are Lucy, now three years old and James, usually called Jimmie, about a year and a half old. Mrs. Howard was a farm girl and was raised on a farm near Spring Hill, Pa. She is a real partner in the business for, besides looking after the house and the children, finds time to do quite a little work on the accounts. Whenever you are in the neighborhood of Wyalusing make it a point to visit Hill Crest View. You will be well repaid for your time and trouble.

A Pair of Young Champions

JENNIE DeKol Segis Walker and her young owner, Antone Vandecoevering, were very much in evidence at the Oregon State Fair and the Pacific International last fall. At the Oregon State Fair she won first in her class and carried off the grand championship. At the Pacific International, held at Portland, Oregon, she was first prize two-year-old in milk and was defeated by the noted Madam Artis Wayne Denver for the grand championship. Her picture here

ANTONE VANDECOEVERING AND JENNIE DE KOL SEGIS WALKER
This heifer was grand champion at the Oregon State Fair, first prize milking two-year-old at the 1924 Pacific International.

shown was taken after she won at the Pacific International and when she was dry, but in her first and only lactation period she produced 12,773.7 lb. milk, 422.29 lb. of fat in 305 days freshening as a senior two-year-old.

Antone Vandecoevering has been enrolled in calf club work for three years and is a member of the Banks 4-H Calf Club. He obtained this heifer March 1st, 1922 and took care of her that spring and summer. In the fall he showed her at a dairy show held at Banks and there she won first in the club members' class and also first in the open class and was then made junior champion, winning a silver cup donated by the Washington County Holstein Calf Club. Later the calf was shown at the Oregon State Fair, being placed third in the club class and second in the open class. Taken to Portland to compete in the Pacific International she won first and junior championship in the calf club classes. The next year Jennie won first at the Oregon State Fair in calf club work and was second in the open classes and at the Pacific International, exhibited as a senior yearling, she won third in the open class. Among the prizes won are two silver cups offered by the Washington County Holstein Breeders' Club for the best showing made by an animal owned by a Holstein club member living in Washington County. Antone is the son of J. P. Vandecoevering, a Holstein breeder and dairyman who lives at Forest Grove, Oregon.

Of Championship Timber

WESTTOWN Aaggie Colantha, No. 684,697, is the property of Mrs. M. L. Jones of Westtown, Penna. Although Aaggie is only a four-year-old heifer she is of grand champion calibre and was the grand champion at the Chester County Fair both in 1922 and 1924. For winning last fall she was

WESTTOWN AAGGIE COLANTHA
Grand Champion at the Chester County Fair, 1922 and 1924. Owned by Mrs. M. L. Jones, Westtown, Penna.

awarded the special prize ribbon donated by the Pennsylvania Federation of Holstein-Friesian Clubs.

Westtown Aaggie Colantha was born December 17, 1920. She is a daughter of Buttonwood Colantha Statesman and King Fairview Aaggie Colantha, formerly at the head of the Jones herd.

There is an honor in business that is the fine gold of it; that reckons with every man justly; that loves light; that regards kindness and fairness more highly than goods or prices or profits. It becomes a man more than his furnishings or his house. It speaks for him in the heart of every one. His friendships are serene and secure. His strength is like a young tree by a river.—*Business Year Book.*

The World's Largest Dairy Company

By Eugene B. Bennett

"PREEMINENT in dairying" is the claim made on behalf of the far distant country of New Zealand. This country is the home of the New Zealand Coöperative Dairying Co., Ltd., which is said to be the largest dairying company in the world. The annual output of this one company is over 22,000 tons of butter (2,240 lb. to the ton) in addition to cheese, milk powder and casein.

The story of New Zealand dairying is one of the many romances of agriculture. The first dairy factory was started in 1882 at Te Awamutu in the South Auckland Province. This factory was soon followed by others. At these factories milk was received and made into cheese. The resulting whey was fed to hogs which in due time were killed and cured for bacon. These factories were a little ahead of their day and, owing to lack of shipping facilities, soon went out of business, a few of them being converted into butter factories. These were not butter factories as we know them, the butter being really made on the farm and sold by the dairymen to storekeepers and merchants. By these people it was "milled"; that is, the different varieties of butter were mixed, worked thoroughly, salted heavily and sold both at wholesale and retail.

In 1886 a man named Henry Reynolds built a creamery at Pukekura. This was made the central factory. Other factories or creameries and skimming stations were erected which took whole milk from the farmer, separated it and shipped cream to the main factory where it was made into butter. Times were hard; prices low; money scarce; and dairying was regarded as a side line. For a long time Mr. Reynolds struggled to develop a paying business with a daily output of around fifty to sixty pounds of butter. This was the entire factory output of the whole Dominion. Contrast this with the present day. The total for the season 1922-23 brought over eighteen million pounds sterling or more than ninety million dollars. Of this sum around thirty-five million went to Auckland Province. The industry employed 78,000 people last year, compared with 50,000 in 1919 and the butterfat output increased in these years by thirteen percent. It is said that New Zealand has more dairy cows per one hundred population than are found in any other country.

The New Zealand Coöperative Company alone in the season 1922-23 paid to the dairymen a sum equivalent to twenty-two and one-half million dollars in return for milk which was manufactured into 20,020 tons of butter, 3,456 tons of cheese, 3,842 tons of milk powder and 826 tons of casein, all being figured in "long" tons.

This dairy company operates over a territory of approximately 150 miles long and 60 miles wide. They have thirteen central butter factories with the fourteenth in prospect, fifteen cheese factories, three factories manufacturing milk powder from whole or skim milk and a central casein factory which utilizes by-products from twenty-four skimming stations or creameries. There are three other factories in which by-products are made. This great dairy company also

operates a box factory and a tin plate factory and obtains its fuel from its own coal mines.

The New Zealand Coöperative Dairy Company began its existence as a coöperative concern in 1901, when 847 shareholders agreed to take over a business operated by a small association. The growth of this company can be realized when we say that for the year 1922-23, this company marketed a total of 22,020 tons butter under its Anchor Brand, while the rest of Auckland province marketed only 13,130 tons and the other provinces of New Zealand marketed 32,050 tons. Anchor Brand is noted for its uniform high quality. As an illustration we can say that early in November 1923, a cablegram from America called for 100,000 lb. of butter. The cablegram was received on Monday afternoon and the butter had to leave 11 a. m. the following Thursday. It had to be specially salted and to be without preservatives and to be packed in boxes containing 66 lb., the usual standard being 56 lb. The shipment was handled by three factories a number of miles apart, but the same procedure of manufacture was followed. A condition of the contract required that the butter would grade 92 points or better. Although the butter was made in three separate factories, the shipments were graded as 93, 93 and 93½, and the whole contract was fulfilled in accordance with the specifications.

While New Zealand has a wonderful dairy climate it also has occasional droughts. An unexpected drought in 1905, after heavy shipments had been made, left the country short of butter for the local winter trade and supplies had to be reimported from Britain. This occurred again in 1908 when a shipment of 62½ tons was brought back from England to supply the local market. Today the yearly output of this one company is sufficient to supply the whole Dominion for two and a half years.

New Zealand and particularly the Province of Auckland has been called the dairyman's paradise. The soil is warm and easily worked, adequate rainfall and a mild climate enable the pastures to remain green and succulent practically all the year round. Housing and stall feeding of cattle are almost unknown. For a few weeks in the summer the pastures lose their freshness but fodder crops keep up the milk flow until the warm autumnal rains revive the pastures. By use of labor saving machinery like the milking machine and the home separator, the dairyman's family are enabled to take care of quite a large herd of cows for there is little of the dirty, heavy work of cleaning stables and hauling manure known to the American dairymen.

Considerable of the credit for the growth of dairying in New Zealand is given to the Babcock tester, invented by Dr. S. M. Babcock of Wisconsin. Mr. Richard Reynolds, brother of the man who was largely responsible for the starting New Zealand on a dairy course, says "That Babcock tester was absolutely the finest thing that ever came to New Zealand." Before then the principal method of ascertaining the quality of the

milk was by placing it in test tubes. The story is that one can in a shipment being carried on a boat was accidentally overturned. The crew, in order not to get into trouble for their carelessness put part of the milk from the other cans into the empty one and filled them all with river water, yet the test tubes indicated that the milk was just as rich that day as it was any day. The explanation given afterwards that gasses contained by the water made curd rise with the cream, was laughed at by the shippers and the boat crew and after the news got around the quantity of milk received by the factories was considerably larger and the quality considerably poorer until the adoption of the Babcock tester effectually checked this kind of adulteration.

Another story showing that the New Zealand dairyman was not always strong enough to withstand temptation is told by a manager of a skimming station. The station had lots of water of high quality and some of the dairymen who brought milk took back some water for use in their houses. This manager became suspicious that one of his dairymen who took an unusual large amount brought part of it back in the form of milk so one day spilt a little rennet into this patron's milk cans. The next morning when the dairyman attempted to deliver milk at the station, he found that the milk would not pour. It was one solid mass of beautiful junket.

Built to Farmer Demands

By Ralph H. Kohl

IN giving the readers of THE HOLSTEIN BREEDER AND DAIRYMAN the story of the interview given by Mr. E. H. Daniel, the first farm implement manufacturer to build his products to the title of this story, it is not the intention of the writer to give you all the experiences of the man with the inventions he has created, but to show what grit and determination will do to win a battle. You readers who started with

hundred dollars borrowed from a local banker who had confidence in the honesty of the young mechanic. There he repaired anything from a baby buggy to a steam tractor or a threshing rig. He never had a man come too early or too late with a job, and he had all he could do. Mr. Daniel was known for miles around as giving the farmer the kind of service he needed. All the time he had two ideas paramount—to build a tractor and a corn husker to farmer demands, machines like the

E. H. DANIEL
The Man Who Builds Machinery
to Farmer Demands

THE SHED IN WHICH MR. DANIEL FIRST BUILT
HUSKERS AND TRACTORS

farmer would build if he were able to build them himself.

The tractor was to have three plows or less according to its size and was to be able to raise the plows when going ahead, standing still or backing up, something that no other tractor even to this day can do. Then it was to be built and enclosed so that wearing parts would not give out or cause trouble. The Husker was to be of a type that would hook behind the wagon, husk from the shock, and save the fodder and the corn it shelled in husking. The fodder must be in good condition so that it could be set back in the shock and the husked corn put in the wagon. The first tractor was built in about a year's time and it was a homemade

a scrub herd, and have built it up to where you have made your herd something to be proud of, have not only helped yourself but also the many others who have bought of you to make their herds better. So in building the machinery that Mr. Daniel has built he not only helped himself but helped his customer, the American Farmer, more than he helped himself.

This story starts ten years ago in a small town in Central Ohio, in a little shed which some readers of this paper may recognize if they look closely. In this shed the man you are reading about started with three

affair that had handfiled gears just from the foundry and the units were all handmade. As the young mechanic with 97% nerve and 3% money would work and save a few dollars he would buy a few pieces, put them together and then go back to repair work for

THE SECOND DANIEL IMPLEMENT FACTORY

awhile to get more money to experiment with. All the time he was consulting prominent farmers as to what they thought of his ideas. They would find fault with this and that and he would alter his plans to fit their needs. Finally he had the first machine finished ready for the test. Farmers from far and near came to see it run, the machine had never been out of the shed but they were there before he could get it tested, so

THE FIRST LONDON MOTOR PLOW

it was run out of the old shed and though it was said you could hear it a mile on a clear day, it worked, and that was enough for the inventor.

The tractor plowed, raised the plows and did everything it was supposed to do. As several parts were getting hot and some of the parts were coming loose from the vibration, the machine was run into its home to keep outsiders from seeing just how near it was to falling to pieces, but it had plowed and run and did not fall down on anything it was supposed to do. This tractor is named the London Motor Plow. It has been in use on farms of the United States for over four years; has given no trouble; and more are going out every year.

About the time Mr. Daniel was perfecting the Husker, his other business had grown so large he had to move to larger quarters. In this new factory machinery of all kinds was installed. He now was prepared to give all kinds of service to the farmers of his vicinity. At harvest or planting time, he always had several men on night duty so that no farmer was held up for anything he might want to use the next day. Mr. Daniel says today that the farmers helped him build his products with their repair work and that they also showed him what they wanted so his products were really built by the farmer for the farmer.

At first the Husker shelled the corn badly and broke the stalks. It has been improved until now it does not

AN UP-TO-DATE LONDON MOTOR PLOW

shell more than a bushel a day. The husking is as good as handhusking while the fodder is in better shape than some hand huskers leave it. The machine is all steel; has an automatic feed that keeps the operator away from the moving parts of the machine. It has a six horse engine that can be detached from the machine by removing four bolts and can be used for wood sawing, feed grinding and other farm power jobs. This engine is of two cylinder type. An automatic water tank feeds the water hopper in the engine as the water boils away during the day's run, thus saving many steps. The ignition is of the Bosch High Ten-

THE OHIO HUSKER IN OPERATION

sion type with spark plugs instead of a jump spark. Parts to which farmers objected were changed or taken off altogether. The gears were at first cast but now they are of machine cut steel. This makes the Husker cost more but it lasts longer. The machine is giving satis-

faction and Mr. Daniel can refer you to farmers who have written him as follows: "It is to me what my binder is." "It is everything you say it is." "It's as clean as any hand husker as I ever saw and the fodder comes through fine."

The husking rolls in the Ohio Husker are spiralled in pairs, one roll running one-third faster than the other, causing the ear of corn to turn on the husking rolls, which in turn causes all sides of the ear being husked to come in contact with the rolls. This is the reason ribbons are very rarely found on corn husked by the Ohio Husker. The Ohio Husker needs only two men to operate and the average farmer can get all his corn husked with the help he has on his own farm and not have to trade work with his neighbors. Then he handles the heavy corn fodder but once and that is when feeding the machine in the field. The Ohio can be used in either dry or wet weather. To test the difference between shredded fodder and whole stalk fodder, throw a shovelful of shredded fodder in the feed lot and then throw a bundle of stalks on the ground and see which the cattle will eat first.

One thing of which the Ohio Husker Company is proud is the fact that in eight years of Husker building, no operator while running one of their huskers has lost an arm or hand. This is a record that no other Husker Company can truthfully claim.

At the present time Ohio Huskers are sold only through the farmer and farmer dealers. Mr. Daniel believes that the farmer has more conscience than the implement dealer as in ninety times out of a hundred, the dealer is only interested in the sale and the commission and does not care very much how the farmer gets along afterwards; while the farmer will try to give his neighbor the benefit of his own experience and will not tell anything but the truth, thus gets business that stays and business that brings more later.

For the past three years Mr. Daniel has carefully studied conditions in the implement business. He predicts that in ten years most farm implements will be bought through farm bureaus and granges or through the farmer himself. The farmer is becoming a business man fast as he was losing the old way and methods have changed so fast during the past four years that he has had to adapt himself to business conditions or lose everything.

The Daniel products are now built in modern factories in which are employed many skilled men making products for farmer demands. More and more the conditions and needs of the American farmers are studied to give them the products best suited for their purposes. In other words the machinery used by farmers are being built in accordance with "Farmer demands."

Dried Milk Manufacture

THE commercial manufacture of dried milk is an essentially modern development. Numerous processes have been patented, but they all divide into two main methods; the roller process and the spray process. The object of both methods is to remove the water content and to save the solids so that the milk in powder form may be transported to its

market, and there be reconstituted by the addition of that water which was formerly extracted.

In the roller process the milk is sprayed on to rollers heated by steam jackets. These rollers drive off the moisture, and delicately adjusted knives then scrape the powder in flaky sheets off the surface of the roller. A sifting process then separates the charred and burnt flakes, inevitably produced by this method, prior to the packing of the product. This method is held by some to have disadvantages in that actual contact with the heated surface cooks elements in the milk and effects the chemical changes therein.

The spray process involves the spraying of the milk under high pressure into a hot air chamber. It involves no cooking or deleterious chemical change; turns out a much more soluble and even powder, and the product invariably commands a higher price on the world's markets.

Milk a Perfect Food

MILK is a perfect food; the most perfect available to the human race. It contains lime and mineral matter for the building of tissue, and ash for the formation of glands; it supplies concentrated energy in the form of fats for the driving of the bodily engine; and it contains those vitamins which are essential to growth and to life. There is no other food on earth which has such an all-round and complete adaptability to human life as milk.

In that period when milk is most consumed—infancy—the young of every species make the greatest proportionate growth of any state of their existence. Milk is designed by nature to meet all needs. It is in fact the most concentrated natural nutrition in the world. The energy value of one quart of milk equals 1 lb. of lean meat; is equal to 9 eggs; or 2 lb. of chicken, or ¾ lb. of ham. One cup of milk contains 6½ times as much lime as does one egg, and over 24 times the quantity contained in two slices of bread. Its mineral content is therefore vital to children for the formation of bone.

What Can Be Made from Milk

SOME interesting figures have been compiled by the United States Department of Agriculture to show what can be made from a definite quantity of milk. Using one hundred pounds of milk which tests four percent, it has been found that this quantity will make 4.8 lb. butter, or eleven pounds of Cheddar Cheese, or forty-five fifteen-ounce cans of condensed milk, or 12.5 lb. whole-milk powder, or 8.5 lb. of Swiss cheese, or 23 lb. of Camembert Cheese.

Irish After Scrub Bulls

SCRUB bulls in Ireland have in prospect the same fate as the snakes in the story of Saint Patrick. A measure requiring that only licensed bulls be used in Ireland was recently reported to the United States Department of Agriculture as being considered by the Irish Dail.

Dairying in Malaya

ALTHOUGH the natives of Malaya are well satisfied with the milk which the buffalo yields, the European residents prefer cow's milk—when they can get it. That, however, does not happen every day in the week, for the imported cow seldom thrives in the heat of the Malaya Peninsula, which is situated unpleasantly near the Equator. Nor, for that matter, do the calves, though a certain amount of success has attended cross breeding. In the hills the importation is justified, but, unfortunately there are more plains than hills in this picturesque country with an enervating temperature. Besides, the white people are mostly condemned to pass the year on the plains. A brief holiday is snatched at a sanatorium—to return "below."

It is only of late years that exiles have had cows sent out from England; and, as the plains do not agree with the experiment, attempts to acclimatize the cattle probably will be dropped. For the rest buffalo milk may not be palatable, but one gets used to it in time. Indeed, there are few things to which one cannot accustom one's self in Malaya. Besides, it is a question of Hobson's choice—buffalo milk or no milk.

As an alternative buffaloes have been brought over from India, it being thought that their milk is superior to that of the Malay animal. The difference, however is too slight to warrant the expense of transport.

The dairies are entirely in the hands of the natives, and intelligent fellows they are, too. The yellow-skinned dairyman is, however, lazy; those who have not experienced his astonishing slothfulness can have no idea of what laziness really is. The combination is a curious one, and it probably does not exist to the same extent in any other race. A lad, who has never done anything more important than keep the birds off the fruit trees, knows how to milk a buffalo almost before the instructor has finished giving the instruction. He milks into the small vessel without spilling a drop, and he can judge the weight of a partly filled pail to a fraction. But the Malay milkman, owing to his slackness, is late in delivering the milk; should it suit his purpose to stay at home and sleep, he has no hesitation in doing so. None work on scheduled time.

The milkman often begins the day with a good intention—to succumb to the national failing. He starts on his rounds fully intending to carry out all obligations until idleness overtakes him. The great shady trees look inviting; the yellow bananas are calling out to be picked. So the slothful one cuts off half a dozen, and, having made a meal of them, lights a long cheroot. He wanders into the adjacent jungle; listens to the monkeys chattering in the creeper-covered trees as they spring from branch to branch; and pays attention to the screeching birds. Then, as an after-thought, the wandering milkman remembers the business in hand, and leisurely retraces his steps to the tree where he left the buffalodrawn milk cart. It has gone. . . .

The Malay is not in the least put out. He merely says to himself in the soft and pleasant native tongue, "Walking makes one tired. I will sleep, and, Budda permitting, I will dream pleasant dreams." Not a

thought of his disappointed customers, nor the missing cart. "Time and trouble," he argues, "are for slaves."

The idleness of the Malay buffalokeeper has a great deal to do also with the filthy state of the sheds. There are two or three establishments which, being run under British auspices, fulfil all conditions. The superintendent of each is an European, and the native employees, fearing dismissal and loss of a coveted pension, overcome their natural laziness sufficiently to carry out orders. In their heart of hearts they consider that the superintendent is stark, staring mad to demand cleanliness and punctuality. . . . "He surely will end his days in a lunatic asylum, the poor demented one," says the astonished native.

There is no lack of customers, for, in addition to the swarms of natives, a fair number of white officials, rubber planters, merchants and traders are at the disposal of the dairyman. Some Europeans, chafing at being kept waiting, render themselves independent by maintaining their own private buffalo, the animal being milked at breakfast and tea time. Others, doubting the cleanliness of the milkman's utensils bid him bring the buffalo to their bungalow door and milk it into one of the household pails. The man does as he is bid, but the "tuan bessar's" demand is considered most outrageous. The Western customer's tastes and habits are, in short, a never-ending source of wonder to the Malay dairyman. For the past hundred years they have startled him, and his surprise shows no sign of abating.

What astonishes the Malay beyond everything else is the white man's disdainful attitude towards the spirits. The milkman goes in mortal dread of them believing that their influence alone is responsible for the health and yield of the buffaloes. Everything possible is done to gain favor with the spirits of the earth, air, water and trees. Goats are sacrifices, a white cock, (it must be a white one) is killed, the ground being saturated with its blood, and the tree trunks are garlanded with flowers. These practices, according to the yellow man, are necessary to the well-being of the buffaloes. "Neglect them and the animals will die or give poor milk," is their firm belief. This Mumbo-Jumbo-business is considered better than good pasturage.

In districts infested by tigers the spirits receive special attention. Despite these pious and frequent precautions, many a shed is raided by the fierce beasts, the buffaloes being carried off. To place on guard a man with a gun does not enter the Malay head.

There is no dairy advertising, though sometimes a couple of natives parade around town calling out the advantages acclaimed by a certain establishment. Or two poles and a cross piece, erected in a cart, bears a high scroll with the words, "Drink my milk and live forever." Unfortunately, the Malay employed on the simple business cannot be trusted to perform their task. The pedestrians, curling themselves up go to sleep; and the carters, nothing loath, follow their example.

Citizenship in a community of tenant farmers is usually not of so high a character as it is in communities where the farmers own the land they till.

The Home of the Howards

A Story of Maple Ridge Stock Farm

IN 1907, or more than seventeen years ago, J. S. Howard (Jerry, as his friends call him) purchased from the veteran Holstein breeder, W. E. Taylor, two five-year-old cows, Lady Inka De Kol Hartog and Inka De Kol Pet. These two animals formed the foundation stock of the herd kept on the Maple Ridge Stock Farm, Springville, Penna., a herd that is well known in Susquehanna County.

These two cows proved a valuable investment and were splendid producers. Mr. Howard was encouraged to add from time to time, a few more animals until he had a herd of more than twenty purebreds. He then sold the entire number with two exceptions from which he raised another herd. When this second herd was so large that he could not personally do most of the work he sold practically all of it at private treaty and in 1920 he set to work to build up the present herd which numbers between thirty and forty head.

Among the present members of the herd is a cow that won first prize as a two-year-old at the Northeastern Michigan Fair. She is a sister to Wandermere Belle Hengerveld, credited with a record of 42.65 lb.

MIRIAM AND RUSSELL HOWARD WITH KING SYLVIA KORNDYKE TWEDE

butter in seven days as a junior four-year-old, world's record in her class at time of making, a cow that was sold at public auction for \$18,300.00 in the sale held at the time the Holstein-Friesian Association held its annual meeting at Worcester, Mass. Another member is a granddaughter of Hengerveld De Kol and from De Kol Plum Copia, a cow that two different years has made over 30 lb. butter in seven-day test. There are three granddaughters of Tidy Abbekerk Prince, one of the greatest century sires, also a daughter of Lilith Pauline De Kol's Son whose dam, Lilith Pauline De Kol, is said to be the first animal under full age that ever produced 100 lb. milk in a day while in official test. She was the first cow of any age to make over 28 lb. butter in a week and her record stood at the head of the junior four-year-old class for at least seven years.

King Rag Apple Plum Copia, the senior herdsire, is a very handsome individual now five years old. His sire carried 68.3 per cent of the blood of the great Pontiac Korndyke. De Kol Plum Copia, the dam of King Rag Apple Plum Copia, two different years has

made over 30 lb. butter in seven-day official test. As a five year old she is credited with 30.47 lb. butter, 668.6 lb. milk in a week and 120.63 lb. butter, 2,769.4 lb. milk in 30 days. Tested a year after, she raised her butter record to 33.26 lb. from 579.4 lb. milk. She was a large, handsome cow, is said to have weighed nearly a ton, was of old-fashioned lines of breeding and is very close to imported stock.

King Rag Apple Plum Copia weighs around 2400 pounds in ordinary flesh. He is a very handsome fellow and has been a prize winner at the Susquehanna County fair. To his offspring he has transmitted the size, type and individuality of his famous dam and his

KING RAG APPLE PLUM COPIA
Senior sire at Maple Ridge Stock Farm.

daughters, now coming into milk, promise that they have also inherited her powers of production. So highly is this bull estimated in his own county, that the Mack Brothers, who own the champion male, the champion female and the champion herd exhibited at the 1924 Susquehanna County fair have hired this bull for partial service in their great herds this winter. Sons of this high class bull head a number of herds in this neighborhood.

The junior sire, King Sylvia Korndyke Tweede, is also a very handsome bull, in fact he won the junior male championship at the 1924 county fair. He is a

BARNYARD SCENE AT MAPLE RIDGE STOCK FARM

son of Woodmont Echo Sylvia Champion, first prize three-year-old bull at the 1922 New York State Fair, while his dam, Butter Boy Empress, a 30 lb. cow that has given over 100 lb. milk in a day, was the 1921 New York State Fair female champion.

King Sylvia Korndyke Tweede is from Wynola Korndyke Pontiac Lass, a junior two-year-old with an official record of 515.8 lb. milk and over 20 lb. butter in seven days. She was by King Tweede Spring Farm, now owned by Abner S. Deysher of Reading, Penna., where his daughters in the herd at Berks Farm are making remarkable records both in short and long time test.

Dairying in Malaya

ALTHOUGH the natives of Malaya are well satisfied with the milk which the buffalo yields, the European residents prefer cow's milk—when they can get it. That, however, does not happen every day in the week, for the imported cow seldom thrives in the heat of the Malaya Peninsula, which is situated unpleasantly near the Equator. Nor, for that matter, do the calves, though a certain amount of success has attended cross breeding. In the hills the importation is justified, but, unfortunately there are more plains than hills in this picturesque country with an enervating temperature. Besides, the white people are mostly condemned to pass the year on the plains. A brief holiday is snatched at a sanatorium—to return "below."

It is only of late years that exiles have had cows sent out from England; and, as the plains do not agree with the experiment, attempts to acclimatize the cattle probably will be dropped. For the rest buffalo milk may not be palatable, but one gets used to it in time. Indeed, there are few things to which one cannot accustom one's self in Malaya. Besides, it is a question of Hobson's choice—buffalo milk or no milk.

As an alternative buffaloes have been brought over from India, it being thought that their milk is superior to that of the Malay animal. The difference, however is too slight to warrant the expense of transport.

The dairies are entirely in the hands of the natives, and intelligent fellows they are, too. The yellow-skinned dairyman is, however, lazy; those who have not experienced his astonishing slothfulness can have no idea of what laziness really is. The combination is a curious one, and it probably does not exist to the same extent in any other race. A lad, who has never done anything more important than keep the birds off the fruit trees, knows how to milk a buffalo almost before the instructor has finished giving the instruction. He milks into the small vessel without spilling a drop, and he can judge the weight of a partly filled pail to a fraction. But the Malay milkman, owing to his slackness, is late in delivering the milk; should it suit his purpose to stay at home and sleep, he has no hesitation in doing so. None work on scheduled time.

The milkman often begins the day with a good intention—to succumb to the national failing. He starts on his rounds fully intending to carry out all obligations until idleness overtakes him. The great shady trees look inviting; the yellow bananas are calling out to be picked. So the slothful one cuts off half a dozen, and, having made a meal of them, lights a long cheroot. He wanders into the adjacent jungle; listens to the monkeys chattering in the creeper-covered trees as they spring from branch to branch; and pays attention to the screeching birds. Then, as an after-thought, the wandering milkman remembers the business in hand, and leisurely retraces his steps to the tree where he left the buffalodrawn milk cart. It has gone.....

The Malay is not in the least put out. He merely says to himself in the soft and pleasant native tongue, "Walking makes one tired. I will sleep, and, Budda permitting, I will dream pleasant dreams." Not a

thought of his disappointed customers, nor the missing cart. "Time and trouble," he argues, "are for slaves."

The idleness of the Malay buffalokeeper has a great deal to do also with the filthy state of the sheds. There are two or three establishments which, being run under British auspices, fulfil all conditions. The superintendent of each is an European, and the native employees, fearing dismissal and loss of a coveted pension, overcome their natural laziness sufficiently to carry out orders. In their heart of hearts they consider that the superintendent is stark, staring mad to demand cleanliness and punctuality.... "He surely will end his days in a lunatic asylum, the poor demented one," says the astonished native.

There is no lack of customers, for, in addition to the swarms of natives, a fair number of white officials, rubber planters, merchants and traders are at the disposal of the dairyman. Some Europeans, chafing at being kept waiting, render themselves independent by maintaining their own private buffalo, the animal being milked at breakfast and tea time. Others, doubting the cleanliness of the milkman's utensils bid him bring the buffalo to their bungalow door and milk it into one of the household pails. The man does as he is bid, but the "tuan besser's" demand is considered most outrageous. The Western customer's tastes and habits are, in short, a never-ending source of wonder to the Malay dairyman. For the past hundred years they have startled him, and his surprise shows no sign of abating.

What astonishes the Malay beyond everything else is the white man's disdainful attitude towards the spirits. The milkman goes in mortal dread of them believing that their influence alone is responsible for the health and yield of the buffaloes. Everything possible is done to gain favor with the spirits of the earth, air, water and trees. Goats are sacrifices, a white cock, (it must be a white one) is killed, the ground being saturated with its blood, and the tree trunks are garlanded with flowers. These practices, according to the yellow man, are necessary to the well-being of the buffaloes. "Neglect them and the animals will die or give poor milk," is their firm belief. This Mumbo-Jumbo-business is considered better than good pasturage.

In districts infested by tigers the spirits receive special attention. Despite these pious and frequent precautions, many a shed is raided by the fierce beasts, the buffaloes being carried off. To place on guard a man with a gun does not enter the Malay head.

There is no dairy advertising, though sometimes a couple of natives parade around town calling out the advantages acclaimed by a certain establishment. Or two poles and a cross piece, erected in a cart, bears a high scroll with the words, "Drink my milk and live forever." Unfortunately, the Malay employed on the simple business cannot be trusted to perform their task. The pedestrians, curling themselves up go to sleep; and the carters, nothing loath, follow their example.

Citizenship in a community of tenant farmers is usually not of so high a character as it is in communities where the farmers own the land they till.

The Home of the Howards

A Story of Maple Ridge Stock Farm

IN 1907, or more than seventeen years ago, J. S. Howard (Jerry, as his friends call him) purchased from the veteran Holstein breeder, W. E. Taylor, two five-year-old cows, Lady Inka De Kol Hartog and Inka De Kol Pet. These two animals formed the foundation stock of the herd kept on the Maple Ridge Stock Farm, Springville, Penna., a herd that is well known in Susquehanna County.

These two cows proved a valuable investment and were splendid producers. Mr. Howard was encouraged to add from time to time, a few more animals until he had a herd of more than twenty purebreds. He then sold the entire number with two exceptions from which he raised another herd. When this second herd was so large that he could not personally do most of the work he sold practically all of it at private treaty and in 1920 he set to work to build up the present herd which numbers between thirty and forty head.

Among the present members of the herd is a cow that won first prize as a two-year-old at the North-eastern Michigan Fair. She is a sister to Wandermere Belle Hengerveld, credited with a record of 42.65 lb.

MIRIAM AND RUSSELL HOWARD WITH KING SYLVIA KORNDYKE TWEDE

butter in seven days as a junior four-year-old, world's record in her class at time of making, a cow that was sold at public auction for \$18,300.00 in the sale held at the time the Holstein-Friesian Association held its annual meeting at Worcester, Mass. Another member is a granddaughter of Hengerveld De Kol and from De Kol Plum Copia, a cow that two different years has made over 30 lb. butter in seven-day test. There are three granddaughters of Tidy Abbekerk Prince, one of the greatest century sires, also a daughter of Lilith Pauline De Kol's Son whose dam, Lilith Pauline De Kol, is said to be the first animal under full age that ever produced 100 lb. milk in a day while in official test. She was the first cow of any age to make over 28 lb. butter in a week and her record stood at the head of the junior four-year-old class for at least seven years.

King Rag Apple Plum Copia, the senior herdsire, is a very handsome individual now five years old. His sire carried 68.3 per cent of the blood of the great Pontiac Korndyke. De Kol Plum Copia, the dam of King Rag Apple Plum Copia, two different years has

made over 30 lb. butter in seven-day official test. As a five year old she is credited with 30.47 lb. butter, 668.6 lb. milk in a week and 120.63 lb. butter, 2,769.4 lb. milk in 30 days. Tested a year after, she raised her butter record to 33.26 lb. from 579.4 lb. milk. She was a large, handsome cow, is said to have weighed nearly a ton, was of old-fashioned lines of breeding and is very close to imported stock.

King Rag Apple Plum Copia weighs around 2400 pounds in ordinary flesh. He is a very handsome fellow and has been a prize winner at the Susquehanna County fair. To his offspring he has transmitted the size, type and individuality of his famous dam and his

KING RAG APPLE PLUM COPIA
Senior sire at Maple Ridge Stock Farm.

daughters, now coming into milk, promise that they have also inherited her powers of production. So highly is this bull estimated in his own county, that the Mack Brothers, who own the champion male, the champion female and the champion herd exhibited at the 1924 Susquehanna County fair have hired this bull for partial service in their great herds this winter. Sons of this high class bull head a number of herds in this neighborhood.

The junior sire, King Sylvia Korndyke Tweede, is also a very handsome bull, in fact he won the junior male championship at the 1924 county fair. He is a

BARNYARD SCENE AT MAPLE RIDGE STOCK FARM

son of Woodmont Echo Sylvia Champion, first prize three-year-old bull at the 1922 New York State Fair, while his dam, Butter Boy Empress, a 30 lb. cow that has given over 100 lb. milk in a day, was the 1921 New York State Fair female champion.

King Sylvia Korndyke Tweede is from Wynola Korndyke Pontiac Lass, a junior two-year-old with an official record of 515.8 lb. milk and over 20 lb. butter in seven days. She was by King Tweede Spring Farm, now owned by Abner S. Deysher of Reading, Penna., where his daughters in the herd at Berks Farm are making remarkable records both in short and long time test.

Maple Ridge Stock Farm consists of 152 acres of which about one half are tillable. It is splendidly located, is on the edge of the thriving country village of Springville, with a milk station about 100 feet from the barn and a feed mill less than a quarter of a mile away. The pastures are rolling, well wooded and well watered and the buildings are supplied by running water derived from springs.

The Howards come from a family of dairyman and are strong believers in the Holstein cow as being the

THE BUILDINGS AT MAPLE RIDGE STOCK FARM

best for the common farmer. "Jerry" Howard in addition to overseeing the work on the farm and doing considerable of it, is also a rural mailman, operating one of the Springville routes. The family consists of Mr. and Mrs. Howard, a daughter Miriam, now eight years old, and one son, now in his late twenties, who is the junior partner of the firm which registered its cattle under the name of J. S. and F. R. Howard. Russell, as the younger man is called, is an enthusiastic

Holstein man and has written a number of articles on breed subjects which have appeared in the general agricultural press as well as in the BREEDER AND DAIRYMAN and other papers. He has an extensive knowledge of Holstein blood lines and is in great request at local sales as pedigree man. The Howards believe that production is impossible without good health and that purchasers wishing to introduce producing blood into their herds desire the animals to be accompanied with an absolutely clean bill of health so that it is no surprise to find that this big producing dairy herd is on the Accredited list.

New Canadian Year Book

WE acknowledge with thanks to Secretary Clemons and the Canadian Holstein-Friesian Association receipt of Volume 12 of the Canadian Year Book. This contains particulars of records received and accepted by the Canadian Association during the twelve months ending April 30, 1924. This volume consists of 832 pages and is of the size and style uniform with the preceding volumes, is comprehensive and handy. Copies of Volume 12 can be obtained for \$2 by writing Secretary Clemons at Brantford, Ont.

Nobody can say nay to the proposition that it requires horse-sense for a stable government.—*Savannah News.*

SYLVDALE HERD

Quality and Production Combined

This show cow has a 26-lb. official record, but better yet, she makes a big profit over her feed cost. She is a granddaughter of

Colantha Johanna Lad

and like the other big producers in Sylvdale Herd, is mated with

Sir Champion Sylvia

whose seven nearest dams average 35.43 lb. butter in official work. Why not investigate this ACCREDITED Herd and see what it can offer you.

Herd Under State and Federal Supervision

The Champion Club Girl of Wisconsin

By J. H. Lewis

A WINSOME, demure, curly haired girl, 18 years of age, living near the village of Browntown, in Green County, Wisconsin is champion club girl of the state. Consistent winnings at county and state fairs for three successive years, and recognition by leading state authorities and the press as a youthful prodigy in the work she has undertaken, is concrete proof that Veva M. Divan is, through industry a genius. With a penchant for work is combined the rare quality of being a good fellow on all occasions, and no matter where she shows and how many prizes she wins she always goes away from a fair with more friends than she had when she first appeared.

Most of us are loathe to admit that a girl of 18 is really to be considered eligible for membership in our boys and girls clubs. In other words a girl at 18 is a young woman. But Veva Divan started in at the age of 15, a mere slip of a girl, and while she has added a few years in age she is still the same little girl we

mailed out to parents and children. I selected W. F. Trukenbrod, chairman of the Green County Board of Supervisors, J. H. Durst, cashier of the Citizens State Bank, and F. E. Coldren, president of the Green County Farm Bureau, as our Advisory Board. The club elected its own executive officers. We had fifty-six members, thirty boys and twenty-six girls. Thirty boys and girls fitted up and showed thirty-eight calves. Ten boys and girls fed and raised forty-four pigs.

VEVA M. DIVAN,
1924 Wisconsin Home Economics Champion.

Three boys exhibited nine lambs. Eight girls took canning and fifteen girls took sewing. During the summer regular meetings were held each month, with complete programs followed with a club picnic.

"The boys and girls exhibited their livestock and work at our Green County Fair at Monroe, and the Wisconsin State Fair at Milwaukee.

"Green County had the largest group of workers staying in the boys and girls camp at the state fair, there being thirty-three boys and girls all having some exhibits, also a demonstration team, and the members took part in the judging contests and camp program.

"Green County Club workers won 108 ribbons, thirty-six of which were blue or first prizes, besides five championships. Lila Schmidt, Green County champion calf club member won third prize, a gold medal, for being best showman. Fay Brewer, pig club boy won a \$35 gold watch. We also won third prize for best county calf club exhibit; first prize for best county pig club exhibit; first prize for best county sewing club exhibit, and first prize for best county canning club exhibit. Fifty of the Green County club members won at the Green County and Wisconsin State Fairs cash prizes amounting to more than \$3,000.00: aside from 2 gold watches; 2 gold medals, a showman's kit and other prizes."

I was awarded a gold medal during my stay at camp as the best camper, there being close to 500 present, and I was given the popular vote of the camp."

"This year I was awarded my third free trip to the International Show at Chicago, being declared Wisconsin State Champion in Home Economics."

"I acted as county club leader and carried on four

first knew when she began to assert herself as a prize winner at county fairs.

She is now leader of the boys' and girls' club of Green County and her rise to this eminent station is best told in her own words, which are given here verbatim: "In November 1923, I went before the County Board of Supervisors of Green County and told them of the great things club work had done for me and urged them to set aside a sum of money to organize and promote a Green County Boys' and Girls' Club, believing such a club would greatly benefit the young boys and girls, give them work in their spare time and engage their minds in such a way that they would grow up better men and women. The board set aside the sum of \$300 to be used as I should direct. I immediately took this matter up with the State Club Department at Madison, and they supplied me with all necessary papers such as enrollment blanks, record books and the like.

"The organization of the club took place March 1st 1924 at a meeting held in the courthouse at Monroe, the county seat, after notices had been published in two county papers and a number of letters had been

"I acted as county club leader and carried on four

VEVA M. DIVAN OF BROWNTOWN, WIS.
and the 263 ribbons she has won at six fairs.

first knew when she began to assert herself as a prize winner at county fairs.

She is now leader of the boys' and girls' club of Green County and her rise to this eminent station is best told in her own words, which are given here verbatim: "In November 1923, I went before the County Board of Supervisors of Green County and told them of the great things club work had done for me and urged them to set aside a sum of money to organize and promote a Green County Boys' and Girls' Club, believing such a club would greatly benefit the young boys and girls, give them work in their spare time and engage their minds in such a way that they would grow up better men and women. The board set aside the sum of \$300 to be used as I should direct. I immediately took this matter up with the State Club Department at Madison, and they supplied me with all necessary papers such as enrollment blanks, record books and the like.

"The organization of the club took place March 1st 1924 at a meeting held in the courthouse at Monroe, the county seat, after notices had been published in two county papers and a number of letters had been

club projects; namely: pig, food, canning and sewing, and was captain of a Demonstration team."

"In 1922 and 1923, I held Wisconsin State Pig Club championship winning in the two years in cash prizes, \$1,141.25: My 1924 cash prize winnings amount to \$662.

"I produced the first prize ton litter in Green County in 1924, ten pigs in the litter weighed 2,013 pounds at the age of 156 days. This litter also won top prizes in the open class at the Wisconsin State Fair, and I won junior championship on a pig I had named De-fiance.

"During three months of this year I made twenty-nine articles and garments, including two dresses, and I canned 1,269 pints of fruits and vegetables."

"I entered eleven jars of fruit and vegetables in the open class at the Wisconsin State Fair and won prizes on ten jars."

"Some of my fruit was exhibited at Sioux City, Iowa and at the National Contest at Wheeling, West Virginia winning prizes at both places."

"I had good sales, selling my male pigs at an average of \$72 each, and they all went to good herds. The five females left are valued at \$300 which would bring the total value of the ton litter to \$1,281.25."

Veva's father, E. L. Divan, specializes in Holstein cattle. He also specializes in Big Type Poland China hogs, in Barred Rocks and White Wyandottes and in comb and extracted honey. This affords the girl a convenient field for her activities.

Veva told me she had other plans in the beginning but she was taken sick and after helping herself to get well took her physician's advice by remaining outdoors as much as possible. While helping her father with the calves and young pigs she cultivated her fondness for live stock. Now she is no longer disappointed because her first plans failed.

One must admire the little girl who in one year as club leader made her boys and girls famous throughout the state; who won a recognized championship in Home Economics for the state; who won first prize at the county fair with a ton litter over a big field, and later carried her triumphs into the very strongholds of the best breeders at the state fair. Now and then we hear muttered whisperings that pa Divan is after all the real factor in the girl's supremacy. If you happen to fall for these surreptitious whisperings just follow pa Divan around during the season and see how much he really is at home as he is all over the state, at fairs and horse shows and business and farmers meetings. Daughter Veva is learning to be a real leader by actual as well as practical experience.

It is a real treat to meet Miss Divan. She is the very essence of politeness and, regardless of the time it takes from her work, is ready and willing always to be of service to others. That is why she built up her club in Green County so that it swept the prize lists at Milwaukee, asking less for herself than for those whose success was of more importance to her than her own triumphs. Such a spirit makes followers idolize a leader. And in the success achieved in 1924 lies the incentive for better work and greater victories in 1925. In speaking of her pigs, she told the writer, "Each year since I began I have tried harder than ever to

raise better pigs, and this good seed stock has been scattered all over my county and you will now find many good herds of hogs where once there were only scrubs."

Now a system like that can result in only one kind of a club—a better one, and while Veva Divan would not state what her program was for 1925 I venture her greatest ambition right now is to make Green County Boys' and Girls' Club the champion club of Wisconsin and from what I have seen of this sweet girl's work and the conversations I have had with her it would not surprise me in the least if she made good. The county board of supervisors made their first appropriation of \$300; to convince themselves and others, they liked the youngsters and encouraged them so that it might not be said they were indifferent to Veva Divan's appeal for help. Now they are ready to back her and the other Green County boys and girls to the limit. It was the best investment the county board of Green County ever made.

The kind of men agriculture must depend on for its leadership are the farm-raised, farm-educated men who have the same breadth of character and vision that it takes to make a railroad president or a great industrial leader.—*Illinois Farmer.*

The reading farmer is the thinking farmer, and the man who thinks straight will usually find a way out of his difficulties and gain ultimate prosperity in the face of discouragements and backsets.

SPRING BROOK HERD

KING ARTIS WACONDA

is not only a handsome individual but he is also bred in the purple.

His dam, a 30-lb. cow that averaged 82.8 lb. milk a day during the week of her official test, also made a World's Record in Year Test as a junior three-year-old.

His sire is from a 31-lb. cow whose progeny are noted for wonderful production and his sire's sire is from a 41-lb. daughter of the first 30-lb. cow.

Better still, he is siring a lot of splendid youngsters that show remarkable promise. Yet I offer his sons and daughters at reasonable prices.

NOT ABOUT COWS

A Change

SINCE we last met, the powers that be have decreed that the friendly shelter of anonymity shall be dropped, and that we be listed as a "contributing editor." We warned them that we feared this would cramp our style and that the little excursions we might wish to make into the realms of intimate affairs might have to be curtailed. We have hastily reread our previous stuff written in the aforesaid friendly shelter to see if there has been anything we would not have written had our own name headed it, and are rather dubious about some of the jingles. If any of you have ever been middle-aged, but in a spirit of frolic have gone masked to a party and, after cavorting around all evening, playing up the character to the fullest, then suddenly have realized that you had to unmask and meet everyone as yourself, you probably recall that you felt a little foolish, and will sympathize a little with our feeling. However, having no choice in the matter, we submit gracefully, but shall ponder carefully before writing any more of the foolish little doggerel with which we have been wont to close the page. So, doubtless, the change is a blessing in disguise and may spare our gentle readers a lot of flapdoodle.

New Year's Resolutions

THIS is the time of the year when one is supposed to make good resolutions, with the idea of bettering everyday life and character. But the probability is that there is much more written about the making of such resolutions than anything else, the subject being a favorite one for the January jokesmith. Yet the idea is not at all a bad one, since it implies the sense of a need of improvement and a willingness to make the effort. And, while many of these New Year's resolutions last for only a short time, there is one born of the lingering Christmas spirit of goodwill to men that should last throughout the year—the resolve to be helpful in some way to some one at some time.

Won't You Help?

AND here is a practical way to help a great many in the near future, and in a very definite way. No one person has a monopoly of knowledge or ability but almost everyone has had some bright idea which would help others, if passed along. If you have worked out some particular labor saving device or have a recipe peculiar to your own kitchen or locality, won't you show the spirit of helpfulness by passing it along and letting our page be the medium? The things that are learned by experience are so much more worth while than mere theories and there must be capable

efficient housewives among the readers of this magazine, who would be willing to send for publication some one helpful item out of their own domestic experience. It is really a duty we owe to others to pass along any idea that might lighten the burden of the everyday worker. Don't wait for further urging but send us at once your favorite recipe or household expedient.

SOME SMALL ECONOMIES

At this time of the year when eggs are both scarce and expensive, it is well to know that in a custard recipe which calls for several eggs, one or two may be omitted and a half teaspoon of cornstarch substituted for each egg left out.

Slices of bread left over from the table may be dried and ground for use in meat loaves or croquettes, or may be buttered, cut into squares and baked brown in the oven and then served as croutons in soup.

Pieces of cake that are too stale to serve as originally intended may be steamed and served with a pudding sauce.

TRY A MIRROR

If you have a room in which there seems to be something lacking and you don't quite know what it is, or you have a wall space or a dark corner that seems to need lighting up, try hanging a good sized mirror and you will be surprised at the change that will be apparent at once. Nothing else will add so much light to a room. Of course, one thing often emphasizes the need of another, just as a new suit often shows the need for a new hat or new shoes, and so a good sized bevel mirror may emphasize the need of beauty treatments for those who constantly pass before it! It should cure the worst case of curlers or boudoir caps worn downstairs in the morning.

PHYSIOLOGY

Do you know why the bone in the elbow is so often called the "funny bone"? Because it borders on the humerus.

RING OUT, WILD BELLS

Ring out the old, ring in the new,
Ring happy bells across the snow,
The year is going, let him go,
Ring out the false, ring in the true.

Ring out the grief that saps the mind
For those that here we see no more,
Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out the want, the care, the sin,
The faithless coldness of the times,
Ring out, ring out my mournful rhymes
But ring the fuller minstrel in.

Ring out old shapes of foul disease,
Ring out the narrowing lust of gold,
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand,
Ring out the darkness of the land,
Ring in the Christ that is to be.—*Tennyson.*

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania. Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JANUARY 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Starting Our Fourth Year

THE HOLSTEIN BREEDER AND DAIRYMAN is entering upon its fourth year. Beginning three years ago it has grown to be the leading Holstein publication representing the largest number of Holstein cattle owners and breeders in America. Among its subscribers are men living in every State, and in Canada, England, Holland, Dutch West Indies, New Zealand, Mexico, Argentina and Australia. Its circulation is National and International in character.

When THE HOLSTEIN BREEDER AND DAIRYMAN was started, some predicted that it would fail because there were two other Holstein publications. We reasoned like this: If the big breeders and speculators can afford two Holstein publications surely the breeder and dairyman who conducts his business on an economical basis, milks his own cows and does a large part or all of his farm work, could afford at least ONE LIVE PUBLICATION devoted to his interests.

It is only natural that THE HOLSTEIN BREEDER AND DAIRYMAN should make a rapid growth and so quickly become the leading Holstein publication because it promotes the interests of men who base their breeding operations on sound business principles and because they own 85% of the Holstein cattle and constitute 90% of the members of the Holstein-Friesian Association.

There is a wide field for expansion of the Holstein breed along dairy lines. Less than 3% of the total number of dairy cattle in the United States are purebred. Government statistics show that even in the leading dairy states like Wisconsin 57% of the dairy herds are headed by Scrub Bulls; in New York 58%, in Michigan 66%, in Ohio 68%, in New Jersey 71%, in Pennsylvania 72%, in Maryland 79%, in Illinois 81%. The average of all of the States show that seventy-seven dairy herds out of every hundred in the United States are headed by Scrub Bulls.

With 97% of the total number of dairy cattle, Scrubs

and Grades, and 77% of the dairy herds headed by Scrub and Grade sires, the room for growth, development and expansion in the purebred Holstein industry should be apparent.

Speculation has been the cause of depression in the purebred Holstein industry. The breeders have allowed the speculators to dominate the front of the stage and the dairy public has refused to deal with them because of the misrepresentation and deception which speculators were practicing in order to exact high prices.

With THE HOLSTEIN BREEDER AND DAIRYMAN in the field the breeders of Holstein-Friesian cattle realize that it is no longer necessary for them to support speculation by subscribing to or advertising in breed publications devoted exclusively to promoting the speculative side of the industry.

THE HOLSTEIN BREEDER AND DAIRYMAN was the first breed and dairy publication to come out Openly, Fearlessly and Honestly to expose the speculators and protect the interests of the dairymen who breed purebred Holstein-Friesian cattle and are dependent on the returns from their dairies and the sale of their increased stock to care for their family and educate their children.

THE HOLSTEIN BREEDER AND DAIRYMAN during the past three years has carried reading articles and display advertisements telling of the excellent work that is being accomplished by the plain breeders and dairymen who own and breed purebred Holstein-Friesian cattle for milk and dairy purposes. Exaggeration and deception has not been necessary to make these stories interesting and instructive. Just a plain recitation of facts has been convincing. Because of the publicity that has been given the breed through the columns of THE HOLSTEIN BREEDER AND DAIRYMAN new business has been directed into the channels of those who breed purebred Holstein cattle and do their own milking and as a result the dairymen who want purebred dairy cattle for milk purposes and the dairymen who breed them for milk purposes have been brought together. Thus the true purpose of THE HOLSTEIN BREEDER AND DAIRYMAN is being fulfilled.

Service or Selfishness

THE mantle of Ex-President Aitken of the Holstein-Friesian Association of America seems to have fallen upon Jimmy Reynolds, chairman of the Executive Committee and Treasurer (drawing salaries of both offices). Reynolds is the real dominating force of the board of directors, the brains of the whole directorate. To be sure there is a President, but he is really little more than an ornamental figure head. An astute politician, Reynolds has apparently so entrenched himself in the affairs of the Association that he is likely to realize his ambition and be elected President next year.

"The man who seeks one thing in life and but one, May hope to achieve it before life is done; But he who seeks all things, wherever he goes, Only reaps from the hopes which around him he sows A harvest of barren regrets."

The Facts

THE conditions in which the members find the affairs of the Holstein-Friesian Association of America has not been brought about by the natural course of events or conditions attending the growth and development of the breed but it is rather the results of a carefully laid plan conceived and designed for the purpose of gaining control of the Association to take the management of its affairs out of the hands of its members and the men who were responsible for its creation, growth, development and prosperity; and to place it in the hands of another group and divert its resources, its efforts and its influence for the purpose to which they are now being used.

THE HOLSTEIN BREEDER AND DAIRYMAN is contemplating publishing in the near future an article or series of articles, giving step by step the various movements that have brought about the radical change in the Association's affairs, in its management, in its receipts, in its expenditures and in its policies.

We believe that such a series of articles will not only be interesting but we feel that if the radical change in the Association's management that has taken place since 1918-1919 is for the good of the members, the breed and the dairy industry, that the men who have been instrumental in bringing about this change should receive the proper credit for their services, their efforts and the money which they have expended.

It is a matter of record that the Holstein-Friesian Association of America enjoyed continued prosperity and accumulated upwards of \$240,000.00 as a surplus up until the year 1919 when the transfer fee to members was increased from twenty-five cents to \$1.00, and to non-members from \$1.00 to \$2.00, and a different management came into control and decidedly different policies have been pursued since that date.

We believe that our readers would enjoy knowing the facts pertaining to the early history and prosperity of the Association. They would also enjoy knowing what man or group of men or what influence was working within the Association that crystallized into the radical change of affairs that took place at the June meeting in 1919 that has resulted in the state in which the Association's affairs exist at the present time.

Few breeders, particularly those who have joined the Association since 1917-1918, know any of the facts regarding Mr. Fred F. Field's attack against Mr. Houghton that was championed by the *Holstein-Friesian World* and the *Black and White Record*. Mr. Field waged a campaign to defeat Mr. Houghton for reelection as Secretary at the Milwaukee Meeting in 1918. Mr. Field was hoping, if he was unable to defeat Mr. Houghton on the floor of the Convention, to make the office of Secretary appointive by the Board of Directors and, by controlling the Board of Directors, appoint someone in Houghton's stead.

In the campaign preceding the 1918 meeting at Milwaukee many letters were sent out supporting both Mr. Houghton and Mr. Field. Editorials appeared in *The Holstein-Friesian World* condemning Mr. Houghton and upholding Mr. Field. In the May 11, 1918,

issue of *The Holstein-Friesian World*, under the heading "GETTING DOWN TO FACTS" there appears an editorial condemning Mr. Houghton.

"The *World* has asked the members of the Association to consider the advisability of putting another man in Mr. Houghton's place. . . . Mr. Houghton is, by temperament, unsuited, by habit unfit for this work. He has had little experience in it. He shows little desire for it. . . . Mr. Houghton lacks energy. We want a man for Secretary who knows the dairy farmer and how to reach him and win him for Holsteins."

At the time these attacks were made against Mr. Houghton he had served as the Association's Secretary for nearly a quarter of a century and during his tenure in office the Association had grown from a very small beginning to the largest Association of its kind in the world. The breed which it represented was recognized as the leading dairy breed of cattle in America, and it had all been accomplished by careful, persistent, business like methods on the part of the administration. The breeders will want to know just why *The Holstein-Friesian World* came out with these attacks. Did they believe it or were they playing their part in a drama that has led up to the present conditions in which the members find the Association's affairs?

Mr. Houghton in repudiating and rebutting the charges preferred against him sent out general letters to the membership, soliciting their support, and personal letters to his friends, telling them of the conditions that existed and what he felt was the reason for the attacks upon him.

In a letter which was published in *The Holstein-Friesian World* under date of April 27th, said to be addressed by Mr. Houghton to a Wisconsin breeder, reads in part as follows:

"I had become aware of this movement against my reelection through members in Syracuse where F. F. Field called together a number of breeders at a dinner two weeks ago. Such men as President Aitken, E. A. Powell, Treasurer Wing Smith, H. A. Moyer, A. L. Brockway, F. M. Soule & Son, W. C. Hunt, John Arfman, Seth M. Strickland and others advised him that he was wrong and refused to join with him. He secured the support of the Stevens Bros., who are breeders and also own *The Holstein-Friesian World*, B. V. Kelley, the auctioneer, O. U. Kellogg, an ex-president and lawyer, who has defended many breeders in trouble, W. H. Mace, a Cortland Dealer, Hastings of the *Black and White Record*, and Price, editor of *The Holstein-Friesian World*.

"F. F. Field is the leader. He has been a director several years and has for past years by his arrogance and ignorance and conceit become very disagreeable on the board, especially to men like Matteson and Aitken, Smith and Brockway. His idea is to dominate or destroy and if possible secure reelection at any cost and contemplates a clean sweep of the present administration. The culmination of his troubles is in the work of the literary committee, of which I am the chairman, which he has dominated this year and operated to his liking, placing a young man in charge of the work at \$4,500 per year, whose whole experience has been in the advertising department of a daily

paper in Washington, D. C. He directs this work from Brockton by telephone and personal visits to him of Mr. Cleare. The latter also appears to be sowing dissension while on his speaking trips about the country.

"I am charged by Mr. Field with lack of coöperation in this work of the literary committee; also on the tuberculosis committee which prepared and distributed the F. F. Field Method of Eradicating Tuberculosis, and which failed to elicit response or comment from breeders except to accuse Mr. Field with using the Association to advertise himself."

The above is only a brief insight into the beginning of the controversy that has been waging in the Holstein-Friesian Fraternity. Those in control of the Association at the present time acquired their position by resorting to methods that are now being questioned in the courts. We feel that all the facts should be laid before each member of the Association and each breeder of Holstein-Friesian cattle.

By Wire

WE received a wire stating that the action brought by George E. Stevenson and forty-six other breeders under Section 32 of the Membership Corporation Law against the Directors of the Holstein-Friesian Association, which was to have been argued January 3d before Judge Pierce in the Supreme Court of the State of New York, was adjourned for one week on account of illness in the Judge's family. The telegram stated that Kellogg, Jimmy, Prescott and Babcock, were present when the case was called.

Hats Off to the Fifty-three

"Though the mills of the gods grind slowly,
Yet they grind exceeding small;
Though with patience they stand waiting,
With exactness grind they all."

WE have printed in other columns of this issue the complaint in an action in equity in the Supreme Court of the State of New York at Buffalo, wherein George E. Stevenson and fifty-two others are plaintiffs and the Holstein-Friesian Association of America is defendant. It is illuminating and instructive, the plaintiffs reside in five different states of the Union, showing that the demand for a change in the administration of the affairs of the Association is not only widespread, and urgent, but necessary for the well-being and the very life of the Association, if one half of the matters set out in the complaint are true, and we venture the opinion after a careful study of it, that all the allegations will be proved beyond the peradventure of a doubt. It is high time the officers and present directors were removed from office and their places filled by plain, practical farmers and dairymen who will have an eye single to the welfare of the Association and Holstein-Friesian breeders wherever situated. Our readers will remember that there is also another proceeding pending in the Courts of New York State against the Association, brought under Section 32 of the General Corporation Law of that state for the purpose of testing the validity of the election of the present board of directors, but as the scope of the proceeding under

Section 32 was too limited to try out all the questions and rid the Association of the barnacles and leeches clinging to it and absorbing it, it was finally determined to start an action in equity and prosecute them both to a successful conclusion.

The thanks of every member of the Association are due these fifty-three gentlemen, who, having the courage of their convictions, and a sense of duty to their fellow members, are striving for the right. We commend to every member of the Association a careful reading of the entire complaint.

The Pennsylvania Federation

ON December 29th the directors of the Pennsylvania Federation of Holstein-Friesian Clubs met at Harrisburg and considered plans for the coming Farm Products Show and annual meeting. As Director Otto was unable to be present, owing to a meeting of the directors of the Interstate Milk Producers Association, he was represented by his neighbor, Wm. S. Ker, president of the Cumberland County Holstein-Friesian Breeders' Association.

Dr. Thompson, president of the Federation, presided at the meeting.

A last minute change of plans by the management of the Farm Products Show made possible a dairy cattle exhibit at the show. It was voted to put on a representative show of Holsteins, every vote being in favor of this as well as letters from Vice-president Jones and Directors Bell and Blair. During the afternoon Director Fairchild phoned his regrets at his inability to be present at the meeting but wished to go on record as being in favor of the representative Holstein exhibit during show week.

It was decided to hold the annual Holstein Breeders' Banquet on the evening of Wednesday, January 21 and, if possible, to arrange so that the annual meeting could be held at 4 p. m. the same afternoon instead of 10 a. m. the following morning as scheduled.

On motion of Director Paxton it was voted to give a cup to the team from the vocational schools of the State winning a dairy cattle judging contest that will be staged during the Farm Products Show week. Federation ribbons will also be given to each member of the winning team. The prizes will be presented on the evening of Tuesday, January 20th by Dr. Thompson as president of the Federation.

E. Page Allison of West Chester and George Heed, Cashier of the National Bank of Chester County, were appointed by the President to audit the books of the Federation.

Banquet reservations can be made by notifying the Secretary, Box 110, Harrisburg, Penna.

G. H. TRUCKELL, Secretary.

Give a man the secure possession of a bleak rock, and he will turn it into a garden; give him a nine-years' lease of a garden, and he will convert it into a desert.—Arthur Young.

A bookkeeping system on the farm is like a speedometer on the flivver; it tells you how fast you're going and lets you figure the costs.

SEE THEM AT HARRISBURG

When the directors of the Pennsylvania Federation of Holstein-Friesian Clubs decided to stage an exhibit of Holsteins at the Pennsylvania Farm Products Show, which will be held at Harrisburg the week of January 19-23, Abner S. Deysher, one of their number, promised to coöperate by sending down a few of the big record animals now at Berks Farm. Sparrow Hawk Johanna is one of the animals Mr. Deysher expects to send. She recently completed a year record of 1,388.08 lb. butter and 28,028.9 lb. milk. At the time this record was completed she ranked 16th among cows tested for a year. She is due to freshen again in February by King Tweede Spring Farm, the Berks Farm senior herdsire. Her fourteen months old son will also be in evidence. This bull has been consigned to the fourth Brentwood Sale.

Wynola Tobe Pontiac Lass, a daughter of King Tweede Spring Farm will make one of the Deysher exhibits. She recently completed a year record of 1,186.78 lb. butter and 23,498.2 lb. milk as a junior three-year-old. Her record took fourth place at time of making. Besides her official test period supervisors were present ten different months while she was on test and on eight of these monthly periods Wynola made retest requirements. She is a very consistent producer for, while her best seven-day record during the year was 25 lb. butter, during the entire 52 weeks she averaged over 22 lb.

Providing Red Cross Heroine of Grayfield drops a living calf in February she will become the State champion in the ten months division taking this title from her stable-mate Charlotte Lyons Korndyke. Although she is due to freshen

SPARROWHAWK JOHANNA

After dropping these calves she produced 1,388.08 lb. butter, 28,028.9 lb. milk in a year.

in February, by King Tweede Spring Farm, she will be on exhibition at Harrisburg. Her ten months record was over 1,100 lb. butter and 22,000 lb. milk.

The new State champion, Lyons Sarcastic Korndyke, is bound to attract lots of attention. She freshened January 2d, dropping a bull calf by Sir Pietertje Chloe Ormsby, thereby qualifying in the ten months division. During 305 days she produced 1,068.59 lb. butter and 24,062.3 lb. milk as a junior four-year-old, the world's record for butter and the second highest milk record ever reported for a heifer in her class. Lyons Sarcastic Korndyke is a splendid individual as well as a great producer and Holstein breeders will welcome the opportunity to look her over.

Lady Thyrsa Walker Segis just completed a ten months record, exceeding 800 lb. butter and 17,000 lb. milk as a junior three-year-old. This is her second 305 day record as last year she produced 763.98 lb. butter and 15,449 lb. milk as a junior two-year-old. This heifer and her full sister will be on exhibition at Harrisburg during Farm Products Show week.

Many breeders from the northern part of the State would like to see King Tweede Spring Farm at the Show but we are informed that it is not the intention of Mr. Deysher and Herdsman Berry to bring down the old bull who now has four daughters that each have made over 30 lb. butter in a week. His last two are Korndyke Tobe Pontiac, 30.51 lb. butter, 646.9 lb. milk, 95.7 lb. milk in a day as a junior four-year-old, and Berks Spring Farm Alcartra 31.19 lb. butter, 585.1 lb. milk in a week, freshening at the age of two years, ten months and eight days. This heifer is the youngest 30

lb. cow in the state of Pennsylvania, and took from her stable-mate Eco-Sylv Mechtilde, the state championship in the senior two-year-old class. In thirty days she produced 132.82 lb. butter and 1,927.2 lb. milk. She is not only the State champion but also the United States champion senior two-year-old for thirty-day butter production, beating out a sister of her sire by one pound of butter. She is a daughter of L. H. C. Princess Annetje Alcartra the first cow to make a 30 lb. seven-day butter record at Berks Farm. At the farm they have two sisters of this great heifer yet to freshen.

LYONS SARCASTIC KORNDYKE

1,068.59 lb. butter, 24,062.3 lb. milk in 305 days as a junior four-year-old, champion Pennsylvania record in class.

In the next issue we plan to tell more of the performances of the cows and heifers at Berks Farm and only take space at this time to tell of the animals that will be seen at Pennsylvania's great winter fair. The Deysher exhibit will be headed by Sir Pietertje Chloe Ormsby and cattle breeders from all over the state will want to see this remarkably bred young bull selected by Mr. Deysher after visiting leading establishments in many states. Very few who will see this bull at Harrisburg have ever before had the privilege of seeing a bull brought from Minnesota to head a high class Pennsylvania herd. The sons and daughters of Sir Pietertje Chloe Ormsby are beginning to arrive at the farm and Herdsman Berry says that they are everything that could be asked for, big, strong-bodied calves, well developed, and very uniform in color, a little more black than white.

The decision to have a cattle exhibit at show time was made possible at the last minute by a change of plans of the show management. A meeting of the directors of the Federation was called immediately and it was decided to take advantage of the opportunity and to have on display a Holstein exhibit that would show the producing capacity of the breed. If you are able to get away from home be sure and see this great show and take in the Holstein events of the week.

TO MAKE MILWAUKEE A DAIRY CENTER

Wisconsin dairymen aim to make Milwaukee the greatest concentration and distributing point for dairy products in this country. They recently formed the Greater Wisconsin Association and one of the first moves will be to build a \$2,000,000 storage warehouse in which dairy products can be stored for curing and, if need be, to keep them off the market if low prices temporarily prevail.

T. H. Campion, principal of the Milwaukee County Farm School, has been appointed Executive Secretary and General Manager. He is chairman of the National Dairy Club of Wisconsin, president of the Wisconsin Agricultural Experiment Association and was formerly district supervisor of county farm agents.

It is claimed that Wisconsin produces 74% of all the cheese made in the United States. The principal market is at Plymouth. Buyers often complain at the time lost in going to an out-of-way place like Plymouth to transact business. With the erection of a large storage warehouse at Milwaukee, it is hoped that the cheese board will move there.

He: "That young brother of yours saw me kiss you just now. What should I give him to keep him quiet?"

She (absently): "He usually gets a quarter."

1,068.59 lb. butter, 24,062.3 lb. milk in 305 days as a junior four-year-old, champion Pennsylvania record in class.

In the next issue we plan to tell more of the performances of the cows and heifers at Berks Farm and only take space at this time to tell of the animals that will be seen at Pennsylvania's great winter fair. The Deysher exhibit will be headed by Sir Pietertje Chloe Ormsby and cattle breeders from all over the state will want to see this remarkably bred young bull selected by Mr. Deysher after visiting leading establishments in many states. Very few who will see this bull at Harrisburg have ever before had the privilege of seeing a bull brought from Minnesota to head a high class Pennsylvania herd. The sons and daughters of Sir Pietertje Chloe Ormsby are beginning to arrive at the farm and Herdsman Berry says that they are everything that could be asked for, big, strong-bodied calves, well developed, and very uniform in color, a little more black than white.

The decision to have a cattle exhibit at show time was made possible at the last minute by a change of plans of the show management. A meeting of the directors of the Federation was called immediately and it was decided to take advantage of the opportunity and to have on display a Holstein exhibit that would show the producing capacity of the breed. If you are able to get away from home be sure and see this great show and take in the Holstein events of the week.

TO MAKE MILWAUKEE A DAIRY CENTER

Wisconsin dairymen aim to make Milwaukee the greatest concentration and distributing point for dairy products in this country. They recently formed the Greater Wisconsin Association and one of the first moves will be to build a \$2,000,000 storage warehouse in which dairy products can be stored for curing and, if need be, to keep them off the market if low prices temporarily prevail.

T. H. Campion, principal of the Milwaukee County Farm School, has been appointed Executive Secretary and General Manager. He is chairman of the National Dairy Club of Wisconsin, president of the Wisconsin Agricultural Experiment Association and was formerly district supervisor of county farm agents.

It is claimed that Wisconsin produces 74% of all the cheese made in the United States. The principal market is at Plymouth. Buyers often complain at the time lost in going to an out-of-way place like Plymouth to transact business. With the erection of a large storage warehouse at Milwaukee, it is hoped that the cheese board will move there.

He: "That young brother of yours saw me kiss you just now. What should I give him to keep him quiet?"
She (absently): "He usually gets a quarter."

Legal Action to Stop Extravagance, Mismanagement and High Fees

SUPREME COURT: COUNTY OF ERIE.

George E. Stevenson, Frank W. Kehl, Charles L. Couch, John T. Shanahan, Clayton E. Bray, Ford W. Hudson, Ray Tomlinson, Philip Rupright, C. A. Snow, W. E. Stephenson, L. P. Rupright, Din. Postlewaite, Robert Winship, Glenn Spencer, W. L. Young, Arch W. Miller, R. Bruce Williams, A. J. Miller, Jay E. Miller, S. Blaine Lehman, D. C. Snider, L. E. Singer, Wade H. Barnes, Julius C. Fish, A. E. Robinson, C. P. Omwake, Charles B. Nigh, Cyrus Stouffer, Clarence V. Eldridge, J. Fred Roulette, R. B. Rench, I. C. Barr, S. E. Speck, M. W. Hoch, H. M. Rowe, C. P. Snively, H. W. Small, T. W. McCleary, Frank R. Keller, Frank P. Coward, J. Fred Davison, Mark F. Bensley, John H. Caves, Charles H. Eldridge, J. S. Howard, F. R. Howard, J. A. Gsell, Henry Martin, R. A. Eldridge, Jonn M. Martin, Charles W. Wood, G. A. Spencer,

—against—

Holstein Friesian Association of America.

TO THE ABOVE NAMED DEFENDANT:

YOU ARE HEREBY SUMMONED to answer the complaint in this action and to serve a copy of your answer, or if the complaint is not served with this summons to serve a notice of appearance on the plaintiff's attorney within twenty days after the service of this Summons exclusive of the day of service. In case of your failure to appear or answer, judgment will be taken against you for default for the relief demanded in the complaint.

Trial to be held in the County of Erie, dated this 26th day of December, 1924.

GREENLEAF S. VAN GORDER,
Plaintiff's Attorney,
985 Ellicott Square,
Buffalo, N. Y.

First: That each of said plaintiffs are in good standing and entitled to all the rights, privileges and advantages of such membership and that all of the plaintiffs are united in interest.

Second: That the defendant, Holstein Friesian Association is a domestic corporation created by Chapter 333 of the laws of 1885 of this state, re-incorporated in the year 1914 pursuant to the membership Corporation law, the certificate of such re-incorporation being filed in the office of the Secretary of State, January 2, 1914, and that its principal place of business is in the city of Buffalo, Erie County, New York.

Third: That a copy of section 23 of the general corporation law is hereto annexed and marked Schedule "A". That a copy of section 26 of the general corporation laws is hereto annexed and marked Schedule "B". That a copy of section 48 of the membership corporation law as it stood prior to May 5, 1921, is hereto annexed and marked Schedule "C". That a copy of section 48 of said law as it stood from May 5, 1921 to May 3, 1923, is hereto annexed and marked Schedule "D". That a copy of said section 48 as amended May 3, 1923 and as it now stands is hereto annexed and marked Schedule "E". That a copy of the act to incorporate the defendant is hereto annexed and marked Schedule "F". That a copy of the certificate of reincorporation of the defendant is hereto annexed and marked Schedule "G". That each of said schedules is made a part of this complaint.

Fourth: That until and during October 1921 the bylaws of said association provided for voting in person or by proxy and that up to and including the month of June, 1921, at all meetings of the association, all voting was in person and by proxy. The annual meeting for 1921 was held at Syracuse, New York in the month of June.

Fifth: That in the month of October, 1921, a special meeting of the association was held at the city of St. Paul, Minnesota at which meeting a delegate system was adopted that from and after said St. Paul meeting all voting has been done pursuant to such delegate system and no voting has been done in person or by proxy. That there are now over 23,000 mem-

bers of the association some of whom reside in each state of the Union and also in some parts of Canada and that there are upwards of 1,200,000 of registered Holsteins in the United States.

Sixth: That the annual convention in June 1922 was held at Kansas City, Missouri and upon information and belief plaintiffs allege that no delegates or members were present from Alabama, Florida, Georgia, Idaho, Kentucky, Louisiana, Tennessee or Utah, and that one John F. McCarthy, a member of the association from Texas was present and that he was given a seat among the delegates without the right to vote. That there were elected to attend such annual convention, 136 delegates and that there were present and voting at such convention 75 delegates only. That in 27 districts no nomination of delegates were made and that these 27 districts under the bylaws were entitled to 31 representatives. That at such convention directors were elected and a resolution was passed clothing the board of directors with power to employ a secretary of the association and a superintendent of advanced registry.

Seventh: That the annual convention for the association of 1923 was held at the city of Cleveland on the 6th day of June 1923. That by the delegate system so adopted as aforesaid at St. Paul, 136 delegates were to be elected. As a matter of fact only 120 were elected, and but 84 were present. That the states of Alabama, Arizona, Arkansas, Florida, Georgia, Idaho, Louisiana, Montana, Nevada, New Hampshire, New Mexico, North Carolina, North Dakota, Oklahoma, Rhode Island, South Carolina, Tennessee, Texas, Utah, West Virginia, Wyoming and Colorado were not represented. That at such convention directors were elected and other business transacted.

Eighth: That the annual convention for 1924 was held at Richmond, Virginia, in the month of June. At that convention 74 delegates only were present, they representing 23 states and Canada. That the convention was conducted under the delegate system adopted at St. Paul in October, 1921, and that the place for the holding of the convention for 1925 was fixed at Grand Rapids, Michigan, that directors were elected, resolutions were adopted and business transacted.

Ninth: That the adoption of the delegate system at the special meeting at St. Paul in 1921 was without the state of New York, was in contravention of the laws of this state and of the charter of the association and that such system deprives members of the association of the right to attend an annual meeting and vote either in person or by proxy and was ultra vires, irregular, illegal and void.

Tenth: That all the acts and proceeding of the annual convention held at Kansas City in June, 1922, were because of the operation of the delegate system and because of the deprivation of the right of any member to vote in person or by proxy for directors and secretary irregular, illegal and void.

Eleventh: That the convention so held at Cleveland, Ohio in June 1923 under such delegate system and plan of voting deprived members of the association of their rights and privileges to attend and vote or from executing a proxy which could be voted. That a member who attended personally could only vote if he had given the committee on credentials of the association and the directors notice of his intention to attend, and that the operation of such delegate system amounted to disfranchisement of a majority of the members of the association.

Twelfth: That the convention for the year 1924 was held at Richmond, Virginia, during the month of June and was conducted under the delegate system and that directors were elected, resolutions adopted, business transacted and Grand Rapids, Michigan was selected for the annual convention in June, 1925.

Thirteenth: That prior to May 5, 1921, no meeting of the association could be held outside the state of New York. That on that day Chapter 577 of the laws of 1921 of this state went into effect providing that meetings of the association could be held outside the state of New York. That on the

3rd day of May, 1923, Chapter 327 of the laws of this state went into effect and telegraphic and written notice thereof and that the association could not legally meet without this state, was immediately and on that day given to Frederick L. Houghton, Secretary of the Association, by a member of the association and that the association could not legally hold meetings or conventions outside the State of New York.

Fourteen: The plaintiffs further show that up to and on or about June, 1919, the fees to be paid the secretary of the association on the sale and transfer of any animal, for a transfer certificate, was the sum of twenty-five cents, and that under the careful and prudent management of the secretary and superintendent of Advanced Official Registry, the surplus fund of the association had grown to \$347,000; that at that time the fees for such transfer were increased to one dollar, which at once became a grievous and oppressive burden upon the small farmer or practical dairyman. That previous to and at the annual meeting at Syracuse, New York in June, 1921, a determined effort among the entire membership was made against such excessive fee, with the result that by an overwhelming majority by personal and proxy vote, namely in a vote of 13,331 by a majority of 2,253 votes, such fee was reduced to fifty cents. That thereafter and on or about the month of June, 1922, at the Kansas City meeting for the purpose of creating a so-called extension service, and entrenching and perpetuating themselves in the management and control of the affairs of the association, the then board of directors by and through a vote of the delegates present again raised such transfer fees to one dollar and a half. The plaintiffs further allege upon information and belief that over twenty-two thousand members of the association are plain practical everyday farmers, who live on their own farms, do a part, if not all of the actual labor thereon. That there are some of the members of the association who are men of great wealth, prominent politically and socially in business enterprises and circles, and it is from this class of the membership that the present board of directors and some of the officers are made up. That by and through the so-called extension service state associations in several of the states were formed each association has been placed in charge of a man who for a paid salary has looked after such extension service and managed the same in such a manner under the direction of the executive committee of the defendant as to safeguard and protect the interests of the said board of directors, in a political way, to the end that their management and control has been perpetuated and entrenched. That because of such great expense attendant upon such extension service, or propaganda, it became not only necessary to increase such transfer from fifty cents to one dollar and a half, but also the same coterie of gentlemen farmers composed of Holstein-Friesian cattle merely because of a hobby or a fad, and not because it was necessary for their livelihood, from their viewpoint of self preservation, decided that it was necessary to encroach upon the surplus funds of the association, which on the first day of June, 1923, amounted to \$459,749.54, and they served notice upon the secretary, and he, as in duty bound, served notice upon the membership that a motion would be made at the annual convention in Cleveland to take \$93,000 out of such reserve fund and expend it in so-called extension service, with the result that \$47,000 or more was actually taken from said reserve fund and was devoted to the ostensible purpose of benefiting the breed through the operation of the so-called extension service a certain portion of said one dollar and fifty cents transfer fees and the accumulations therefrom, namely, fifty cents on each transfer, is made payable and paid to organizations formed in various states for the purpose of the so-called extension service, with the result that a half dozen of the states which have greater membership than others received a very large proportion of one-third of such fees, which are again used in an effort to perpetuate this same coterie of gentlemen farmers, in their control of the association. The plaintiffs allege that no benefit what-

ever accrues to any member of the association from this so-called extension service, except those few "gentlemen farmers, politicians and business men," above noted. That the funds of the association are squandered the reserve fund is being depleted from year to year, the association has been operated at a loss during each of the last three years, and unless the extravagance of the present board of directors is checked and stopped the association will become insolvent.

Fifteen: The plaintiffs further allege that the increase of the transfer fee to one dollar and fifty cents and the diversion of fifty cents thereof from the treasury of this association into the hands of these so-called state associations to expend as they see fit, is in contravention of the letter and spirit of the articles of the association or charter of this association and in contravention of the laws of this state, ultra vires, illegal and void. That showing how easily the affairs of the association are controlled, it is only necessary to point to the attendance of the 1922 convention at Kansas City, when only seventy-five delegates were in attendance, and to the 1923 convention in Cleveland when only eighty-four delegates were in attendance. The convention at Richmond, Virginia in 1924, where only seventy-four delegates were in attendance; these delegates were selected each year by these state organizations of this so-called extension service, the leaders of which are always selected and approved by the executive committee of this same political board of directors, and in this connection your petitioners allege that in the final analysis of the action of the board of directors, with reference to these transfer fees, and to the treasury surplus, it amounts practically to a looting of the treasury and is not in the best interests of the association nor the great membership thereof, scattered throughout the United States. And your petitioners further allege that the increase of such transfer fee to one dollar and fifty cents was irregular and illegal, and that such transfer fee is of right and should be at the rate of fifty cents for each transfer as fixed and determined at the Syracuse meeting in June, 1921. That during the five years or six years last past large sums of money, amounting to many thousands of dollars have been illegally and wrongfully withdrawn from the Treasury of the association and paid to officers and directors of the association in violation of law and of the constitution and bylaws of the defendant among which was \$12,000 paid to one D. D. Aitken as president for 1919-1920 and \$12,000 paid him while president 1920-1921 in fictitious, ostensible, capacity as director of extension service, and among which was many thousands of dollars paid to James A. Reynolds a director and chairman of the executive committee, during the year above named and every year thereafter and that said Reynolds is now Treasurer of the defendant and also drawing the salary of that office. That a majority of the present board of directors have constituted a majority of the board of directors since the year 1919. That so reckless have the directors become in the management of the affairs of the defendant that the expenditures for 1923-1924 exceed those of 1919-1920 by upwards of \$329,924.00. In fact the directors have gone to such lengths in their extravagance that they have made the defendant a purely business corporation instead of a membership corporation confining its activities as contemplated by its charter to registering and transferring the cattle and maintaining the purity of the blood of the breed. The plaintiffs further show that the total earnings of the defendant for the year

ending April 30, 1919 were:	\$317,595.87
Total operating expenses	\$256,811.37
Net Profit	\$60,784.50
That for the year ending Dec., 1923	
Total operating expenses were	\$586,736.22
Total receipts	\$525,916.67
Net loss	\$60,819.55
In 1919 the defendant issued 97,392 transfers. In 1923	

it issued 91,665 transfers. In 1919 it issued 90,887 registration certificates.

In 1923, 115,132.

In 1919 the defendant received, 3,198 applications for membership.

In 1923 it received 1,754 only.

Sixteen: That the principal place of business as stated in the charter of the defendant, is at Buffalo, New York, a very central location for the annual meetings of its members with relation to the Holstein-Friesian interests in the United States. That taking the country as a whole the interests of the members would be better served by the holding of the annual meetings there rather than by holding them alternately in different states of the Union.

THE PRINCIPAL REASON FOR HOLDING YEARLY MEETINGS OR CONVENTIONS IN LARGE CITIES OF DIFFERENT STATES OF THE UNION HAS BEEN FOR THE BENEFIT OF THE SAME COTERIE OF WEALTHY GENTLEMEN FARMERS SO THAT THEY MIGHT HOLD AN ANNUAL SALE OF THEIR VALUABLE CATTLE IN CONNECTION WITH SUCH ANNUAL CONVENTION. THE DEFENDANT PAYS THE OFFICERS AND THE MEMBERS OF THE BOARD OF DIRECTORS ALL THEIR EXPENSES WHILE ATTENDING THE CONVENTIONS OR ANNUAL MEETINGS. THE EXTENSION SERVICE WRITES UP THEIR ADVERTISEMENTS OF THE CATTLE THEY DESIRE TO SELL AND PAYS THE ADVERTISING BILLS OUT OF THE TREASURY OF THE DEFENDANT, WHILE THE PLAIN ORDINARY DIRT FARMER WHO IS UNABLE TO FIT UP OR OWN A HIGH GRADE CLASS OF CATTLE FOR THESE ANNUAL SALES OR TO PAY THE EXPENSE ON SHIPMENT OF CATTLE, PAYS HIS OWN PERSONAL EXPENSES, ALL OVER THE UNITED STATES, IS STILL PENALIZED FOR THE BENEFIT OF COMPARATIVELY A FEW, BY BEING COMPELLED TO PAY EXCESSIVE REGISTRATION AND TRANSFER FEES WHICH ARE FIXED AND DETERMINED BY THIS SAME COTERIE OF POLITICAL, GENTLEMEN FARMERS.

THAT THESE PUBLIC SALES HAVE BEEN SO FEATURED BY THE SO-CALLED EXTENSION SERVICE OF THE DEFENDANT, AT THE EXPENSE OF THE DEFENDANT BY THE PROPAGANDA AND THE ATTENDING DRAFT UPON ITS TREASURY THAT IT HAS ASSUMED THE MAGNITUDE OF A PUBLIC SCANDAL TO THE GREAT DETRIMENT AND LOSS OF THE ASSOCIATION.

Seventeen: That the convention of June, 1923, held at Cleveland, Ohio, and all its acts and resolutions, and the convention held at Richmond, Virginia, June, 1924, and all its acts and resolutions were in contravention of the laws of this state, irregular, illegal, ultra vires, null and void.

Eighteen: That while by the act of incorporation of the defendant the principal office of the defendant is deemed to be located within this state, yet the incumbents of the different offices all reside without the State of New York, to wit: The President in Illinois, the Vice President in Pennsylvania, the Secretary in Vermont, the Treasurer in Ohio and the Superintendent of Advanced Registry in Wisconsin and the plaintiffs allege upon information and belief that all of the funds of the defendant have been withdrawn from the State that while in name it is a domestic corporation, it has been designedly made in fact a foreign corporation seeking to evade the provisions of the laws of this state, and while in name it is a membership corporation, yet in fact it has designedly been made a business corporation exploited for the sole purpose of creating and fitting offices by the present board of directors and their satellites at large salaries with the result that the resources of the defendant are being rapidly depleted.

WHEREFORE the plaintiffs pray for a decree and judgment of this court holding,

First: That the special meeting of the defendant at St. Paul, Minnesota in October, 1921 and all its acts and resolutions because there was no authority for it under the statute law of this state nor under the constitution or bylaws of the defendant, be decreed null and void and of no effect.

Second: That the convention held at Kansas City, Mo., and all its acts and resolutions, because it was held and conducted under the delegate system of voting was null and void and of no effect.

Third: That the convention held at Cleveland, Ohio in June, 1923 and all its acts and resolutions, because it was held without the state of New York and conducted under the delegate system of voting, was null and void and of no effect.

Fourth: That the convention held at Richmond, Virginia, in June 1924, and all its acts and resolutions, because it was held without the state of New York and conducted under the delegate system of voting, was null and void and of no effect.

Fifth: That the fixing of the fee at fifty cents for the transfer of any animal as fixed and determined at the annual convention in June, 1921, at Syracuse, N. Y. is still in full force and effect.

Sixth: That an interlocutory decree of this court be made providing for an examination of the books of the defendant by an expert accountant to be named by the court, for the purpose of ascertaining the exact financial condition of the defendant.

Seventh: That the resolution providing for a meeting at Grand Rapids, Michigan in June, 1925, is null and void.

Eighth: That a special meeting be held in New York State, at a place to be appointed by the court, for the election of directors because of the failure to legally elect directors at the Cleveland convention in 1923, at the Richmond Convention in 1924, and the secretary give sixty days notice thereof, in writing to each member shall have the right to vote in person or by proxy.

Ninth: That the defendant be enjoined from any encroachment upon the reserve fund for the purpose of the so-called extension service or propaganda connected therewith, and from holding any meeting or convention outside of the State of New York.

Tenth: For such other different, or further relief as to the court may seem just and equitable together with the cost and disbursements of the plaintiffs herein.

GREENLEAF S. VAN GORDER,
Attorney for plaintiff,
985 Ellicott Square,
Buffalo, New York.

Hostess: "Did you ever try any of my biscuits, Judge?"
Judge: "No; I never did. But I dare say they deserve it."

DAUGHTERS OF WESTSIDE KING VALE 4th

We are overstocked. Can't you use a few of this Quality?

MENZO A. BROOKER

Chenango Co. New York

Herd under State and Federal Supervision.

GLENN GERMAN'S PET COW

Nearly all dairymen have a favorite cow, one they pet occasionally, because of some trait. She may be especially typy, or an extra-good producer, or she may always go to her stall and never give any trouble, instinctively seeming to know just what is expected of her or what her owner wishes her to do. Such cows seem to be almost human in their understanding and to be without that "streak of cussedness" sometimes found in humans as well as barnyard animals.

Dorothy Francine Johanna Lad, one of the handsome cows owned by Glenn German, of Cuba, New York is a special pet of her owner and it was all the more surprising to us to learn that he had consigned her to the sale of the New York State Association, which will be held at the State Fair Coliseum at Syracuse, January 14th and 15th. Maybe it was because Mr. German thought so much of this cow that he agreed to the request of the association representatives that he send

DOROTHY FRANCINE JOHANNA LAD AND GLENN GERMAN

her to the sale for Dorothy is the kind that a man hates to part with and likes to buy. Study her outlines and type as shown in the picture, notice her long, slender head and neck, her depth of body and evident dairy quality and note how confidently she stands by her owner to have her photograph taken, and you will join us in wondering why her owner promised to let her go.

Dorothy Francine Johanna Lad is by Donald Johanna Lad a grandson of King Korndyke Sadie Vale and Colantha Johanna Lad 8th. Her dam is a granddaughter of Brookside Pontiac Paul and traces to many old time famous animals. This dam was officially tested when nearly eleven years old and made 18.69 lb. butter in seven days. Dorothy was tested as a senior three-year-old and produced 20.36 lb. butter 476.4 lb. milk. She has a maternal sister, with 535.5 lb. milk, 23.05 lb. butter in seven days as a four-year-old.

December 30, 1924.

The Holstein Breeder and Dairyman,
Harrisburg, Pa.

Gentlemen:

Please excuse my delay in renewing my subscription. I intended to do so before, but kept putting it off on account of numerous duties that demanded attention.

I like the paper very much and heartily approve the stand you take in Holstein affairs.

It is indeed gratifying to read your magazine after having been disgusted with the ill-advised politics set forth in The Holstein-Friesian World.

MASSACHUSETTS BREEDER.

The illustration shows Mr. German in his working clothes just as if he were bringing Dorothy and her stablemates from the pasture to the barn. The farm buildings are in the background so you can learn something about the home from which Dorothy comes. In addition, the German herd is on the accredited list with its health vouched for by both state and federal veterinary authorities.

Teacher: "Now, Robert, what is a niche in a church?"
Robert: "Why, it's just the same as an itch any place else, only you can't scratch it as well."

The cows and heifers in this herd are bred to a son of KING SEGIS PONTIAC KONIGEN and DUTCHLAND PIETERTJE BEAUTY, an A.R.O. granddaughter of DUTCHLAND SIR PIETERTJE HENGERVELD and BEAUTY PIETERTJE BUTTER KING.

The first twenty-two sisters of my bull, tested for a year, average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision latest test CLEAN. Prices Reasonable.

THE PRACTICAL DAIRYMAN

CARE OF THE DAIRY BULL

Good sires are absolutely necessary to dairy farmers, as it is largely through the use of good sires that high-producing herds are built up. Once a dairyman has a good bull he should be given the care that will insure the greatest profit.

Bull calves to be raised for breeding purposes should be fed and handled much the same as heifers. If skim milk is fed—and it should be—it is advisable that after calves are three months old to give them a little more grain than the heifers get and to delay weaning from milk to 8 to 10 months. As a rule, bulls grow somewhat faster than heifers. This feeding enables them to attain their best size and development. Undersized bulls are seldom looked upon with favor. Bulls should be ready for light service at 10 or 12 months of age. From this time on the grain fed the bull may be much the same as that given the herd cows. Feed the bulls enough to keep them in vigorous physical condition, but not too fat, since this often causes sluggishness. This is especially true of old bulls and is very often caused by excessive flesh and lack of exercise. If the bull becomes too fat, cut down the grain and make sure he gets plenty of exercise.

The amount of grain will vary from 4 to 10 pounds daily, depending on the size and condition and the roughage fed. The following grain ration is a good one.

Ground corn	300 pounds
Ground oats	200 pounds
Wheat bran	200 pounds
Linseed meal	100 pounds

Ground oats are especially desirable for bulls. Cottonseed meal is not to be recommended unless in very small amounts. Such legume hays as alfalfa, soybeans and cow peas should be fed. These feeds are high in protein and mineral matter and are valuable for keeping heavily used bulls in ideal condition. From 10 to 12 pounds of hay should be fed daily, and where silage is available from 10 to 15 pounds may be fed. Dairy bulls should have plenty of water. This point is often neglected.

If bulls are to be profitable, they must be properly housed and exercised. It is a poor practice to keep a bull standing constantly in a small stall without exercise, as it may make him sterile and vicious.

A shed or barn opening into a lot or yard is a practical shelter for a bull. The shed may be left open on the south side, which enables him to go out and in at will.

Bull calves should be separated from the heifers before they are six months old, as they may begin to get heifers with calf.

Bulls are old enough for service at 10 to 12 months of age, but until they are 18 months old they should be bred to only a few cows. At two years of age, during the breeding season, he should be able to serve four or five cows a week without injury. A mature, well-fed bull could possibly serve 200 cows a year, if the cows were evenly distributed throughout the year. Under average conditions, however, when the breeding is not evenly distributed a bull should be allowed to care for 50 to 60 cows. In breeding cows, one service or leap is usually satisfactory.

A bull should never run with the herd because:

First, there is no way of telling what cows are safely with calf, and as a result, sterile cows may be kept in the herd when otherwise they could be disposed of. Also, cows that are shy breeders may not be discovered in time for proper treatment.

Second, there will be no way of telling when to expect the calves, so that cows may be milked right up to the time of calving. In order to best prepare a cow for her next milking period, she should be fattened somewhat. This can be done best when the cow is dried up for a period of about six weeks.

Third, if heifers run in the same pasture, they will be bred before they are sufficiently developed which results in small stunted cows.

Fourth, when allowed to run in the pasture, a bull will waste his vitality, because he will serve a cow a number of times.

A bull should always be regarded as dangerous, even though he may appear to be perfectly gentle. He should always be handled with a staff in preference to a rope or chain, as the attendant can keep him at distance with the staff.

A bull should have a ring put through his nose by the time he is a year old.

If the bull is to be kept in good breeding condition for a number of years, the following rules should be followed:

1. Give the bull plenty of exercise and allow him to have plenty of fresh air.
2. Feed the bull liberally, being sure that he secures sufficient protein in his ration.
3. Use the bull intelligently. Do not allow him to make more than four or five services in one week.—*Clemson College Dairyman.*

DOES FEEDING CABBAGE AND POTATOES AFFECT MILK

Cabbage and potatoes are not often grown for dairy feeds but in the cabbage growing sections in times of low prices the cow often consumes large quantities and many farmers feed some of their surplus small potatoes to their dairy animals. These feeds are sometimes blamed for taints in milk. The Bureau of Dairying has been conducting some experiments at Beltsville, Md., to determine how cabbage and potatoes affect flavor and odor and to learn in what quantities they may be fed and the milk handled so as to minimize objectional effects on the quality of the product. Conclusions are as follows.

When dairy cows consume an average of 14.3 pounds of cabbage one hour before milking, objectional abnormal flavors and odors are produced in milk.

Increasing the quantity of cabbage consumed from an average of 14.3 pounds to an average of 24 pounds increases to a marked degree the intensity of the abnormal flavors and odors produced in milk.

When dairy cows consume an average of 25 pounds of cabbage immediately after milking there will be few objectional flavors or odors in the milk.

Proper aeration reduces strong abnormal flavors and odors in milk caused by feeding cabbage, and some of the slightly abnormal flavors and odors may be eliminated.

The abnormal flavors and odors produced by feeding cabbage are slightly more pronounced in cream than in milk.

When dairy cows consume an average of 14.8 pounds of potatoes one hour before milking, slightly abnormal flavors and odors may be produced in the milk. They are very slight, however, and would seldom be perceived by the average consumer.

Increasing the quantity of potatoes consumed one hour before milking from an average of 14.8 pounds to an average of 29.3 pounds does not increase the abnormal flavors and odors produced in milk.

When dairy cows consume an average of 28.7 pounds of potatoes immediately after milking, no effect is produced on the flavor or odor of the milk.

CONCRETE FLOORS

A concrete floor is easy to keep clean and is not slippery if finished with a wood float. It is cold for the cows to lie on, however, unless kept well bedded with straw or similar material. A wooden overlay made of creosoted planks gives the cows the necessary insulation and when laid tight to the concrete is sanitary. Cork brick or creosoted wooden blocks are excellent but expensive. An earth floor, or a wooden one with space under it holding filth, is unsanitary.

Wisconsin Bulletin 369.

COLD WEATHER REQUIREMENTS

In most parts of the country the conditions under which milk is produced during the winter months are somewhat different from those encountered during the warm summer months. Whereas in summer the cattle are in the open most of the time, being in the barn only for milking, in winter the greater part of the time will find them in the barn. Under these conditions special attention should be given to those factors influencing the quality of milk that were not present during summer.

The health of the cattle is largely dependent upon proper ventilation. It is a common experience to find many stables with either too much or not enough ventilation during winter. Barns to be comfortable should be properly ventilated and at the same time not too cold. There are many inexpensive ways of admitting fresh air and leading off the impure air without sacrificing comfort. Fresh air and proper temperature are not antagonistic. Farmers' Bulletin 1393, "Principles of Dairy Barn Ventilation," gives specific directions on this matter. It will be sent free as long as the supply lasts. Write for it to the U. S. Department of Agriculture, Washington, D. C.

Clean cows are important in producing good-quality milk. When cows are stabled, more time and labor are necessary than under pasture conditions. This fact may properly be emphasized.

Poor-flavored milk may result from the method of feeding such feeds as silage, roots, kale, etc., during the winter. To be sure that such feeds will not unduly affect the flavor of the milk, feeding should be done within one hour after milking. Such practices will give better results than feeding before or at milking time. Flavors and odors of milk are very important factors in the commercial and economic phases of the dairy industry.

At this time of the year many producers may have abandoned the use of ice, or even cold water in cooling milk, thinking that the weather itself will sufficiently take care of the cooling. The use of a thermometer will show whether or not they are right. Prompt cooling of milk is important in the winter as well as in the summer.

CONCENTRATES AND ROUGHAGES

Concentrates are feeding stuffs of condensed nature, which are low in fiber and hence furnish a large amount of digestible matter. Examples of this class of feeds are the various grains, as Indian corn, wheat and oats, and milling by-products of high feeding value, as wheat bran, linseed meal, gluten feed, etc.

Roughages are the coarser feeding stuffs, which are higher in fiber and supply a lower percentage of digestible matter. Such feeds as hay, corn fodder, straw, and silage belong to this class. Some of the low-grade milling by-products, such as oat hulls, ground corn cobs, and peanut hulls are roughages, rather than concentrates, for they are largely fiber and furnish but little nutriment.

NUTRITIOUS AND REFRESHING

The Clemson College Extension Dairyman recently gave directions for the making of chocolate milk of which large quantities are used in the southern states. The chocolate syrup may be purchased they say or an excellent syrup can be made from the following recipe.

1 gallon water	2 teaspoons cream of tartar
2 pound chocolate	1-4 teaspoons cinnamon
12 pound sugar	8 ounces cornstarch
	2-4 ounces vanilla

Directions for mixing. Place sugar in dish or steam kettle. Add cream of tartar, cinnamon, cornstarch and mix together. Then pour in enough water to make a thick paste. Add chocolate, preferably broken in small lumps, and stir into the paste. Heat slowly and stir almost constantly. The chocolate will melt and mix with the sugar mixture to form a heavy dough. Gradually add the rest of the water (heated), stirring it in. Bring to boiling point. Set away in a covered can until ready for use.

For chocolate milk mix one part syrup with six to eight parts milk. The syrup and milk should be thoroughly mixed. This may be done in a milk can.

HARD MILKING

Hard milking is due to an obstruction of stricture, sometimes within the milk duct, but usually at the teat orifice. It may be brought about by a tenseness of the teat orifice, or by scar formation following injury of the teat.

There are on the market several types of teat dilators, any one of which may be of benefit in correcting this condition. The dilator may be inserted an hour or two before milking, but the instrument should be sterile and the teat thoroughly cleansed before the insertion. After milking, the affected teat should be massaged with petrolatum into which 10 per cent of the fluid extract of belladonna has been incorporated. The alternate use of the ointment and the dilator should be continued until the condition appears to be corrected.

When this treatment fails it may become expedient to resort to surgical measures for relief of the stricture, but this is done to better advantage after the cow has been dried off, involving a better prospect of prompt healing, and a less likelihood of causing a dangerous infection or a leaky teat. The instrument used for this operation is known as a teat bistoury, consisting of a small shaft containing a concealed blade. After the bistoury is thrust well into the teat the blade is uncovered and the instrument is rapidly withdrawn, thus severing the obstructing issues at one stroke. This procedure is usually repeated three or four times in each teat that is hard to milk, turning the blade at different angles each time. Great care must be exercised to have the instrument sterile for this operation, to avoid infection into the udder. A word of caution to be taken into consideration is that this operation may result in an excessively large teat orifice, and is sometimes productive of the unfortunate condition known as leaky quarter.—*Farmers' Bulletin 1422.*

HOME GROWN FEEDS

No system of livestock farming is profitable without an abundance of home-grown feeds. Especially does this apply to a sufficient quantity of home-grown roughages.

The dairy farmer is in a position to produce feeds necessary for the dairy herd cheaper than they can be purchased, because all feeds must be grown on some farm, in addition to the original farm cost, those that are purchased must be charged with transportation cost, milling, sacking, bailing, hauling, and the profits of several middlemen before they arrive at the farm where they are consumed by the dairy cow. The roughage and concentrate feeds that are most desirable for making suitable rations for the dairy cow are those crops which make a good system of crop rotation, which are soil builders, and which when fed to good dairy cows return the greatest profit per unit of feed grown.

In 1909 an 8-ounce packet of Sudan grass was sent to America from Khartum, Africa; a forage crop valued at nine million dollars is now produced from it in the United States.

THE PRACTICAL DAIRYMAN

CARE OF THE DAIRY BULL

Good sires are absolutely necessary to dairy farmers, as it is largely through the use of good sires that high-producing herds are built up. Once a dairyman has a good bull he should be given the care that will insure the greatest profit.

Bull calves to be raised for breeding purposes should be fed and handled much the same as heifers. If skim milk is fed—and it should be—it is advisable that after calves are three months old to give them a little more grain than the heifers get and to delay weaning from milk to 8 to 10 months. As a rule, bulls grow somewhat faster than heifers. This feeding enables them to attain their best size and development. Undersized bulls are seldom looked upon with favor. Bulls should be ready for light service at 10 or 12 months of age. From this time on the grain fed the bull may be much the same as that given the herd cows. Feed the bulls enough to keep them in vigorous physical condition, but not too fat, since this often causes sluggishness. This is especially true of old bulls and is very often caused by excessive flesh and lack of exercise. If the bull becomes too fat, cut down the grain and make sure he gets plenty of exercise.

The amount of grain will vary from 4 to 10 pounds daily, depending on the size and condition and the roughage fed. The following grain ration is a good one.

Ground corn	300 pounds
Ground oats	200 pounds
Wheat bran	200 pounds
Linseed meal	100 pounds

Ground oats are especially desirable for bulls. Cottonseed meal is not to be recommended unless in very small amounts. Such legume hays as alfalfa, soybeans and cow peas should be fed. These feeds are high in protein and mineral matter and are valuable for keeping heavily used bulls in ideal condition. From 10 to 12 pounds of hay should be fed daily, and where silage is available from 10 to 15 pounds may be fed. Dairy bulls should have plenty of water. This point is often neglected.

If bulls are to be profitable, they must be properly housed and exercised. It is a poor practice to keep a bull standing constantly in a small stall without exercise, as it may make him sterile and vicious.

A shed or barn opening into a lot or yard is a practical shelter for a bull. The shed may be left open on the south side, which enables him to go out and in at will.

Bull calves should be separated from the heifers before they are six months old, as they may begin to get heifers with calf.

Bulls are old enough for service at 10 to 12 months of age, but until they are 18 months old they should be bred to only a few cows. At two years of age, during the breeding season, he should be able to serve four or five cows a week without injury. A mature, well-fed bull could possibly serve 200 cows a year, if the cows were evenly distributed throughout the year. Under average conditions, however, when the breeding is not evenly distributed a bull should be allowed to care for 50 to 60 cows. In breeding cows, one service or leap is usually satisfactory.

A bull should never run with the herd because:

First, there is no way of telling what cows are safely with calf, and as a result, sterile cows may be kept in the herd when otherwise they could be disposed of. Also, cows that are shy breeders may not be discovered in time for proper treatment.

Second, there will be no way of telling when to expect the calves, so that cows may be milked right up to the time of calving. In order to best prepare a cow for her next milking period, she should be fattened somewhat. This can be done best when the cow is dried up for a period of about six weeks.

Third, if heifers run in the same pasture, they will be bred before they are sufficiently developed which results in small stunted cows.

Fourth, when allowed to run in the pasture, a bull will waste his vitality, because he will serve a cow a number of times.

A bull should always be regarded as dangerous, even though he may appear to be perfectly gentle. He should always be handled with a staff in preference to a rope or chain, as the attendant can keep him at distance with the staff.

A bull should have a ring put through his nose by the time he is a year old.

If the bull is to be kept in good breeding condition for a number of years, the following rules should be followed:

1. Give the bull plenty of exercise and allow him to have plenty of fresh air.
2. Feed the bull liberally, being sure that he secures sufficient protein in his ration.
3. Use the bull intelligently. Do not allow him to make more than four or five services in one week.—*Clemson College Dairyman.*

DOES FEEDING CABBAGE AND POTATOES AFFECT MILK

Cabbage and potatoes are not often grown for dairy feeds but in the cabbage growing sections in times of low prices the cow often consumes large quantities and many farmers feed some of their surplus small potatoes to their dairy animals. These feeds are sometimes blamed for taints in milk. The Bureau of Dairying has been conducting some experiments at Beltsville, Md., to determine how cabbage and potatoes affect flavor and odor and to learn in what quantities they may be fed and the milk handled so as to minimize objectional effects on the quality of the product. Conclusions are as follows.

When dairy cows consume an average of 14.3 pounds of cabbage one hour before milking, objectional abnormal flavors and odors are produced in milk.

Increasing the quantity of cabbage consumed from an average of 14.3 pounds to an average of 24 pounds increases to a marked degree the intensity of the abnormal flavors and odors produced in milk.

When dairy cows consume an average of 25 pounds of cabbage immediately after milking there will be few objectional flavors or odors in the milk.

Proper aeration reduces strong abnormal flavors and odors in milk caused by feeding cabbage, and some of the slightly abnormal flavors and odors may be eliminated.

The abnormal flavors and odors produced by feeding cabbage are slightly more pronounced in cream than in milk.

When dairy cows consume an average of 14.8 pounds of potatoes one hour before milking, slightly abnormal flavors and odors may be produced in the milk. They are very slight, however, and would seldom be perceived by the average consumer.

Increasing the quantity of potatoes consumed one hour before milking from an average of 14.8 pounds to an average of 29.3 pounds does not increase the abnormal flavors and odors produced in milk.

When dairy cows consume an average of 28.7 pounds of potatoes immediately after milking, no effect is produced on the flavor or odor of the milk.

CONCRETE FLOORS

A concrete floor is easy to keep clean and is not slippery if finished with a wood float. It is cold for the cows to lie on, however, unless kept well bedded with straw or similar material. A wooden overlay made of creosoted planks gives the cows the necessary insulation and when laid tight to the concrete is sanitary. Cork brick or creosoted wooden blocks are excellent but expensive. An earth floor, or a wooden one with space under it holding filth, is unsanitary.

THE FARMER AND HIS LEAD PENCIL

By R. V. GUNN,

Director Wisconsin Banker-Farmer Exchange

Have you ever thought of an ordinary lead pencil as a farm implement? It isn't so absurd as you might think. Even if it is only a stubby, worn down little pencil, you may find it mighty useful in keeping a record of money paid out, money coming in, and several other transactions that are a part of operating a farm. The little old lead pencil can help the farmer to keep a complete history of the business side of his farm operations, and many farmers are beginning to discover that the information contained in a record of this kind is measured in dollars and cents—and more of them on the profit side.

FARMER A BUSINESS MAN

Farmers, are, or should be, business men. But can you imagine a city business man—a merchant for instance—who would let his store go along with the same old equipment that he bought for it about 15 years ago? The successful merchant keeps every department of his store bright and new looking, with some of the newest tricks for displaying his goods, new little machines for measuring yard goods, and other little time saving devices. And most merchants now-a-days have delivery trucks, and many other kinds of equipment that make for efficiency. And do they do all these things just for the looks of it? Of course not. Most hard-headed business men don't care a rap for appearances, except from a business standpoint. They do these things because they have kept records of the various departments of their business which would show that an improvement in one department made that department more profitable right away, while perhaps an improvement made in another department was too expensive for the business that department did. And so, by learning by experience that is all down in black and white, the city business man can be successful. The same thing is true of the farmer. The farm is a multitude of business units like any big department store, and it should be managed just

as carefully, and with just as much attention to the financial records as a big business or any other kind.

NECESSARY RECORDS NOT COMPLICATED

Most farmers know this. We aren't telling them anything when we say they ought to keep farm records. But most of them don't do it. Why? Because they feel that it takes too much time. "Why, I could run another farm in the time that it would take me to keep books for this farm," insisted one farmer. And most of them believe it is too hard a job to tackle along with the other work of farming. So it is evident that farm "bookkeeping" should not be real "bookkeeping." It should be simple above everything else, and need include no frills.

BETTER CHANCE FOR LOAN

A farmer needs, most of all, a statement of his inventory values, and a memorandum of his expenses and receipts. When a farmer steps into his bank to borrow some money, the first thing the banker asks for is a financial statement. Here is where the inventory records are needed. They serve as a basis for credit. The man who can accurately present a systematic statement of what he owns, how much he owns, and what it is worth, has made his first favorable impression on the banker. In addition to his net worth, if a man can show from his record of receipts and expenses how much he made from his farm during the year just past, which reflects on his own business ability, he makes a second favorable impression on his banker. It must be remembered that banks loan money on a man's character and his business ability, as well as upon financial backing.

RECORDS AID INTELLIGENT MARKETING

Orderly and intelligent marketing is of outstanding importance. How much more intelligently farmers could go at this problem if they knew how much their product cost them and, hence, how much they must receive for it in order to break even. Cost records will help them here.

The farmer's labor income, as revealed by his yearly financial and inventory summary, serves as a milestone for his year's

progress. A comparison year by year, stimulates interest and makes it possible to profit by mistakes. Record keeping and what it reveals can be made a real game.

SIMPLIFY INCOME TAX REPORTS

And the farmer wants to pay an income tax. Certainly he does—If he can get the income that will justify paying it. If he does not get his income, he should study out the reasons for the lack of business success. When it comes to filling out the income tax blanks, why should the farmer have such a horror of the job? Why should the banker spend hour after hour, helping the farmer, or why should the farmer employ a lawyer to figure out his returns? This trouble and worry could be materially lessened and the income tax report made out in comparatively short time if farm accounts were kept.

ESSENTIALS OF GOOD FARMING

Last, but not least, is the necessity of knowing where we stand. No business which has nearly as much capital invested as an ordinary farm has, expects to prosper without a definite knowledge of what is happening to it financially. A farmer must know where his profits come from, what phase of the farm business does not pay, and where changes must be made to make them pay. Record keeping is an essential part of good farm management.

The Wisconsin Bankers' Association and the Wisconsin College of Agriculture are working hand in hand to promote better business methods and more profitable farming. See your banker or your county agent about securing a farmer's account book. Now is the time to get your new book, enter your initial inventory, and be ready to study your 1925 farm business in an orderly manner.

And dig up a couple of good sharp lead pencils.

Co-Ed: "How long were you in the far north?"

Freshie: "I wasn't in the far north."

Co-Ed: "Excuse me; I thought you were dancing with your snowshoes on."

WALDRON FARM SALES

South Otselic, N. Y., Dec. 26, 1924.

The Holstein Breeder and Dairyman,
Harrisburg, Pa.

Gentlemen:

I thought you might like to hear of the recent sales from Waldron Farm.

I sold a bull calf, sired by my senior herdsire, King Sylvia Pontiac Pietje, to George E. Dickinson of Remsen, N. Y. The dam of this calf is a show cow, a granddaughter of K. P. Pontiac Lass. To Will Pike of North Norwich, a bull calf whose two nearest dams averaged in every day work nearly 90 lb. milk.

To George R. Brown of Georgetown, N. Y., a bull calf out of a daughter of King Sylvia Pontiac Pietje and sired by Calamity Segis King De Kol. The dam of this calf, although being but little past two years old is giving nearly 50 lb. milk a day on twice-a-day milking. She is a show cow and a splendid milker. Her calf should do them a lot of good. He traces three times to May Echo Sylvia, once to De Kol Plus Segis Dixie and once to K. P. Pontiac Lass. Also to Earl D. Landers of Upper Lisle, N. Y., four young cows and a heifer calf. Two of these cows are by Judge Lyons Walker and one by a 32 lb. sire. These are all of splendid type and large producers. Mr. H. H. Benson of Beaver Meadow, N. Y., also just purchased two young cows.

Next week I expect to ship two heifer calves to Ohio and two to the northern part of this state.

There seems to be a great demand for large producing cows of good type and breeding, also for heifer and bull calves bred in the May Echo Sylvia line.

Yours truly,
(Mrs.) MAUD DWIGHT.

"Pa sent me for a piece of rope like this."

"How much does he want?"

"Just enough to reach from the calf to the fence."

To avoid inbreeding we offer our four-year-old
herdsire

King Sadie Vale Hengerveld Ormsby

His sire was KING SADIE VALE HENGERVERD—
You know what his daughters are doing. He was
by King Korndyke Sadie Vale from a 37-lb. three-
year-old daughter of Sir Veeman Hengerveld.

His dam, S. V. H. EFFIE, is a daughter of Sir
Veeman Hengerveld with a year record of 1,085.60
lb. butter, 24,050 lb. milk.

Come and examine this bull. See his offspring
in 4 good herds. His daughters are producers, milk-
ing from 40 lb. to 50 lb. daily at first freshening.

He is on the Accredited List and right in every
way.

MILLER BROTHERS

Clarks Summit,

Penna.

TRAVERSE ECHO SYLVIA KING

the head of our ACCREDITED Herd, is not only a
bull of splendid individuality but is also backed by
Wonderful producers.

His dam, (twice over 30-lb.) has a 7-day official
record of 33.27 lb. butter, 736.4 lb. milk averaging 102
lb. for 30 days. She has a 32 lb. and a 35 lb. daughter.

Five of his 7 nearest dams have one or more 30-
lb. daughters. His dam and both his granddams have
daughters that each averaged 5 lb. butter a day for
a week's time.

His three nearest dams have 7 day records aver-
aging 33.03 lb. butter; his seven nearest dams average
32.72 lb.; his fourteen nearest tested dams average
30.175 lb.

And he heads a herd of producers, cows that make
good returns for their care and feed.

Come and look him over and you will want one or
more of his offspring or else a good cow bred to him.

W. B. KENNEDY & SON,
Bradford Co., WYALUSING, PA.

RO-AN HERD Offers A TEN MONTH OLD BULL

Sire: MONARCH BEAUTY, a double grand-
son of King of the Pontiacs. His two grand-
dams average over 600 lb. milk, 33 lb. butter in
7-day official work.

His first two daughters average 20.95 lb. but-
ter, 434.2 lb. milk. Both tested as junior two-
year-olds.

Dam: JOHANNA BETSY BERYL. Calving
as a junior two-year-old heifer, she produced
19.03 lb. butter, 442.9 lb. milk in 7 days; in C.
T. A. work she made 363.5 lb. fat, 9,892 lb. milk,
so you can see her quality.

This bull is a fine individual with a long,
straight back. He is evenly marked, well grown,
and is now ready for light service.

Price only \$80

ROY W. CHAMBERLAIN
ALLEGANY COUNTY CANAHEA, N. Y.
Keep in mind that RO-AN Herd is ACCRED-
ITED and has never housed a Reactor.

MAPLE GROVE YBMA GLISTA

His dam, MAPLE GROVE SPOFFORD
PRINCESS, 641 lb. milk, 27 lb. butter in a
week, was bred, raised and tested here.

His sire, MODEL DANIEL GLISTA,
was by a great show bull and from a 31-lb.
Glista cow from a 34-lb. Glista dam.

Yet you can buy his sons from us at
prices ranging from \$50 upwards; his
daughters from \$65 upwards.

The dams are big producing cows and
the entire herd is ACCREDITED.

MAPLE GROVE STOCK FARM

F. Jones, Manager

CENTERVILLE, PA.

CLUB ACTIVITIES

HENRICO COUNTY BREEDERS MEET

James A. Loving of Richmond, Virginia, president of the Henrico Holstein Club, presided at a meeting of the Henrico County breeders on the night of December 23rd at which time a very enjoyable Christmas party was indulged in by members and their wives. This meeting was held at the home of Mr. L. S. Ace, Secretary of the Club. Mr. Ace proved himself a real host. Bountiful refreshments were served and entertainment of dance and song was provided by Miss Cristobel LaBerne an accomplished artist.

The business session proved just as interesting as the social part because every breeder present showed that he was interested in the development of Holsteins in this section.

Mr. H. W. Gills led a discussion as to the advisability of urging the Virginia Holstein-Friesian Club to employ a man to give his entire time to the development of the breed in Virginia. A committee consisting of Messrs. Gills, Ace and Kirby was named to work up recommendations to be submitted to the Virginia Holstein-Friesian Club at their annual meeting which will be held in Roanoke, Virginia in January.

The matter of the Club buying an outstanding bull was discussed and the same Committee was named to work out plans to be presented at the next meeting, which will be held at the home of the President on January 13th.

Everyone reported a great demand for cattle of good type and breeding and the Club voted it was the most successful meeting they had held for sometime.

W. L. KIRBY.

BREEDERS HOLD JOINT MEETING

A joint meeting of the Guernsey and Holstein Breeders Associations was held at Omro, Wis., December 4. W. P. Bussey of Omro, and County Agent Sell of Oshkosh, were the principal speakers, relating incidents of their trip to Mississippi to investigate prospects for a market for Wisconsin dairy cattle.

W. C. Springgate of Oshkosh talked on the outlook for business for the coming year, basing his prediction on the Babson reports. Every indication points toward a good year.

The two organizations had separate business meetings. Three per cent of the selling price of cattle sold through the efforts of the Holstein Breeders Association will be charged owners.

The board of directors, who will elect the officers of the Winnebago County Holstein Breeders' Association, were chosen as follows: F. H. Scovel, Butte des Morts; H. L. Ellis, Eureka; C. E. King, Omro; Arnold Petrick, Black Wolf; Hugo Merk, Algome; Louis Sorenson, Allenville; and Earl Hughes, Neenah.

HEAR GOOD TALKS

The Columbia County Holstein Breeders Association met at Poynette, Wis., December 16th. After a banquet there was a program, the principal feature of which was an address, "Milk as Food" by Dr. Hugh Caldwell, now of Columbus. The Doctor was raised in Poynette but this was his first appearance before an audience in his home town and he has made an extensive study of his subject. F. E. Bell, of Columbus spoke on Calf Clubs and superintendent S. C. Cushman, of Wyocena told why Holstein cows were kept on the county farm.

LEADERS OF THE WAUSAU CLUB

At the annual meeting of the Wausau Holstein club recently held at Wausau, Wis., the following officers were elected: president, Alex Trantow of Maine; vice-president, A. G. Melang of Stettin; secretary-treasurer, John Heil, Jr. The directors are Dan Albrecht, L. W. Gleason, D. C. Olmstead, R. E. Golisch, Wm. Runzheimer, Mrs. Elizabeth Coleman, Andrew Pogel and John Huckbody.

WANT HIGHER DAIRY TARIFF

Members of the Holstein Breeders Association of Manitowoc, Wis., have addressed a memorial to Senators La Follette and Lenroot and Congressman Lampert, asking them to use their influence to raise the tariff on foreign dairy products, claiming the importation of butter and cheese from other countries especially Canada and Italy is ruining the Wisconsin dairy industry. The petition says that many farmers are quitting their farms owing to high prices for labor and taxes, combined with poor returns for their products. It urges action during this session of Congress.

The Association joined the Guernsey breeders in asking that the county agent be continued for another year. It was proposed to take a county wide referendum on this subject but it was pointed out that the county board has already voted the money to continue the office of county agent for the two year period ending July 1927 and that a special vote would cost the taxpayers approximately one million dollars.

Old officers of the association were elected at the meeting as follows: president, Theodore Pritzl; vice-president, Oscar Witte; secretary, Charles Hampke; treasurer, Charles Kenop; directors, Benard Fetzer, Dave Lorfeld, C. L. Babcock, Elmer Thompson, and H. H. Bohne.

The meeting, after discussion went on record as favoring a Manitowoc County herd at the state fair next year.

ON WASHINGTON ISLAND

Washington Island, Wis., is the home of a Holstein breeding community and the breeders held a meeting in Nelson Hall, December 16 and elected officers for the coming year as follows: president, Nels Nelson; Ole Erickson, George Madison, George Hansen and Jens Jansen, vice-presidents in order respectively. Charles Hansen, secretary; and Charles Schmidt, treasurer. Treasurer Schmidt reported that the association had paid for its three bulls with the exception of a very small amount and was in excellent financial condition. County agent Bailey urged the raising of enough alfalfa, corn, oats and barley on each farm to eliminate the need of purchasing feed. Professor E. J. Delwiche of the State Experiment Station discussed cash crops and said there was a real opportunity in growing canning pea seed. Several farmers on the Island will receive seed from the experiment station at market price and Mr. Bailey and Professor Delwiche will inspect the fields next summer and remove plants not true to name.

EAU CLAIRE BREEDERS MEET

The annual meeting of the Eau Claire Holstein Breeders Association was held December 13 and officers were elected as follows: President, Charles Newhouse, of Augusta, Wis., vice-president, B. M. Arries, of Augusta; secretary-treasurer, Lt.-Governor W. S. Comings, of Eau Claire. The association plans to exhibit another show herd next fall and will hold a big picnic during the summer.

UNITY BREEDERS REORGANIZE

Reorganization of the Unity Holstein Breeders Association was perfected at a meeting of the Holstein Dairymen held recently at Unity, Wis. The officers are: Carl Runge, president; Peter Lydison, vice-president and William Doomer, treasurer.

Although he was a particularly long-suffering parent, there were times when his nerves gave way under the fire of the innumerable questions of his small son.

One evening as he was settling down to a quiet perusal of his paper, a small voice piped: "Dad, am I made of dust?"

"I think not," was the weary reply; "otherwise you would dry up now and again."

MINNESOTA PRODUCERS BAR POLITICIANS

At the annual meeting of the Twin Cities Milk Producers Association, held at St. Paul, Minn., December 2, President Schilling in his address suggested a resolution which was afterwards proposed from the floor, declaring vacant the office of any director becoming a candidate for any elective political office. After a brief debate this was carried unanimously.

The Twin Cities Milk Producers Association will in the future offer only one quality of milk to the distributors who supply the cities, and milk which fails to come up to a set standard will not be accepted. In addition to the sediment and acid tests hitherto used, a test involving bacteria count was authorized. Installation of laboratory equipment and salary of chemists needed to make bacteria counts about once a month will cost about one cent a hundred pounds of milk. It is estimated that about 75% of the milk now received by the association comes within the association's requirements, which were set by the board of directors after a consultation with the health authorities of the cities served, Minneapolis, St. Paul, and Northfield.

As an outside speaker, Harry Hartke of the Cincinnati Pure Milk Coöperative Company had been secured and he counseled the Twin Cities Milk Producers not to go into the direct distributing business, certainly never while they have as good coöperation as at present from the private and coöperative distributors. In his district the distributors failed to be satisfied even with a spread of \$4.00 per 100 pounds so the milk producers in the Cincinnati territory found themselves under the necessity of doing their own distributing. It was necessary for them to purchase outright a three million dollar plant and assume a considerable obligation for this purpose.

W. F. Schilling of Northfield was re-elected president; A. H. Dexter, Osseo, first vice-president; H. B. Nickerson, Elks River, second vice-president; W. S. Moscrip, Lake Elmo, secretary-treasurer. These four with F. A. Lammers of Lakeville constitute the executive committee.

While not all the 6,000 producers were present, the crowd practically filled the Metropolitan Theatre which was furnished by the courtesy of the St. Paul Association. The Northwest Farmstead reports that the distributors paid the Twin Cities Association \$3,744.12 as a service charge for taking care of non-member's milk during September. This service is thirty cents on a hundred pounds on non-member's milk and will allow two cents per hundred pounds additional to be paid to the members of the association. Heretofore the non-members had the benefit of the association's activities without paying for it. Now he pays and the member gets the money.

MANUFACTURED MILK MARKETS

The year closed with evaporated and condensed milk markets occupying a steady to firm position. From a manufacturer's standpoint there has been an unusual improvement during the past few months and markets are actually stronger than for some time. This change from the unsettled feeling which featured markets along in the summer has been gradual, and each month since July 1 there have been reductions in stocks held by manufacturers, in itself some indication of a fairly satisfactory clearance. Total stocks on December 1 were down to 158,275,000 lb. Since 1920 total stock on December 1 have averaged 176,000,000 lb. including the low holding in 1922 which barely exceeded 69,000,000 lb. When it is considered that on July 1 of this year stocks were at record levels, not only for July 1 but, with one or two slight exceptions, for all periods of the year since compilations were begun in 1919, the current month's total is rather significant. While these figures themselves are not indicative of how profitable the year may have been to condensery operations they do show that the product has been moved during a period which on the whole has been a trying one to dairy interests.

Mention made from time to time in these monthly comments regarding the uncertain trend of butter markets has suggested that diversion of condensery milk into butter involved some element of risk, but where this could be done with reasonable safety, or where other channels could be utilized, such opportunities were taken advantage of. Doubtless this control of production played no small part in restoring markets to their present condition. More recently demand for fluid milk has

been reported heavier in relation to normal supply, and some condensery sections have been shipping milk to cities. For some time there has been sufficient difference in price to encourage producers to seek market milk outlets whenever possible. In the principal dairy sections, this difference is now running about sixty cents per hundredweight, but has been even greater.

The last export figures available are for November, and indicate a falling off on amount from the previous month. For eleven months of the year, however, 1924 exports exceeded those of 1923 by 39,000,000 lb. Export business at the moment is reported generally quiet, probably in part due to the fact that there is not the same pressure to sell on the part of domestic manufacturers that existed earlier in the year and also because active foreign demand has not exerted itself. Recent reports indicate price advances on both domestic and foreign goods, with further advances likely next month. Domestic trade is expected to be more or less quiet until after the first of the year on account of distributors working low stock until the taking of inventories has been completed.

The powdered milk business has shown a big gain over the year 1923. While only the November figures are available, they show that more than five million pounds have been exported during the first eleven months of 1924, the exact figures being 5,040,431 lb. against 2,238,277 lb. for the first eleven months of 1923. The November exports were more than a million pounds over those of November 1923, or 1,260,425 lb. against 221,143 lb.

We do not have the import figures for the full year, but the amount brought into this country during 1924 is far below the imports of 1923. For the months of November alone, the figures are—

	Nov. 1924	Nov. 1923
Butter	110,680	3,830,657 pounds
Cheese	5,999,265	7,895,113 pounds
Condensed, Evaporated and powdered milk	893,031	186,862 pounds

DAIRYMEN'S LEAGUE BUYS MORE PLANTS

On January 1, the Dairymen's League Coöperative Association, Inc., took possession of the business and properties of the W. M. Evans Dairy Company. According to President Slocum the twelve country plants will be retained and operated by the association and the city end of the business sold to the Borden's Farm Products Company.

The city properties include a pasteurizing and distributing plant on Lexington Avenue, Brooklyn, and three additional distributing stations in Brooklyn and one in Queens.

The twelve country plants, all fluid milk shipping stations, are located as follows: Beerston, Delaware County, East Homer, Cortland County; South Gilboa, Schoharie County; Winterton, Sullivan County; Central Square, and West Monroe, Oswego County; North Brookfield, Madison County; Ninevah Junction, Broome County, N. Y.; Newton, Sussex County; Bridgeville, Warren County, N. J.; Lynn, Susquehanna County; and Monroeton, Bradford County, Pa.

Grover Cleveland's composition on the cow, written when he was a small boy in school, follows:

"The cow is very useful if it were not for the cow we could not have no milk to put in our coffee and tea.

"Every part of the cow is useful; the skin is tanned into leather and boots are made of it. The flesh is good for food and is called beef; their horns are made into buttons. Of milk butter and cheese is made. There is a glutinous substance by the hoof which is made into glue—indeed if it were not for the cow, we should have to do without many things which are considered necessities of life."—*Kansas City Times*.

Doctor—Of what did your father die?

Patient—They said calvary mortis.

Doctor—And your mother?

Patient—Oh, nothin' serious.

Doctor—Well. What did the Doctor call it?

Patient—He said it was brides disease, but she was an old woman and a widdier.

March 10—Waterloo, Ia., Iowana Spring Guaranty Sale.
March 12—Huntsdale, Pa., W. A. Wood Sale.
March 18, 1925—Myerstown, Pa., Jacob W. Brubaker Sale.

ECHOES FROM THE SALES

Under the auspices of the Waupaca Holstein Breeders Association a sale was held at Waupaca, Wis., early in December. Among the forty-two animals were fourteen bulls and twenty-eight females. One of the biggest crowds that ever attended a sale at Waupaca was in attendance but prices were low, this was attributed to shortage of feed and general tightness of money. The forty-two head brought \$3,285, an average of slightly over \$78. The highest price was \$200 which C. T. Folkman of Clintonville, paid for a female consigned by Geo. Lindsay & Sons of Manawa. Five of the bulls were under a year old and a large number of the females were young which helped to bring down the average.

The herd owned by Dr. L. VanHouten of Valley City, N. D. was dispersed December 6. The animals brought good prices and a large number remained in North Dakota. Despite the fact that there was a large number of young stock the average was \$130, the top price being \$505 for Sir Korndyke Ormsby Piebe 3d, one of the herdsires.

KELLEY SOLD OUT

Circus advertising failed to attract many out of state buyers to the dispersal of the John M. Kelly herd held at Baraboo, Wis., December 9. The seventy animals sold averaged \$215. The prize-winning get of sire which has helped to advertise the Kelly herd during the past show season was struck off for \$475 each to their breeder, Arthur Weihert of Watertown, Wis. The highest price obtained was \$495 for Blue Eye Ollie Abbekerk, a two-year-old bull from Walcow's Ollie Abbekerk. He went to Ferguson Farms, Dyersburg, Tenn. The purchases of this establishment amounted to nearly \$3,000. The senior bull, Canary Paul Heilo Aaggie, went for \$490 to G. A. Abbott of Sulphur Springs, Montana.

BISHOP HERD SALE

For practically a quarter of a century, Senator Wm. Bishop has owned a big producing herd of Holsteins at Chimacum, Washington. Breeders gathered from all parts of the state to see this herd dispersed at public auction, December 11.

HEIFERS IN LOG CABIN HERD

Note the type, size and quality. Then remember that this herd is Accredited—and is headed by

King Hengerveld Lefa Joh

a son of King Joh from a 32-lb. daughter of Dutchland Colantha Sir Inka. What can we do for you?

Ralph C. Jackson
Owner

LOG CABIN HERD

W. E. Mapous
Supt.

Crawford County

Conneaut Lake, Pa.

Special arrangements had been made for boats to stop at a point two miles from Chimacum so that buyers from the mainland could attend but it was evident that a large number of those present attended because of their interest in this well known herd rather than their desire to buy.

There were forty-five animals struck off for \$5,530 and the average of \$122 did not do justice to the stock. Darkness fell before all the animals were sold but no announcement was made by Mr. Bishop as to his intention and it is not known whether he plans to sell his remaining stock at private sale or to continue the herd.

The top price was \$800 which Thomas Lockhart, Mt. Vernon, paid for the two-year-old show bull and herdsire, Sir Chimacum Ormsby Gettie a son of Greenbank Sir Ormsby Hengerveld and Chimacum Wayne Gettie, 1,077 lb. butter in yearly test.

BIG RECORD COWS BRING LOW PRICES

Prices at the sale held in connection with the Pacific International Show reflected the defeat of the butter substitute laws which were up for referendum in both Oregon and Washington. Bidding was sluggish. The fifty-four Holsteins brought \$9,358, an average of \$173.30. Nooksack Irma Segis topped the sale going for \$525. She was consigned by H. J. Evans, Ferndale, Washington, and was purchased by Carnation Farms, who also took Nooksack Empress De Kol Segis for \$455. Both were daughters of Colony Korndyke Segis. Empress as a five-year-old made a record of 1,142.39 lb. butter, 32,292.3 lb. milk and it was announced at the sale that she was the second cow with a 30,000 lb. yearly milk record to be sold at public auction. The world's milk record junior four-year-old in the 305 day division, Tyce Hiske Fayne, was sold for \$335 to F. R. Beals, of Tillamook. She is now eight years old and has been champion of her class for four years. Archie Prior, one of the leading sheep owners of Yakima, bought the most animals, taking six head of young heifers for \$715.

DOERINGFELD BUILDING A HERD

Lou Doeringfeld of Fennimore, Wisconsin, is noted as being one of the best dairymen in his vicinity. For a number of years he kept grade Holsteins and about six years ago purchased a couple of purebreds. Today Doeringfeld & Son have a herd of forty-eight animals of which one-half are purebreds. They have gradually built up their herd by discarding poor animals, purebred and grade alike, and raising all the female progeny from their best purebreds. The Doeringfeld Stock Farm is about one and one-half miles north of Fennimore and contains 200 acres.

At the present time they are milking twenty-two head in this herd which is always near the top of the Fennimore-Boscobel cow testing association. During the past association year, the herd averaged 369.5 lb. fat while in the first eight months of the present association year the herd average was about 300 lb. and promises to go well over the 400 lb. mark before the year ends.

The Doeringfelds made a good start in Association work for, in the first year they were enrolled, their herd average was 309 lb. per cow and most of the herd were young. The increase, according to the son, Carl, is mostly due to greater age and development of the milkers, for this family have always practiced good feeding methods and used selection in their breeding stock and did not wait to learn these things from cow testing association work.

The favorite cow in the Doeringfeld herd is Muchy. She is a beautiful animal and as a five-year-old made a year record of 936 lb. She was sired by a grandson of King of the Pontiacs. One of her sons is being used as a herdsire. He is a large, well built animal and is very smooth and straight. His sire was by Sir Pietertje Ormsby Mercedes 40th and from a 27-lb. A. R. O. cow.

The other herdsire is Summit Artis Korndyke, a son of King Pontiac Artis Sadie Vale. The calves of this bull are large, straight and handsome and add to the attractiveness of the herd.

The Doeringfelds practice diversified farming and besides purebred cattle, have purebred sheep and pigs. They are firm believers in alfalfa and other legumes and grow most of their feed. They supplement the pastures by feeding both grain and green crops and both members of the firm say this is a profitable practice. Carl, the junior member of the firm, studied agriculture at the Wisconsin State University for two years and says his time was well spent and has been of great use to him in farm practice.

A colored pastor announced to his congregation the following subject: "Brethren and sisters, I'se gwine to preach a powahful sermon dis mornin'. I'se gwine to define the undefinable. I'se gwine to explain the unexplainable, and I'se gwine to unscrew the unscrewable."

Cow Testing Association Reports

ILLINOIS COW TESTING

Purebred Holsteins were first and second during November for Illinois cows enrolled in cow testing association work. The leader, owned by L. M. Knox, of Morrison, was credited with 2,223 lb. milk, 91.1 lb. fat. A Sinissippi Farm Holstein was second with 1,713 lb. milk, 83.9 lb. fat and a purebred Holstein owned by Rock River Farms at Byron, was fourth with 76.2 lb. fat, 2,457 lb. milk. Seven of the ten highest producers were purebred Holsteins, one was a grade Holstein, one a purebred Brown Swiss while the other was a cow of mixed breeding.

The leading herd consisted of ten purebred and grade Holsteins owned by Frank Flack, of Jo Daviess County their average being 1,540 lb. milk, 50.1 lb. fat.

PENNSYLVANIA TESTING

November production was reported by 29 Pennsylvania associations in which 9,347 cows were tested. Of this number 593 exceeded 40 lb. fat, 178 exceeded 50 lb. while 439 cows produced more than 1,200 lb. milk.

The three highest milk producers were purebred Holsteins. The leader, owned by T. L. McCarrell, of Hickory, had 2,409 lb. to her credit, one owned by I. V. Otto, of Carlisle, was second with 2,375 lb. while the third cow, owned by the Tressler's Orphan Home, produced 2,250 lb., the highest producer reported for Perry County. The leader for fat production was a grade Holstein owned by Abraham Herr, of New Danville, with 95.7 lb. fat. In second place is a purebred Holstein owned by A. B. Craig, of Sewickley, with 90.4 lb. fat. There is a tie for third place between registered Holsteins owned by Mr. McCarrell and

Chas. Chaffee, of Ulster, each having 86.7 lb. fat to their credit. The Cumberland County association has the highest ten cows with an average of 65.4 lb. fat. The Garden Spot association operating in Lancaster County was second with 64.9 lb. while ten Montgomery County cows averaged 61.3 lb.

The Garden Spot Association closed its year's work with an average production per cow of 7,063 lb. milk, 281.1 lb. butterfat. Eight cows each produced over 400 lb. fat, the leader being a registered Holstein called Sarcastic, owned by H. Earl Long. She is credited with 10,095 lb. milk and 469.5 lb. fat. The Long herd also leads with high average.

The Westfield Association also finishes its year with an average of 6,827 lb. milk and 303.2 lb. fat. The highest producer was a registered Holstein, Jewel, owned by H. A. Freed, Racine. She is credited with 16,339 lb. milk and 604 lb. butterfat. The Westfield Association has finished its fourth year and has shown a steady increase in average production from the first year. For the year just ended the cows averaged 609 lb. milk and 52.2 lb. fat more than they did the first year the association operated.

COMAN HAS THREE BEST

During November 872 cows were tested in the Maricopa County Association and they averaged 26.2 lb. fat. The purebred Holstein herd of Broussais Coman of Phoenix, Arizona, had the highest average, 53.5 lb. fat and 1,677 lb. milk. The Miller Company herd was second with 42.1 lb. fat and 1,446 lb. milk. Johanna, Inka and Birthday, purebred Holsteins in the Coman herd, are first, second and third for the month with a production of 82.1 lb., 81.4 lb. and 78.5 lb. respectively.

SOUTH DAKOTA TESTING

A registered Holstein owned by Tom Maher of Brookings, returned the greatest income over the cost of feed in South Dakota Cow Testing Association work during November. She produced 72.09 lb. fat, 1,602 lb. milk. Her production was worth \$24.31. She was charged with a feed bill of \$1.50 for pasture, \$2.16 for 360 lb. alfalfa hay, and her net income over feed cost was \$20.85. She was not the highest producer, however, that being a grade Shorthorn in the Brown County Association with a record of 76.3 lb. fat, 1,590 lb. milk. In second place was a purebred Holstein owned by the Sioux Penitentiary Farm with 73.26 lb. fat, 1,980 lb. milk. Frank Johnson of Hetland, had a purebred in fourth place with 70.06 lb. fat, 1,751.4 lb. milk and Ed. Baldwin had the fifth cow, a purebred Holstein with 68.45 lb. fat, 2,130.2 lb. milk.

The leading herd consisted of nineteen purebred Holsteins owned at the Penitentiary Farm, their average fat was 47.87 lb. and average milk, 1,403 lb., the average test being 3.41%. Maher's twelve purebreds averaged 35.60 lb. fat, 908.3 lb. milk and their average test was 3.84%.

During the month 2,378 cows were tested of which 140 produced more than 40 lb. fat, 184 exceeded 1,000 lb. milk, and 63 herds averaged more than 25 lb. per cow. The average production was 555.7 lb. milk, 21.74 lb. fat. The average price paid for butterfat was 35 cents per pound. Thirty-one cows went to the butcher during the 30 days.

Much from Little—The Returns from a Classified Advertisement appearing in THE HOLSTEIN BREEDER AND DAIRYMAN.

CRAIG'S COW FIRST

Echo, a purebred Holstein owned by A. B. Craig, Sewickley, Pa., was the leader for both milk and butterfat in the Montour Valley Cow Testing Association during November. Echo is a four-year-old and was fresh December 19th. She is credited with 2,010 lb. milk, 90.45 lb. fat. A purebred Holstein owned by the County Home, also a four-year-old, was second with 66.24 lb. fat while purebreds owned by L. J. Stewart and the County Home tied for second place for milk production each being credited with 1,332 lb.

There were twenty-four herds tested containing 340 cows in milk and 74 cows dry. Seven animals exceeded 50 lb. fat and 14 exceeded 1,200 lb. milk, reports the tester, L. M. Stark.

LANDIS HERD TESTS HIGH

Inka De Kol Clyde No. 407789, a seven-year-old purebred Holstein, owned by Wm. H. Landis of East Greenville, Pa., led the Montgomery County Cow Testing Association for December production being credited with 2,012 lb. milk, 110.66 lb. butterfat. Second to her was another purebred Holstein in the same herd with 1,584 lb. milk, 95.04 lb. butterfat. The six leading cows for butterfat production were members of the Landis herd, a grade Holstein being next, followed by purebred Holsteins owned by Warren Schultz and A. K. Rothenberger. These nine animals all exceeded 60 lb. fat.

The Landis herd of ten animals averaged 1,413 lb. milk, 68.06 lb. fat, the Schultz herd was second, Gerhart herd was third and the Rothenberger herd was fourth for both milk and butterfat production.

WISCONSIN TESTING

A registered Holstein owned by the Mikada Farms leads the list of cows tested in Wisconsin during November with a production of 121.4 lb. fat. A

grade Holstein owned by Hartman Brothers is second with 92 lb. A registered Holstein owned by the Swarthy Stock Farm is third with 88.2 lb. and a registered Holstein owned by H. Bartlett is fourth with 88 lb. fat. A 14-cow Holstein dairy owned by Wm. Meuschke averaged 51.3 lb.

Production was reported by 147 associations of which 35 were headed by registered Holsteins, 60 by grade Holsteins, and two others by black and white cows no information being given as to whether they were purebred or grade. Grade Guernseys headed 19 associations, registered Guernseys 6, registered Jerseys 3 and grade Jerseys 9.

IN JO DAVIESS COUNTY

A ten-year-old grade Holstein owned by Ross Pierce and enrolled in the Jo Daviess County, Ill., Cow Testing Association No. 1 was the November leader for butterfat, she producing 2,106 lb. milk, 67.4 lb. fat. Fourth place went to a stablemate with 1,688 lb. milk, 58.4 lb. fat. Mr. Pierce's herd consisting of twenty-two grade Holsteins held third place in the high herd list, their average being 1,035 lb. milk, 33.5 lb. fat.

Second and third and fifth high individuals belonged to Frank Flack, they being credited with 1,800 lb. milk, 66.6 lb. fat, 1,887 lb. milk, 58.5 lb. fat and 1,815 lb. milk, 54.6 lb. fat respectively. Mr. Flack's herd of nine purebred and grade Holsteins carried off herd honors with their average of 1,540.1 lb. milk, 50.1 lb. fat.

RICKELS' COWS DO WELL

A six-year-old grade Holstein owned by John Rickels of Anamosa, Ia., was the highest producer for November in the Anamosa Cow Testing Association. She is credited with 71.1 lb. butterfat, 1,380 lb. milk. The Rickels' herd of ten cows averaged 29.16 lb. fat which ranked third in the herd list.

MARYLAND TESTING

Purebred Holsteins owned by Louis E. Lambert, of Germantown, made a great showing during November in Maryland testing work taking first, third and fifth places in the entire state. The leader produced 71.7 lb. fat and 2,472 lb. milk, the cow in third place produced 69.5 lb. fat and 1,986 lb. milk and the fifth animal is credited with 68.1 lb. fat and 1,947 lb. milk. Crissie, a purebred Holstein owned by A. C. McCardell, of Frederick, was second with 71.5 lb. fat and 2,235 lb. milk. In fourth place is another purebred Holstein owned by Dr. Shermantine, of Sparks, with 69.4 lb. fat and 1,446 lb. milk. Two other purebred Holsteins appear in the list of the leading ten. One is owned by Douglas Diamond, of Gaithersburg, and the other by Chas. Sigler, of Caroline County. The Diamond cow is credited with 64.5 lb. fat and 1,842 lb. milk and the Sigler cow with 63.72 lb. fat and 1,593 lb. milk.

BLACK AND WHITE COWS LEAD

The three leading herds for November in the Dubuque County, Iowa, Cow Testing Association consists of purebred and grade Holsteins. In first place was eleven cows owned by B. Quade with an average of 81.0 lb. milk, 31.2 lb. fat. The second herd consisted of seven purebred and grade Holsteins owned by M. H. Steger and their average was 86.0 lb. milk, 29.7 lb. fat while the ten cows belonging to P. J. duPont averaged 66.6 lb. milk, 27.6 lb. fat. The highest individual producer was a grade Holstein owned by Mr. Quade with 1,183 lb. milk, 59.2 lb. fat while in third place was a grade Holstein of the Steger herd with 1,153 lb. milk, 46.1 lb. fat.

Mr. Quade, who keeps strict herd accounts says that it costs from \$75 to \$100 to raise a dairy heifer to milking age so that she will produce her best as a cow. Therefore he stresses the importance of raising only good stock.

WESTVIEW HERD

PAULINE WETZEL

19.76 lb. butter, 457.3 lb. milk in 7 days as a junior three-year-old. A granddaughter of the great sire.

READ THIS TO YOUR MERCHANTS

Merchants of Aurora, Nebraska, have adopted a novel trade-drawing scheme. They donate a number of articles as prizes and then give tickets to anyone purchasing merchandise at their store. These tickets have the amount purchased stamped on them. Every Wednesday an auction is held and the donations are put up for auction to the highest bidder but instead of cash being paid the tickets are turned in by the person to whom the auctioned article is struck off. At the December 10th auction a purebred Holstein heifer, donated by the City Chamber of Commerce, was sold. The purchaser bid tickets that showed purchases amounting to \$621. These sales are held in a large local pavilion and people come from long distances to see the auction and to take part.

BRIDGFORD SELLS SIXTEEN

Recently F. R. Stenzo, of San Lorenzo, Cal., purchased 16 heifers from the Bridgford Holstein Company. A few are in milk but most of them are yet to drop their first calves. Nearly all are served by King Dairy Maid Prilly the young son of Adirondac Wietske Dairy Maid and King Segis Alcartra Prilly. Included in the lot are five daughters of King Segis Alcartra Prilly, four daughters of King Alcartra Prilly Pontiac and three daughters of King Segis Alcartra Abbecker.

END OF FIRST MONTH

A purebred Holstein owned by R. C. Wood of Traer, Ia., was the high cow in the Tama Cow Testing Association during its first month of operation. She produced 60.8 lb. butterfat, 1,644 lb. milk. Grade Holstein was second with 59.9 lb. butterfat, 1,176 lb. milk.

The leading herd consisted of eighteen cows, breed not given, with an average production of 911 lb. milk, 36.6 lb. fat.

WHAT ARE LAKENVELDERS?

Many people believe that the Holstein-Friesian and the Dutch Belted cattle were originally one breed but we believe that idea is erroneous or else that the time was in the dim and distant past and the two breeds separated many, many years ago.

The Dutch Belted cattle were kept and developed by the nobility of Holland, who selected them more for their peculiar markings than for their producing ability. The Holland owners are not inclined to part with their cattle although it is said that a number of Dutch Belted cattle were brought to this country in 1838 by United States Consul D. H. Haight. In 1840 the great showman P. T. Barnum secured a few cattle for show purposes and exhibited them throughout the country. After a number of years they were placed on a farm and a large number of the Dutch Belted cattle in this country trace to the Barnum importation.

The real name of the breed is Lakenvelders which means "wrapped around with a sheet," or according to other authorities, "the cattle with the white sheet."

The district in Holland where these cattle can be found is around The Hague. Although there are quite a number of the animals in this country they are nowhere nearly as popular as their Holstein-Friesian cousins. Probably the fact that they have been bred for markings instead of large and profitable production, is one of the reasons that they are not more widely diffused and not more popular with the rank and file of dairymen.

A vigorous campaign is being waged in a number of states against the use of metal tag fasteners for attaching shipping tags to sacks of cattle feed. In the unwritten history of every breed there are many instances of prize animals dying from the effects of swallowing such tags with their feed.

ESSENTIAL POINTS IN FEEDING COWS

1. Feed all the roughages the cow will eat.
2. Legume hays are absolutely necessary for most profitable production.
3. When size of herd justifies, a combination of silage and legume hays is most profitable combination of roughages.
4. The grain ration should be a balanced feed, consisting of home-grown grains as far as possible, and based on the type of roughage fed.
5. Concentrates should be made up of a combination of grains derived from not less than three different plants.
6. Feed one pound of concentrate feed daily for each two and one-half to three and one-half pounds of milk produced in the case of Guernseys and Jerseys, and one pound of feed to each three and one-half to four pounds of milk produced in the case of Holsteins or Ayrshires.
7. Milk is 87.1 per cent water. Water is cheap. Provide plenty of clean, fresh drinking water for the milk cows.

BIG BULL BEEF

Harvey F. Umberger, of Bellgrove, Pa., recently slaughtered a Holstein bull that weighed 982 lb. when dressed. The whole of the meat will be utilized in the Umberger home, part of the beef being canned and part being dried.

QUITE A PRODUCER

A British Friesian, named Lavender Violet, is officially reported as dropping live twin calves at the mature age of twenty years. In her nineteenth year, previous to this event, she produced over 19,000 lb. milk.

FOR SALE—Yearling bull at low price, three cows, two, three and four years old. Two heifers. Accredited.

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

ANOTHER POULTRY DISEASE

Someone has said that of the making of books there is no end. The modern version is that of the list of diseases there is no end. The latest to trouble the farmer is European Fowl Plague, which the Pennsylvania Bureau of Animal Industry found was killing poultry. Previous to this discovery the disease was not known to exist in this country. Affected chickens die suddenly, often with few symptoms. There is a bluish-red discoloration of the head, discharge from the eyes and nostrils, with sometimes swelling of the wattles and ear lobes. The birds become very dull, refuse food, have fever and rapidly become weak. There may be a watery diarrhoea.

Fowl plague is due to a filterable virus which is present in all body tissues but particularly in the blood, nervous system, exudates, nasal secretions and the intestines.

No satisfactory treatment is known for this disease. Preventative measures and sanitation must be used to limit the infection. Sick fowl should be killed and all carcasses disposed of, preferably burned. Repeated cleaning of the infected premises, coops and crates are recommended. All crates in which fowl are shipped should be cleaned and disinfected before being used again.

The disease seems to be confined mostly to chickens shipped from the West for slaughter purposes. It is not communicable to human beings.

VIRGINIA HOGS WON AT CHICAGO

Virginians are elated with the showing made at the International Livestock Show by Duroc Jersey hogs exhibited by the Curles Neck Farm, Henrico, Va. The ribbons won total eighteen including the grand champion sow of the breed, afterwards adjudged the grand champion sow of the show. This is the first time the honor has gone to a Virginia bred and raised animal. These animals won three firsts, seven seconds, four thirds and four fourths.

Every hog in the exhibit was bred, farrowed and raised on the Curles Neck Farm. For the past four years this herd has been developed by T. G. Ragsdale of Dinwiddie.

In addition to the International the Curles Neck herd was exhibited during the past season at eight shows, the farthest North being Massachusetts, to the West as far as Ohio and South as far as North Carolina. On this circuit the herd took a total of 210 ribbons, twelve grand championships, and twenty-two championships. Among these winnings were the following firsts, aged herd, seven times; young herd, three times; and get of sire, seven times.

The Central West is usually considered as the "hog country" and the performances of these Virginia raised hogs shows the progress livestock is making in the Southern States.

He jests at scars who never felt a wound.—Shakespeare.

THE E. H. WITTER HERD

Allegany County has produced a number of the best Holstein animals ever in New York State and it is still the home of a large number of highclass herds, many of which are on the accredited list because of proven freedom from disease.

One of these herds is owned by the E. H. Witter Estate at Cuba. The late E. H. Witter was widely and favorably known on account of his sterling honesty as well as his knowledge of Holstein cows and his ability to care for them. His business is still carried along by his family. His son, Jolee, is now in charge of the herd which was started over twenty-two years ago.

A number of records have been made in the Witter herd. One of the animals

ERA BUTTER BOY PONTIAC
28.03 lb. butter, 642 lb. milk in seven days.
Owned by the E. H. Witter Estate,
Cuba, New York.

is Era Butter Boy Pontiac, and she is a direct descendant of Era 3d, the first purebred Holstein female owned by the Witters. Era Butter Boy Pontiac has an official record of 28.03 lb. butter, 642 lb. milk, and she has several daughters and sisters in the present herd. The Witter Estate will consign to the New York Holstein-Friesian Association's sale which will be held at the Coliseum on the state fair grounds at Syracuse January 14th and 15th and in their consignment will be a maternal sister of Era Butter Boy Pontiac. Her name is Baby Era Butter Boy and she was sired by Czar Walker Clothilde, son of a cow that produced 666.7 lb. milk, 31.70 lb. butter in seven days, 953.50 lb. butter, 20,225 lb. milk in ten months.

Consignments from Accredited herds are always sought for by sale managers and parties in search of stock are gradually confining their public sale purchases to animals from accredited herds. Improvement is the order of the day and it is futile to introduce improved blood into a herd unless there is a guarantee that the new animals have a clean bill of health.

BOUGHT SON OF A CHAMPION

Wm. Jachnig of Fillmore, Wis., is a proud owner of a twelve-months-old son of Johanna Rag Apple Pabst, grand champion Holstein bull at the National Dairy Show, Wisconsin State Fair and the Pacific International this year. The young bull was born and raised on the farm of Joseph Piek of Harford. His dam as a junior two-year-old made an official record of 18.47 lb. butter in seven days.

Herd under State and Federal Supervision

A HERD WITH A HISTORY

In 1908 W. P. Sabin of Spencer, N. Y., had a life insurance policy mature and he invested the money he received in purebred Holsteins. The present Sabin herd is owned by his nephew, Ray J. Sabin and a few of the animals in the present herd are descendants of the stock first owned.

In answer to a question as to how long the farm had been in the Sabin family, Ray answered, "Always," and he went on to explain that his grandfather settled on the farm when it was primeval forest and cleared it. The Sabin family at one time owned a large tract of territory. Mr. Will S. Sabin and his brother, Otis, died within a short time of each other and left Ray in charge of the estate which consisted of four farms. How he managed is another story which we will defer telling at this time.

A number of the animals now in the herd have cow testing association records. Effie Ormsby Pontiac 2d is credited with 10,637.7 lb. milk and 351.6 lb. fat while the entire herd averages 9,124.2 lb. milk and 315.6 lb. fat with an average net profit of \$75.15. One of the cows is credited with 15,799.3 lb. milk and 415.2 lb. fat.

The present Sabin herd has a splendid reputation for health. It has been tested three times, the first two times having only one animal that did not pass a perfect test while the last time the herd was clean, so it is only fair to assume that this good herd will soon be on the accredited list.

CRAIG HERD SOLD

At a recent meeting J. A. Craig of Janesville, Wis., was re-elected president of the Rock County Holstein Breeders Association. Now comes the news that his entire Holstein herd has been sold to the Wisconsin State Board of Control and will be placed on the farm of the Wisconsin Industrial School for Boys at Waukesha. The Craig herd has been accredited for several years and the milkers enrolled in the local cow testing association. These two facts were influential in making the sale. The entire herd, numbering thirty-eight head, will be kept intact as a foundation breeding and dairy herd at the Waukesha School.

Mr. Craig has left for California on a vacation trip. He is still interested in a herd of Holsteins in Rock County.

ABOUT THE MERRYALL HERD

Cows that produce 20,000 lb. or more of milk in ten months year after year are not common, even in herds where the animals are given special care and attention in order to make great records. Yet in De Kol Klaasje Hillside, A. L. Burlington of Merryall Farms, has such a cow. In C. T. A. work this animal is credited with over 20,000 lb. milk in TEN months, then, in her next lactation period she was put in semi-official test and made 20,447.5 lb. milk, 858.47 lb. butter in 305 days. She has several other great herd records and is a splendid example of the producing Holstein, for,

in addition to being a producer, she is a cow of remarkable type and conformation. Others in the Merryall Herd have large records, both official and C. T. A., and, to complete the recommendations, this herd is on the accredited list.

At the head of Merryall Herd stands the splendid bull, Traverse Echo Sylvia King, a show bull of great merit. His dam has an official record of 33.27 lb. butter, 736.4 lb. milk, while she averaged 102 lb. milk daily for thirty days of official work. She has six tested daughters, one with a 35 lb. record, another nearly 33 lb., two others above 24 lb., another with 24 lb., while much is expected of her youngest tested daughter and there is reason to believe that she will prove to be as good as her older sisters.

King has wonderful backing. His three nearest dams average above 33 lb. butter in A. R. O. work, his seven nearest average 32.72 lb., his ten nearest average 33.67 lb., while his fourteen nearest, all that appear on a five generation pedigree chart, average 30.18 lb. butter, evidence, not only of powers of production but also of transmitting ability.

Merryall Farms is situated near Wyandover, Penna. A good improved road runs by the barn. This herd is one of the very best in Bradford County, a county noted for the production of dairy products.

THE HIRED MAN'S KIND

A traveling man staying at a small town hotel wished to catch a very early morning train and asked the landlady for the loan of an alarm clock.

She produced the clock and remarked, "We don't often use it, sir, and sometimes it sticks a bit, but if it doesn't go off, just touch that little hammer and it'll ring all right."

SILOS IN PENNSYLVANIA

Approximately 55,000 Pennsylvania farms have silos in use at the present time. This is 26% of all the farms of the state and is an increase of 2% over the number used a year ago. There has been an increase of about 4,000 silos during the past year.

HICKOK PRODUCTS CO., K-22, Owatonna, Minn.

A GRAND CHAMPION HERD

Pennsylvania does not have a state fair and so it is difficult to say which is the champion herd of the state or where the state champions are owned. But Susquehanna has more Holsteins and more herds than any other county in the state so the herd winning the purple ribbon at the Susquehanna County Fair has a legitimate claim to the championship.

At the 1924 Susquehanna County Fair, held at Montrose, the ribbons for grand champion male and grand champion female, as well as for the champion herd, went to Mack Brothers of Montrose.

COLONEL JOH LYONS

Grand Champion at the 1924 Susquehanna County Fair, owned by Mack Brothers, Montrose, Penna.

The Mack Brothers consists of L. N. Mack and Floyd E. Mack who live on adjoining farms. With "Lafe" Mack is associated his son Morris, while Floyd is a bachelor.

At the heads of the Mack herds there are two great bulls, Colonel Joh Lyons and Grand Champion Segis 2d. Colonel Joh Lyons won first in his class as well as senior and grand championship at the county fair. His sire was King Joh, by King Segis Pontiac Alcartra from a 33 lb. daughter of Johanna McKinley Segis. His dam, Gypsy Lyons, has a 33.63 lb. seven-day butter record, has a daughter that made over 34 lb. in seven days as a three-year-old, and was from a 29 lb. daughter of Judge Hengerveld De Kol. Gypsy Lyons was sired by King Lyons a bull with a long list of good record daughters. The records of the eleven nearest dams of Colonel Joh Lyons average 32.15 lb. butter and eight of the eleven dams have butter records above the 30 lb. mark.

Grand Champion Segis 2d is also a show bull but has not been exhibited for several years. His sire and his dam were both show animals and so were a number of the other animals appearing close up in his pedigree. His dam as a four-year-old made a seven-day record of 37.15 lb. butter and is credited with 123 lb. butter in thirty days. His sire is from a 30 lb. grand-daughter of Lord Netherland De Kol and was by King Segis Champion whose dam, Aaggie Pauline Sarcastic, has a record of 36.35 lb. butter in a week and for years was known as the breed's highest record show cow.

Daughters of Grand Champion Segis 2d have carried off awards of honor at county fairs and his daughters predominate among the prize exhibits from the herd this year.

The Macks are plain, every day, dirt

farmers, have no other business except farming and know that business. When showing they have to compete against herds collected at great expense from distant states yet their home-grown Holsteins have no difficulty in carrying off a large majority of the prizes. Animals from this herd have gone into other parts of Pennsylvania and given satisfaction. Satisfied customers are always good advertisements and the Macks experience little difficulty in disposing of their surplus stock. Their herds are all purebred and have been for many years and are under state and federal supervision, with a splendid record for health as well as type and production.

HOLSTEIN MILK FOR ITALIAN CHEESE

Few of us think of Italians as farmers yet we all know that a large portion of the population of Italy are engaged in agricultural work. In this country they seem to be day laborers or venders of chestnuts or bootblacks but in their own country they farm far more intensively than do the farmers of America.

Two Italian noblemen started an Italian farm colony around Lake Nebagamon, a picturesque body of water in Douglas County in the extreme northwest of Wisconsin. These men were Count Guilio Bolognesi, formerly Italian consul at Chicago and Count Emilio Castilliano, Italian consul at Duluth. Count Bolognesi purchased three thousand acres of land and his younger friend became a partner in the enterprise which was to benefit young Italian immigrants coming under the jurisdiction of their consular offices. This Italian colony is the largest manufacturing center of American made Italian cheese in this country. Count Bolognesi has been in the Italian diplomatic service in nearly every leading European country as well as in South America. He came to Chicago in 1914 and there married a wealthy Chicago girl of Italian descent. He is greatly interested in the farm project and he and his wife and family spend their entire summers at this place and he is there most of the rest of the year.

Two things that would interest lovers of the black and white are the cheese factories and the count's herd of purebred Holstein cows which now numbers about 80 head including 29 yearlings raised on the farm. The two herd bulls are of Korndyke and Canary breeding and many of the cows are splendid producers.

After several failures with the cheese factory an expert Italian cheese maker was imported from his own country. Eight different varieties of Italian cheese are now made and more will be made in the future. The brand most familiar to Americans is Parmesan. From the time of making until Italian cheese is ready to eat, a period varying from 18 months to two years elapses consequently storage is one of the chief problems. After the cheese has formed they are periodically turned and rubbed with olive-oil and the air is kept moist so that curing may go on in the approved manner.

GOOD DEMAND FOR PRODUCERS

King Sylvia Pontiac Pietje is the handsome bull heading the producing herd of Holsteins owned by Mrs. Maud Dwight, of South Otselec, New York. He is a son of Champion Echo Segis Pontiac and May Echo Pontiac 2d, 659.8 lb. milk and 26.23 lb. butter in seven days as a junior four-year-old. She was by Woodcrest Sir Clyde and from a daughter of May Echo Sylvia, the world's champion milk producer.

King Sylvia Pontiac Pietje has a number of very handsome daughters and as the Waldron herd is accredited there is a big demand for his offspring. In another column appears a letter from Mrs. Dwight telling where dairymen of New York State have purchased sons and daughters of this bull and producing cows bred to him. The demand is not limited to Chenango or surrounding counties. From distant points letters come inquiring about stock and in her letter Mrs. Dwight reports that she intends to ship heifer calves to Ohio and the northern part of New York State.

THE HOLSTEIN BREEDER AND DAIRYMAN is pleased to report this encouraging news and is glad it has had a hand in calling the attention of breeders and dairymen everywhere to the excellence of Mrs. Dwight's accredited herd which is operated from the dairying standpoint and where every cow is expected to make a substantial profit over the cost of her feed and care.

WIPPERMANN SELLING BULLS

E. C. Wippermann of Sheboygan, Wis., recently sold four valuable bulls. Jacob Wagner of Cleveland, purchased a bull of the Govers family sired by King Abbecker Pontiac Segis 3d. Alvin Reineking of Plymouth purchased another son of King Abbecker Pontiac Segis 3d. The dam of this bull produced 671 lb. butter in a year as a two-year-old. Otto Wippermann, father of "E. C." purchased a son of the King bull from a cow that made 927 lb. butter in a year as a three-year-old. Her milk and butter record are the highest in Sheboygan County. The fourth son of the King bull was purchased by H. Kaeser of Kiel. The dam of this one as a junior four-year-old produced 850 lb. butter in a year.

RE-STOCKING WITH PURE-BREDS

Readers of the BREEDER AND DAIRYMAN will remember that the high class purebred Holstein herd owned by the Los Angeles County Farm was slaughtered some months ago owing to foot and mouth trouble. Two carloads of purebred Holsteins from the ranches of Ralph Blowers and G. U. Clark, of Hanford, California, and from the W. J. Hidgon Ranch near Tulare were shipped December 10th to the farm to replace the slaughtered herd.

"Your medicine has helped me wonderfully," wrote the grateful woman. "A month ago I could not spank the baby and now I am able to thrash my husband. Heaven bless you."

DON'TS

Don't get rid of your bull unless you know you will get a better one.

Don't be afraid to follow your herd bull with another of the same strain.

Don't buy an animal without obtaining a proper transfer certificate, and don't sell without giving one.

Don't neglect butterfat.

Don't attach too much importance to pedigree without merit.

Don't get your yearling heifers too fat.

Don't expect to possess a breeder's herd in a short time, or without work—and disappointments.

Don't gamble with young bulls when old proved bulls can be obtained.

Don't breed for one point only to the detriment of others.

Don't use a bull with a bad head.

Don't overlook the mother of your bull—she has an udder.

Don't use a bull from a leggy cow.

Don't sacrifice utility to fashion.

Don't confuse constitution with beef.

Don't underestimate the importance of blood circulation.

Don't criticize judges until you have heard their explanations.

Don't think your geese are swans.

Don't disparage another breeder, or breed.

Don't miss an opportunity to see a good herd.

Don't hesitate to consult your breed society.

Don't be selfish and hinder progress.

Don't underfeed your cows.

Don't exhibit only when you think you can win.

Don't fear or be discouraged by a beating at a show.

Don't mind helping a new breeder.

Don't think that these Don'ts don't apply to you.—*The British Friesian Journal.*

IT PAYS TO CLEAN UP

Winnebago County is the first county in Iowa to be declared a modified free area. As a result packers pay a premium of ten cents per one hundred pounds for hogs that come from such an area as there is less risk of finding an animal affected with tuberculosis. The first carload shipped after the county was placed on the modified area list brought a dividend of \$16.67 extra. Petitions are being distributed in more than forty Iowa counties in an effort to have all cattle owners test their cattle.

It was late at night. No one seemed to be about and the poor woman was very seasick. She thought if she could only get up to the deck a few minutes the fresh air would do her good. So, in her nightgown, she was crawling up the stairs when she met an equally sick man coming down. She gave a feeble scream of embarrassment. "Don't worry, lady," the man groaned, "I'll never live to tell it."

Much from Little—The Returns from a Classified Advertisement appearing in THE HOLSTEIN BREEDER AND DAIRYMAN.

LIGHTS ON THE FARM

Lights on the farm is a subject of many a serious discussion in the homes of our readers. The coal oil lamp has very nearly become a thing of the past and the man who uses a tractor to plow his fields, a farm truck to carry his milk to market and to bring his supplies from town; and an auto in which he carries his family for business and pleasure is not content with the lighting system used in the home of his grandfather. Many farm homes are lighted by acetylene plants but this is an electric age and electricity especially when derived from transmission lines, is easily the favorite system because it supplies both light and power. It is true that electricity is sometimes used as a cooking medium but farmers seldom if ever find it profitable to cook their food with electricity.

The Wisconsin College of Agriculture under the name of Turn On The Light, have issued a very comprehensive circular or bulletin on lighting systems. Most of this is devoted to a discussion of electricity. This circular should be in the library of every farmer who is not located on a transmission line and nearly everyone that is on such a line. It points out some of the reasons why the rural customer has to pay more for his service than the city dweller. It tells some of the mistakes made by farmers, one of which is paying a long price for the installing of a system and then using a few lights widely scattered and making practically no use of the juice for power purposes. The circular is full of information and is by far the best of its kind we have seen on this subject.

THEY MULTIPLY FAST

Twin sisters that have each had twin calves can be seen in the herd of H. N. Kutschbach, of Sherburne, N. Y. The Kutschbach herd is fully accredited and has passed seven tests without a reactor being found.

A number of good bulls have headed this herd. The first class herd sire was King Veeman DeKol. Then came King of the Walkers a full brother of King of the Black and Whites. The two latest herd sires came from the herd of Professor George Warren, of Ithaca, N. Y., and both were from cows with yearly records.

BLACK CATTLE AT PINEHURST

Pinehurst Farm, formerly well known as one of the leading Wisconsin Holstein-Friesian establishments, has been converted into a beef cattle raising farm. Late in September, seventy-three head of Black Aberdeen-Angus were received, headed by "Morlate," a son of "Initiate." The cattle were purchased from a South Dakota breeding establishment. Inhabitants of Sheboygan turned out in force to see the doddies driven along the streets from the station to the farm.

Lack of competent milkers is the reason given locally for the change.

HERD BUILT FROM ONE COW

In 1910 Mr. and Mrs. Frank Gaebe of New Salem, North Dakota, started a dairy herd with one Holstein cow, Indi Pense Surprise, number 120,220. On January 1st of that year the New Salem circuit was instituted. Twelve members signed up for record keeping and co-operative breeding and Mr. Gaebe was among them. The first year the yearly average was 130 lb. butterfat. In 1916 the average was 421 lb. butterfat. Although Indi Pense Surprise was born November 10, 1908, she is still the boss of the herd. Her record for one year was 15,771.3 lb. milk, 626.7 lb. butterfat. Several daughters have done even better.

The herd consists of thirty-nine females, nearly all descendants of Indi Pense Surprise. Twenty-two heads are milking. During 1923 the cows showed an average net profit over feed costs of \$82.74. Their average butterfat was 303.4 lb. and the average milk was 9,060.2 lb.

In 1883 a Northern Pacific land commissioner unloaded a car load of German Americans at a railway siding which was later named New Salem. The settlers were not successful grain growers so they turned to dairying. This industry increased to such an extent that by 1896 a creamery was built at New Salem jointly by the townspeople and the farmers. This creamery has never closed its doors for a single week since it began operating. In 1909 the Federal Department of Agriculture, through Assistant Secretary W. M. Hays, offered jointly with an experiment station in any state to start a community breeding experiment. Professor J. H. Sheppard of the North Dakota State Agricultural College, learned that the farmers of New Salem had jointly purchased a car load of purebred cattle in 1906, suggested that a breeding circuit be established there. Ten of the original twelve herds are still in the circuit. All circuit herds are tested annually for tuberculosis and all are on the accredited list.

The average gross income per farmer for butterfat in 1921 was \$1,107.91, in 1922, \$1,181.88, in 1923 \$1,621.95. During 1922 one grade cow produced 419.3 lb. butterfat during six months of the time she grazed on the community pasture and received no grain. In 1923 a purebred in another herd produced 609.3 lb. butterfat from 11,195 lb. milk. The average increase per cow for the last four years over the first four years was 172 percent.

Aunt Mirandy: "Dey say dat ole Mistah Smiff wasn't buried a-tall. Dey done took him to a crematory in Baltimore an' cremated him."

Widow Johnsing: "Foh de Law's sake; you doan tell me! Ah believe it's de very cemetary where our folks gets deir cream and buttah."

A soap and perfume manufacturer advertised for a slogan. Among those submitted were: "If you don't use soap, for heaven's sake use our perfume."

ON THE HILLS

of Tioga County have been raised some of the best Holsteins that ever came from New York State—big healthy cows that yield large quantities of rich testing milk.

The following breeders of healthy Holsteins whose establishments are located near Owego and within easy driving distance of Elmira, Ithaca, Binghamton or Waverly can supply you with good cattle and invite inspection of their herds.

DELICIOUS FLORIDA ORANGES AND GRAPEFRUIT direct from grove to your table at \$2 per full bushel box, Tampa, Fla. Send check or money order to FLORIDA COOPERATIVE MARKETING ASSOCIATION, Thonotosassa, Fla.

PLANT KUDZU FOR HAY AND PASTURE—more nutritious than alfalfa, and yields more. Grows on poor acid land without lime or fertilizer and never has to be replanted. Write for information.

CHEROKEE FARMS, MONTICELLO, FLA.

ABORTION. Dr. George Hollabush's remedy, general tonic for cows and mares will prevent abortion and make prompt breeders and correct failure to clean. Guaranteed and money refunded if not satisfactory. Write for circular. DR. GEORGE HOLLABUSH MEDICINE CO., INC., DEPT. A, FT. ATKINSON, WIS.

PERSONAL PRINTED STATIONERY. 200 noteheads, 100 envelopes, good white vellum bond paper, three or four line printing in neat Gothic type, blue ink. Quick service. Price \$1, cash with order. Excellent Xmas gift. HANSON PRESS INC., 563 HARRISON AVE SPRINGFIELD, MASS.

"I believe," shouted a very militant speaker, "in fighting an enemy with his own weapons! That's what I advocate." "Tell me," came a meek voice from the end of the hall, "tell me, how long does it take you to sting a wasp?"

MINERALS IN THE DAIRY RATION

By PROFESSOR OSCAR ERF
Ohio State University

Numerous tests and continual observation over a period of twenty-five years have well established the fact that minerals are of great importance in the metabolism of the dairy cow. The chemical action of the mineral salts assists in the digestion and assimilation of the proteins, carbohydrates, fats and crude fibers.

A cow producing only an average amount of milk requires no minerals except those in her feed unless the quality of the feed is very poor. Grains, grasses, hays, beets or beet pulp, and by-products of grain such as bran, linseed meal, vacuum-dried distillers grain and peanut meal are usually high in mineral constituents of a highly digestible character.

Hays cut when quite young or just before blooming, as a rule, contain the greatest amount of minerals. Hays not properly cured lose many of their mineral salts. Forty-five per cent of the mineral salts can be washed out of alfalfa hay by heavy rains and 25 per cent can be washed out of clover hay.

The variety of the beet has much to do with the percentage of minerals which it contains. The little red beet is higher in ash than the larger beets and is better for milk production than the sugar beet. Carrots fed in limited quantities are of benefit in supplying minerals.

As a rule concentrates are low in minerals and owing to this, high producing cows are not able to obtain a sufficient amount of minerals from their feed without over-balancing the other constituents. The higher the production the greater the amount of mineral salts that must be added to the ration.

Care must be taken in determining the proper minerals, the amount to be fed to each cow and the method of feeding. Minerals should not be fed in a concen-

trated form, but should be sprinkled over moist hays, silage or grain feeds. Mr. Monroe of the Ohio Agricultural Experiment Station has found that a small quantity of lime sprinkled over the silage forms calcium lactate which is desirable for milk production. Even the salt, to be of the greatest benefit, should be mixed with the feed.

The following minerals have been used to the greatest extent and with the best results: Calcium phosphate, calcium carbonate, magnesium sulphate, sodium, sodium phosphate, iodide of potassium, sulphur praecipitatum, black sulphide of antimony, arsenates, iron sulphates, bromides and sodium chloride. Bone meal and hard wood ashes have been found to give the best results of any minerals with the exception, of course, of salt. As the production increases it is often advisable to reinforce these with sulphur, potassium iodide and other minerals.

The effect of minerals in the dairy ration is not directly evident in the increased flow of milk. The improvement in the physical condition of the animal is more apparent and due to this the milk flow is eventually increased. Minerals also seem to have a very important effect upon the unborn calf, undoubtedly due to the improved physical condition of the mother. If judgment is used in feeding minerals the tendency is for the calves to be strong and vigorous.

To obtain the best results, the feeder must study the individual cow, and his ability to feed and care for the cow determines to a very great extent whether she will produce nearly her maximum amount of milk over a period of years or her lifetime.

"Much bothered with tramps out your way?"

"I was until I tacked up a sign on my gate."

"Ah! 'Beware the dog' I suppose."

"Oh, no. Simply 'Farm Help Wanted.'"

DANISH AGRICULTURAL CO-OPERATION

Previous issues of this paper have commented on the investigations in agricultural conditions in Denmark by Chris. L. Christensen, an agricultural economist in the employee of the United States Department of Agriculture. Mr. Christensen spent more than a year in Denmark studying agricultural coöperation in that country.

"While conditions of American agriculture are different in some ways from those in Denmark," says Mr. Christensen, "I believe certain fundamental truths in agricultural development are in many ways similar. Fifty years ago Danish agriculture was confronted with problems similar to those which confront some sections of American agriculture to-day. The competition of cheap grains from the new agricultural areas of the Americans and Australia, which flooded the European markets, forced the Danish farmers to abandon the production of grain as a money crop. This, together with the need of improvement in soil fertility, caused them to turn to diversified farming. My studies tell how the Danish farmers met this economic truth."

"Forty years of sound agricultural planning and progress have revolutionized the economic and social life of the of peasant agriculture, which threatened Danish people. From a depressed state the welfare and prosperity of the whole nation, Denmark stands to-day as the world's foremost agricultural country in the scientific organization of her production and marketing. Her people, rural as well as urban, appear contented and prosperous. Neither extreme wealth nor extreme poverty exists."

The results of Mr. Christensen's study have been printed in Bulletin No. 1266 entitled "Agricultural Coöperation in Denmark." Copies may be obtained free from the Department of Agriculture, Washington, D. C., as long as the supply lasts, and thereafter at 15 cents per copy from the Superintendent of Documents.

The economics brought about by coöperative marketing in Denmark have been affected in the function of assembling, processing, grading and packing, Mr. Christensen says. Coöperative marketing has also resulted in a rational adjustment in her agricultural production so as to fit better the consumer demands and requirements of the market. The system has aided in focusing the producers' attention on the value of quality, standardization, and dependability in quality and regularity of supply.

The bulletin describes the marketing problems which the Danish farmers faced in the early days before their present highly developed dairy industry. When they found that thousands of small batches of different grades of farm butter could not be profitably dumped on the British markets, they set about to effect economies in assembling and manufacturing as well as improvements in grading, standardization and packing.

Danish farmers have improved their livestock through coöperative livestock breeding associations. Coöperative bull

associations have put better livestock on the average farm. Besides the work of the breeding associations there are now 821 cow testing associations with approximately one-fourth of the total milk cows in Denmark. The application of scientific and businesslike methods of dairying has nearly doubled the milk yield per cow during the last 40 years and is rapidly eliminating the unprofitable cow.

Mr. Christensen's study embraced the activities of agricultural production, marketing, purchasing, livestock improvement, finance and insurance. It follows the evolution of agricultural coöperation in Denmark, from small beginnings to its present important development. Much detailed, practical information on the history, technical organization and business operations of the coöperative associations is contained in the bulletin.

A BIG TEXAS INSTITUTION

The Texas Tuberculosis Sanitarium was established by the Texas legislature in 1911 and was opened for patients in 1912. It is located in Carlsbad, Tom Greene County, about fifteen miles north of San Angelo. The altitude of the sanitarium is 2,150 ft.; the average rainfall is 28 inches and the mean temperature is 51 degrees Fahrenheit. It lays on a level tableland covered with mesquite grass and trees and has hills on three sides and the North Concho River on the other. Water is drawn from this river for irrigation purposes.

A large amount of milk and cream is used by the patients and this supply comes from a herd of tuberculin tested Jerseys and Holsteins. They are given abundant feed and are cared for under strictly sanitary conditions. The institution is under the jurisdiction of the State Board of Control and the superintendent is Dr. J. B. McKnight.

BETTER GET THIS

Sewerage Systems for Farm Homes, is the title of circular 173, issued by the Extension Service of the Wisconsin Department of Agriculture in cooperation with the Wisconsin State Board of Health and while only a small circular it is full of information as to the building and installing of sewerage systems on the farm. It is not filled with talks on sanitation the gist of which is known by every well read farmer but gets right down to business by telling when and how septic tanks should be installed on the farm. Instead of the usual fancy pictures the illustrations, of which there are fourteen, are drawings, usually in cross sections. The bulletin should be found in the library of every farmer who does not have a sanitary service system installed in his home. Just write to the University of Wisconsin at Madison and ask for circular no. 173.

The Department of Commerce is urging hosiery manufacturers to standardize lengths, grades and styles of stockings. Unfortunately, nothing much in that line can be done about legs.

CALCIUM CYANIDE

A new poison Calcium Cyanide is recommended for the control of insect pests and the extermination of rats and other rodents. Calcium Cyanide is a chemical compound of lime and the deadly gas cyanogen.

This chemical is made in much the same way that carbide is made for acetylene generators. Coke and limestone are fused in the electric furnace and then the carbide is heated with nitrogen. The result is Calcium Cyanide.

For general use Calcium Cyanide is sold as a very fine powder and is used with talc or some similar diluent for use in a dusting machine.

All farmers are familiar with the phenomena in the change of lime from unslaked to slaked. A somewhat similar change takes place when calcium carbide is exposed to moisture, it gives off acetylene gas and slaked lime results; so when chloride of lime is exposed to moisture it gives off chloride gas and leaves slaked lime. Calcium Cyanide acts in somewhat the same way and gives off cyanogen and leaves slaked lime. Cyanide gas is heavier than air and so concentrates at lower levels and then gradually diffuses in the atmosphere.

Cyanide gas destroys the substance in the blood that makes the red corpuscles take up oxygen. Death is quick and painless. For controlling insects the plants are lightly dusted after sunset on a dry day. If the compound is in granules or flakes it is distributed lightly on the ground near to, but not touching the plant. Most insects are killed immediately. It is used for dusting pens, sheds, shelters, kennels and coops for fleas infesting hogs, dogs, etc., and for the various poultry pests. If it is used in the evening, the next morning only a little lime and the talc is left.

Calcium Cyanide affords an easy method of controlling woodchucks and rats. The powder is blown or placed in the woodchuck burrow and settles in the chambers, smothering the occupants.

The powder may be pumped into the opening of rat holes or be shoveled in as far as possible. After pumping, the rats often appear at the entrances of other runs and sometimes leap out and die. About a teaspoonful to each opening is recommended and it is also suggested that the opening be plugged with dirt which is generally not necessary with woodchucks.

Several Governmental experiment stations, as well as the University of Missouri and the Nebraska College of Agriculture are experimenting with this chemical, which, doubtless, will be in general use among farmers in the near future.

AGRICULTURE IN IRELAND

Of the 3,165,000 population of the Irish Free State about 2,000,000 are engaged in agriculture. There are 354,484 agricultural holdings. The area under crops in 1923 was less by 93,073 acres than in 1922, though greater by 13,000 acres than in pre-war years. There is a decline in the number of sheep, but a big increase in the number of pigs.

PENNSYLVANIA STATE EXPERIMENT STATION

Bulletin 188 issued by the Pennsylvania State College contains the report of the director for the fiscal year ending June 30, 1924.

During the year there were 115 active experimental projects carried on at the agricultural experiment station. Two that were started during the year are of great interest to dairy cattle owners. One is to ascertain the vitamin requirements of the dairy calf and the other is to find if there is a correlation and if so, how much, between dairy type and dairy production.

Kudzu has been highly recommended by seed merchants and many farmers are in doubt as to the possibilities and value of this plant. Nearly one half an acre was planted to Kudzu in 1923. Nearly all the plants grew for a period but during the prolonged drought in June most of the plants died and by fall the stand was only about 30 per cent. Vines over twenty-five feet were produced by some of the plants but all were unable to survive the winter.

In a feeding experiment with Holstein cows, soybean hay produced 3.3% milk less than did alfalfa hay. As the soybean hay proved but slightly inferior to alfalfa hay for milk production it is highly recommended for an emergency hay to be grown on Pennsylvania dairy farms. A feeding experiment lasting six weeks was conducted to ascertain the relative value of clover and alfalfa hay for milk production. While receiving clover the cows produced 6.5 less milk than they did while receiving alfalfa.

HOW HALL MARKETS SURPLUS CALVES

Supplying animals for calf clubs is part of the business of H. H. Hall, of Genesee, Pennsylvania, who has control of a couple of purebred Holstein herds, one of which has passed one clean test and the other is already Accredited. The milk from these two herds goes to a condenser. The calves are marketed when they are three months old and are raised on whole milk until that time.

The Hall herd is given just fair "Pay at the Pail" dairy management with no frills but with scales, stable records, and

a Babcock test machine used to see that the animals do "Pay at the Pail."

An Ormsby Johanna Plum bull has been used. This fellow came from the Stevenson herd and his dam and sire's dam have year records that average over 20,000 lb. milk and 975 lb. butter. One of his sons was also used, he being from a dam that several different years made from 8,000 lb. to well over 10,000 lb. milk in ten months.

Another herd bull came from the Wintertur Farms and is of Ormsby-Prilly-Segis-Pietertje breeding. This fellow has an average for dam and sire's dam of well over 22,000 lb. milk and more than 1,000 lb. butter.

Animals in these two herds have milk records ranging from 8,000 lb. to 10,000 lb. milk. Generally these are ten months or lactation period records. One two-year-old produced 10,187 lb. milk in a twelve months lactation period. These records are made on twice a day milking, feeding and watering.

ICE CREAM AT THE DOOR

A house to house delivery of ice cream has been initiated in London, England, during the past summer, says a report sent to the Department of Commerce by the American Consul-General. One firm has 400 tricycles which are fitted with boxes containing insulated chambers. These obtain their supplies from a number of fixed stations which in turn are supplied from the factory.

Householders desiring ice cream place a lettered card in their window but orders can be given for deliveries to be made at any special time.

The standard cream bricks are wrapped in grease-proof paper and enclosed in a carton. Brickettes are wrapped in similar paper, as are also the chocolate bars, while the tubs consist of small cardboard (waxed) pails with a card disc on top.

A little girl ran into the house crying bitterly, and her mother asked her what was the matter.

"Billy has broken my dolly," she sobbed.

"How did he break it?" asked her mother.

"I hit him on the head with it," was the answer.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

Just for Fun

MAN'S CHIEF INTEREST

She had gone out to dinner with her suitor. She had felt in particularly gay and sprightly mood, and had talked she felt, quite entertainingly of this and that. Many had been the amusing incidents she had told.

But toward the end of the evening her suitor seemed very dejected and unhappy.

"What has been the trouble? Did anything happen to-day to make you blue?" she asked. Surely the evening had been a success.

"No, the day was a very good one," he said.

"But to-night? Haven't you enjoyed it?" she asked, surprised.

"Well," he returned, "you know a man likes to talk about himself when he takes a girl out, and you haven't given me a chance all evening."

Two young kindergarten teachers, intelligent and attractive, while riding down town in a street car were engaged in an animated discussion. In the seat behind them sat a good-natured, fatherly looking Irishman enjoying a nap. Finally one kindergartener inquired of the other:

"How many children have you?"

"Twenty-two," she replied. "And how many have you?"

"Oh, I have only nineteen," replied the first.

At this point the Irishman, now wide awake with astonishment, leaned forward in his seat, and, without any formality, inquired in a loud voice:

"What part of Ireland did youse come from?"

Liza Ann: "Brother Congo, I hear Sister Johnson is dead. When she gwine to be interned?"

Brother Congo: "Dey ain't gwine to be no internment."

Liza Ann: "How come?"

Brother Congo: "De fambly hab decided she's to be incriminated."

"He's the most vegetable person I know."

"What do you mean?"

"Why, look at his carroty hair and the spinach around his face? He plays squash, smokes cabbage and is as cool as a cucumber."

I'm very sorry to hear your wife is so ill Benjamin. Not dangerous, I hope.

Thankee Miss, but she be too weak now to be dangerous.

Visitor: "We're getting up a raffle for a poor old man. Won't you buy a ticket, my dear?"

Sweet Girl: "Mercy, no! What would I do with him if I won him?"

ITS PURPOSE

"Gwan, nigger, you-all ain't got no sense, nohow."

"Ain't got no sense? What's dis yere haid for?"

"Dat thing? Dat ain't no haid, nigger. Dat's jes er button on top er you body ter keep your backbone from unravelin'."

An Idaho man was fishing in Lake Crescent recently. He caught a big northern pike; the biggest he had ever landed in his long and busy life. He was elated. He was crazed with joy, and he telegraphed his wife: "I've got one; weighs seven pounds and it is a beauty."

The following was the answer he got: "So have I; weighs ten pounds. Not a beauty—looks like you. Come home."

The colored pastor of a colored church noticed a new face in his congregation, and after the service he hurried down to greet the new-comer, "Mr. Johnson, this is the first time you've been to our church. I'm mighty glad to see you here." Mr. Johnson replied: "Ah had to come, pah-son. Ah needs strengthenin'. Ah's got a job white-washin' a chicken-coop an' buildin' a fence around a water-melon patch."

On his tour of the district, an inspector of city high schools came before a class of girls. He wrote upon the blackboard, "LXXX." Then, peering over the rims of his spectacles at a good-looking girl in the first row, he asked:

"Young lady, I'd like to have you tell me what that means."

"Love and kisses," the girl replied.

"I sent a salad to my next-door neighbor, who said to my daughter the next day: 'Here, Mary, is the dish your mother sent the salad in. Tell her I'm sorry I haven't anything to send back in it.'"

"Mary said, 'O, that's all right. You can just keep the dish until you have.'"

Teacher—What are the sister States?

Mabel—I am not sure but I should think they were Miss Ouri, Ida Ho, Mary Land, Callie Fornia, Louisa Anna, Della Ware, Minne Sota and Mrs. Sippi.—*St. Cloud High School Mascot.*

"What do elephants have that no other animals have?" asked the teacher of her first-graders.

"Little elephants," was the surprising response.—*Judge.*

"What makes you think that man you just met was a banker?"

"I just heard him say that children were the coupons cut from the bonds of matrimony."

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

No. 2

The Orwell Ridge Herd

A Little Known Herd of High Class Accredited Holsteins

BETWEEN the towns of Orwell and

Rome, Bradford County, Pa., is the Orwell Ridge Farm, owned by James E. Eastman. Orwell Ridge Farm contains one hundred and seventy acres. Mr. East-

man purchased this farm about thirty years ago and has erected all the buildings now standing. The development of the farm shows what good farming, good management, and a good herd of Holsteins make possible for, when the place was bought, the annual hay crop was from four to five tons while last year there was enough to feed all the stock and in addition thirty tons were sold.

Mr. Eastman started his Holstein herd with two cows and now has over twenty head. Nearly everything in the herd has been raised on the premises. The quality of the herd can be seen when we state that the ten milkers of varying ages averaged 10,000 lb. milk last year.

The Eastmans have never made any official records on their own farm. They live a few miles from Lisle Allis of Rummerfield. They found that Mr. Allis was going to test some of his cows and as they had two animals that recently freshened and were producing heavily, they made arrangements for Lisle to put these animals in his test string and feed and care for them. Ridge Frances Pauline Julip produced in seven days, 501.6 lb. milk, 24.03 lb. butter, while her daughter Ridge Fannie It Pontiac Fayne was credited with 559.7 lb. milk, 29.69 lb. butter in seven days, 1,086.4 lb. milk, 59.02 lb. butter in fourteen days. Frances was tested as an eight-year-old and Fannie as a senior four-year-old. The records of the dam was begun twenty-five days after freshening and the younger cow was put in test thirty-two days after she freshened. Ridge Frances Pontiac Julip is a daughter of King Segis Pontiac Julip who was by King Segis Pontiac from a good daughter of King of the Pontiacs, a combination of bloodlines greatly in favor a few years ago. This cow is no longer a member of the herd, having been sold a few months ago but her twenty-nine pound four-year-old daughter and several other daughters are still in the Eastman herd.

EXAMPLES OF TYPE IN THE EASTMAN HERD
Notice the pig in the background.

Some of the younger members of the herd are by Walker Lyons Colantha, a bull whose seventeen nearest dams have seven-day records averaging 30 lb. butter. This bull was a very handsome fellow, nearly all

white in color and his offspring are very promising. He is a son of Judge Lyons and is therefore brother to the remarkable heifer, Clara Clothilde Lyons, with records of 639.8 lb. milk in a week, 2,658.4 lb. milk in thirty days, 4,872.8 lb. milk in sixty days, 7,183 lb. milk in ninety days and 9,584.2 lb. milk in one hundred and twenty days, while she has a ten-months' record of 20,771 lb. milk, 723.4 lb. butter, all as a senior two-year-old.

Judge Lyons was by King Lyons from Betta Lyons Walker, 28.39 lb. butter, 661.4 lb. milk in seven days as a three-year-old, a daughter of Betta Lyons Netherland, a 34-lb. daughter of a 34-lb. cow. Betta and her mother, Blanche Lyons, were the first mother and daughter to each exceed 34 lb. butter in a week.

May Clothilde Walker, dam of Walker Lyons Colantha, is a daughter of King of the Black and Whites, a bull whose seven nearest dams were all thirty pound cows. May Clothilde Walker is a daughter of a 29.58 lb. cow, May Clothilde Pietertje. Another daughter of this cow, Beauty Pietertje Clothilde, is the dam of Segis, Pietertje Prospect, the only cow that has exceeded 37,000 lb. milk in a year.

The Eastmans own one-fourth interest in Berylwood Prince Aaggie Chicago, the other three-fourths being owned by Lisle Allis. This bull is a son of Prince Aaggie of Berylwood, the famous California show bull and show sire. Exhibited as a yearling at all the great California fairs in 1921, he was undefeated, winning grand championship at each event. In 1923 his offspring won both junior championships at the California State Fair. His seven nearest dams all have records above 1,000 lb. butter, each of the seven were tested two different years and the seven two-year records average over a ton each. These seven dams have made sixteen records that average over 1,000 lb. each. He is a son of Aralia De Kol Mead 2d, 1,303.84 lb. butter, 26,938.5 lb. milk in a year. It will be re-

HAMPSHIRE

FOR SIX YEARS FOR SIX YEARS

in succession, 1918-1919-1920-1921-1922-1923, Hampshires have won the carload lot grand championship over all breeds at the International Livestock Show.

HAMPSHIRE are the practical farmer's practical hog, because of their meat type—grazing qualities—activity—health and vigor—highly developed mother instinct—milking qualities—early maturity and economical gains, and because they are *Recognized Market Toppers*. The heaviest ton litter for 1923 from the biggest hog state in the Union, Iowa, was sired by a purebred Hampshire boar. This litter weighed 3,199 pounds at 180 days.

The official breed paper is—*THE HAMPSHIRE ADVOCATE*—a monthly publication, devoted to the interest of Hampshire breeders and the Hampshire breed.

SUBSCRIBE NOW! \$1.00 per yr. or \$2.00 for 3 yrs. FREE SERVICE DEPARTMENT—Through our field department we are able to buy hogs of correct Hampshire type of leading bloodlines at reasonable prices. Years of experience in buying and judging hogs insures you this valuable service, at no cost.

Toplines, Size and Quality

These are daughters of
Maple Corner Supreme

a bull of splendid type and conformation, whose dam, a 32.6 lb. record cow, averaged 83.6 lb. milk a day for thirty days.

His six nearest dams have official records averaging 35.11 lb.

This *Accredited* Herd has never housed a reactor.

C. F. GRIDLEY

Tioga County

Candor, N. Y.

membered that this cow recently broke the world's record in the dairyman's division with 1,073 lb. butter in a year.

The dam of Berylwood Prince Aaggie Chicago is Hartwood Netherland Segis. This cow has an official seven-day record of 31.05 lb. butter, 701.9 lb. milk. She has been tested two successive years, her latest record being 1,146.97 lb. butter, 27,018.1 lb. milk, while in two years she produced 53,669.4 lb. milk, 2,273.85 lb. butter.

The Eastmans follow a practice seldom seen on eastern farms. They do not raise pigs but buy one or two in the spring and keep them with the young calves. When the calves are turned into the pasture, the pig which seems to have formed an attachment for its stablemates, goes along and Mr. Eastman says the pig stays down in the pasture all day and comes up with the animals at night and morning to be fed. When the representatives of the BREEDER AND DAIRYMAN obtained the pictures used to illustrate this article, the pig was well grown and in fine condition and the calves and heifers seemed to regard it as one of themselves.

Mr. Eastman, while a high-class dairyman, specializes in poultry, and says he is really more a poultryman than he is a farmer. Last year he wintered 750 White Leghorns and last spring hatched 1,600. His estab-

SHADY PASTURES AT ORWELL, RIDGE FARM

lishment has quite a reputation and annually poultry management demonstrations are held on the farm, the county farm bureau and Pennsylvania State College cooperating in the event.

The Eastman home is equipped with all modern improvements, is heated by a furnace and lighted by acetylene. A compressed air system forces water to the house and the farm buildings. The farm is on a ridge and splendid views can be seen in all directions.

Mr. Eastman has two sons; Gerald, who assists with the farm work, and Wesley. Gerald is a graduate of Pennsylvania State College taking the full agricultural course. Wesley also is a graduate of Pennsylvania State College, completing the dairy husbandry course.

Berylwood Prince Aaggie Chicago.

He accepted a position as secretary of a New York Y. M. C. A. He prefers farming, but the home establishment is not large enough to call for the services of two college graduates as well as those of Mr. Eastman.

A PAIR OF PRODUCERS AT EASTMAN'S

The Eastmans are members of the Farm Bureau and the Dairyman's League and are leaders in their community in all movements for the betterment of agricultural conditions. And, as you would have a right to expect, the Eastman Herd is on the Accredited list.

Reasons for Diversification

QUANTITY of farm products we have in abundance; better quality is what is wanted, since quality improves prices and widens markets. To assist in securing a competence some specialization is advisable. Sometimes this has been carried so far as to work serious disaster. Many farms in western New York have been almost exclusively devoted to the raising of grapes, which, when abundant or moderately so, sold at ruinous prices. It is noticed that where only an eighth or a fourth of the farm was devoted to vines, the yield was not only proportionately larger but the quality better than where nearly all the land was used as a vineyard. Wherever diversified agriculture was carried on to a limited extent and plantations were restricted, the low price of grapes made no serious inroads on the income. Where all the land was given up to grapes, work was intermittent, the farmer being overtasked at one season of the year and idle at another. The demoralizing effect on the farmers and their families of this army of unrestrained youths and loungers of the city, which, for a brief period, swarms in the districts devoted to specialized crops, as grapes, berries and hops, is marked.

The baleful result of raising a single or few products in extended districts may be seen in California and the great wheat districts of the northwest. In such localities there is little or no true home life, with its duties and restraints; men and boys are herded together like cattle, sleep where they may and subsist

as best they can. The work is hard, and from sun to sun for two or three months, when it abruptly ceases, and the workman are left to find employment as best they may, or adopt the life and habits of the professional tramp. It is difficult to name anything more demoralizing to men, and especially to boys, than intermittent labor; and the higher the wages paid, and the shorter the period of service, the more demoralizing the effect. If there were no other reason for practicing a somewhat diversified agriculture, the welfare of the workman and his family should form a sufficient one.

I. P. ROBERTS.

Light Wanted On Breeding Problems

By F. F. RESSEGUIE

I HAVE been a breeder of purebred Holsteins since 1903 and have made some fairly creditable records, up to 34 lb. in seven days. I believe that the inherited trait of giving large quantities of milk is so fixed in the Holstein cow that high records are only the combination of a good cow and an expert feeder and caretaker, and I am glad to see the tendency to get our feet on the ground and get down to improving the breed for type, which has been sadly neglected, not only by the large, but by the small breeders as well. While I have had the satisfaction of breeding some very creditable cattle, I have had many disappointments in trying to breed for better type, but in reading the many articles on breeding and looking over the pictures of the different prize winners at the many fairs and expositions in this country and Canada, and in studying our Association's \$30,000 breed models, many questions come to my mind in regard to the art of breeding better Holstein cattle.

I attended the 1923 National Dairy Show at Syracuse and was very much impressed with the wonderful array of cattle of the different dairy breeds. I heard Moscrip and Haeger, two of our best judges, talk on type, and sat by the ringside and tried to place the animals ahead of them. With so many of the prize winners coming from unknown sires and dams, many questions came to my mind: questions which I have tried to solve in my 21 years as a breeder, with some success and many failures.

What is the art of breeding? Some say "like begets like," but I think many old breeders will tell you that it often works the other way. In looking at the pictures of many prize winners, I have often wondered: What did their sire look like? What did their dam look like? What was the underlying cause of their outstanding type? Take the prize winning "produce of dam" at the 1923 National, two cows from the same dam, one far superior to the other. I think we will all admit that there is a "nick" in breeding, but why is it that a certain sire bred to a certain cow produces an excellent individual while another sire bred to the same cow produces an ordinary animal. Then a certain sire bred to a certain cow produces an excellent type of animal this year, but bred back next year produces an ordinary type of animal or vice versa. Then again, some sires bred to a certain cow for a number of years produce offspring that are above the average, in fact, far beyond,

in type and production, the same sire's offspring from other cows. Again some sire's offspring seem to be practically all good individuals and yet again certain bulls sire excellent type daughters and ordinary type sons and vice versa.

Some years ago I bought a very typy little cow and bred her to a bull that I had purchased from a prominent breeder. This bull's dam was almost an ideal show cow, having won at many of our prominent fairs. Her sire had won more blue ribbons, and sired more prize winners than any other sire of the breed at that time. Not only was this bull from show stuff but he was an excellent individual, in fact, a first class show bull. Now what of the result of mating this bull with this cow? We received a heifer calf which grew into a very ordinary type of cow, only making 14 lb. butter at two years. This cow had three daughters born before I bought her. They were all by a bull of ordinary type but all three were superior as show animals and producers, one making 32 pounds; one 25 pounds and one 18 pounds of butter in a week as a two-year-old.

Sometimes we find a breeder who seems to have solved the problem of breeding or to have been very fortunate in his selection of sire and his breeding females. I do not believe it will ever be solved by buying a show bull and then buying show cows to breed to him. There would be too much diversity of breeding in the females. I realize that we have the laws of heredity and reversion to contend with. As an illustration: I bred a calf, which I sold in one of the Brentwood sales, that recently made the Maine State record in the 10 months division as a two-year-old. In type and color marking this heifer is almost identical with her fourth generation dam back in direct female descent.

Now, in conclusion, I have a few things to suggest, for I feel that you can keep models before us for a century and it will help some, but if you do not tell us small breeders on the hillside how to produce type, we will be floundering along a century hence, still striving to produce something without any guide but a clay model. My suggestions are these: First, that you, in your paper, show us, as far as possible, the pictures of all the animals, (good or bad) in the first two or three generations of the prize winners so that the average breeder can see the type that was mated together to produce these outstanding individuals. Also comments on the weak points of sire and dam. Second: Nearly all of our prominent judges own practical breeding establishments. Why could they not put in print some of their successes and disappointments—where the dam was weak, where she was strong, where the sire was weak, where he was strong and the results of mating them together. Tell us what to expect if we breed a cow built like a Jersey or one with a high arch or narrow hips, wide or narrow loin, ewe neck, short neck or a long, deep-bodied cow with a low rump or a short blocky cow to a show bull. Give us something to go by.

Possibly a book showing the pictures of the prize winners and then the pictures of their ancestors as far as possible, in pedigree form, with comments on the good and weak points, would do a world of good to teach us average breeders the art of breeding.

The Importance of Dairying

By C. W. LARSON AND ASSOCIATES, IN THE DAIRY INDUSTRY

FROM the time the first cows were brought to this country by the early settlers there has been a steady, and at times a rapid, increase in the development of the dairy business, until now there are more than 30,000,000 dairy cattle in the United States. These animals are cared for on about 4,500,000 farms, or approximately 70 per cent of all the farms in this country. Our dairy cows are producing vital food products which form a large and important part of the diet of our entire population and for which consumers pay more than \$3,000,000,000 a year, or about \$30 per person.

There are several reasons why dairying has become so important in this country:

(1) The dairy cow economically converts pasture grasses, dry and succulent roughage, and the by-products of many different kinds of grain into milk, that most excellent food for man. The dairy cow does well when a large proportion of her ration comes from these products. Only through the agency of animals can roughage be converted into human food. The great purpose of agricultural productions is an adequate food supply. For feed eaten the dairy cow returns more than three times as much digestible protein as the steer and more than twice as much energy in edible products.

(2) As our western ranches were divided into farms, it became necessary to cultivate the land more thoroughly and to practice more intensive agriculture. With this change came a need for livestock that could be maintained under this system. The dairy cow found a place in this shift of agriculture and livestock production from the range to the more intensive system, largely because she produced more human food per acre.

(3) In order to maintain soil fertility, it is necessary to keep livestock on a large proportion of our farms. The constant growing of grains and other crops depletes the fertility of the soil. The amount of fertilizer ingredients sold off the farm in dairy products is so slight that the amount brought to the farm in the form of purchased concentrate feeds often more than compensates for the loss. The yields of crops on farms where dairy cattle form an important part of the farming enterprise have been maintained and frequently increased.

(4) Dairying cannot be expanded rapidly. Only a slow growth is possible. Favorable years have not stimulated production to a point where overproduction seriously retards future progress. Many persons have been encouraged because the enterprise was stable and the income regular. An increased number of calves raised in any particular year due to favorable conditions will two or three years later have a tendency to increase materially the number of cows available for milk production, but the stimulation is always forseen. It is not possible, therefore, to have very great fluctuations in the number of dairy animals. Production may, however, be influenced materially by feeding.

When prices of dairy products are relatively high, it is advantageous to feed more heavily.

(5) The keeping of a few dairy cows on general farms has made it possible to utilize labor to advantage and to furnish a cash income as a side line. It also gives an income throughout the year.

(6) The price of dairy products is unusually uniform from year to year as compared with the prices of other farm products. While this limits great profits at times, it also largely eliminates great losses. Dairying, therefore, is a stable type of production.

(7) Dairy cattle which, for one reason or another are no longer desired for milk production, can be slaughtered for meat. These cattle, together with the veal calves from our dairy herds, furnish more than one-fourth of the beef and veal supply.

(8) The opportunities for increasing the capital stock and additional income through the sale of purebred dairy cattle, especially when animals of unusual production are bred, have offered a further stimulus to the development of the industry.

Dairy production is therefore important because of its favorable relation to the production of crops, the maintenance of soil fertility, and the seasonal distribution of labor; because of its large total income from the sale of products; because of its stabilizing effect on agriculture in general; because of the large part of our meat that is supplied as a by-product of dairying; and because milk and its products are so important in the proper nourishment of our people.

A Herd of High Quality

A SHORT distance from Chambersburg, Pa., is a Holstein breeding establishment owned by H. W. Small and Sons. The herd is of high quality and includes a number of the descendants of King of the Pontiacs. The Small herd is one of the oldest

HERD OWNED BY SMALL AND SONS, CHAMBERSBURG, PA. in Franklin County. Animals in this herd have been shown at a number of fairs and have won many prizes for type and conformation. They also have a local reputation for both heavy milking and good testing and the herd is on the accredited list.

The consumption of wine reached such a high point about a thousand years before the Christian era that Lycurgus, King of Thrace, passed a prohibition act, the thoroughness of which cannot be questioned. A strict abstainer himself, he forbade the use of wine to his subjects, and rooted up all the vines within his dominion.

Forty Years of Holstein Breeding

FORTY YEARS as a breeder of purebred Holsteins is the record of Werner Tasher of Verona, Wis. Mr. Tasher began his Holstein operations on his boyhood home farm just two miles southwest of Mt. Vernon. This is known as Sugar River Valley Farm. Mr. Tasher now owns two farms which are operated by tenants.

In the forty years only four females have been purchased. In 1884 John Tasher bought Ascianus from F. C. Stevens, Attica, New York, then one of the leading breeders of the Empire State. The sire of this bull was No. 418, and his dam's registry number was 7118. The calf was eleven months old and Mr. Tasher paid \$225 for him, bringing him to Mt. Vernon in February, 1884. Mr. Tasher early became the handyman with the dairy herd. He tells of one occasion when two dairy farmers came to buy a Holstein calf. Mr. John Tasher was not at home so Werner, then a boy, took over the selling proposition and asked \$10 for the calf. The two men offered \$5 but finally, after arguing that the price was exorbitant, they gave him almost \$10 in small change, filling the boy's hands full.

In 1886 two purebred females were added to the Tasher herd. One of these was Mountain Spring No. 1362, calved in 1880 on the farm of George Brown of Aurora, Ill., who is still living and who has contributed a number of articles to the BREEDER AND DAIRYMAN. At her side was the heifer calf, Black Cloud, that later developed into a great milk cow.

A score of bulls have headed this herd. The second was a son of the first sire. The third was Grillas Echo Prince, bred by Crose Bros. of Durand, Ill. The fourth was from the herd of S. N. Wright of Elgin, Ill., one of the leading breeders of his day. Bulls have been secured from breeders living in Iowa, Wisconsin, Michigan, and New York. Mr. Tasher is a booster for the purebred business and his herds are enrolled in the Verona Cow Testing Association and have proven their worth at the pail.

Ropy Milk

MILK sometimes is ropy, stringy, or slimy. The cause may be in some irritant forage to which the cattle have access, or other error of feeding, or the condition may be of bacterial origin.

Treatment.—Affected animals should be stall-fed on a properly balanced ration, or pastured on an abundant, suitable growth in a well-drained meadow. Each animal may receive a daily drench of Epsom salt, 2 ounces, and bisulphite of soda, 2 drams, in 1 quart of water.

If the unnatural condition is found to be acquired after the milk is drawn, it is probably due to lack of cleanliness at some stage of the handling of the milk. In this event, efforts should be directed toward the disinfection of utensils, and other sanitary measures.

The prompt pasteurization of new milk at a temperature of 140° F. for 30 minutes should protect it from becoming viscous or assuming other undesirable properties ordinarily attributable to bacterial action.—*Farmers' Bulletin 1422.*

Junior Department

Boy's Profitable Venture

Elton Newman lives near York, Nebraska. In September, 1923, Elton, then fourteen years old, entered the York High School as a student of vocational agriculture. With his father and R. L. Clark vocational agricultural instructor, Elton worked out a plan by which he would purchase a purebred Holstein cow and care for her during the year and not only get credit in the school for his work but also make a profit with the animal. He figured that he ought to make a profit of \$150 above feed cost to pay for his work.

The story of his success is told by J. H. Pearson of the Nebraska Department of Vocational Education using Elton's own words:

"I bought the cow and first feed on November 12th, and began my project that evening. I mixed up the feed that formed a ration which we had figured in the classroom. The ration was shorts 4 pounds, bran 3 pounds, oats 2, corn 18, oilmeal 2, and alfalfa 8 pounds. It took 11 days to get her on a full-feed. She increased in the meantime from 40 to 55 pounds of milk a day. The ration cost me 48.7 cents a day. The increase in the milk more than paid for the ration. On April 12th I turned the cow on sweet clover pasture, and figured a new ration: it was bran 1 pound, sweet clover 15 pounds, oats 1 pound, and alfalfa 10 pounds. The cost was 41 cents a day. It would have been less, but the corn I bought was 10 to 20 cents higher. There was no difference in the milk-flow.

"On January 7th the cow was bred to Nelsons Bros.' purebred Holstein-Friesian bull; transportation and phone call cost me \$6.25. If it is a heifer calf, I am to pay \$25; if a bull calf, I am to pay them \$25 or give them the calf, and they will breed her again without charge. She passed the tuberculin test on June 7th. She had been tested once before. On June 12th our barn burned. I lost about 50 pounds of feed and one halter. The insurance on the feed amounted to about \$1, which I took out in feed. The halter money went to father, so he gave me another halter. On July 25th I had the milk tested, and figured a new ration. At this time I bought a mixture to keep off flies. The formula I got from the Kansas Experiment Station. The cow will freshen between October 9th and 19th. She usually comes fresh about 10 days before time. I began to cut down on corn preparatory to drying her up on August 16th. By August 22d I was milking her only once a day and feeding only 2 pounds of oats and 2 pounds of bran. She was still on sweet clover pasture.

"The cow produced 9,504 pounds of milk at 35 cents a pound. The sales amounted to \$332.66. My expenses, including feed, housing, testing, and the like, amounted to \$155.51, leaving me a gross profit of \$177.15. An average of one hour a day was spent milking and caring for her, so that 289 hours at 20 cents an hour amounted to \$57.80 for my labor. This, subtracted from the gross profit, gave me a net profit of \$119.35 from my cow."

Coolidge and the Livestock Industry

"WE are entitled, I think, to look upon livestock as one of the most highly developed products of the agricultural industry. To bring that industry to its present high estate has required a continuing co-operation of unflagging industry, determined courage, sound business, a widespread and intelligent application of scientific methods, and the recognition of the practical advantages to be derived from our American system of agricultural education. "If anybody questions that the farming community of this country has become a community of men and women capable of dealing with affairs in the broadest and most inclusive sense, I should like to have the doubter share with me the privilege of discussing the problems of agriculture with some of the men and women who came straight from the farm to the White House for that purpose. I should like to have the doubter know, as well as I know, that even in his times of misfortune the farmer demonstrates a most reassuring capacity to keep his common sense intact and to do his economic thinking on sound lines.

"From the beginnings, the prosperity and efficiency of farming have been very accurately measured by the development of its livestock feature. I do not know just when the discovery was made that the profitable mode of marketing products of the farm was to drive them away on four feet. But I do know that this was so long ago recognized in the old New England country of which I am a native that it gave rise to a quaint colloquialism which was employed in stating the size and capacity of a farm. When I was a boy in Vermont, a farm was described, not as containing 60 acres or 80 acres or 100 acres, but as a 10-cow farm or a 20-cow farm or a 30-cow farm. And I am not sure but this old fashioned mode of measurement was more accurately descriptive than any unit derived from the activities of the surveyor."

The above was taken from the speech made by President Coolidge when attending the International Stock Show at Chicago. This is the first time an American President has officially attended an international agricultural exposition.

Indiana Rural Legislation

WHEN the members of the Indiana State Legislature started their sixty-day session January 8, they had a large number of bills before them that are of interest to Hoosier farmers. Governor Jackson advocates a bill providing for permanent auto license plates. Another bill will make funds belonging to the state board of agriculture payable only when drawn through the state auditor's office. The board of agriculture now handles its money independently of other state offices. Another bill proposed was to permit farm organizations to unite for the purpose of buying and selling produce. It will also be suggested that real estate be reappraised next spring instead of awaiting the regular appraisement period in 1926. The advocates of this measure claim that the valuation on real estate, especially farm property, was set when

prices were high and that at present the farmers are paying taxes on a valuation much higher than the market price of their properties.

A proposed measure will authorize state rural police. Another one makes the county the unit in educational administration eliminating the trustees from participation in school affairs. This measure was first advocated by the survey committee which investigated education in Indiana three years ago. It caused a great deal of debate in the last session and there will doubtless be a lot of discussion this session. A "blue sky" law is advocated to prevent the floating and selling of stock of little or no merit. An income tax amendment passed last session will come up for endorsement as well as the repeal or modification of the direct primary law.

The Indiana Legislature contains a large number of practical farmers, 34 of the 100 are listed as dirt farmers and enough others have had agricultural interests to give those who have a working knowledge of farm conditions a substantial majority. There will be eleven farmers in the Senate and these men together with others who have farming knowledge will control the upper house.

The Dairy Cow Is a Money Earner

THE California Department of Agriculture has unearthed some interesting facts about the dairy cow. For the statistical year ending June 30, 1923 the total gross value of dairy products produced in the Golden State was \$104,327,522. Butter, market milk and cheese constituted \$69,825,593 of this valuation. This leaves the large total of \$34,501,929 as other sources of revenue to the credit of the dairy cows, an amount almost equal to the \$36,563,715 worth of butter. Included in this valuation are such products as condensed milk, powdered milk, sugar of milk, casein, albumen, cream for ice cream, buttermilk and so on. With the exception of cream for ice cream and condensed milk, these are side lines of the dairy business that have been developed in recent years.

But the figures as given out overlook another source of revenue for which dairy cows are to be credited. Nothing is mentioned of the immense quantity of meat that the dairy cows contribute in the form of beef and veal. Nor is credit given for the increase in the number of cows that are raised annually, nor for the manure that they contribute to keep up the fertility of our soils. When it is all figured out the dairy cows of the country do a whole lot besides putting butter on the table and milk on the doorsteps of city dwellers.

Just Milk

MILK is the most trusted of human foods. Clothed in a veil of white; recommended as nature's perfect diet; associated with the innocence of infancy—milk is the hope of recovery for invalids and the sick, a perfect food, highly palatable, very digestible and nutritious, and contains life giving vitamins so necessary to good health, wealth and happiness.

Expected to Attend State Show

THE exhibit of Holstein cattle at the Pennsylvania Farm Products Show to be staged at Harrisburg, January 19 to 24 comes from Berks Farm, the well-known Holstein establishment owned by Abner S. Deysher of Reading, Pa.

Mr. Deysher, who is a director of the Pennsylvania Federation of Holstein-Friesian Clubs, volunteered to furnish part or all of the Holstein exhibit just as soon as it was determined that cattle would form part of the show.

Heading the string is the Berks Farm junior sire, Sir Pietertje Chloe Ormsby, a handsome dark colored

SIR PIETERTJE CHLOE ORMSBY
Junior sire at Berks Farm, owned by Abner S. Deysher, Reading, Pa.

bull already weighing around a ton. He is a son of Chloe Pietertje Ormsby, 30.81 lb. butter, 532.4 lb. milk in a week as a junior four-year-old. As a five-year-old she made a year record of 1,175.07 lb. butter, 20,875.2 lb. milk. Chloe has made a number of tremendous long-time records. Freshening before she was a two-year-old she produced 801.13 lb. butter in a year, world's record for a yearling heifer at that time. As a junior three-year-old she made 1,067.88 lb. butter in a year and as a junior four-year-old 1,149.86 lb. butter. She is said to be the youngest cow that ever made three separate year records each above 1,000 lb. butter and each time she produced over 20,000 lb. milk.

The time of the year at which the Farm Products Show is held militates against bringing cattle long distances to this show and on this account, if on no other, Mr. Deysher is to be commended for his enterprise and public spirit. As mentioned in our January 8 issue the new world's champion, Lyons Sarcastic Korndyke is expected to be one of the party. A full account of the exhibit will be published in the February 8 issue of this paper.

Large Co-Operative Creameries

WISCONSINIANS have never been noted for their modesty or perhaps it would be better to say, they are enthusiastic boosters of all things pertaining to their native state. An inhabitant of Barron County, Wisconsin, recently wrote a widely published article on the dairy industry of Barron County in which he said that 15 creameries in that county produced six million pounds of butter last year and that Barron County was the home of the Barron Coöperative

Creamery, the largest coöperative creamery in the world. This creamery has been running twenty-one years. The writer took in a lot of territory in making his comparison.

Mr. Guy Miller of Stanislaus County, Cal., claims that the Coöperative Milk Producers' Association of Central California, located at Modesto, does a far larger business than the Barron Creamery.

The Modesto Creamery, during the year ending the 31st of December last, produced 5,380,874 lb. butter. In addition it sold during the year sweet cream that contained 272,262 lb. butterfat. Had this sweet cream been churned the output of this one creamery would have nearly equaled the yearly output of six million pounds claimed for the 15 creameries of Barron County to say nothing of a comparison with the Barron Coöperative Creamery, which received during the year milk containing 2,026,203 lb. butterfat.

Mr. Miller says that the Milk Producers' Creamery during the past year manufactured 2,861,900 pounds of skimmilk powder, 637,404 pounds of casein and 62,899 gallons of condensed skimmilk. This creamery is not a centralizer, but is a coöperative creamery owned by 1,533 dairymen. The milk and cream of the patrons is hauled by truck direct from the farms to the creamery. Part of the members send cream and part send whole milk. During the season of the greatest milk production over 200,000 pounds of milk is received at the creamery daily as well as a large volume of cream. The butter production in May, 1924, exceeded ten tons per day on several occasions.

Mr. Miller contented himself mentioning the output of the one Stanislaus Creamery. He could have told of others in his own state. The Danish Creamery Association, a coöperative concern of Fresno, California, churned during 1922, no less than 3,461,251 lb. butter. That this butter was of high quality is shown by the fact that many first prizes and gold medals were won with its exhibits.

Starting Big

JOSEPH E. LEHMAN AND SONS, owners and operators of two fine large farms near Chambersburg, Pa., the Queen City of the Cumberland Valley, recently took a trip to Tioga County, Pa., in company with their County Agent and the veteran Holstein breeder and sales manager, S. R. Miller of Chambersburg. They bought 90 head of fine registered Holstein cows and heifers from accredited herds of Tioga County. The Lehmans are starting in the breeding of the greatest of all dairy cows, Holstein, and are among the best and most progressive farmers of Franklin County. They find the Holstein the farmer's cow and the greatest money maker.

The Lehmans also bought a half interest in King Pietertje Ormsby Piebe 17th, a great four-year-old bull sired by Hargrove and Arnold's great herdsire, King Pietertje Ormsby Piebe and from a 30-lb. junior four-year-old with 968 lb. butter, 20,000 lb. milk in a year. King Pietertje Ormsby Piebe is a show bull and already has a fine lot of daughters in two of the largest herds in Chester County.

Competition for American Dairying

TWO thousand, four hundred tons of butter, with an average grade of 93.93 points, is the record of the New Zealand Coöperative Dairy Company for the year ended March 21, 1923, according to a consular report to the United States Department of Agriculture. During six months in the height of the season all butter made was graded superfine, with the exception of 63 boxes which were graded first class. The top score was 94.46. The high quality is due to the use of scientific production methods by farmers, an educational campaign conducted by the company's instructors, and the practice of a rigid system of grading.

A story of this great dairy company appeared in the January 8th issue of THE HOLSTEIN BREEDER AND DAIRYMAN. Better read again what Mr. Eugene B. Bennett tells of its origin, growth and development.

Dairying in San Domingo

FLUID milk in the Dominican Republic is boiled before using except for cooking and often for the latter purpose as well, states Consul Charles B. Hosmer. Although adults use milk generally modern methods of production and distribution do not prevail. The average price in the cities is about twelve cents per bottle and the bottles hold a little over two-thirds of a quart. A large amount of condensed, evaporated and powdered milk is imported into the country each year and manufactured milk is always used for infant feeding.

RO-AN HERD Offers A TEN MONTH OLD BULL

Sire: **MONARCH BEAUTY**, a double grandson of King of the Pontiacs. His two granddams average over 600 lb. milk, 33 lb. butter in 7-day official work.

His first two daughters average 20.95 lb. butter, 434.2 lb. milk. Both tested as junior two-year-olds.

Dam: **JOHANNA BETSY BERYL**. Calving as a junior two-year-old heifer, she produced 19.03 lb. butter, 442.9 lb. milk in 7 days; in C. T. A. work she made 363.5 lb. fat, 9,892 lb. milk, so you can see her quality.

This bull is a fine individual with a long, straight back. He is evenly marked, well grown, and is now ready for light service.

Price only \$80

ROY W. CHAMBERLAIN

ALLEGANY COUNTY CANADEA, N. Y.

Keep in mind that RO-AN Herd is ACCREDITED and has never housed a Reactor.

There is no butter made in the republic and only a small amount of native cheese. Butter is imported chiefly from the United States and Denmark and large importations of cheese are made from the United States and Europe.

A wealthy resident of Santo Domingo City recently installed machinery for cream separating, is supplying cream for which there is a limited demand and sells milk put up under sanitary conditions. His enterprise will be watched with great interest for this is the first attempt in this country to carry on business under modern dairy methods.

Last Week At Syracuse

APPROXIMATELY 75 interested in the Holstein industry gathered at the Yates Hotel, Syracuse, N. Y., on January 13 for the annual business meeting of the New York Holstein-Friesian Association.

The number of directors was increased from 12 to 13. Membership fees, which have been on a minimum basis of \$5.00 annually with an extra charge for number of cows owned, were changed to a flat \$5.00 rate.

When the new board convened, Charles F. Bigler, who had been holding the positions of president and secretary for the past few months, was reelected president, R. E. Chapin of Batavia was chosen as first vice-president, Harvey F. Farrington of Lowville, second vice-president, and Harold Hess of Phoenix, treasurer. The executive committee are Harry Yates of Orchard Park, Mr. Chapin, Mr. Farrington and the president-secretary. The legislative committee consists of Professor H. H. Wing of Ithaca, C. W. Halliday of North Chatham and Frank Schuyler of Central Bridge. It was voted to hold a sale at Cuba, May 6 and 7.

At a dinner held at the Hotel Onondaga, the veteran Holstein breeder, E. A. Powell of Syracuse, eulogized the late Wing R. Smith, for many years treasurer of the Holstein-Friesian Association of America. Mr. Powell and Mr. Smith were brothers-in-law. Professor E. S. Savage of Ithaca said a few words on dairy cattle feeding.

An auction sale managed by the president-secretary was held on the state fair grounds January 14 and 15. Prizes were given for the best animals, Professor Wing being the judge. A silver milk pail, donated by Dr. D. B. Armstrong, was awarded to Harvey A. Moyer for the best two-year-old heifer. Harvey F. Farrington donated a 70-lb. cheese to be given to the owner of the best bull consigned and this was awarded to Mr. Yates. The Maaikenshof Farms of Bedford Hills was adjudged to have the best mature cow and was awarded advertising for which \$25.00 would have to be paid.

In the first day's sale 60 head of cattle were sold. The average was a little over \$150.00, the highest price being \$925.00. About 150 were in attendance. The auctioneers were Mead and Scott.

As a business man the farmer's object is to secure the largest possible income for his year's work as a laborer or manager, or both.

Measurement and Milking Capacity

A NUMBER of agricultural colleges and breeders of dairy cattle are now coöperating with the Bureau of Dairying of the United States Department of Agriculture in the study of the relationship of the outward appearance of dairy cows to the size of internal organs and to milk and butterfat production. The Pennsylvania State College, University of California, and Cornell University already have contributed records which they have made of cows discarded from their herds. Three more colleges—North Dakota, Kansas, and Washington—are ready to take up the work, and there are several more that have signified an intention to participate in this important investigation, which probably will be continued for several years.

When this work was begun about a year ago, the Department made external measurements of some 400 cattle at packing plants, and after their slaughter made a study of the internal organs as to weight and other measurements. At the present time the principal effort being made is to find not only the relationship between outside measurements and internal organs, but any relationship which may exist between outside measurements and the size of organs, and between size of organs and capacity for milk and butterfat production.

So far between thirty and forty cows of known records have been slaughtered and measured after the outside measurements had been made. Some famous producers are in the list, including the long-time producing champion Jersey cow Sophie 19th of Hood Farm. The mounted skeleton of this famous cow is kept by the Bureau of Dairying for scientific study. Measurements have been taken of the United States champion butterfat cow, the Holstein-Friesian, May Walker Ollie Homestead, with a record of 1,218 lb. fat in a year. Permission had been granted the department to secure both ante-mortem and post-mortem data on the Holstein, Tilly Alcartra, one time world-record milk producer, but the unfortunate appearance

of foot-and-mouth disease in the herd made it impossible to use her in this way.

At the time of the last National Dairy Show preliminary measurements were made of some of the best producers exhibited. Several owners of high-producing cows measured at this time volunteered permission to the department to follow through its investigations when these animals are ready to be retired from the herd. The department is glad to accept such offers of coöperation from owners of outstanding animals. Where State colleges are coöperating they will make the measurements for all cows offered by breeders in the State, as well as those in their own herds.

Show Plans Go Wrong

AS THE BREEDER AND DAIRYMAN is on the press, Mr. Abner S. Deysher telephoned that it is absolutely impossible to send his animals to the Pennsylvania State Farm Products Show. Owing to snow and ice between Berks Farm and Reading, Herdsman Berry was unable to get the animals out of the Berks Farm barnyard. This is all the more regrettable as the railroad car had already been fixed, stalls built for the bulls and most of the equipment placed therein. At Harrisburg the stalls had been fixed by the show management and all preparations made. The latest information is that neither the Guernsey nor Jersey breeds will be represented and the only purebred animals that will be on display will be registered Ayrshires.

One of the fundamental principles involved in the establishment of a permanent and profitable dairy industry, is an earned reputation for the production of quality products.

If you sell feeds to high producing purebred dairy cows you have a double market—a market for calves and a market for milk.

How Do You Like Her?

She is a daughter of our senior herd-sire,

GRAND CHAMPION SEGIS 2D

He was by a great show bull and from a 37.15 lb. four-year-old. His six nearest dams average 32.06 lb. in 7 day official work. Better yet, he sires producers as well as show stock. Let us show you our herd of 120 head which is under State and Federal Supervision.

L. N. Mack & Son and Floyd E. Mack
Montrose, Pennsylvania

TIDY ABBEKERK PRINCE

is acknowledged to be one of the greatest transmitting sires of the breed. His daughters and granddaughters are not only producers but are noted for their size, beauty of form, and producing capacity. The majority of our milking dairy are daughters and granddaughters of this great sire.

Yet our prices are very reasonable.

HOMER N. LATHROP
SHERBURNE NEW YORK

Herd under State and Federal
Supervision

The Offspring of

Maple Grove Clever Konigen Glista

inherit his type and conformation and, as their dams are producers, they are bound to make good wherever they go.

Westview Herd passed its first test CLEAN.—You will make no mistake buying here.

NOT ABOUT COWS

Talk Health

OF all the deadly bores that infest the earth, one should pray to be delivered from those who constantly discuss their ailments in public. Just let some one mention operations, and a flood of eloquence is let loose, describing in minutest detail every step of their own last peculiar experience. And from the delight that some women seem to take in dwelling upon such things one would deem them an added attraction, instead of a revelation of weakness. No doubt all this is based upon a desire for attention and sympathy which evidently can be obtained in no other way. Though few realize it, only those very closely associated with us are very much interested in the state of our health, and then often only because of the way in which it affects their work or plans. The real sufferer from ill health usually says little or nothing about it, minimizing the worst features and magnifying the good ones. It is just a habit that people get into of discussing their health as they discuss the weather, with no idea of how their intimate revelations may affect their hearers. A kindly doctor, in making a social call, once asked an old lady that perfunctory question—"How are you?" At once all present were treated to a minute description of inward troubles that would have made a great impression in the doctor's private office. When there is a basis for complaint, when pain may exist, centering one's mind upon it only prolongs it, and may bring about a chronic condition of poor health. These lines by Ella Wheeler Wilcox are well worth remembering.

Talk health. The weary never ending tale
Of mortal maladies is old and stale;
You cannot charm or interest or please
By harping on that minor chord—disease.
Say you are well, or all is well with you
And God will hear your words and make them true.

Puddings

A PUDDING has been described as a compound formed of fragments of a material which had a previous independent existence, bound together by a soft mortar or cement which was able to penetrate and fill the pores and intervals between the lumps, and the whole set by heat.

FOR FLOWER LOVERS

If the bulbs planted last fall for indoor flowering this winter are showing signs of blooming before they are well out of the bulb, place a cone of dark paper over them to exclude the light, and the blossoms will reach for the speck of light at the top. Ordinary light colored paper will not answer as well as heavy dark paper, as it does not exclude the light sufficiently.

In ironing anything that has to be folded like table linen, bed linen or handkerchiefs, fold them in different places at various times, as they are less likely to wear out if the folds are occasionally changed.

WHERE IS EHO?

Many years ago Thompson, Susquehanna County, was called "Eho." The Thompson correspondent of the *Forest City News* tells of the difficulties a newly engaged teacher had in finding the place, as follows:

About two weeks ago, our school directors hired a man to fill the position as assistant principal made vacant by the resignation of Mr. Hill. The new teacher is lost! Mr. H. M. Benson, of Jackson, may be responsible for this in persistently reminding us that the name of this place is "Eho." The teacher in question first wired us from Thompsonstown, Pa., that he couldn't locate Thompson; we told him to come ahead that there wasn't any town attached to it and then he goes to Thompsonville, Pa., and wires that no one expects him. Thursday we had a telegram from Thompsonfalls, Montana, that he was broke, having been riding on trains since December 2d. On Saturday he phoned from Thompsondale, Wayne County, Pa., and asked if we would mind hanging out a lantern as he had been through here twice already; we heard recently that he got as far as Carbondale and asked the agent for a ticket to Eho, the agent having never heard of Eho and not being "up" on these cross-word puzzles gave him a ticket to Danville. We may find him there.

ANOTHER CRANBERRY SAUCE

While cranberries are in the market, try this way of making cranberry sauce. It is very much easier than the usual way and is perfectly delicious. Take one pound of cranberries, two pounds of apples, peeled and sliced, and put them through a food chopper. Add three pounds of sugar, and it is ready to serve. If only a small quantity is desired use a cup as a measuring unit instead of a pound.

JUST SUGGESTIONS

If lemons get too dried up before using, warm them in the oven or drop in hot water for a few minutes and you will get very much more juice from them.

THE END OF AN 80-HOUR DAY

A man who stayed at home with the children for half-a-day while his wife did her Christmas shopping submits the following statistics:

Opened door for children—108 times.
Closed it after them—108 times.
Tied children's shoes—16 times.
Number of stories read to them—21.
Stopped children playing piano—19 times.
Smoke rings blown to amuse them—498.
Arbitrated children's quarrel—77 times.
Put doll carriage out—28 times.
Brought doll carriage in—28 times.
Mended kiddie car—5 times.
Cautioned children about crossing street—66 times.
Children crossed street—66 times.
Peddlers rang door bell—7 times.
Dried children's tears—14 times.
Toy balloons bought for children—6 times.
Average life of balloon—3 minutes.
Assisted children to blow noses—14 times.
Telephone calls answered—8 times.
Percentage of wrong phone numbers—100 per cent.
Slices of bread and butter served—12.
Drinks of water served—9.
Refused to buy candy—87 times.
Questions dodged about Santa Claus—1,051.
The statistician is now advertising for two nurse girls and a governess.—*Journal of Home Economics.*

HOME CANNED MEAT

When the butchering season arrives on the farm the busy housewife thinks with disfavor of the none-too-pleasant work ahead which will be added to her already numerous tasks.

However, when it is all done, what a pleasure to visit the cellar and view with pride and satisfaction the rows of cans filled with meat, and when company arrives unexpectedly, to open some choice kind and receive the well earned compliments that are bound to be given her work.

Also what a pleasure to realize that she is cutting butcher bills by utilizing a farm product at a time when it is plentiful and so doing her part in reducing the high cost of living in the home. These facts are incentives to overlook the disagreeable features appertaining to the work.

The following are a few different ways of caring for meats that have been fully tried out, and proven successful in keeping qualities, if the jars are placed in a cool cellar and protected from strong light.

To can fresh ham have the jars thoroughly sterilized with boiling water, "E-Z" seals are the best. Slice fresh ham about one inch thick, cut in pieces that will fit nicely in can, sprinkle each layer with a little salt, pepper if desired, pack very solidly to the top, put on rubber, (using the best brand), adjust cover, putting clamp over cover but not pulling it down by the neck of jar, it must be loose in order that the steam may escape freely. Place the cans in a shallow pan, the large old-fashioned "dripping" pan is excellent, having about one inch of water in the pan, and do not allow the jars to touch each other or sides of container. Place in hot oven and process or "bake" steadily three hours. The oven should be kept hot enough to insure steady cooking. At end of three hour period, remove, pull down clamp to seal can and invert to test, if any juice escapes a new rubber must be adjusted. It will not be necessary to reheat can after doing this. Place the jars away out of drafts to cool, and do not invert them while cooling.

It might be well to add a few words to those not familiar with the process of this method of canning meat. The product will have settled away from the top and there will remain in the bottom of the can the liquid lard which has cooked from the fat, and at least an inch of moisture which will turn to a jelly-like substance when cold. There should not remain more than that amount of "jelly," or the keeping qualities are lessened. The delicate flavor of ham canned in this manner is unequalled.

Sausage may be taken care of with this same process. The sausage should first be seasoned properly, then packed tightly in cans, using the "E-Z" seals, cook in oven three hours. Do not invert jars when cooling. Following is a splendid recipe for seasoning sausage:

20 lb. ground pork.	¼ lb. sage (if desired).
¼ lb. salt.	2 oz. pepper.

When canning meats by oven process the rubbers will become softened by the intense heat but this will do no harm if the cans do not leak when tested.

In opening the jars of sausage cut it each way with a long knife before removing from can; it will come out better.

One should endeavor to have a variety of canned pork. Try frying fresh shoulder meat, seasoning as for table, pack slices (when a delicate brown) in jars; usually enough lard to cover will fry out of shoulder meat; however, there should be three inches in each can. Invert these when cooling as the lard should be at the top when it is cooled.

Make the seasoned sausage into small balls that will slip into cans easy, fry a nice brown color and pack. There should be the same amount of lard on this as for shoulder meat, also invert cans.

Tenderloin and back steak, both splendid cuts, are simply splendid canned this same way.

The two most important facts to bear in mind while canning meats of any kind are—having jars, tops, and rubbers all sterilized with boiling water and the moisture in the product cooked out as much as possible. Too much moisture remaining will cause any canned meat to sour even when all other precautions are taken. If necessary, cook longer than stated to eliminate this moisture.

There is a good old-fashioned "dutch" manner of taking

care of the "white meat" or back steak, which lies in a thick strip along the back bone.

When the pork is being cut up this meat can be torn out in one long piece. Cut this into pieces one inch thick, pack a layer of these in one small crock or jar, sprinkle with salt, pepper and ginger (do not forget the ginger), then another layer and continue until crock is two-thirds full, cover with cold water and weight down. Will be ready for use in three weeks, will keep until warm weather and has a wonderful flavor all its own.

Hams and shoulders which are not canned fresh are splendidly taken care of as follows: Pack tightly in twenty-gallon jar and pour brine over. To each 100 pounds of meat take

10 lb. salt.	2 oz. saltpeter.
2 lb. brown sugar.	4 gal. boiling water.

Dissolve the ingredients in the boiling water, let cool and pour over meat. Allow meat to remain in pickle six weeks, then remove. It can be smoked or fried without smoking. Either way, fry out moisture, then pack in crocks, pouring over lard that cooks out. When two-thirds full cover with lard and weight down. Will keep splendidly, care being taken to re-cover remaining meat in crock with lard after removing slices for use.

To can beef. Cut beef into chunks that will fit nicely into cans, add small pieces of suet while packing. When jar is full place one teaspoonful of salt on top of meat to each quart. Place rubber, adjust cover loosely. The one quart "E-Z" seals are the most convenient.

A washboiler can be used to good advantage to process the meat. Anyone not possessing a canning rack need not feel nonplused. Place newspapers in bottom of boiler to depth of about four inches, packing them in tightly. Place cans on these. By wrapping thick papers around among the cans several more will be gotten in. This will also avoid their tipping around. Fill boiler with medium hot water within six inches of can tops, place cover on tightly, process steadily three hours counting from the time when water commences to boil. Remove, fasten down the covers, test, and place out of drafts to cool. Do not invert.

Some people prefer Mason Top Cans, but it is advisable to buy new tops for canning meat. If processing meat in these cans, screw top on loosely while cooking. If the wire clamps on "E-Z" seals have become stretched out through using, one can insert a small, tightly rolled pellet of paper under clamp going over top, when sealing this will eliminate using two rubbers.

When frying fresh or smoked meat to can, if in doubt about moisture being cooked out sufficiently, test by holding a small mirror over meat, moisture will accumulate on mirror if still present.

A LABOR SAVER

The top parts of blankets and quilts become quite soiled long before the rest of the article. Take a strip of muslin about ten inches wide and bind the tops of the covers, leaving about five inches on each side. These strips may be washed and replaced, or may be destroyed and new ones used. It will prove a great saving in the laundering of the heavy pieces of bedding.

HOT DOG!

"I don't suppose you keep anything so civilized as dog biscuits in this one-horse, run-down jaytown, do you?" the tourist customer snarled.

"Oh, yes, stranger," the village merchant responded, pleasantly. "Quite a few folks like you come through from the city, and we aim to have everything called for. Have 'em in a bag or eat 'em here?"

TRY THIS DISH

Take one reckless, natural-born fool; two or three big drinks of bad liquor; a high-powered, fast motorcar.

Soak fool in liquor, place in car and let go. After due time, remove from wreckage, place in black, satin-lined box and garnish with flowers.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

JANUARY 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Thirty Thousand Dollars Short

THE financial report of the Holstein-Friesian Association of America for the year ending December 31, 1923, showed that the Association was operated at a loss of \$60,819.55. The published statement for the past year, ending December 31, 1924, gives a loss in round numbers of \$30,000.00.

No stronger argument could be advanced that the Association is being mismanaged or extravagantly managed than to cite the fact that, up until 1919, when the transfer fee was twenty-five cents, a few capable officers and directors working for the interests of the breed and the breeders and the Association, were able to pay all expenses and accumulate a surplus of \$220,000.00.

Under the present management, with a transfer fee of \$1.50 to members and \$3.00 to non-members the Association is running behind each year. Will extravagance cease before the Association's reserve fund is exhausted? This question is of vital importance to every breeder of Holstein-Friesian cattle.

From the Enemy's Camp

WE HAVE stated repeatedly that 90% of the breeders of Holstein cattle and members of the Holstein-Friesian Association were dairymen who conducted their business along the lines of economical milk and butter production and were dependent upon the returns of their dairies as their chief source of income.

We have contended that less than 10% of the breeders were breeding cattle as a hobby, making official records and promoting the selling of cattle at speculative prices. We have contended that the 10% who were breeding cattle as a hobby or who were dealers and promoters and not dairymen, had gained control of the Holstein-Friesian Association and were using its resources to promote the speculative end of the industry at the expense and to the detriment of

the dairymen who breed Holstein cattle for dairy purposes. We have contended that this was wrong in theory and wrong in principle.

And now in an advertisement of the Fred F. Field's Holstein Company appearing on the back cover of the *Holstein-Friesian Register* under date of January 15th we read:

"According to the last Holstein census 95% of the breeders were making their living from the production of milk and cream. The others were 'Cow Fanciers' and they were not dependent on the industry for a living.

"It is generally conceded that less than 5% of the Holsteins will measure up or even approximate the true type standard. For quite some time the breed papers have given nearly all their space to show ring news and to putting over the true type. What is the answer? They have succeeded in increasing the value of the 5% and depreciating the value of the other 95% or the animals that are owned by the practical dairymen and breeders that are the real backbone of the industry. Ten years ago the system was wrong and yet 95% of the breeders were benefiting by it. The system is now wrong and less than 5% are being benefited by it."

The HOLSTEIN BREEDER AND DAIRYMAN places the Fred F. Field's Company as one of the breeding establishments that comprises the 5% that are being benefited from the advertisements and publicity that has been broadcast by the Holstein-Friesian Association through paid advertisements and its Extension Department at the expense of the breeders and dairymen.

It is not the seven-day tests or the thirty-day tests or the yearly tests made under official supervision that has placed the Holstein cow at the head of the list as the leading dairy cow of America. It has been her performance in the working dairy when fed and cared for in the hands of the plain breeders and dairymen. There she has made her reputation and there she has been able to live up to her reputation.

In the advertisement above referred to Type and Production measured by official records has been emphasized in selecting breeding stock. We would emphasize the value of records made under normal, economical milk production and we would add to this health.

Unless the seller could give definite assurance that the animals offered for sale came from a tuberculosis free herd or one that was regularly tested and practically free from the disease we would not consider making a purchase under any condition.

So prevalent has the Federal Accredited Plan for the eradication of tuberculosis become that unless a breeder mentions in his advertisement that his herd is Accredited or under State and Federal Supervision it always arouses curiosity and the feeling that the health of his herd would bear investigation. A sixty-day retest is not a sufficient guarantee against losses from tuberculosis. The buyer must have a further guarantee that the animal comes from a tuberculosis free herd or one that is regularly tested.

"Smileage!" What a fine new word. How language does grow.

A True Prophet "From Rock-Ribbed Maine"

I want you to put the following in the next edition of the *World* so the readers will have a chance to think it over before the June meeting.

I think the attacks that the *World* and its associates and owners, the Stevens Brothers, have made on the secretary and other officers is the meanest, most narrow-minded policy I have ever heard of.

It is clear to any reader who uses his head for other things than to keep his collar on, that some of the people connected with the *World* want some or all of the offices of the association for what financial returns they will get.

I want to ask every reader if he wants for our next set of officers men who are so narrow-minded, so low down that they will take the methods being employed to secure those positions that they do not care or dare to come out in the open and ask for.

The very methods that these men employ tell louder than words ever can that they themselves do not feel that they deserve the positions they seek because of greater ability. Therefore, they use the secretive methods that they loudly condemn.

I hope the next officers that the association has will be men as open-minded, broad-minded and honest as those men we now have. I hope every member in the state of Maine, if not New England, will be careful to send in his proxy vote reflecting the present officers. It is much better to know who you are voting for than to let someone whom you only know by name vote for whom he chooses.

AUSTIN W. JONES,
Veazie, Me.

The above letter appeared in the *Holstein-Friesian World* under date of May 18, 1918, and under the heading, "From Rocked-Ribbed Maine." At the time it was published it was prophecy. It is now history.

It is interesting to read Mr. Jones' letter because his prediction rings true to what actually has since happened in the Holstein-Friesian industry.

After the smoke of the battle has cleared away the members of the Holstein-Friesian Association and the breeders of Holstein-Friesian cattle find that they have been deceived and misled by following false gods waving glittering banners of speculation and deception.

The Downfall of the Billboard Scheme

LITTLE is heard nowadays about Holstein-Friesian billboard advertising. When Fred Koenig and his satellites started the scheme with a flourish of trumpets it was heralded as a universal panacea for nearly all the ills that ever afflicted the Holstein-Friesian industry. More of the members' money was spent in advertising this scheme than was ever received for the billboards. Apparently the scheme has been dropped by its originators who now have a new scheme whereby a small fraction of the Holstein milk produced can be advertised and sold under the trade name of "White Nectar," while the expense of promoting the plan comes from the pockets of all the breeders.

One of the troubles with the billboard scheme was that it was about 20 years behind the times. For more than a decade public sentiment has been against billboard advertising in the country districts. Civic improvement leagues, chambers of commerce and organizations both in city and country have passed resolutions against the nuisance. For years the billboard companies have been endeavoring to help feature the annual Pennsylvania Farm Products Show, and just as steadily the organizations represented at this great agricultural show have voted not to use such advertising.

So bitter is the feeling against billboards desecrating the landscape that legislation and the courts have been appealed to in order to do away with these eyesores. That the friends of the billboards are fighting a losing battle is evidenced by the following quotation taken from *The Independent*, issue of January 3, 1925.

"The drive against billboard nuisance has already progressed far enough to make certain the eventual mopping up of the worst of these monstrosities. The United States Supreme Court has sustained the decision of the Illinois Supreme Court in *Cusack vs. Chicago*, enabling the State, without constitutional change, to prevent the erection of billboards in residential districts. Equal authority, by inference, exists in most of the other states. Massachusetts in 1918 adopted a constitutional amendment which sets forth that 'Advertising on public ways, in public places and on private property within public view, may be regulated by law.' The Supreme Court of Minnesota has recently expressed the opinion that 'it is time that the courts recognize the aesthetic as a factor in life.'.....It can be said with certainty that the public desire to rid American landscapes of advertising blots is increasing, and that the comparatively near future will see the end of the servitude under which private interests have placed both the eyes of the public and the highways in which public funds are invested."

A Word to the Ladies

OUR lady readers' attention is especially called to the article on the Woman's Page, entitled "Home Canned Meat." A couple of years ago representatives of THE BREEDER AND DAIRYMAN called at the home of the writer and were invited to stay to dinner. On making the objection that it would cause much extra work for the lady in question we were met with the answer that she would take up a can of meat and that everything else was in readiness. The lady did even better than she promised for the meat on the dinner table consisted of home made sausage and fresh pork, that is, pork that had never been salted, simply canned fresh. Both were delicious. We were told that they were put up early in the year and it was late in August when they were used upon the table. The housewife informed us that she canned 150 quarts last year by these same methods without losing a single can so we consider her a canning expert and can thoroughly recommend her method. We trust that any of our readers who can meat by her recipes may meet with equal success.

Nothing is true that proves that any evil is necessary.

THE PRACTICAL DAIRYMAN

BAD ODORS AND FLAVORS

Bad flavors and odors of milk are multitudinous in their nature and origin. Some cases are unquestionably brought about by unsuitable feed in the stall or pasture, others probably result directly from a diseased condition of the gland, while in many cases bad flavors and odors are caused by contaminated milk pails.

Occasionally a cow that is within from one to three months of calving yields milk that imparts a bitter taste when made into butter. Cattle on an impoverished pasture may yield bitter, bad-smelling milk as a result of consuming large quantities of some acrid or pungent weed. An excessively rich stall feeding, if long continued, may in time bring about undesirable flavors in the milk.

In case the milk of all cows in the herd is bad flavored, the probability is that the feed is the cause. If on inspection only a few individual animals are found to be yielding milk that is off in flavor or odor, it is the condition of these animals that is most likely responsible. If, however, the odor and flavor are at first normal, and after the milk has been allowed to stand for a while become objectionable, the explanation will probably be found in infected milk pails or cans rather than unsuitable feed or diseased udders.

To overcome such conditions it is first necessary to detect and remove the cause. If due to diseased udders, the animals may be isolated for treatment. If due to errors in feeding, the errors must be rectified. If due to bacterial contamination, it must be prevented by the sterilization of receptacles, and other measures of sanitation in the routine operation of milking.

—Farmers Bulletin 1422.

PASTEURIZATION TEMPERATURE

The temperature of pasteurization is fundamentally important. It is imperative to have the temperature under control, so that it will always be right. Assurance should be had that the thermometers in use are correct and that the required temperature is regularly maintained throughout the holding period. In deciding upon the temperature to be required, health authorities usually allow for mechanical variations and provide a safety zone, but in setting a standard they assume that pasteurizing equipment, especially thermometers, will be kept in order. Without attention to this matter any requirement loses much of its value as a protective measure.

SHALL COWS FACE IN OR OUT?

Whether it is better to have the cows face the center or the outside walls is a matter of preference.

Facing in. The advantages of facing a central feed alley the long way of the barn are:

1. Feeding is made easier.
2. Milkers are near the light.
3. Sunlight strikes the gutters.
4. Crowding is avoided as the cattle enter through two doors.
5. Floor flues for ventilation, if used, may be placed at the outside walls where they will be out of the way.

The chief disadvantage is that the manure cannot be put directly into the manure spreader. This is partly remedied by a litter carrier.

Facing out. The advantages of having a central driveway with the cows facing out are:

1. The manure spreader can be filled from the barn with one handling of the manure.
2. Walls can be kept free from spattered manure.
3. Sale cattle can be viewed by the buyer more easily for he can see both rows at once and cattle show off better.
4. The herd is not divided by two doors.
5. Sunlight strikes the mangers.
6. Chores are made easier for three-fourths of the work is concentrated in the central driveway.

Wisconsin Bulletin 369.

TESTER'S HANDBOOK

A handbook for cow testers and herd owners has been prepared and published by the United States Department of Agriculture. The handbook not only informs the tester just how to do his work in the most valuable way, but also informs the owner of the herd just what he can expect of the tester. A thorough knowledge of the duties of the tester by both the tester and the owner of the herd should aim materially in promoting harmony and better cooperation in cow testing work.

A copy of the handbook, which is called Miscellaneous Circular No. 26, may be secured upon request, as long as the supply lasts, from the Department of Agriculture, Washington, D. C.

HINTS ON MILK ADVERTISING

Reach the adult with milk advertising is the advice of the United States Bureau of Agricultural Economics, following a consumer demand study for milk recently conducted in Philadelphia. Adults consume less milk than children, for it was found in the survey of four hundred families that the younger members of the family are the most regular drinkers of milk. Eighty-five per cent of all children less than 13 years of age drink milk. Above this age, however, it was noted that with increasing age individuals tend to stop drinking milk. Only 71 per cent of children between the ages of 13 and 18 were milk drinkers. Adults drink less milk than individuals of any other age, for only 41 per cent were milk drinkers.

This decrease in the use of milk with advancing age was also brought out in an analysis of the frequency with which people drink milk. Sixty-two per cent of infants drink milk at every meal, 40 per cent of children of three to six years of age, 36 per cent of children of seven to 12 years of age, and 19 per cent of children of 13 to 18 years of age. Only five per cent of the adults drink milk at every meal. In the four hundred families nearly two-thirds of the persons were adults over 18 years of age. Not only fewer adults drink milk than do children, it was found, but they drink milk less often. The conclusion reached by the department is that advertising and milk publicity should be designed to reach this large, and, accordingly, important group of adults who never drink milk and adults should also be encouraged to drink milk at more frequent intervals. Mothers and housewives seem to understand the importance of milk in the children's diet but they do not feel that milk is as important or essential in their own diets.

Early training of children is an important means of publicity and its results are far-reaching. It seems reasonable that if children in schools are taught the relative value of foods and the importance of certain types of foods in their diets the effect of such instruction will be carried by them to later life. The ultimate value of such instruction can be determined only when the school children of to-day become the citizens of to-morrow. Immediate results of educational campaigns within the public schools, however, are declared to justify the efforts, according to dairy council officials.

Preparation of advertising copy to reach the adult is recommended. Pictures of babies in milk advertising and slogans about babies' milk are familiar. This type of advertising may have had a place in the past but the foregoing statistics indicate that it is to the mothers and fathers that this advertising should now appeal. Adults should be encouraged to drink milk if the consumption is to be increased materially. Forget about the babies for a while for the mothers have learned the importance of milk for the children. Mothers

should now be taught the importance of milk to their own health and the message should be taken to the father that milk contributes to his health.

Milk advertising must have a positive message. General statements in advertising produce doubtful results. Care and thought must be devoted to the preparation of copy and the planning of campaigns. Decide whom you are to reach, then decide how the additional amount of milk should be used within the family and determine the medium which will best accomplish the purposes of the appeal.

Families with large incomes are the heaviest users of milk. Consumption figures indicating the poorest families used the least milk were based on per capita use for it was found that the poorest families are the largest families and the wealthiest families average fewer children to the family.

Individuals in families with very limited income consumed an average of 0.51 of a pint per day, 70 per cent of this quantity was used for drinking. Families where the husband made fairly good wages and accordingly had better incomes than the group just described consumed more milk, or 0.60 of a pint per day per person, and used a similar proportion for drinking. Families which were better off financially and in which the husbands were professional and salaried men used 0.78 of a pint per day per person and drank about two-thirds of it. The wealthy families living in the best residential sections of the city purchased the largest quantity per person of any of the groups surveyed, or 0.81 of a pint daily, less than half of which is used for drinking purposes.

Four out of five housewives declared that the price of milk did not affect the amount of milk which they used, although half of the housewives in the poor group stated that the price of milk did affect the amount used. Despite these statements, the price of milk is a factor affecting its use even in the families of good income. Wealthier families were among the smallest milk drinkers and their large use of milk was due to the amounts used for cooking.

Greater milk consumption among families with low incomes should be one of the aims of milk advertisers, for not only can these groups profitably use more milk for drinking but the increased use of it would be generally economically advisable. Milk is not used as a drink in wealthy families to the extent which might be expected. Similar advertising and propaganda will not reach these families of different incomes. Directions for use of milk in cooking, cooking clubs, and educational information comparing the cost of various types of food will reach the families of the small income classes. Because of the present low consumption there is more chance of increasing the use of milk within the poor group than within the wealthy group. Wealthy families now use large quantities of milk in cooking and if the increase in the use of milk is to come within this

group it must come through encouraging the members of the families to drink additional quantities of milk. Advertising specifically designed for this purpose may produce results when advertising with a general appeal would make no effect.

A careful study of the data secured in the survey shows that food value is the appeal which will best reach the consumer, quality is second in importance and the dealers' names stand third as the feature of the advertisements retained by the minds of the consumer.

Milk advertising conducted by the individual distributing companies is to be seen in practically every issue of newspapers, in street cars, bill boards, wagons and numerous other places. Each of these advertisements carries the name of the responsible dealer and often little else. Yet names have made little impression upon the housewife for she remembers much more readily appeals which set for the food value of milk or which stressed quality.

The success and value of repeated advertising of the name of a particular dealer is questioned on the basis of the data collected. Let us see just what advantage will accrue if the dealer's name is constantly brought before the public. Will this form of advertising cause a consumer to stop trading with one dealer in order to secure the more widely advertised product of another?

There generally is not enough difference in the milk of different dealers to influence the housewife to make a change. Habit is too strong a factor in the lives of the average American to bring about a change. Surveys have shown that housewives trade with one food retailer for year after year and the most usual cause for changing dealers is the fact that the family moves from time to time.

New residents of a city are a source of increased business for advertisers. This class of population, however, cannot be of great value for new residents are not acquainted with the advertising of the city and in choosing a milk dealer are quite likely guided by other factors such as the advice of friends, stopping the first milk wagon which is noticed on solicitation by a route driver.

WESTERN SHOWMAN COMES EAST

Representatives of the Essex Farm herd, owned by John M. Dennis and Son, will probably be seen at many of the great fairs next fall for Mr. Dennis has secured the services of the veteran Holstein breeder and showman, Frank White, who started in his new position January 1st.

Mr. White is well known by Holstein breeders throughout the country, particularly in the states of Iowa, Illinois and Wisconsin. After a number of years experience with noted show herds in Iowa he started in business for himself at Hampton and then after a few years removed to Woodstock,

Ill., where, with his son Roy, he built the Groveland herd. The Whites, although they never owned a very large herd, exhibited at many of the great fairs of the western states as well as the National Dairy Show. The most noted member of their herd was the famous show cow, Lady Ona Hijaard, winner of many prizes. This great cow transmitted her superb type and conformation to her offspring for the Whites exhibited as "produce of dam" a son and daughter of this cow 29 successive times without being defeated. Nearly all of these 29 shows were of the highest class and the list included many state fairs and one or more National Dairy Shows.

Mr. White had the misfortune to be caught with a heavy investment in the great deflation that came after the war. But owing to his wide experience and general ability his services as a showman were in great demand and were secured by the Jefferson County Asylum. The victories of the Asylum show herd and their great champion Madam Artis Wayne Denver are well known to all interested in the Holstein industry.

Mr. and Mrs. White will reside at the Essex Farms, Luther-ville, Maryland. Their son, Roy, whose home is at Waterloo, Iowa, has a position with the James Manufacturing Company. The Holstein enthusiasts of the eastern states will welcome the addition of such a noted showman to their ranks.

INTERMOUNTAIN STOCK SHOW

The Eighth Annual Inter-Mountain Livestock Show will be staged at Salt Lake City, March 31 to April 4, 1925. The preliminary premium list shows that the management have set aside just as much money in the classes for dairy stock as they have in the corresponding classes for the beef breeds. In addition, they will stage a 48-hour performance contest. In this there will be two classes; one for cows under three years old and another for cows over three years old. In each of these classes, the first prize is \$50, second, \$30, and third prize \$20.

Valuable prizes are given in the junior classes which are open to boys and girls between the ages of ten and eighteen—on the farm or in the grade and high schools. There is a calf club competition, a student judging contest in which prizes are given both to the team and to the individual student, a boys' and girls' judging contest, and special classes for fat calves, lambs, fat lambs, and fat hogs, owned by juniors. If desired the exhibits made by the boys and girls may be sold at auction.

There is no charge for entries nor even for admission, and the railroads will grant reduced rates. The manager of the Inter-Mountain Livestock Show is R. N. Mead and his address is the Commercial Club, Salt Lake City, Utah.

If Adam chucked Eve under the chin, would he simply be tickling his own rib?

CLUB ACTIVITIES

TRUMBULL COUNTY CLUB MEETING

On New Year's day the members of Trumbull County Holstein Breeders' Club met at Grange Hall in Greene Township and chose E. H. Partridge of Champion, president; G. L. Gates, Mesopotamia, vice-president; Harold H. Allen, Greene, secretary; and F. V. Millikin, Mecca, treasurer, for the year 1925.

After an excellent dinner served by the ladies of Greene Township the meeting was called to order by Mr. Partridge the vice-president, in the absence of President T. A. Fell. S. M. Salisbury, Dairy Specialist, Ohio State University, addressed the gathering on the value of Cow Testing Association records and high producing cows for economical production. He stated that at the present price farmers are receiving for milk, an animal must produce between ten and twelve thousand pounds of milk per year to bring the dairyman any margin of profit over and above cost of feed, labor and overhead expenses. A committee composed of L. W. Pierce, A. V. Case and Guy W. Miller, were appointed to organize a Cow Testing Association among the Holstein Breeders, and secured the following members: Woodford Brothers and G. L. Gates, Mesopotamia, C. B. Knight and J. A. Paden, Bloomfield, Case-holm Farm, C. S. Allen and Son and H. R. Clark, Greene Township and L. W. Pierce and Partridge and McCombs, Champion township. The committee will finish its work within the next two weeks.

E. H. Partridge, the newly elected president, was elected a delegate to attend the annual meeting of the Ohio Holstein Association at Columbus. The executive committee were instructed to have the breed sign boards located in Champion and Bazetta Townships repainted. Sales secretary, A. V. Case, reported sales in the last eight months from May to December inclusive of 75 head of cows, heifers and bulls for a total of \$12,937.50, an average of \$172.00 per head. In this eight-month period 17 new members were secured for the State Association. The newly elected officers together with one member at large from the association, constitute the executive committee.

TROUBLES OF A STATE SECRETARY

A secretary of one of the state organizations wrote letters to some of his club members suggesting that it was time that they paid their dues, and in reply received the following:

HOTEL ROANOKE, ROANOKE, VA., Jan. 11, 1925.

DEAR MR. SECRETARY:

I have your annual request for a contribution to a certain alleged organization for what, the Lord only knows, as I am sure nobody else does. Suckers must be getting pretty scarce when you will hound a man who is hardworking on his job trying to decently support a large wife and small family. I am on to you, you are trying to do the same thing but the difference is you are scheming in your office how to bleed unsuspecting folks like myself.

Well, before I come across I want to see a report of the moneys collected. I also notice by the by-laws that we elect officers and hold meetings; I only heard of you being elected once and then for only one year, not for life, as you seem to think you have been.

Some of these days I am going to speak my mind on this subject and I sure do expect to make the fur fly, but for the present I want an auditing committee appointed; you know I have paid my dues regularly for years and am a member in good repute and high standing, only I refuse to allow myself to be robbed any longer. Them's my sentiments and my slogan is "Turn the Rascals Out."

I beg to remain,

Yours very truly,

Unfortunately there is no way of predicting the thunderstorms that curdles the milk of human kindness.

FOR AGRICULTURAL IMPROVEMENT

R. L. Bush and Dr. L. M. Thompson were elected vice-presidents of the Susquehanna County Agricultural Society at its meeting in the Court House, at Montrose, Pa., January 10th. Floyd E. Mack, another well-known Holstein breeder of this vicinity, was elected as a member of the Executive Board for a three-year term.

The report of the treasurer showed fair receipts of \$4,654.50; premiums paid, \$1,309.25; total amount of expenses exclusive of premiums was \$1,829.51. For improvements to buildings and grounds, notes amounting to \$1,244.88 were paid.

Many members took part in the discussion on ways to advance the interests of the Society and improve the fair. W. C. Cruser advocated pulling matches for draft horses and baby shows which proved popular many years ago. Dr. Thompson advocated more premiums for sheep and saddle horses and increases in the pet and dog department. F. M. Gray suggested more amusements of an open air nature to interest the younger element. R. D. Cruser favored more athletic contests as well as the old-fashioned "greased pig" race and "greased pole climb." Others favored school team athletic contests.

B. F. Jones of South Montrose, gave an interesting talk explaining to the members the difference between the meaning of purebred, standard bred and thoroughbred as applied to horses and cattle. Other speakers known to Holstein men were Hugh Jones and R. L. Bush. President W. G. Comstock, who was re-elected, stated that he believed the Susquehanna Agricultural Society was the oldest Pennsylvania Fair Association that had held continuous fairs as purely agricultural events. This Susquehanna County doings, which is held annually in Montrose, ranks second to none in the state.

A PUREBRED BREEDERS' CLUB

Members of the Clayton County Purebred Breeders Association met at the Court House, Elkader, Ia., on January 1st, and elected as officers for the coming year: President, H. H. Diers; Vice-President, Frank Tieden, and Roy Combs, Secretary-Treasurer. J. L. Cords of Elkader, was elected director as the representative of the Holstein interests. Owners of purebred animals of any breed make up this active breeders club.

PROPOSED CALIFORNIAN T-B BILL

A large crowd of Stanislaus County dairymen gathered at Modesto, Calif., December 13 to hear Sam Greene, Secretary of the California Dairy Council, explain the tentative draft of the proposed bovine tuberculosis bill. Mr. Greene explained that two years ago, five bills concerning tuberculosis testing were introduced into the state legislature. Dairymen and cattlemen throughout the state could not agree on any of them so a committee got together and drafted a bill which it was thought would be satisfactory. Mr. Green is now touring the state endeavoring to work up sentiment in its favor.

The committee was composed of representatives of the Holstein breeders, Jersey breeders, Guernsey breeders, Ayrshire breeders, beef cattle owners, the veterinary science division of the University of California, the United States Bureau of Animal Industry and Sam Greene, representing the State Dairy Council.

The new bill may be divided into three parts: control of the sale and use of tuberculin; branding or identifying of reacting animals; and payment of indemnities in tuberculosis eradication areas. The bill provides that tuberculin can be bought only from licensed houses. Only approved veterinarians can be allowed to use it and all sales must be reported to the state department of agriculture.

It will be unlawful to sell raw milk that has not been pasteurized or that is from cows that have not passed the tuberculin test.

There was a spirited discussion over bringing cattle into the state. No dairy animal that has not passed the test could be imported and a sixty to ninety day retest would be required. If the animals fail to pass the retest they would be slaughtered or shipped back to the point of origin. Cattle for immediate slaughter would be exempted.

A discussion arose over the exemption of feeders. Dairy owners complained that dry dairy cattle and young dairy stock sent to grazing land would come in contact with untested stock and thus would get the disease. Mr. Greene replied that beef cattle seldom had the disease and if feeders were required to be tested it would line up the beef people against the measure and make its defeat likely.

No animal would be allowed to enter a free area until the test showed it free from tuberculosis and another test would be made after thirty days. It would be unlawful to exhibit a cow that had not passed the test.

Consent of all owners would be required before the test could be made. The maximum indemnity would be \$100 for grades and \$300 for purebreds. The animals are to be appraised by a man selected by the owner, another selected by the state department, a third to be selected by the supervisors in case the others do not agree.

KEEP TRANSFER FEE LOW

Hog recording associations are considering advancing their charges for registration and transfers but the proposal is meeting with considerable opposition. The Poland China Standard Recording Association met at Marysville, Mo., December 17. The secretary's report showed a net gain for the year of \$872.43.

It was unanimously decided not to change the recording fee and to charge 25 cents for each transfer with no time limit within which the transfer had to be filed. Formerly, after one year, \$1 was charged for transfers. Heretofore the stockholders have been furnished volumes of herd books free but it was voted to charge \$1 each for all volumes.

E. E. Carver of Gilford, Mo., the only surviving charter member of the Association, was elected president. J. C. Daws of Troy, Kan., was elected to the board of directors to succeed T. J. Daws. No other change was made in the directorate.

HOLSTEIN HERDS EARN FINE DAIRY HOMES

By J. H. LEWIS

Within the past two years, and more particularly the past year, over a score of elegant dairy barns, of modern construction, with the best equipment dairy-building experts can supply, have been erected in southwest Wisconsin, earned by the profits in the milk pail, daily coming from the Holstein cow.

The old red barns with their ungainly lines have disappeared one by one, and in their places are found stately structures of exquisite design, becomingly painted and very attractive to the eye. One desirable reform has been the elimination of red paint. As long as we knew no better we calculated we were showing off, but now that the more delicate tints are used we see where we are becoming progressive as well as civilized.

We take our hats off to the Holstein dairy daisy who has made all this possible. To her belongs the glory and the distinction of bringing about this welcome reform. She is well

New Holstein barn erected on the L. A. Brunkhorst Farm, near Platteville, Wisconsin.

entitled to the eminent distinction being shown her by providing palatial cow dwellings where, through the long Wisconsin winters, she may conduct herself with becoming propriety as a dairy adjunct, while at the same time enjoying cow life in comfort.

Preference has been shown the breed in the southwest counties of Wisconsin. Iowa and Lafayette Counties have outstripped Grant County in the matter of Holstein herd development, and the county boards of supervisors in the two first named counties have authorized appropriations for fine dairy barns to cost about \$20,000 each. Lafayette County extended itself moreover to the point of ordering a complete herd of Holsteins installed at this county poor farm, and then, not satisfied with the good work done, ordered the purchase of a high class, purebred Holstein herdsire.

The barn shown here is the latest to appear on a Holstein farm operated by an individual owner. This barn is near completion on a high mound, just off state highway 80, the main beaten trail between Dubuque, Iowa, and Milwaukee, Wis. It is found on the L. A. Brunkhorst farm, four miles north of the city of Platteville, in Mound Branch valley.

The barn is 34 x 98 feet, with basement under all.

At one end of the dairy barn are four pens screened in with heavy wire guards, one for the herdsire, one a maternity pen and two pens for young calves. At the other end of the barn is a separate inclosure for horses, and just above the horse quarters is found the feed bins. There are 31 stalls and stanchions, with automatic drinking cups, and the stalls are laid with heavy floors of cork brick, making an ideal resting place for the cows at night.

Water is pumped by windmill power from a deep, clear well, and empties into a cement reservoir, from where it is piped to all parts of the barn. A litter carrier running on an overhead rail empties into a concrete pit on the outside, well removed from the barn building.

Highway 80 forms a junction with highway 19, east of the village of Montfort in Grant County. Along highway 19, east to Dodgeville, the county seat of Iowa County, and west on this important highway to Lancaster, one sees wonderful herds of Holsteins and barn after barn of the type shown here, and even much handsomer. In some spots the tourist

can count them in groups of three to five, all close together, on adjoining farms.

Mr. Brunkhorst found hardwood timber on his farm when he set out to build his fine barn, and it is a plank barn frame as differentiated from a timber frame barn. Also in the valley below through which runs the creek known as Mound Branch sand and gravel was found which were used in the work of building, and rock was quarried out of the hillside on which the barn stands. In this way a considerable saving was effected. The owner, however, parted with something better than \$8,000 in building, and is satisfied that, if he had to buy the lumber, and the other materials, he would have expended over \$10,000.

Her Royal Highness, Lady Bossie Holstein, has worked wonderful transformations in the landscape scene of southwest Wisconsin and the good work is being promoted, since farmers have awakened to the facts that dairying has the one crop farm scheme backed off into the tall timber, and that it pays to be associated with a cow testing association where they learn to feed, and weed, and milk according to intelligent standards. Had the author of "Little Brown Jug" lived into the Holstein period in Wisconsin, he would have paid his poetic tribute not to a jug but to the foster mother of the human race, the dearest and best thing on the farm, the Holstein milk cow.

A unique feature of the barn is the roof, constructed of 99 per cent pure corrugated zinc shingles. Southwest Wisconsin is known for its zinc and lead mines. Farmers derive a double revenue in many instances where it may happen a mine is found on a farm. The mine operator pays a ten per cent royalty on the gross earnings of a mine, which experts have shown is equivalent to 25 per cent of the net profits of a zinc producer. It is meet, therefore, that southwest Wisconsin farmers shall turn to zinc roofing because it is said such a roof is everlasting. Also it is non-magnetic and therefore no lightning rods are required.

The silo was not quite finished when the Holstein Breeder and Dairyman's correspondent was on the ground and took the photo shown here. This silo is built of solid cement, 42 x 14, and will have, when finished, a highly ornamented dome. The barn is painted a light canary tint with white trimmings and is indeed a most attractive structure. People driving by slow up to take in its beautiful outlines and the attractiveness it lends to the Brunkhorst ranch.

Mr. Brunkhorst's Holsteins are all large, clean limbed animals, of excellent blood lines, splendid conformation, and of known production as the milk is weighed and tested. There is no association in this immediate locality. Several attempts have been made to organize a cow testing association in the Platteville district. In Grant County at this time are seven such associations, all functioning perfectly, but for some reason the dairy farmers in and about Platteville have so far been unable to get together definitely on this proposition.

BREEDING PUREBREDS TWENTY-EIGHT YEARS

For more than twenty-one years G. Fulmer Decker of South Montrose, Pa., has been a member of the Holstein-Friesian Association of America. He joined the association in 1903 although his herd was established in 1896 so that it has been in existence nearly thirty years. The first two animals were purchased of his next door neighbor and brother-in-law, B. F. Jones, and were of Voliska blood, a strain represented by a number of good cows in the best herds of Susquehanna County. Mr. Decker's herd has never been very large although it has always been of high quality. The herdsires have been owned in partnership with other nearby breeders—sometimes with his brother Henry Decker, sometimes with his brother-in-law, B. F. Jones and occasionally with both as partners.

The first herdsire of which we have knowledge was a son of Paul Beets De Kol. Then came King Segis Hengerveld De Kol Burke, a son of the century sire Pietertje Hengerveld Segis and Nettie Mahomet Burke, a 23.76 lb. daughter of De Kol Burke. One of the daughters of King Segis Hengerveld De Kol Burke has three different years made over 30 lb. butter in seven days and has a record of 34.93 lb. There are twelve other daughters with seven-day records ranging from 20 lb. to 32.66 lb. As this bull has only eighteen tested daughters

and most of his daughters have been tested in small herds, this is pretty good evidence of their quality.

The next sire, owned in partnership with Jones & Son, was Tobe Rag Apple Korndyke, a son of Sir Rag Apple Korndyke from Christmas Tobe 2d, 31.66 lb. butter in seven days, 129.46 lb. butter in thirty days as a ten year old. The Tobe bull was a remarkable sire and his daughters were both handsome individuals and big producers. Some of the best animals in the present herd are granddaughters of this bull and his daughters and granddaughters are alike noted for individuality and ability to produce large amounts of milk and butterfat.

Inka De Kol Pontiac Abbekerk was the fourth sire of which we have record. He was from a 27-lb. three-year-old grand-

KING TWEEDE SPRING FARM

one of the great herdsires that formerly headed the Decker herd. daughter of King Pontiac Artis and was sired by a son of Spring Farm King Pontiac, from a daughter of Changeling Butter Boy, whose dam was a daughter of Tidy Abbekerk Prince. This bull has only a half dozen tested daughters but all his get are good.

Mr. Decker had an interest in King Tweede Spring Farm, who now heads the noted Deysher herd at Berks Farm. This bull was from Dressie Lady Pontiac, over 30 lb. butter, 600 lb. milk in a week. When nearly eleven years old, she was started in year test in which she produced 20,063 lb. milk, 981.36 lb. butter. The sire of King Tweede Spring Farm is Spring Farm King, a son of King of the Pontiacs and the 34

WOODMONT ECHO SYLVIA CHAMPION

Show bull and sire of show stock. Formerly Decker herd bull, lb. cow Tweede De Kol Lass and therefore full brother to K P Pontiac Lass, former world's champion and first cow to make over 44 lb. butter in seven days official test. The daughters of King Tweede Spring Farm are making splendid records, are handsome individuals and big producers. The first daughter of this bull to complete a year record was Lady Tweede Pontiac Lass, 848.04 lb. butter, 20,949.6 lb. milk as a junior two-year-old.

The show bull, Woodmont Echo Sylvia Champion, stood at the head of the Decker herd. This bull was first prize three-year-old at the 1922 New York State Fair. His dam, Butter Boy Empress, was first prize aged cow, senior and grand champion at the New York State Fair the preceding year

and also won first prize in the A. R. O. class. Mr. Haeger, who was judge on that occasion, pronounced her one of the three best cows shown that year. Woodmont Echo Sylvia Champion was by Sir Pietje Echo Sylvia, a son of Champion Echo Sylvia Pontiac from the 32 lb. cow, Woodmont Cornelia Pietje, a cow that has the remarkable record of making two different 32 lb. seven-day records in her four-year-old form, one as a junior and one as a senior four-year-old.

The latest sire to head this good herd is King Beauty Sylvia Lyons. His dam, A Beauty Lyons, made 26.13 lb. butter, 570.5 lb. milk in a week as a junior three-year-old in the Hartshorn herd and Mr. A. A. Hartshorn has pronounced her as one of the best cows he had. She is a granddaughter of King Lyons and her dam is a granddaughter of Beauty Pietertje Prince. King Beauty Sylvia Lyons was by King Echo Sylvia Model and so is a grandson of Champion Echo Sylvia Pontiac and the 28-lb. cow Belle Model Pietje 2d, whose dam three different years has made over 33 lb. butter in seven days and is from Belle Model Johanna 2d, twice over 37 lb. butter in seven days official test.

There is one remarkable thing connected with the history of the sires that have headed this establishment. Selected from the standpoint of individuality as well as breeding it has never been necessary to slaughter them when Mr. Decker and his partners were compelled to dispose of them to avoid inbreeding. They have been sold, generally at public auction and usually have brought more money than were originally invested in them, showing several things: first, that they had good care; second, that they were high class individuals; and third, that

LOCAL CELEBRITIES

G. F. Decker, his brother-in-law and neighbor, B. F. Jones, and King Beauty Sylvia Lyons, the sire of the young calves at the Decker establishment. Mr. Decker is holding his former herdsire.

their progeny showed that they were desirable sires in every way.

Mr. Decker has done considerable A. R. O. work and some very good records have been made at this establishment. He is also a very successful breeder of Bronze Turkeys and Plymouth Rock fowls and has shown stock at the great poultry shows at Madison Square Garden winning a number of prizes.

The Decker farm consists of 120 acres. It is well wooded and well adapted for dairying. Mr. and Mrs. Decker have a beautiful home. The barn has modern equipment although no large amount of money has been invested in showy things, such investments have been considered from the standpoint of usefulness and profit earning ability. The present herd consists of twenty-three head and is accredited, being one of the oldest accredited herds in Susquehanna County.

Fisher, an ardent angler, was proudly exhibiting to his young wife his day's catch.

"Aren't they beauties?" she said, enthusiastically. "But, dear, I've been so anxious for the last hour!"

"Foolish child," he said, gently caressing her, "to worry needlessly. Why, what could have happened to me?"

"Oh, I didn't worry about you, dear," she replied. "But it grew so late, I was afraid before you got back to town all the fish shops would be closed."

Visitor: "And how old is your baby brother, dear?"
Small Sister: "He isn't old at all; he's a this year's model."

March 25—Harrisburg, Pa., Bonnymeade Herd Dispersal.

COMING SALES IN SOUTHERN PENNSYLVANIA

A number of sales under the management of the veteran Holstein man, S. R. Miller of Chambersburg, are scheduled to be held in the Cumberland Valley region during the next two months.

On February 28th, W. H. Price of Clear Spring, Pa., will sell about thirty-five head of cattle. More particulars will be given in a later issue.

W. W. Yeingst of Mt. Holly Springs will sell twenty head at public auction March 10th. W. A. Wood of Huntsdale, will disperse his herd on March 12th. This herd, although small, is of good quality, and animals consigned to large sales from this herd have always brought good prices. Mr. Wood is a good caretaker and a capable judge and his animals are always in splendid condition.

Jacob W. Brubaker of Myerstown, will sell his herd March 18th. Although small this accredited herd is of high quality and includes a two-year-old with a 24 lb. official seven-day butter record.

The well-known Bonnymeade herd will be dispersed on the farm January 25th. The Bonnymeade Farms are at Paxtang on the outskirts of Harrisburg. Trolley cars and a state road run right through the farm which is one of the show places of Pennsylvania's capital city. In the sale will be 102 head. Glenn R. Meade, the progressive young auctioneer of East Aurora, N. Y., will officiate on this occasion. Watch later issues of this paper for information on this and other coming sales.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

Heart Lake, Pa.

ACCREDITED — Of course.

A Classified Advertisement in THE BREEDER AND DAIRYMAN is a paying investment.

and most of his daughters have been tested in small herds, this is pretty good evidence of their quality.

The next sire, owned in partnership with Jones & Son, was Tobe Rag Apple Korndyke, a son of Sir Rag Apple Korndyke from Christmas Tobe 2d, 31.66 lb. butter in seven days, 129.46 lb. butter in thirty days as a ten year old. The Tobe bull was a remarkable sire and his daughters were both handsome individuals and big producers. Some of the best animals in the present herd are granddaughters of this bull and his daughters and granddaughters are alike noted for individuality and ability to produce large amounts of milk and butterfat.

Inka De Kol Pontiac Abbeckerk was the fourth sire of which we have record. He was from a 27-lb. three-year-old grand-

KING TWEED SPRING FARM

one of the great herdsires that formerly headed the Decker herd, daughter of King Pontiac Artis and was sired by a son of Spring Farm King Pontiac, from a daughter of Changeling Butter Boy, whose dam was a daughter of Tidy Abbeckerk Prince. This bull has only a half dozen tested daughters but all his get are good.

Mr. Decker had an interest in King Tweede Spring Farm, who now heads the noted Deysher herd at Berks Farm. This bull was from Dressie Lady Pontiac, over 30 lb. butter, 600 lb. milk in a week. When nearly eleven years old, she was started in year test in which she produced 20,063 lb. milk, 981.36 lb. butter. The sire of King Tweede Spring Farm is Spring Farm King, a son of King of the Pontiacs and the 34

WOODMONT ECHO SYLVIA CHAMPION

Show bull and sire of show stock. Formerly Decker herd bull, lb. cow Tweede De Kol Lass and therefore full brother to K P Pontiac Lass, former world's champion and first cow to make over 44 lb. butter in seven days official test. The daughters of King Tweede Spring Farm are making splendid records, are handsome individuals and big producers. The first daughter of this bull to complete a year record was Lady Tweede Pontiac Lass, 848.04 lb. butter, 20,949.6 lb. milk as a junior two-year-old.

The show bull, Woodmont Echo Sylvia Champion, stood at the head of the Decker herd. This bull was first prize three-year-old at the 1922 New York State Fair. His dam, Butter Boy Empress, was first prize aged cow, senior and grand champion at the New York State Fair the preceding year

and also won first prize in the A. R. O. class. Mr. Haeger, who was judge on that occasion, pronounced her one of the three best cows shown that year. Woodmont Echo Sylvia Champion was by Sir Pietje Echo Sylvia, a son of Champion Echo Sylvia Pontiac from the 32 lb. cow, Woodmont Cornelia Pietje, a cow that has the remarkable record of making two different 32 lb. seven-day records in her four-year-old form, one as a junior and one as a senior four-year-old.

The latest sire to head this good herd is King Beauty Sylvia Lyons. His dam, A Beauty Lyons, made 26.13 lb. butter, 570.5 lb. milk in a week as a junior three-year-old in the Hartshorn herd and Mr. A. A. Hartshorn has pronounced her as one of the best cows he had. She is a granddaughter of King Lyons and her dam is a granddaughter of Beauty Pietertje Prince. King Beauty Sylvia Lyons was by King Echo Sylvia Model and so is a grandson of Champion Echo Sylvia Pontiac and the 28-lb. cow Belle Model Pietje 2d, whose dam three different years has made over 33 lb. butter in seven days and is from Belle Model Johanna 2d, twice over 37 lb. butter in seven days official test.

There is one remarkable thing connected with the history of the sires that have headed this establishment. Selected from the standpoint of individuality as well as breeding it has never been necessary to slaughter them when Mr. Decker and his partners were compelled to dispose of them to avoid inbreeding. They have been sold, generally at public auction and usually have brought more money than were originally invested in them, showing several things: first, that they had good care; second, that they were high class individuals; and third, that

LOCAL CELEBRITIES

G. F. Decker, his brother-in-law and neighbor, B. F. Jones, and King Beauty Sylvia Lyons, the sire of the young calves at the Decker establishment. Mr. Decker is holding his former herdsire.

their progeny showed that they were desirable sires in every way.

Mr. Decker has done considerable A. R. O. work and some very good records have been made at this establishment. He is also a very successful breeder of Bronze Turkeys and Plymouth Rock fowls and has shown stock at the great poultry shows at Madison Square Garden winning a number of prizes.

The Decker farm consists of 120 acres. It is well wooded and well adapted for dairying. Mr. and Mrs. Decker have a beautiful home. The barn has modern equipment although no large amount of money has been invested in showy things, such investments have been considered from the standpoint of usefulness and profit earning ability. The present herd consists of twenty-three head and is accredited, being one of the oldest accredited herds in Susquehanna County.

Fisher, an ardent angler, was proudly exhibiting to his young wife his day's catch.

"Aren't they beauties?" she said, enthusiastically. "But, dear, I've been so anxious for the last hour!"

"Foolish child," he said, gently caressing her, "to worry needlessly. Why, what could have happened to me?"

"Oh, I didn't worry about you, dear," she replied. "But it grew so late, I was afraid before you got back to town all the fish shops would be closed."

Visitor: "And how old is your baby brother, dear?"

Small Sister: "He isn't old at all; he's a this year's model."

Cow Testing Association Reports

TESTING IN WISCONSIN

Hartman Bros. owned the two high producing cows enrolled in the Lodi Association during December. Flossy, a grade Holstein, was in first place with 1,835 lb. milk, 78.9 lb. butterfat, and Mary, also a grade Holstein, was second with 2,092 lb. milk, 71.1 lb. butterfat. A grade Holstein owned by Frank Robertson was third with 1,513 lb. milk, 63.5 lb. fat. Mr. Robertson's herd carried off honors for high herd average with 41.9 lb. fat.

H. Werner & Sons have a herd of twenty-four Holsteins and they were the leaders of the Columbia County Association during December, their production being 1,317 lb. milk and 46.9 lb. fat. Members of this herd occupy first three places for individual production, the leader being credited with 2,536 lb. milk, 91.3 lb. fat, second animal was credited with 1,776 lb. milk, 79.9 lb. fat and third with 2,257 lb. milk, 74.5 lb. fat.

The high herd in the Neillsville Association No. 1 during December was owned by Wm. Naedler of Neillsville, their average being 989.3 lb. milk, 37.6 lb. butterfat. Fred Appleyard of Neillsville owned the herd in second place with an average of 967.2 lb. milk, 34.6 lb. fat. Vander, a purebred Holstein in the Appleyard herd, was the individual leader, she being credited with 1,683 lb. milk, 69.7 lb. fat.

J. W. Lawton & Son of Viola have the high herd and the high cow enrolled in the Viola Association during December. Their twenty-one purebred Holsteins averaging 1,130 lb. milk, 38.2 lb. butterfat. Their high cow produced 1,959 lb.

milk, 86.2 lb. fat. During the month 326 cows were tested.

Fourteen registered and grade Holsteins owned by Edgar Hazen of Waupun led the Waupun-Ladoga Association during December, by producing an average of 1,127.8 lb. milk, 38.4 lb. butterfat. Twelve grade Holsteins owned by Levi Pinkerton was second with an average of 1,096.8 lb. milk, 35.8 lb. fat.

The high cow was a purebred Holstein owned by J. F. Braatz & Sons of Brandon. She is credited with 1,962 lb. milk, 64.7 lb. butterfat. Next to her was another purebred black and white with 1,473 lb. milk, 61.9 lb. fat to her credit. She is owned by F. L. Schultz & Sons.

Forty-seven of the 417 cows tested in this association produced more than 40 lb. butterfat in the month.

Sixty-six of the 404 cows tested in the Clinton-Rock County Association exceeded 40 lb. butterfat during December reports A. W. Schmidt, tester.

A purebred Holstein, owned by Craighurst Farm, was the leader, being credited with 1,742 lb. milk, 81.9 lb. fat in 27 days. Twelve grade Holsteins owned by P. T. Offerdale & Son carried off herd honors by averaging 900 lb. milk, 33.9 lb. butterfat.

YODER HERD WINS HONORS

There are twenty-eight herds enrolled in the Milflin County Cow Testing Association. In these herds there were 273 cows in milk during December with 39 cows dry. More than twenty-four cows exceeded 40 lb. butterfat, seven exceeded 50 lb. and 17 produced 1,200 lb. milk or more.

A. C. Yoder owned the three leading producers, all registered Holsteins, one making 2,455 lb. milk, 73.7 lb. fat, the second 2,508 lb. milk, 70.2 lb. fat, and the third 2,384 lb. milk, 62 lb. fat. A grade Holstein owned by J. W. Kearns was fourth with 1,409 lb. milk, 55 lb. fat.

The tester of this association is S. Rupert Harshbarger of McVeytown, who reports that there are now six milking machines in use in the association. Ten new milk houses were built during the past summer and practically all of the stables have been whitewashed. Sixteen of the members have silos and several are feeding balanced rations and are getting very satisfactory results.

WILL TAKE A YEAR'S REST

There were 433 cows in test during the year 1924 in the Fennimore-Boscobel, Wis., Testing Association. Their average production was 7,714 lb. milk, 289.1 lb. butterfat, thus exceeding the 1923 average by 64.3 lb. fat. Forty-two cows produced more than 400 lb. fat and 75 went over a pound a day for the year.

The leading herd is owned by Lou Doeringsfeld & Son of Fennimore, their eighteen purebred and grade Holsteins averaging 12,141 lb. milk, 405.1 lb. butterfat.

Ben Rehrauer, tester for three years for the Association says that the association has decided to abandon work for one year.

HOLSTEIN BULL. Three of his dams averaged 108 pounds milk a day. 40.48 lb. butter 7 days. \$125.00.
WISCONSIN LIVESTOCK ASSOCIATION, Appleton, Wis.

NORTH DAKOTA HOLSTEIN FARM

In 1907, George E. Hammond came to North Dakota with cash and equipment worth \$900. He now owns a 320-acre farm in the Golden Valley county worth, at present prices, at least \$15,000. He has a comfortable modern house, and a modern barn with concrete floors and steel stanchions.

In 1921, Mr. Hammond purchased the purebred bull Segis Prospect Matador De Kol and two purebred cows and he now has ten female purebreds, his increase being to heifers and one bull.

Last year the cream checks brought Mr. Hammond about \$1,000. His annual cash income runs around \$2,000, in addition the Hammonds get a great share of their living, all of their butter, cream, milk, eggs, vegetables, poultry, and much of their meat from the produce of their farm.

Mr. Hammond came from Winona, Minn., as did many other farmers who settled around the Hammonds, in fact this is something of a southern Minnesota settlement.

In the First State Bank of Golva, the center of the community, there is a chart with this slogan on top:

"What is home without a cow?"

Underneath there are the figures showing the amount of the cream checks cashed in the month of May since 1918 which are as follows: 1918, \$476.17; 1919, \$1,110.10; 1920, \$760.32; 1921, \$777.03; 1922, \$1,151.23; 1923, \$1,099.40; 1924, \$3,383.04.

TRADE PUREBREDS FOR GRADES

Robert Ward of Benton, Illinois, had the honor of furnishing the purebred bull calf which figured in the first trade made under the bull exchange plan recently launched by the University of Illinois College of Agriculture. In this exchange farmers and dairymen have a chance to trade their grade and scrub bulls on even terms for purebred dairy bull calves. H. A. DeWerff, county farm adviser, made

the arrangement between Mr. Ward and a Franklin County farmer.

Cattle breeders, county breeders' associations and others interested in improved dairying are lining up behind the bull exchange plan. Farm advisers make the necessary arrangements and when the trade is arranged, the breeder will register, transfer and ship the purebred calf to the dairyman who pays the express charges. In turn the dairyman sells his grade or scrub bull and sees that the sales slip and check get to the breeder who furnishes the purebred calf.

HANSEN'S COWS PRODUCE

During the year just closed a grade Holstein owned by Harry Hansen of Denmark, Wis., produced 16,147 lb. milk, 510.2 lb. fat. She was milked three times a day for about two months and returned \$2.80 for every dollar's worth of feed consumed. The second high cow was a grade Holstein also and was owned by Helgar and Herman Jensen. This animal was credited with 15,250 lb. milk and 488 lb. fat. Freshening as a junior two-year-old, the registered Holstein, Erma, owned by Mr. Hansen produced 10,062 lb. milk, 394 lb. butterfat.

FIVE SUCCESSFUL YEARS

The Dallas County, Ia., Testing Association finished its fifth successful year of testing and has been reorganized for its sixth year of work. There were 247 cows tested for the full year, and the average production for the entire association was 297 lb. fat and 7,690 lb. milk.

The leading herd was owned by G. Appenzeller, his eight grade Holsteins averaging 387.6 lb. fat, 8,685 lb. milk.

The leading individual was a purebred Holstein owned by Fred Dann, of Woodward, Ia., with 544.3 lb. fat, 14,951 lb. milk to her credit.

Much from Little—The Returns from a Classified Advertisement appearing in THE HOLSTEIN BREEDER AND DAIRYMAN.

MEXICANS RESUME BUYING

After a complete let up of export orders for more than a year, Paul Knilians of the Edgewater Stock Farm, Fort Atkinson, Wis., reports a shipment of Holstein cattle to M. Jose Cardanas, one of the leading cattle importers of Mexico.

For a number of years Senor Cardanas took many carloads of cattle from Wisconsin and this meant a good outlet for the surplus cattle of southern Wisconsin breeders, for the Mexicans generally require good cattle and pay good prices to get them. Then conditions south of the border became such that cattle could not be safely imported but the present indications are that the Mexican business will be resumed on a greater scale than ever. Mr. Knilians says that there is a possibility that the Edgewater Stock Farm may establish a branch in Mexico for the purpose of selling dairy cattle.

HEALTHY SHOWING

Dr. C. L. Lee conducted a tuberculin test on 83 head of purebred Holstein heifers purchased around Iola, Wis., by the Swanger Land and Livestock Company. The result was a clean bill of health. The cattle were loaded on December 29, and billed to New London where they will meet other cars of stock and the entire lot will be shipped by through train to Mackay, Idaho.

Representatives of the Swanger Land and Livestock Company purchased about 175 purebred Holsteins in the vicinity of Oshkosh and intimate that they intend to purchase 500 head.

A certain young lady named Funk Was tricked into buying a skunk, She thought 'twas a cat

Till it got on her lap, But now she burns Japanese punk.

"I wonder, dear, if I shall lose my looks, too, when I get to be your age?" "You'll be lucky if you do," snapped the other lady.

HOLSTEINS WIN BUTTERFAT TEST

Warrie and Sons of Holtville, Cal., exhibited a fine herd of Holsteins at the Imperial Valley Mid-Winter Fair which was held at Brawley, Cal., early in December. Four cows from this herd won the butterfat production contest staged the last day of the fair, by producing 8.23 lb. butterfat. Their nearest competitor scored 6.97 lb. This mid-winter fair started as a local enterprise three years ago but has developed into a county-wide fair and people came from long distances to see and take part in it.

A MARYLAND ACCREDITED HERD

After running his herd for a number of years as a milk producing establishment, Senator Wade H. D. Warfield of Sykesville, Maryland, thought that he would give some of his animals an opportunity to make official records. During the month of October Princess Rizpah Artis De Kol produced 563.8 lb. milk, 22.85 lb. butter in seven days. She is on yearly test and the total of her two days official test was 106.5 lb. milk, 5.245 lb. butterfat. This is the highest milk yield of any cow on Advanced Registry test in the State of Maryland while the butterfat was within a quarter of a pound of the highest butterfat production reported. Princess was on the state honor roll for both October and November.

On November 10, Sister Carroll Artis De Kol Segis, a full sister to Princess Rizpah Artis De Kol freshened at the age of one year, ten months and eight days. She made a seven day record of 397.3 lb. milk, 21.53 lb. butter. She, too, is on long time test and in her two official days produced 117.9 lb. milk, 5.446 lb. butterfat.

Both Princess and Sister Carroll were

bred and developed on the Carroll Farms, the name Senator Warfield has given his establishment. Two other members of the herd were given short time records and put on long time work. Arbor Lawn Countess Model made a seven day record of 564.4 lb. milk, 23.04 lb. butter and Lucy Canary Oak De Kol made 494.9 lb. milk, 22.32 lb. butter. In long time work Countess made in her two official days, 162.1 lb. milk, 5.25 lb. butterfat and Lucy is credited with 147.4 lb. milk, 5.44 lb. butterfat.

The herd at Carroll Farms is accredited and the head herdsman is Gustav O. Hofer. The herdsires are Carroll Quality and Dutchland Creamelle King Change, bulls backed by animals with large official records. Senator Warfield takes great pride in the building of his herd. He is one of the leading business men of Sykesville and was born on the farm on which he now lives.

A ONE COW HOLSTEIN FARM

There is a one cow farm within four miles of Hartford, Wis. This farm consists of 11 acres and on it lives Charles Liesberg, aged 44 and his mother aged 86. They keep one cow and Charles uses a wheel barrow to convey the milk to the creamery, a mile distant. They keep no horse and when provisions or other supplies are needed Charles walks the four miles and then four miles back. Recently he purchased a sack of flour, a spool of barbed wire and some provisions and then wheeled the 250 pounds back to the farm.

In 1879, John and Dorothea Liesberg moved to the farm and built a little frame house. The following year Charles was born. Except for his trips to Hartford or nearby farms where he works occasionally, Charles hasn't been off the reservation for 44 years.

HEIFERS IN LOG CABIN HERD

FIVE OF OUR SENIOR YEARLING HEIFERS

Note the type, size and quality. Then remember that this herd is Accredited—and is headed by

King Hengerveld Lefa Joh

a son of King Joh from a 32-lb. daughter of Dutchland Colantha Sir Inka. What can we do for you?

CHOICE YOUNG SONS of

MODEL DARIUS KING SEGIS

His dam—639 lb. milk in a week; 723.4 lb. butter in 10 months as a two-year-old.

Her dam—609.1 lb. milk, 30.30 lb. butter.
Her dam's dam—679.5 lb. milk, 32.52 lb. butter.
His sire's dam—645.8 lb. milk, 30.07 lb. butter.

From producing lines and bred to big producing cows of high class breeding and individuality.

And the Herd is ACCREDITED.

FRED B. KEENEY

Laceyville

Pennsylvania

ONE OF OUR MILKERS

This cow and 21 of her stablemates of all ages, averaged 10,782 lb. milk in a year of Cow Testing Association work.

You can obtain good stock at farmers' prices here. Then, too, this herd is ACCREDITED.

MAPLE GROVE STOCK FARM

F. JONES, Manager
R. D. No. 4 Centerville, Pa.

My Former Herdsire King Tobe Alcartra De Kol

was by King Segis Pontiac Alcartra from Lady Tobe De Kol, 36.59 lb. butter in a week, 141.24 lb. butter in 30 days, as a senior three-year-old, world record at time of making. Her daughter made 30.21 lb. butter in 7 days as a heifer; her dam, 31.66 lb. as a ten-year-old cow.

I plan to keep all the daughters of this bull but have a few nice bull calves that I offer at farmer's prices.

Herd under State and Federal Supervision.

O. I. Martin
Cambridge Springs, Pennsylvania

BUILT A PAYING HOLSTEIN HERD

Six years ago A. J. Anderson of Tripoli, Iowa, sold his grade cows and bought ten grade Holsteins, securing them from herds that had been in cow testing work. Last year Mr. Anderson enrolled his herd in the Bremer County Cow Testing Association No. 2 and at the end of the year the Anderson herd ranked third with an average of 270.3 lb. butterfat per cow. One of the members of the herd, a yearling heifer, freshened nine months previous to the time the association started and so had a lactation period of 21 months. Had she freshened at the beginning of the association year the average yield of the Anderson herd would have been the highest of any in the association.

Mr. Anderson had headed his herd with two good bulls and all the heifers now in milk are daughters of these two sires. Eight cows completed at least nine months of testing and at least six of the eight were daughters of these herdsires.

Owing to the reputation of this herd there has been a call for surplus stock and Mr. Anderson has obtained for the stock he sold \$500 more than he paid for his first ten cows. In his herd and in that of his son, Glen V. Anderson, there are 36 female descendants of the original ten females. The showing this herd has made has attracted lots of attention in Bremer County and other dairymen are expected to follow the Anderson example.

A ONE STORY COW BARN

By the side of the state road running from Corning to Elmira, N. Y., is Mossy Glen Farm owned by J. B. McCarthy, who gets his mail at South Corning, New York. If you pass over this road your attention is at once attracted by the one story cow barn. At the end of this barn are two large silos and all the hay for feeding is drawn into the barn as it is required.

The McCarthy herd consists of both purebred and grade Holsteins. At present it numbers 40 head of which half are purebreds. A milk route is operated and the milk produced is delivered twice daily, the rest being taken by hotels and a near by hospital. The price obtained ranges from eight to ten cents per quart and the quality is high as might be expected from the barn arrangement. The cows are milked by machine and hand, Mrs. McCarthy occasionally operating with the milking. Although Mr. McCarthy had been a Holstein owner for many years he is not a member of the National Association.

Mossy Glen Farm consists of part wooded slopes and part flat land which is very fertile. The scenery is picturesque and the name of the establishment very appropriate.

FOR SALE.—Registered Holstein bull 2 years old—Stebbins Ideal Colantha. RUSH PLUMLEY, R. D. 2, Mouson, Mass.

MICHIGAN HOLSTEINS

are Healthy.

MICHIGAN HOLSTEINS

are persistent producers

From this herd you can obtain Heifers sired by a 34-lb. bull from daughters of a 30-lb. bull and bred to a bull whose dam produced 35 lb. butter in 7 days.

Can sell one female or a carload, and a few real good bulls.

FREEDOM IS LOST FOREVER

Oklahoma is no longer included in the "wild and woolly west." More than a year ago, one of the citizens of that state endeavored to dine in Purcell at a Harvey restaurant minus his coat. This the manager looked upon as a breach of etiquette and refused to serve him with a meal. The matter was taken to court and the controversy carried up to the highest tribunal in the state, the restaurant winning. In its editorial columns, the Sioux City Live Stock Record comments upon the case.

"Had a decision such as this been rendered in the effete east where so many of the gentler members of the male persuasion wear long hair, manicure their fingernails, rouge, pencil their eye brows and wear corsets, it would have occasioned no surprise, but in Oklahoma, land of the stalwart pioneer, and of the free, unfettered plainsman, it seems out of place.

PEAT FOR BEDDING

A form of peat is being advocated as bedding material and is brought into this country from Holland. Several large dairies are reported as using bales of peat in place of their usual amount of shavings. It is claimed to contain a large amount of organic matter which not only adds to the humus in the soil but also is said to be serviceable as a source of energy for nitrogen fixing bacteria.

There are many swamps in the United States where considerable peaty substance is found and it hardly seems that it should be necessary to go to Holland for this kind of material. There are extensive peat swamps in nearly all countries and peat has formed much of the fuel in the Irish rural homes since the dawn of Irish history.

THIRTY ACCREDITED HOLSTEINS

An accredited herd of Holsteins containing 30 head is owned by C. F. Reynolds, of Woodhull, Steuben County, New York. The herd is headed by King Pontiac Jessica, No. 391934. He is a son of King Segis Pontiac Climax and the seven-day records of his four nearest dams average 31 lb. butter.

Mr. Reynolds is fortunate in having a flowing artesian well right in his barnyard. We know many cattle owners would give a lot of money to be so fortunate. This well is eighty feet deep and the water is of splendid quality.

BOUGHT BULL ON MERIT

A. M. Dunn, of Los Angeles, recently purchased the mature bull, King Abbecker Johanna Segis, from W. F. Mitchell, of Visalia, Cal. This bull is a son of the noted cow Adirondac Wietske Dairy Maid. Mr. Dunn saw several of the daughters of this bull milk over 90 lb. in a day in their second lactation period and made up his mind that he would own their sire.

MABEL BEETS MODEL

She has spent her whole life in this herd. Cows and heifers of this quality, from A. R. O. dams, are bred to KING PIETJE AAGGIE PONTIAC. He was by King Pontiac Alcartra Pietje and his four direct descendant dams average 611.3 lb. milk, 30.62 lb. butter in seven-day work.

KING ORMSBY ENDERCAMP

by King of the Ormsbys from one of the best daughters of Judge Segis.

ACCREDITED—of course.

E. R. GELATT & SON

R. D. 1, THOMPSON, PA.

THOMPSON LOSES GRAND CHAMPION COW

Gerben Westside Mona, grand champion at the Grand Forks Fair is dead, reports her owner A. B. Thompson, of Grafton, N. D. The fair was held July 21-26. Mona was in good shape at that time and was due to freshen the first of September. About the middle of August, Mona was in pasture with the rest of the Thompson cows. The younger cows in the herd had horns and evidently one of her young stablemates crowded Mona into a barb wire fence. She cut one of her milk veins and although her owner found her soon after she was injured, she had lost so much blood that she died right away. She was third in her class at the North Dakota State Fair this year.

Mr. Thompson lost three of his best cows last summer. One of his three-year-olds caught her horn on a bar inside her drinking cup. She was all right when the men left the barn for supper and although they were gone only about thirty minutes, they found her nose held at the bottom of the bucket and she was so far gone that they were unable to save her.

Another cow, when loose, picked up a potato in the feeding alley. She was unable to swallow it and Mr. Thompson was unable to remove it so he sent for the veterinary who removed the potato. The cow died three days later and the postmortem showed that her throat had been bruised, evidently by another cow's horn so that horns were really responsible for all three accidents.

The Thompson herd consists of thirty-three head, twenty-eight purebreds and five grades. The owner started with grades four years ago but is rapidly changing to purebreds. He believes purebreds pay much better than grades. He is milking fifteen cows the year round and says that since he has purebreds, he is making more money out of fifteen than he made out of twenty-four. Milk and cream is retailed in Grafton and gross receipts average \$650 per month. The herd averages \$550 per month so that some months additional supplies have to be purchased. Ever since the dairy was started there has been a good demand for all the milk and cream produced. The Thompsons buy their butter but get their milk and cream from their own dairy.

In regard to the surplus stock, Mr. Thompson says:

"Not only is the income from the dairy products of the purebreds greater than that from the grades, but a big difference is noticeable when it comes to selling the calves. I raise all the female calves but dispose of the bull calves as soon as possible. Those that come from my good purebred stock sell much better than the grade stuff. I get from \$40 to \$250 each for my bull calves, depending upon their type and size. Most of these calves have been sold to farmers in this country, all of them have been sold in the state. One of them went as far away as Valley City. My purebreds are all registered, and I try to back them up with good records."

A few official records have been made and next winter Mr. Thompson plans to test more of his stock. He says that the purebreds is the only venture he has taken that did pay. The grand champion cow cost him \$600 but came as near paying for herself as any grade cow could.

The herd sire is Spring Farm King 34th. He is now five years old and weighs 2,400 lb. but he could be made to weigh 3,000 lb. For herd purposes, he is kept thin yet he won second in the aged bull class at the Grand Forks Fair and also at the State Fair. Some of his female calves weigh 120 lb. or more before they are twenty-four hours old.

Practically all the feed used is raised on the Thompson farm of which there are one hundred and eighty acres with about one hundred and forty under cultivation. Most of the alfalfa hay fed is raised and the average crop is increasing. Oats, barley, bran and some oil meal is used for a grain ration, the oats being raised on the farm and other feeds purchased. Some mangels have been fed and Mr. Thompson thinks they have a place in the dairy ration. He has raised a few sugar beets and will try a larger acreage next year. He has also fed potatoes and has had no trouble with tainted milk. These are fed after the cows have had the rest of their feed or just after milking. Thirty acres of corn is raised for silage. Sweet clover silage was fed for two years and Mr. Thompson likes it very much but said that several times it tainted the milk and has to be handled carefully. It makes excellent pasturage; in fact, he believes the only place for it is in the pasture. He has about ten acres of sweet clover pasture and forty acres of natural timber land pasture along the Park River.

Bird Lodge Dairy Farm is a beautiful place just on the outskirts of Grafton. The buildings are painted white and are in the best of repair and the establishment is greatly admired by passers-by.

Mr. Thompson was born about seven and one-half miles west of Grafton. His father, Thomas Thompson, one of the pioneer farmers of the state, has taken forty-six crops of grain off his land and says he has never had a crop failure.

The teacher was trying to give her pupils an illustration of the word "perseverance."

"What is it," she asked, "that carries a man along rough roads and smooth roads, up hills and down hills, through jungles and swamps and raging torrents?"

There was a silence, and then Tommy, whose father was an auto dealer, spoke up.

"Please, miss," he said, "there ain't no such car."

"Hit may be hard fo' a rich man to enter de Kingdom of Heaven," said Rastus to the preacher, "but hit's just as hard fo, a po' man to stay on de earth."

HAY AND STRAW—direct to consumer. Write wants. GREEN BROS., Continental, Ohio.

Just for Fun

EDITOR GETS IN BAD

An Oklahoma editor, just about ready to go to press, "pied" a couple of articles, one concerning a public sale and the other a write-up of a wedding. He asked the office devil to get the two together—and he did.

Here is how he put the two together, and the mixture was not known to the editor until an angry preacher and the mother of the bride appeared on the scene:

"William Smith and Miss Lucy Anderson were disposed of at public auction at my barn one mile east of a beautiful cluster of roses on her breast and two white calves before a background of farm implements too numerous to mention in the presence of about seventy guests including two milch cows, six mules and bob sled. Rev. Jackson tied the municipal knot with 200 feet of hay rope; the bridal couple left on one John Deere gang plow for an extended trip with terms to suit the purchaser. They will be at home to their friends with one good wheelbarrow and a few kitchen utensils, after ten months from date of sale, to responsible parties and some fifty chickens."—Exchange.

Magistrate: "You were here last week. were you not?"

Prisoner: "Yes."

"Twice last week?"

"Yes."

"Do you want a season ticket?"

"Did you hear about the awful trouble that has befallen Mrs. Talke?"

"Don't tell me she has lost her voice."

"No; her husband has lost his hearing."

A Scotchman was strolling through the market place in Glasgow one day and close at his heels followed his faithful collie. Attracted by a fine display of shell and other fish the Scot stopped to admire, perhaps to purchase. The dog stood by, gently wagging its tail, while its master engaged the fisherman in conversation.

Unfortunately for the beastie, its tail dropped for a moment over a big basketful of fine, live lobsters. Instantly one of the largest lobsters snapped its claws on the tail, and the surprised collie dashed off through the market, yelping with pain, while the lobster hung on grimly, though dashed violently from side to side. The fishmonger for a moment was speechless with indignation; then, turning to his prospective customer, he bawled:

"Mon! mon! whistle to yer dog, whistle to yer dog!"

"Hoots, mon," returned the other complacently, "whistle to yer lobster!"

One afternoon a stranger debarked from a train at a hustling town in the west and headed up the street. Finally he met a man who looked like a native.

"Pardon me," said the stranger, "are you a resident of this town?"

"Yes, sir," was the ready rejoinder of the other. "I have been here something like fifty years. What can I do for you?"

"I am looking for a criminal lawyer," responded the stranger. "Have you one here?"

"Well," said the native, reflectively, "we think we have, but we can't prove it on him."

HAMPSHIRE

PROFITABLE IN THE HANDS OF ANY
PRACTICAL FARMER

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have again won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

No. 3

A Crawford County Accredited Herd

CRAWFORD COUNTY is almost a pioneer in tuberculosis eradication work in the Keystone State and every bovine animal in Crawford County has passed a clean tuberculin test, some of them several times. There are a number of accredited herds in this county, one of which is owned by L. S. Brown who gets his mail from Saegertown, Pa.

The Brown herd contains between thirty and forty registered Holsteins. When the representatives of the BREEDER AND DAIRYMAN visited this establishment about the first of August last year, there were 15 cows and 7 two-year-olds beside the young stock and the herdsire. Mr. Brown is a member of the Crawford County Holstein Bull Association and has his third association bull this year. The first one was Jolie Combination a grandson of King Ona and Maple Crest Pontiac Hartog. The dam of this bull was Meadow

of King of the Pontiacs and was from K. P. B. A. McKinley Queen, 1,077.76 lb. butter and 23,136.7 lb. milk in a year as a senior four-year-old and she in turn is from Novelty McKinley Hengerveld 1,049.53 lb. butter and 23,770.1 lb. milk in a year as a senior three-year-old.

Back of King Valdessa McKinley is a combination of big record ancestors. His four nearest dams, all tested as heifers, have year records that average 1,138.02 lb. butter. His three nearest dams average 1,052.34 lb. His six nearest dams have seven days records that average 30.56 lb. butter and the seven nearest tested dams averaged 32.50 lb. butter. The average of the

PART OF THE BROWN HERD IN PASTURE

year records of the three direct descendant dams is 937.16 lb. butter and, as already stated, two of these were tested as three-year-olds and the other as a four-year-old.

The sire of King Valdessa McKinley Pondyke is a son of King Valdessa and Finderne Hologen Fayne

HAYING ON THE BROWN FARM

37.34 lb. butter in a week, 1,395.06 lb. in a year as a junior three-year-old. As King Valdessa was a son of Valdessa Scott 2d, the first 40 lb. cow, and was grandson of the first 44 lb. cow it can be seen that the ancestors of King Valdessa McKinley Pondyke have cut a big figure in A. R. O. history.

NELLIE MECHTHILDE PONTIAC AND L. S. BROWN

Holm Lucille Jolie Hartog with a three-year-old record of 19.44 lb. butter and 456.9 lb. milk in a week. She is from the same dam as the 33 lb. cow, Lucille Jolie Pontiac with 1173 lb. butter in a year. Jolie Combination is also a direct descendant of this great cow as she is his sire's dam. She is credited with 665.5 lb. milk in a week and 2,686.2 lb. milk in thirty days. Her year's butter record was made as a senior four-year-old and was world's record in her class at time of making.

The second association bull and the sire of the young calves in this herd was King Valdessa McKinley Pondyke. His dam, McKinley Hengerveld Pondyke, as a three-year-old made a seven day record of 22.31 lb. butter and 555.9 lb. milk and a thirty day record of 91.07 lb. butter and 2,232 lb. milk. She has a 365 day record made as a junior two-year-old of 684.2 lb. butter and 16,784.8 lb. milk. She is a granddaughter

To avoid inbreeding we offer our four-year-old
herdsire

King Sadie Vale Hengerveld Ormsby

His sire was KING SADIE VALE HENGVERELD—You know what his daughters are doing. He was by King Korndyke Sadie Vale from a 37-lb. three-year-old daughter of Sir Veeman Hengerveld.

His dam, S. V. H. EFFIE, is a daughter of Sir Veeman Hengerveld with a year record of 1,085.60 lb. butter, 24,050 lb. milk.

Come and examine this bull. See his offspring in 4 good herds. His daughters are producers, milking from 40 lb. to 50 lb. daily at first freshening.

He is on the Accredited List and right in every way.

MILLER BROTHERS

Clarks Summit,

Penna.

The bull at the head of the Brown herd at the present time is Sensation Clothilde Tehee, a very fine individual, in fact a high class show bull. His dam, Lucille Clothilde Tehee, as a two-year-old, produced 20.44 lb. butter and 465.6 lb. milk in a week and as a senior three-year-old made a year record of 945.87 lb. butter and 21,986.9 lb. milk. He dam is an A. R. O. sister of Lucille Jolie Pontiac the 1,173 lb. four-year-old. The dam's sire is a son of Ona Clothilde De Kol 2d, 1,044.45 lb. butter and 25,449.6 lb. milk in a year, a daughter of 1,100 lb. cow and the dam of a 1,200 lb. cow.

Sensation Clothilde Tehee is by a son of Lindale Bonnie Pauline 1,250.07 lb. butter and 30,024.1 lb. milk in a year. As a senior three-year-old she made a record of 1,003.75 lb. butter and 26,057.1 lb. milk in 365 days.

The members of the Brown herd were selected and bred from a dairy production standpoint but there are a number of large record cows closely related to some of the animals in this herd. For instance, Pontiac Burkeyje Plus, now nine years old as a junior three-year-old made 20.69 lb. butter and 507.5 lb. milk in seven days. Her dam is a granddaughter of Hengerveld De Kol and comes from the same lines of breeding as the cow that heads the list of records made in far away New Zealand. Her sire is from De Kol Plus, a cow that as an eleven-year-old made 26.09 lb. butter and 694.08 lb. milk in seven days and 956.17 lb. butter and 22,304 lb. milk in a year. De Kol Plus is the maternal granddam of De Kol Plus Segis Dixie 32-632.3 lb. milk and 1,439.35 lb. butter in 365 days as a seven-year-old in strictly official test and 33,464.7 lb. milk, 1,686.63 lb. butter in a year as a nine-year-old, the champion of the U. S. and Canadian record systems.

MR. and MRS. BROWN, CHILDREN AND GRANDCHILDREN Including the two sons-in-law.

The handsomest cow in the Brown herd is Nellie Mechthilde Pontiac and she is good enough to grace any herd in the country. Her dam as a two-year-old made 19.13 lb. butter in a week while her sire, King Pontiac Ormsby has a number of good record daughters and was by King of the Pontiacs from Aaggie Topsy Ormsby 21.78 lb. butter in seven days as a junior three-year-old. Nellie Mechthilde Pontiac has never been tested for a seven day record but last summer was sent to another breeder's farm several miles away and was there put in year test. When she had been there four months she produced 300 lb. butterfat and 7,946 lb. milk. Her best day was 76 lb. and she was due to freshen again before the end of the year.

A handsome dairy-type two-year-old in the herd is a daughter of Nellie Mechthilde Pontiac, sired by Jolie Combination. When fresh she started to milk 50 lb. a day and promises to be as good as her dam.

Mr. Brown is not only a good farmer but is also a good mechanic. In his barn is a small forge and a large number of tools and their appearance indicate that he not only knows how to use them but also to take care of them. He helped to build the barn on the farm and assisted in the building of other barns in the neighborhood.

There are good horses as well as good cows on this farm. Two teams especially attracted our attention as one contained a Shire stallion and the other a Percheron stallion and the owner claims that he finds no trouble whatever in handling these horses in this manner. They were in splendid condition at the time we saw them working.

Mr. and Mrs. Brown have five children, the four oldest ones are girls. Two of the girls are married one lives on a farm near by and the other at Cambridge Springs. The picture of the family group, which was

taken on a Sunday, goes to show that the old home is a mighty good place to come back to. The two youngest girls are twins, Hilda and Helen, and one of these girls is shown driving the loaded hay wagon. The ten-year-old boy, Edgar, is greatly interested in the livestock and has a pony which he rides to bring in the cows from the pasture thus saving time and labor. He is well acquainted with pedigrees as well as the work of the cows at the pail.

The son-in-law standing between the twin girls and their mother is the superintendent of the herd and farm owned by Luther Conroe of Cambridge Springs

L. S. BROWN'S GRANDCHILDREN
They all drink Holstein Milk.

and has a big producing Holstein herd under his charge. The son-in-law standing next to Mr. Brown is one of the proprietors of a large garage in the near by city of Cambridge Springs. The picture from which this cut was made was taken on Sunday afternoon, July 27, 1924.

Mr. Brown has been breeding purebred Holsteins about nine years and has lived thirteen years on his present farm which contains 181 acres. It is a good farm, well adapted for dairying, and has a nice timber lot and sugar bush in addition to the meadows and pastures.

Great Government Experiment Farm

PERMANENT equipment for experimental work, a personnel of trained investigators and assistants, and its nearness to Washington, D. C., combine to make the experiment farm conducted by the United States Department of Agriculture at Beltsville, Md., one of the important institutions in the country for the study of livestock problems. Many State experiment stations, several national organizations, as well as many branches of the department, are coöperating in the studies.

Dr. John R. Mohler, chief of the Bureau of Animal Industry, in a review of the farm's activities for the last fiscal year outlined some of the major experiments conducted on the Beltsville Farm and in the list mentioned:

Studies of animal nutrition in the specially constructed nutrition laboratory recently built to study the influence of feeds on animal growth and reproduction.

Studies of animal genetics, which have included observations on more than 30,000 guinea pigs. Inbreeding, transmission of coat colors, sterility and factors causing abnormalities have received special attention.

Meat studies conducted at the experimental abattoir located on the farm. This work related largely to the soft-pork problem, methods of curing meats and their effects on nutritive value and palatability of meats.

Feeding and breeding experiments with swine, including detailed slaughter records.

Experiments on the effects of lice and worms on the development of hogs from birth to maturity.

Experiments to determine the minimum age at which pigs can be successfully and permanently immunized against hog cholera.

Development of a practical system of forage-crop pasture for sheep and lambs.

Studies of the effects of "flushing" (extra feed at lambing time) on sheep breeding and lamb yields.

Studies of growth of sheep by systematic weighing of all growing stock.

Experiments on wool growth and studies on the identification of animal fibres. The farm has a well-equipped wool laboratory.

Investigations with milk goats. The grading up of common American does with purebred bucks of heavy milking strains has been carried to the fifth generation.

Extensive poultry investigations including the hatching of 7,500 chicks with good results. Inheritance of egg production, vitamins in rations fed laying hens, comparative value of animal and vegetable proteins in feed and value of feeding milk to growing chickens received special attention.

Effects of feed on the flavor and odor of milk from dairy cows. These experiments included studies with cabbage, potatoes, garlic and green rye.

Tests in the sterilization and cleaning of milking machines by various methods.

Studies of grain mixtures in comparison with alfalfa hay for dairy cows, including best methods of determining nutritive values.

Comparison of feeding hay once and twice a day to dairy cows.

Relative value of milking dairy cows twice and three times a day in the effect on diminution of milk yield during lactation period.

Dairy cattle breeding experiments, including measurements and weights of organs and detailed studies of udder development.

The experiment farm is reached most conveniently by automobile but is also accessible from Washington by train or electric interurban car, the distance being about 14 miles. Visitors are welcome and many delegations in visiting the capital city go en masse to see this outstanding farm.

Since July 1, 1924, when the Bureau of Dairying was created, the dairy work of the farm has been under the supervision of the new bureau. The other activities are under the supervision of the Bureau of Animal Industry, as heretofore. T. E. Woodward is the resident manager of the dairy farm and B. F. Brandon of the animal husbandry farm. From the public's standpoint, it is one large farm conducting the various inter-related activities outlined.

The home and the business are so closely united on the farm that success depends to a large extent on the home.

The bull at the head of the Brown herd at the present time is Sensation Clothilde Tehee, a very fine individual, in fact a high class show bull. His dam, Lucille Clothilde Tehee, as a two-year-old, produced 20.44 lb. butter and 465.6 lb. milk in a week and as a senior three-year-old made a year record of 945.87 lb. butter and 21,086.9 lb. milk. The dam is an A. R. O. sister of Lucille Jolie Pontiac the 1,173 lb. four-year-old. The dam's sire is a son of Ona Clothilde De Kol 2d, 1,044.45 lb. butter and 25,449.6 lb. milk in a year, a daughter of 1,100 lb. cow and the dam of a 1,200 lb. cow.

Sensation Clothilde Tehee is by a son of Lindale Bonnie Pauline 1,250.07 lb. butter and 30,024.1 lb. milk in a year. As a senior three-year-old she made a record of 1,003.75 lb. butter and 26,057.1 lb. milk in 365 days.

The home and the business are so closely united on the farm that success depends to a large extent on the home.

Pennsylvania Breeders Gather at Harrisburg

JANUARY 19-23, 1925, the Pennsylvania Farm Products Show was staged at Harrisburg and was attended by many people, a number of whom journeyed long distances to take in this event.

Every state wide agricultural organization of Pennsylvania holds a meeting during Farm Products Show week. Speakers, some of national as well as state wide reputation, are secured and there is something doing every minute from the time the show starts until its close.

Holstein enthusiasts had one great disappointment. Last year the Pennsylvania Federation of Holstein-Friesian Clubs was responsible for the staging of a breed exhibit. The prohibition of a poultry show made possible such an exhibit this year and it had been arranged to bring down a number of national and state champions from the Deysher herd. Unfortunately weather conditions did not permit and the only purebred cattle on exhibit were Ayrshires.

The exhibits of corn, potatoes, apples, farm and dairy machinery, wool, and other exhibits were fully up to the average. The vocational schools and other state educational institutions made high class exhibits. The electric farm was visited by thousands although they had to travel several miles to see this. A farm and farmstead had been equipped with every electrical device an enthusiastic salesman could think of selling to a farmer possessing a big bank account. The idea was to show what could be installed in the house and around the farm to save manual labor and make use of electricity.

On Wednesday, January 21st, the Pennsylvania Federation of Holstein-Friesian Clubs held its annual meeting and banquet. Both were held in the Masonic Temple. President Thompson, in his address said that the Holstein business had not been brisk during the past year. He read telegrams from the Hon. F. O. Lowden, President of the National Association, and from Director John A. Bell, Jr., regretting inability to be present.

The secretary's report told that the Federation had donated prize ribbons to owners of the champion Holstein male and the champion Holstein female at twenty fairs in the state; and had donated a silver cup and premium ribbons to the winners in a cattle judging contest, the teams coming from vocational schools of Pennsylvania. The cup was won by Kenneth Bender representing the Benton School.

During the year one new local, the Holstein Club of Bradford County, had joined the Federation. The receipts of the Federation during the year were \$223.94, the expenditures, \$227.97 with outstanding bills amounting to \$34.39. (Unlike other state associations, the Pennsylvania Federation does not receive any transfer fee rebate from the National Association.)

The treasurer's report showed a balance of \$286.59.

A revision of the by-laws was suggested by President Thompson, a committee to be appointed, the suggested changes to be submitted to the members at the next annual meeting.

Hon. E. P. Brown, representing Susquehanna

County in the Legislature, spoke on tuberculosis eradication work and said that a bill appropriating one million dollars for this purpose had been introduced in the House.

Dr. C. J. Frantz of Warren said that contagious abortion was fully as detrimental to the cattle industry as tuberculosis.

R. R. Welch of Grove City, read two resolutions adopted the previous day by the Breeders' and Dairymen's Association. Mr. George E. Stevenson moved that the Legislature be asked to appropriate at least two million dollars in addition to the amount realized from the dog tax for tuberculosis indemnity purposes. There were several seconders and this resolution was passed unanimously.

The election of officers and directors then being in order. President Thompson asked Ex-President Stevenson to act as temporary chairman. The nomination of Abner S. Deysher of Reading had several seconders but Mr. Deysher rose and said that he was too old a man to head an aggressive campaign; that he believed a younger man should hold the office and declined to stand. Thereupon Dr. L. M. Thompson was nominated and elected unanimously as was Treasurer Keen and Secretary Truckell. F. D. Kerrick of Towanda, veteran Holstein breeder, was elected vice-president, the retiring vice-president W. Hugh Jones being at present out of the Holstein business.

President Thompson explained that the directors were elected for a two year term and that six were re-elected each year. Thereupon the retiring six were unanimously re-elected. They are: H. H. Blair, Williamsport; Wm. J. Fairchild, Berwick; H. E. Robertson, York; John H. Shirk, Lancaster; S. T. Witmer, Union Deposit; S. F. Zook, Curryville.

The directors holding over are: John A. Bell Jr., Coraopolis; Abner S. Deysher, Reading; Arthur M. Northrup, Danville; Ivo V. Otto, Carlisle; James M. Paxton, Houston; Chas. A. Row, Yardley.

At the directors meeting held immediately after the members meeting, it was resolved on motion of C. A. Row of Yardley, that next year the meeting and banquet be again held on the same day.

The President, Secretary and Senator S. F. Zook of Curryville, were appointed as a legislative committee.

On motion of Mr. Deysher, the secretary was instructed to purchase ribbons for the Federation to award the champion male and the champion female exhibited by Pennsylvania Holstein owners at the principal fairs in the state.

On motion of Mr. Keen, seconded by Director Blair, the secretary was instructed to arrange for a cup and ribbons to be awarded the teams winning the vocation school judging contest which would be conducted at the 1926 Farm Products Show.

Ribbons will be given by the Federation to juniors showing the best Holstein calves, such juniors to belong to organized calf club projects and the local associations to handle the awards.

Messrs. Deysher, Otto, Robertson and Blair were

elected to form an executive committee with the president, secretary, and treasurer.

Directors John A. Bell, Jr., and J. M. Paxton together with Albert L. Craig of Sewickley, were appointed by the chair as a committee to revise the constitution and by-laws and submit the proposed changes at the next annual meeting.

At the banquet, an enjoyable time was had by the one hundred and thirty-four that sat down to the tables. There was no formal program. Dr. L. M. Thompson, who acted as toastmaster called upon a number of those present. Dr. J. L. Lenker of Harrisburg, from whose farm came the Holstein milk served on the tables, was the first speaker. He gave medical testimony as to the value of Holstein milk as food.

The toastmaster called upon the newly elected vice-president, F. D. Kerrick of Towanda; Professor A. A. Borland of State College; C. F. Bigler, Syracuse, N. Y.; D. K. Sloan, Towanda; S. J. Brownell, State College; Secretary F. D. Willits, Harrisburg, and Morris T. Phillips, of Pomeroy, a noted Guernsey breeder who is president of the Pennsylvania Council of Agricultural Associations. Mr. Allen Crissey, fieldman for the district comprising the states of Pennsylvania, New Jersey, and Delaware, read a report of his activities during the past year.

The musical program was staged by the Susquehanna Quartet, which was composed of E. P. Little, Geo. B. Finn, Geo. P. Little and J. Terrence Sheen with Mrs. Dana A. Watrous, accompanist. The solos by Mrs. Watrous and Mr. E. P. Little were heartily applauded and encored while the bass songs of Terrence Sheen were the hit of the evening. Mr. Little is district attorney for Susquehanna County and Mr. Sheen is the junior member of the firm of J. B. Sheen and Son, owners of an accredited herd of Holsteins at South Montrose.

Urges Co-Operation of Cattle Owners

AN earnest appeal to Pennsylvania breeders and dairymen to co-operate in the work of tuberculosis eradication was voiced by Secretary F. P. Willits at meetings held in Harrisburg during Farm Products Show Week. Cattle owners were urged to use their influence with the members of the Legislature to raise sufficient funds for the furtherance of the tuberculosis campaign and for the resulting indemnity for cattle destroyed because of reaction to the test.

Secretary Willits told that the State Board of Health at one time issued an ordinance whereby no milk should be given away or sold within the State of Pennsylvania unless it came from tuberculin tested herds or else was pasteurized before it reached the consumer. Realizing that this ordinance, if enforced, would work hardship to the herd owners of the State, the Secretary was successful in having it modified so that herd owners can proceed to sell milk until such time as the State Bureau of Animal Industry can test their herds. Cattle owners in many widely scattered districts have made application to have their herds tested and with the limited funds at their disposal, the Bureau of Animal Industry has been unable to handle all the work re-

quired, a situation which is duplicated in practically every other state in the Union.

The civic authorities of many Pennsylvania towns are issuing ordinances that no milk shall be sold within their territory excepting it comes from tuberculin tested herds. Since it is impossible for those living in the rural districts to obtain pasteurized milk they necessarily must use milk which is not pasteurized and therefore until the herds are tested, this milk will have to come from untested herds. The rural people themselves need to have their herds tested for their own protection.

During the last two years, New York State has ex-

THE HONORABLE F. P. WILLITS
Secretary of Agriculture for the Commonwealth of Pennsylvania.

pected for indemnities, the vast sum of eight million dollars and the Legislature of the Empire State is expected to appropriate four million dollars this year for this purpose. In tuberculosis eradication work, New York is leading Pennsylvania.

It has been reported by good authorities that New York City itself is likely to pass an ordinance forbidding any milk coming into that City except from tuberculin tested herds. If that should come to pass, milk which is being produced in the northern tier counties of Pennsylvania and now selling in the City of New York, would lose its market, consequently the dairymen would seek other outlets for their product and in consequence the milk markets of Philadelphia, Pittsburgh and Baltimore, to say nothing of the smaller cities within the state would be completely disorganized.

Pennsylvania ranks third among all the states in the value of dairy products, sixth in the number of dairy cows, and only fourteenth in the number of cattle under supervision for the prevention and eradication of tuberculosis. Therefore, for the protection of the health of the people of the State as well as to assist the agricultural interests, every effort should be used to induce the members of the Legislature to grant the State Department of Agriculture at least two million dollars for this work.

A Wisconsin High School Fair

By J. H. LEWIS.

PORTLY, ruddy-faced, bald-headed Sam Wilson, then principal of the Livingston, Wisconsin, High School, proposed eight years ago a High School free agricultural fair. School officials fell in with Sam's idea and annually since then this fair has been held, growing better and more extensive with each succeeding year. Wilson is no longer principal of the school. He has been succeeded by Professor E. E. Skaliskey, a hard worker and scrupulously sincere in keeping this fair a simon pure agricultural exhibition. To make certain the committees will not deviate from the main purposes he insists on a place on every one.

Last October 4th, the Livingston High School Fair attracted over 4,000 people. It is held but one day, Saturday. In the school building were sewing, baking, cooking and canning exhibits by the pupils of the state graded schools of Livingston and Arthur, a small village six miles south, as well as exhibits from eleven rural or district schools near by.

Out on the spacious well-kept lawn surrounding the school were four large wall tents, end to end. In these

SECTION OF RURAL SCHOOL EXHIBITS
High School Free Fair, Livingston, Grant Co., Wis.

tents were the agricultural exhibits, and the tents were crowded all day with interested spectators. The competition was for ribbons and cash prizes amounting to \$500, donated by the citizens and farmers of the community. All entries must be by students. Adults may enter but are assigned to separate classes.

Livingston, Arthur, Greenwood, Hopewell, Rock, Martinville, Ebenezer, New California, Crow Branch, Carpenter, Hake, Hazel Dell and Annaton schools were entered.

T. O. McCutchin of the College of Agriculture, University of Wisconsin, assisted by two high school agricultural teachers judged the exhibits. The competition and rivalry between the schools was so close the judges required three solid hours before they turned in their markings. These markings were based on, first arrangement and attractiveness; second, completeness; third, quality of products. Twenty points were allowed for the first count, and forty points each for the second and third.

Greenwood took first for the second successive year

with 90 points; Hopewell, 89; Rock, 86; Martinville, 85; Ebenezer, 84; New California, 83; Crow Branch, 82; Carpenter, 81; Hake, 80; Hazel Dell, 77; Annaton, 76.

The one point difference between Carpenter and Hopewell exhibits was made on quality of products. It required the acumen of a keen judge to discern this difference.

The exhibits consisted of every known farm product raised on the soil of Grant county, and for the past two years Grant county has taken first place at the state fair on agricultural exhibits.

The live stock exhibits were housed west of the school. Cattle, horses, and ponies were shown, also poultry, Poland-China and Duroc-Jersey hogs.

The Livingston High School Band of 25 pieces furnished good music all day. There were three baseball games between high school clubs, a horse shoe pitching contest with thirty expert barnyard golf shooters competing, and in the afternoon a team pulling contest which was exciting and interesting.

Sam Wilson's idea has borne good fruit. The people of Livingston claim that the first High School Fair to be held anywhere in the United States was held here. Letters of inquiry regarding the conduct and management of this High School Fair are received each year by Professor Skaliskey from other states, some quite distant. In other districts of Wisconsin the Wilson idea has taken root and last autumn four High School Fairs were held in Grant county alone.

Agriculture is the first interest of the agricultural community. Stimulating young boys and girls to compete for prizes is a trenchant manner of inculcating early a dominant faculty that leads to efficiency and love of farm practices and develops talent worth while when the real battles of life demand attention.

Lower Rates on Purebreds

A FREIGHT rate of one-half the regular tariff is now in effect upon all shipments of "less than carload" capacity of registered breeding cattle and registered horses, except race horses, between points in Illinois, Iowa, Michigan, Minnesota, Missouri, South Dakota and Wisconsin. These reduced rates apply on shipments moving over the following railroad lines, both interstate and intrastate: Chicago & Northwestern; Chicago, Burlington & Quincy; Chicago & Alton; Chicago, Rock Island & Pacific; Illinois Central; Minneapolis and St. Louis; Minneapolis, St. Paul & Sault Ste. Marie; St. Joseph & Grand Island; Union Pacific; Wabash, Chicago, St. Paul, Minneapolis & Omaha, and the Chicago, Milwaukee & St. Paul. The minimum charge is \$7.00.

Shippers wishing to take advantage of these lower rates must furnish certificates of registration which will be attached to the waybill accompanying each animal in a shipment. They will be given to the consignee when shipment is delivered and freight charges paid.

In Missouri the new rates apply only when shipments move between points on the Wabash, Chicago & Great Western and Chicago & Alton.

Nothing is easier than drifting with the crowd.

The Agricultural Census

GOOD progress is reported in the taking of the Federal Agricultural Census. It was intended that the census be completed by the end of January, but in many districts it has been found necessary to extend the time to February 15th.

Secretary of Agriculture Howard M. Gore asks the farmers to facilitate the work of the enumerators and to give prompt replies to all the questions in the census schedule. All information secured will be held strictly confidential and used solely for statistical purposes.

"The Census is taken by the Department of Commerce in coöperation with the Department of Agriculture. The schedule of inquiry was approved by the Department of Agriculture and directed to determine matters of fundamental importance to the welfare of the agricultural industry. This Census is needed as a basis for the annual crop estimates of the Department of Agriculture, and it is of great importance that the results be accurate.

"The totals of farm acreage, land utilization, livestock, crops, etc., will show actual conditions during 1924 and will be used for the preparation of estimates for each year until the next census. All this information will directly or indirectly be of benefit to farmers and to farmers' associations and organizations throughout the country. It will help Congress to legislate wisely in matters affecting the farmers' interests."

Sparrow Hawk Johanna

SPARROW HAWK JOHANNA was expected to be shown at the Pennsylvania Farm Products Show held in Harrisburg the week of January 19 to 23 but weather conditions prevented the shipment being made, much to the regret of the members of the Holstein-Friesian fraternity gathered at Harrisburg during the Show and none regretted this more than Mr. Deysher himself.

SPARROW HAWK JOHANNA
1,388.08 lb. butter, 28,028.9 lb. milk in a year. Owned at Berks Farm, Abner S. Deysher, Proprietor, Reading, Pa.

We are showing the latest picture of this great cow. The official figures for her year record was 1,388.08 lb. butter, 28,028.9 lb. milk. She is due to freshen again in February by King Tweede Spring Farm, the senior herdsire of the Deysher establishment. The daughters of this bull are making big records in long time as well as short time work and are also making good in the general dairy.

Shall I Breed Poland Chinas in Connection with My Holsteins?

By BERT STAFFORD

NATURALLY I say Poland Chinas because I am partial to that breed, but if you like some other breed better, go to it, that is the kind you should have.

In the first place I will say, no man should go into a business of any kind that he does not particularly care for, nor should he take up one breed of stock when he prefers some other.

The first requirement is, like the breed and the busi-

A HIGH CLASS BUNCH OF POLAND CHINAS

ness, then go in with a determination to take the proper care of them and develop the pigs properly.

There are more failures from improper or no care, and poor development, than from all the other causes put together.

It's different altogether from breeding dairy cattle; in that, you feed for milk production, in the other you feed to grow and develop them to the largest size without injury to quality and finish.

Since so much depends on care and feed, it has always been a surprise to me that more dairy cattle breeders did not breed hogs also.

You have formed the habit (or should have) of taking the proper care of your herd; you have learned long ago the value of a good foundation herd, not just the sire alone, but the dams as well, and since care and feed is the greatest requisite for success in breeding purebred swine, you who realize this and have practiced it in your dairy operations, are the ones who should go into the breeding of purebred hogs, for you have in many cases the advantage over the beginners who have never bred registered stock of any kind.

There are several other reasons why you could add this industry on to your other to a good advantage, so many farmers go into the breeding of swine as a side issue, or a secondary branch, they get in and then allow their farm work to interfere with the care and feed of their hogs, they can't give all their attention to one without loss to the other, so it is divided with the weight on the farm side and the pigs suffer for it, and when sale day comes they are not as good even as the farmer's grades, and he has a failure.

In your breeding of Holsteins, you have only a part of your time taken up, and yet you do not have time

to do much work on the farm, so why not add on another branch and give all the time of one man to taking care of both herds.

The breeding of one will help you in the other, the cost of selling one will cut the cost of selling the other, which lessens your overhead expenses, a very important item and one that must be watched closely.

There is another reason why you should add on to your breeding operations this line, the best time to go into breeding of purebred stock is on an upgrade in prices and demand, and there is no question but what this will be the condition for some years to come.

The hardest knock a business ever received, was handed to the breeding of swine 6 years ago when so many went into it on a large scale just when it was at the peak and ready to hit the toboggan, forcing over 60 per cent of the breeders out.

There is, and always will be, room in this business for the man who goes in with a determination to first get a good herd and then take proper care of it.

There is no room however for the "hot and cold" men, they are the drawbacks, the examples for farmers to point to and say "there is nothing in it, just look at Bill Jones—lost all he had." On the other hand, John Smith, who did not have any better herd to start with than Jones, has taken the proper care and has fed them good, was with his sows in farrowing time, thereby saving a large per cent of the pigs farrowed, and who, when sale day came had a fine offering, so much better than the neighbor farmers, that they were anxious to buy and were willing to pay a good price for their seed stock. You have got to have better stock than the grades or scrubs or you cannot expect to sell the farmer. He will not buy your hogs at a price that will make you money and why should he, if they are an inferior lot.

Good well developed pigs for breeding stock are worth a premium and a good one, but a poorly developed one can fit nowhere but in the feed lot.

Now I have said nothing as to the superiority of Poland Chinas over other breeds. All breeds have their good points, it's a matter for you to decide, as

to which you prefer. I like the Polands because they are just as prolific, and as easy feeders if not easier than the other breeds.

The main point is, get purebred hogs of some kind on your farm, the government report is, that purebred swine are 40 per cent better than grades, then why do you hesitate to get them on your farm?

You can buy your foundation herd now cheaper and get better hogs than you will be able to do for the next 5 or 10 years. There never was so great a shortage in purebred stock, according to the population, as now, the farmer is not buying brood sows now because they are not going to believe a thing until they actually see it, but as soon as prices begin to soar, they will do just as they always have done, buy on a high and sell on a low market.

In the last few years, ton litter clubs have sprung up all over the country, farmers have tried them out successfully, and in nearly every instance the purebreds won over the grades, and a Poland China litter down in Texas broke all records.

It was proven that the purebred litters made the owner money; if it can be done on one, why not on every good litter, if it can be done in times like these and under such conditions, it can be done most any time.

The business of breeding purebred stock of all kinds, is just as safe as any other business, speculators get into all lines and speculators do no good to any business, but the reverse.

Use good business judgment in selecting your herd and in the care of it and you will make money.

"To live content with small means; to seek elegance rather than luxury, and refinement rather than fashion; to be worthy, not respectable; and wealthy, not rich; to study hard, think quietly, talk gently, act frankly; to listen to stars and birds, babes and sages, with open heart; to bear all cheerfully, to do all bravely; await occasions, hurry-never; in a word, to let the spiritual, unbidden and unconscious grow up through the common. This is my symphony."—*Wm. Henry Channing.*

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

Idaho Dairymen on the Warpath

A STATE without a butter substitute factory, but with 33,000 farm families directly interested in the dairy industry is the claim made on the part of the State of Idaho by the *The Idaho Farmer* in a damning indictment of the oleo business.

Undismayed by the rejection of oleo legislation by recent referendums in the states of Oregon and Washington the dairy interest in the state of Idaho will attempt to have the Idaho legislature pass a bill during its present session that will prohibit the mixing of vegetable oils with dairy products for the purpose of getting the dairy taste and flavor.

The investment in farm land, farm buildings, and farm equipment by Idaho dairymen approximates \$35,000,000. Butter substitutes are manufactured outside the state from ingredients produced outside Idaho, and this industry pays no taxes whatever in the state, and provides no pay-roll for Idaho citizens.

In the state of Idaho there are 34 creameries, 67 cheese factories, and a milk condensery. It is estimated that the one-half of the milk produced by Idaho dairymen is now manufactured into cheese. During the first six months of 1924 Idaho creameries manufactured 60,000,000 pounds of butter, and in the first six months of that year more butter was made in the state than was produced during all the previous year.

Opposing the passage of the bill are a few wholesalers and a number of retailers who handle imitation butter. Resolutions favoring the bill have been passed by a number of breed organizations, the state grange, every Pomona and every local grange in Idaho and every agricultural association of the state, as well as many chambers of commerce.

The legislators are appealed to from the angle of the economic value to the state of the dairy industry, and then "war is carried into the enemy's country" by the presentation of a series of statements compiled by the United Dairymen Associations of Washington. The filed statements name the companies chiefly interested in the importation of copra and vegetable oils into this country. They state that the president of the American Linseed Company and one of the leading oleo companies are one and the same, that another man is secretary of both companies and that the officers and directors of the American Linseed Company and of a number of oleo companies interlock, and that they are virtually one concern under many names.

The Breed in the Future

UNDER the head of "Friesians of the Future," the January *British Friesian Journal* has the following worthwhile editorial. As nearly all our readers know, the cattle called Holstein-Friesians in this country and Canada are called Friesians in their own home, and in the British Isles, South Africa, Australia and New Zealand. The emphasis laid on constitution or health in this article is along the lines advocated by many who are working for the welfare of the black and white breed in this country.

"What will be the British Friesian of the future? The only possible answer is that it will closely resemble the Friesian of Holland. This means that it will be a

big cow with tremendous heart girth and constitution, the ability to produce, on an average, more milk and butterfat than any other breed, and will yet be a dual-purpose animal because it is well-fleshed and renowned for its good quality beef.

How can British breeders attain to this high standard in the shortest time and in the safest manner? Probably by using only bulls that have passed the Tuberculin Test, and bulls with strength and butterfat backing in preference to ordinary or inferior bulls with a super-abundance of milk in the pedigree; by rearing the young stock on open air methods and on a sufficiency of food; and by taking care to see that the cow is regarded as an individual as well as a factory, and is not required to work too hard on too little food.

All Friesians are well-bred for milk, and experience shows that the animal with the strongest constitution not only gives the maximum of milk, but lives longest. Milk we have in plenty; constitution we also have, but with dairy cattle it is not possible to obtain too much constitution. Butterfat has been wonderfully raised, but many strains can be further improved, and when the average butterfat percentage of the breed has been raised from its present figure of 3.4 to 4 per cent, such average will in all probability prove high enough. At the risk of reiterating a statement that may well be criticized, we say again that those who have not seen the Friesian in Holland can have little idea of the excellence of the average and best animals of the breed. The British Friesian was such a lusty infant that, perhaps it grew too rapidly, and in any case it cannot be pretended that perfection has been reached in the short space of 14 years. Owing to unique circumstances, too much attention was probably paid in the past to price, and insufficient regard had for the individual animal. Prices are now much lower than they have been, so that the present is a good time to review the situation critically, to conserve energies, and to develop and improve herds. And no better or safer programme can be framed than one that has as its policy the retention and improvement of constitution, and the increase of butterfat."

Chapped Teats

CHAPPED teats are caused by any irritation, such as sudden chilling after the sucking of the calf, "wet milking" by the attendant, damp or filthy conditions of the stable, wet bedding, overstocking, exposure of tender skin to sun rays in summer, or freezing in winter, etc. The skin is first rough and inclined to scale, and later wrinkles are formed, which become hard and deep and presently break into raw fissures.

Treatment.—Favorable conditions, such as dry quarters and bedding, cleanliness of the udder, and "dry milking," should be assured. Some reliable anti-septic wash may be used, after which the chapped surface should be painted (once daily) with compound tincture of benzoin or a mixture of 1 part of tincture of iodine and 4 parts of glycerin. It may be advisable to anoint the teats with petrolatum before milking, and to use a sterile milking tube so that the milk may be drawn with the least pain to the animal.—*Farmers' Bulletin 1422.*

NOT ABOUT COWS

"First Aid" and Good Health in the Home

THE Modern Mother is prepared to meet the emergencies that always arise where there is a family, and to treat the minor ills far more capably than those of olden times. Open discussion in public press, welfare stations, teachings in rural communities on "Red Cross" nursing and "First Aid" have educated the modern woman along these lines.

However, in the best cared for families, accidents are bound to occur and the children and adults will have at least minor illnesses at times. It is the wise mother that will have educated herself in the most important details of practical nursing.

Every household should contain a few of the most important articles needed for dressing a wound, even in the city with a drug store near by but it is especially important for those living in isolated districts to have remedies and surgical dressings on hand.

It is a recognized fact not to handle, or wash a wound, however, slight it may be, even an antiseptic solution will only carry pus germs deeper. Far better to thoroughly swab out the cut or wound with absorbent cotton saturated in iodine, then cover with a dressing of sterile gauze held firmly in place with adhesive tape. Of course any serious wound demands the immediate attention of a physician. But this dressing will prevent more pus germs from entering and tend to stop bleeding. If the wound is deep and there is hemorrhage of an artery, the blood will be a very bright red, and expelled in jets. This must be stopped immediately, by pressing with your thumb between bleeding point and heart.

An effective way of applying iodine to a wound on a small child is to wind cotton (sterile) loosely on end of a toothpick, saturate until dripping, and with one swab you can usually cover the entire surface if not too large. A child resents the added pain from the sting of the iodine and will not remain quiet while a nervous mother is applying it in futile little dabs. Iodine is also a splendid remedy for chilblains. Paint every two or three days on affected parts.

For burns a thin paste of water and bicarbonate of soda will relieve pain; carbolized vaseline, olive oil and fresh lard are all good. A solution of Epsom Salts is soothing. Deep burns should have the attention of a doctor.

Earache is another distressing illness of a great many children. Heating sweet oil or glycerine until hot, but not enough to burn and putting a few drops in the ear, then applying a hot water bottle will prove effective. However, severe earache demands the services of a competent physician.

Nosebleed does not usually require especial treatment unless severe. Then apply cold at back of neck, either ice or cold water, a roll of paper under the upper

lip between it and gum or salt and water—teaspoon of salt to a cup of water—snuffed up in nose will usually suffice.

Sprains are painful injuries; elevate the affected part and apply either hot or cold water. If there is much inflammation cold will prove most effective. Arnica rubbed in gently will help to deaden pain.

In our climate colds of one kind or another are far more common than any other disease. Neglected colds are sometimes the beginning of very serious diseases. Patent medicines advertised to cure colds contain dangerous drugs as a rule. Free use of cathartics in the beginning, light eating for at least 24 hours and keeping warm, will tend to break up a cold. The following treatment is good for adults. One teaspoon soda, (baking) dissolved in one-third glass hot water, taken one-half hour apart for two hours or four doses, repeat next morning. This will overcome the acid condition of the system to an extent. For the small child, the "old-fashioned" remedy and standby, Castor Oil, is still in style.

After all is said, there are a great many rules for keeping in good health. One could write a volume on them and still not be through. Boiled down they amount to this; common sense applied to the business of living. Food, of course, is one of the biggest factors in good health. The majority of Americans overeat. Overeating makes people fat and sluggish, and renders them susceptible to disease. We should eat plenty of green vegetables and fresh fruit, drink plenty of water and a quart of milk every day. Meat once a day is enough when plenty of eggs and butter are used.

Frequent baths and plenty of sleep are both important details of good health. Also fresh air in the sleep-room. All these things—proper and comfortable clothes, time for recreation and rest make for the proper mental attitude and insure good health—which also means happiness.

The following articles should be kept on hand in every home:

Bottle of iodine, Adhesive tape, Antiseptic gauze (one pkg.), Absorbent Cotton (one-half lb.), Roller bandages, large and small width, Bottle Aromatic Spirits of Ammonia, Bottle Castor Oil, Epsom Salts, Syrup of Ipecac (for croup), Calomel tablets, Mustard (ground), Mustard Ointment, Aspirin for relief of pain if necessary, Clinical thermometer.

Linen vs. Cotton

IN an experiment carried on by a large hotel it was found that one linen sheet outwore twenty-two cotton sheets, under similar conditions. One linen tablecloth was found to outwear twenty-four cotton tablecloths. This brings to our minds the fact that in spite of the high original cost it is true economy to purchase linen for beds and tables.

That Vegetable Garden

"Hope dwells eternal in the human breast;
Man never is, but always to be blest."

WHILE these lines from Pope are not entirely true in the lives of most people, for some are blest, yet life at times would be altogether unbearable were it not for that forward looking attitude of the mind. And certainly this is the time of the year when it is a great pleasure to forget the present and to project ourselves into the future. January might be well called the zero month in more senses than one, for to those who dislike winter with its snow and ice and cold, it is the longest, darkest, coldest month of the year. December has the redeeming feature of Christmas, with its joyous anticipation and still more joyous realization, and February, the shortest month of the year has longer days and more hours of sunshine. One can even endure March with its blustery winds and storms, for it often has quite spring-like days, and anyhow April comes next when Spring will surely arrive. Well, here we are, clear into next spring, but, alas! we have to come back to January, with its thirty-one dreary days of snow and ice, and then more snow and ice, days of brief daylight and wintry sunshine.

Now at this time of the year there is only one thing that sustains the aforementioned hope and that is the making of plans for spring, plans for household improvements, plans for spring clothes, and plans for garden. The catalogs are beginning to arrive and the one that enlists our attention the most just now is the seed catalog. When the wind roars outside and the snow swirls and eddies, isn't it great to sit by the open fire-place or near the good old register and study the seed catalog? It is winter's greatest indoor sport. We sit and vision the wonderful tomatoes we are going to grow, and the corn and peas—this year we are going to have all we want of the latter—last year we did not plant nearly enough! And we're going to plant enough onion seed, so we can have all the tiny green onions we want, and we must not forget the sets—"An apple a day keeps the doctor away" an old adage says and maybe an onion a day will keep the undertaker away. And so we visualize the cucumbers, the red peppers and the beets we are going to grow, for a beneficent Providence has dulled the memories of back breaking hours of weeding, in spite of which, along in August the weeds nearly won out, and forgotten are the hours spent under the hot sun, when things began to swim before our eyes but when certain garden stuff had to be picked and other work had to be done or much of past effort would be lost. Fortunately, none of these things occur to us as we sit in our easy chair and plan the summer garden. For

Breathes there a man with soul so dead
Who never to his wife has said
We'll plant a garden fair this year
And fill our table with good cheer.

We are told that millions of people in this country have only the mentality of children, but after trying to answer our children's questions we are inclined to think that is enough.

SOME CHOICE ONES

Although to some people a radish is a radish, and a cabbage is merely a cabbage, yet in the vegetable kingdom there is as great a difference in kinds and families as in the animal kingdom. Yet many persons, who would not tolerate a scrub cow about their premises calmly buy their garden seeds "as is." If one is a real dirt gardener, varieties come to mean much to one, and as much care is taken when buying the spring supply of seeds as when buying the sire that heads the herd. All other things being equal—the sort, the fertilizing, the working—much better results may be obtained when care is exercised in the selection of the seed. For instance in the cabbage family, the American Drumhead Savoy seeds cost no more than others, in fact less than some, yet very few ordinary gardens boast of this king of cabbages. It is a sure header, even the outside leaves are tender, it is a good keeper and has a flavor far superior to any other sort. When unable to get lettuce in the winter time, salads may be served on the crinkly inside leaves and no one would dream it was the lowly cabbage. It is an early variety, but by planting the seed outdoors in June, then transplanting, a good winter crop is assured.

CAULIFLOWER

In growing cauliflower, the Snowball is a very good variety. One packet of seed once gave us over eighty plants, all of which headed well, one weighing seven pounds without the stalk. That year we canned enough cauliflower to last several seasons. The seed was sowed outdoors, then young plants transplanted about two feet apart.

BEANS

When it comes to string beans there is room for a wide range of choice, depending upon whether one prefers the green or the wax variety. Our favorite is the Hodson Long Pod Wax, a bush variety, the pods of which average seven or eight inches in length. We felt sure they were a foot long until we measured them, so sympathize with enthusiastic fisherman. The ample foliage shelters the pod from the sun, keeping them brittle for a very long time. This variety is remarkably free from bean diseases, rust, blight or mildew, and gives a great crop for winter use, being the best for baked beans that we have ever used.

MUSK MELONS

Even in this latitude of northern Pennsylvania we have had splendid success in raising musk melon, using the Early Hackensack, since this variety matures in a much shorter time than any other, being at least two weeks earlier. We got fruit that was good sized, ripened thoroughly and had a delicious flavor.

CUCUMBERS

In growing cucumbers we have always liked the Arlington White Spine as being best suited to general family use. It is free from that bitterness that is sometimes found in some of the other varieties. It is a good producer and stands the dry weather well. One season we planted the Gherkin for pickles, but decided that the small Spines answered very well for that purpose, and ought to be picked to keep the vines bearing. When the Gherkins get past the proper stage for pickles they are not much use for anything else.

ONIONS

We usually plant two rows of onions, each one hundred and fifty feet long. Sounds like a lot of onions and looks like a lot when weeding time comes and we cannot trust any one but ourself to do it! We use the Mammoth Silver King, a mild variety, for early use, and the Ohio Yellow Globe for the late crop. All through the season the tiny green onions are picked for the table, by the basketful, for when cleaned, wrapped in waxed paper and put on ice, they will keep crisp for a week. Yes, we all like 'em.

In the next issue we would like to tell you of some of the unusual garden stuff we have raised, for, as we have often boasted, we have gone right through the alphabet, and have raised everything from artichokes to zinnias.

Joan (romantically)—"I think the poets are right, George. It's only in the great open spaces that we find ourselves!"

George—"Well, we're twenty miles from anywhere, the sun's going down, and I've lost the map, so now's your chance!"

The Holstein Breeder and Dairyman

or 27th of each month preceding date of issue.

FEBRUARY 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Time to Clean Up

BALTIMORE is, we believe, the first great city of the nation to demand that the milk sold within its borders come only from tuberculin tested herds. An ordinance has been passed by the Baltimore Health Board which will permit milk only from tuberculin tested cows to be marketed in that city. Producers who do not already own tested herds are expected to apply to their state authorities before the fourth of next March, to have their cattle subjected to the test and on and after January 1, 1926, the regulation will be strictly enforced.

Johnstown, Pa., a city with a population of around 70,000 has a similar ordinance which will go into effect April 1st, of this year, but this will not have the far reaching effect of the Baltimore ordinance for milk is shipped into the city of Baltimore from Maryland, Southern Pennsylvania, Delaware and Virginia.

Officials high in the agricultural and veterinary departments of near-by states have confidentially reported during the past year that a similar measure is contemplated by the Health authorities of New York City. Such a move would practically revolutionize the New York City milk trade. It is certain that the action would be strongly backed by the great metropolitan dailies on the grounds of conserving the health of the consumer. The Legislature of New York State has within the past two years appropriated the vast sum of eight million dollars to aid the tuberculosis eradication campaign and for the payment of indemnities. Metropolitan tax payers are asking what New York City has gained by the expenditure of all this money. While many of those in close contact with New York City's milk trade predict that such a move would, for a time at least, disorganize the milk business and might even cause a milk famine in the metropolis, yet it is certain that at the outset at least, every woman's association in New York City, every medical organization and a large majority of the civic bodies would back the measure.

It is for the owners of dairy cattle to think of what

is coming and to take measures to protect themselves and their interests realizing that improvement is the order of the day and that the demand of the future will be for cleaner, purer, safer food products.

An Unnecessary Luxury

THE political management of the Holstein-Friesian Association of America has a representative looking after their interests in the states of Pennsylvania, New Jersey and Delaware in the person of Allen N. Crissey. A fee of fifty cents is levied on the breeders living in these states for every transfer issued by the National Association which goes towards defraying Mr. Crissey's salary and expenses.

The tax on the breeders living in Pennsylvania for the year ending December 31, 1924, was \$3,277.50, in the State of New Jersey, \$522.00 and in the State of Delaware, \$160.50. At a meeting of the breeders in the State of Pennsylvania, Mr. Crissey read a report telling how he had divided his time during the past year. We will not venture to state how effective Mr. Crissey has been in promoting the political interests of those who are responsible for his employment; but from the standpoint of the breeders living in Pennsylvania, New Jersey and Delaware, the benefits to be derived from Mr. Crissey's work from the standpoint of increased sale of cattle, it would seem that they would be better off if the services which he has rendered were never performed because the records of the transfers issued by the Holstein-Friesian Association for Pennsylvania, New Jersey and Delaware during the year ending December 31, 1923, were \$8,893 and for the year ending December 31, 1924, were \$7,820, or there has been a decrease in the number of cattle sold in these states as determined by the number of transfers issued, of 1,073.

We are not criticising Mr. Crissey personally. We would not expect a young man to refuse to accept a position that offered such attractive remuneration, that required so little effort and ability and offered such unrestricted opportunities for travel, riding in Pullmans, putting up in the best hotels, attending fairs, agricultural shows and exhibitions, answering all inquiries and suggestions with the one expression, "I am willing to cooperate."

Our objection to the work which Mr. Crissey is doing is, that we do not believe the breeders of Holstein-Friesian cattle or dairymen generally for that matter, are called upon to contribute towards the support and maintenance of extension workers to duplicate or work with the state or agricultural authorities.

The breeders of Holstein cattle, dairymen and farmers in general can render their greatest assistance in helping to promote the Agricultural Extension projects that are undertaken by the State and Federal governments by joining in the movement and doing their part. If there is need for more extension workers in the field, let the State and Federal governments employ them and let their salaries and expenses be paid from state and federal funds.

Scrubs can multiply as fast as purebreds—but they never get the right answer.

Laws That Work Two Ways

LEGISLATION is seldom invoked unless some one's rights are abridged or infringed. When it is invoked to do away with an abuse, legislation usually infringes on the rights or privileges of others and there are few laws passed that, in some form or other, do not work hardship on a few people.

Many British farmers slaughter their surplus animals. Some of the carcasses are consumed on the farms and some shipped to market. There are many small slaughter houses where a few animals are killed and the meat shipped to the city. There has been considerable criticism of the methods or rather lack of methods used in preparing and shipping these carcasses so the British Ministry of Health issued regulations which were designed to prevent contamination of meat intended for human consumption. When drawing up the regulations the authorities seemed to have town slaughterhouses in view but applied them to every place where an animal was killed to be used for food. The result is that strict interpretation of the laws would prohibit any animal being killed unless the house in which it was killed or dressed was licensed with the Rural District Council. Then no animal can be killed in such licensed slaughterhouses unless notification is given three hours before killing; no part of any animal (sheep excepted) excepting the stomach may be removed until six hours after giving such notice; and no place used as a slaughterhouse may be used for any other purpose.

A slaughterhouse is defined as "any building or place used for slaughtering cattle, or animals of any description for sale."

An appeal will be made at once to the authorities to modify or at least explain their ruling so that it will not stop home slaughtering but this is certainly an instance where an attempt to rectify abuses does nearly as much harm as it does good.

Some Deductions

CHARLES BIGLER, former Livestock Insurance Agent, whose present titles are: President of the New York State Holstein-Friesian Association, Secretary to the New York State Holstein-Friesian Association, Paid Field Representative for the New York State Holstein-Friesian Association, Sales Manager for the New York State Holstein-Friesian Association, made a very interesting report at the annual meeting of his State Organization.

The Holstein-Friesian Association of America credits New York State with having 4,698 members. In the published report of Mr. Bigler's State Association, it appears that it is composed of 518 members. If all the members of the New York State Holstein Association are members of the Holstein-Friesian Association of America, only one breeder in every nine are identified with Mr. Bigler, the other eight breeders are evidently having nothing to do with the State Association.

The published report of the finances of the New York State Holstein Association tells us that \$2,600 was collected in Membership Fees and \$6,463 was collected by the Holstein-Friesian Association in in-

creased transfer fees and turned over to the New York State Association.

We are unable to furnish our readers with an itemized statement of the expenditures, but we are told that the Association's liabilities exceeds its assets by \$1,150, or that the Association expended all of the \$2,600 collected in dues and all of the \$6,463 paid over from the National Association and they still lacked \$1,150 of paying their debts.

The leading projects which the New York State Holstein-Friesian Association has indulged in under Mr. Bigler's management, seemingly has been:

First: Looking after and administering to the Political needs and welfare of those in control of The Holstein-Friesian Association.

Second: Holding local or county meetings throughout the State for the purpose of getting the breeders together and collecting dues.

Third: Promoting the selling of cattle at public auction.

There seems to be nothing about the Bigler organization that tends to improve dairy conditions or make the breeding of Holstein-Friesian cattle more profitable in the State of New York. On the other hand, quite the contrary is true. Instead of the breeders being able to sell more animals each year as they naturally would have to take care of the increase in the breed, the sales in the State of New York as determined by the number of transfer certificates issued by the Secretary's office of the Holstein-Friesian Association of America shows that there was a falling off of One Thousand One Hundred Forty-Two, for the year ending December 31, 1924.

Is it sound business for 518 breeders out of 4,698 living in the State of New York, to contribute \$2,600 to a movement that expends in addition to the \$2,600, \$6,463 collected as an increased tax on the transfer fee and finish up the year \$1,150 in debt, when they find at the end of the year they have sold 1,142 less animals than they did the year previous? Is the State Paid Secretary plan at fault, or, is the New York State Association extravagantly managed?

Against Billboard Advertising

A BILL, which if passed, would aid the Pennsylvania State Highway Department in its drive against billboards has been introduced into the Pennsylvania Legislature. In the preamble of reasons for the bill, it states that the purpose of the bill is "to regulate outdoor advertising because advertising intended to be read only by users of the State highways diverts attention from the dangers of traffic and from the signs placed along the highway to warn users thereof of dangerous points, and is therefore an interference with public safety, adding needless danger to traffic."

It may or may not be a source of consolation to the members of the Extension Department to learn that THE HOLSTEIN BREEDER AND DAIRYMAN did not have anything to do with the introduction of this bill nor did we know that it was going to be introduced. We only went on record against Koenig's billboard scheme on the grounds that it was expensive, unnecessary and unethical. Maybe the day is coming when it will also be unlawful.

The Way to Reduce Taxes

ON every hand you hear the cry for "tax reduction" but as Mark Twain said about the weather "No one seems to be doing anything about it." There are exceptions to this last statement. As everyone knows, the President is an active advocate of the doctrine of economy and tax reduction. Now comes the South Dakota State Farm Bureau. At its recent convention among the recommendations passed were the following:

We favor a repeal of laws creating the following state commissions, etc., for which amounts appropriated by the last legislation were as follows:

Free Library Commission	\$ 18,850.00
Immigration Commission	42,800.00
Industrial Commission	18,000.00
Department of Agriculture	85,860.00
Expense Allowance, members of legislature	28,800.00
State Sheriff	87,200.00
State Aid Fund for "Rural Schools, Consolidated Schools, Normal Training to High Schools, Vocational Education."	380,000.00
"Women's Board of Investigation."	7,200.00

Total\$668,710.00

Notice the wide range of subjects covered, including several that many farmers and farm organizations would hesitate to oppose. The cry for free libraries, for funds for the Department of Agriculture and for rural schools is generally popular among leaders of farm organizations. Sitting at Harrisburg the third week in January, as head of the Senate Agricultural Legislation Commission, Senator Schantz, of Allentown, said "the Commission had a great many bills and measures submitted to it on behalf of agriculture and everyone of them called for money."

This South Dakota farmers' organization evidently has grasped the idea that it is of little use to clamor for less taxes on agricultural producers and at the same time demand higher taxes on other producing classes. Economy, like charity, begins at home.

Other states might, with good advantage to their own citizens, follow the lead of South Dakota. This also holds good for the National Government at Washington. To paraphrase President Grant: "The way to reduce taxation is to reduce expenditures."

The Big Record Fallacy

By D. L. RUNNELLS in *Ann Arbor Times-News*

IT IS not proper to judge a cow by one week's record, or one month's record, or even one year's production, according to Prof. O. T. Reed, head of the dairy department of the Michigan Agricultural College.

A cow may be able to produce 40 pounds of butterfat in seven days or 200 pounds in 30 days, or 1,000 pounds in a year and yet she may not be an individual of exceptional merit unless her record of past performance shows she is a consistent high producer, Prof. Reed declared.

"I have in mind a certain cow which produced 20,000 pounds of milk containing 800 pounds of butterfat in a year," said Prof. Reed. "But what was the five-year average of this cow?"

"The records show her average was 250 pounds of butterfat per year. They also show this cow spent three years preparing for this 800-pound record, and while it was a meritorious achievement to produce 800 pounds in a single year the records indicated she was little better than other cows which had consistently produced 250 pounds year after year.

"It takes a whopping good cow to produce 500 pounds of fat year after year and in my opinion such an animal is worth more than a cow which will give 1,000 pounds in a single year followed or preceded by other years in which the production has ranged between 200 and 250 pounds.

"Let's get the notion out of our heads that all we need to do is buy a few daughters from a 1,000-pound cow and expect to get a whole herd of 1,000-pound producers. It can't be done.

"Do not mistake me. I do not mean there is no merit in developing 1,000-pound cows for there is if the cows are high producers. But in my judgment it would be better to develop cows which will consistently produce 500 pounds year after year than animals which produce high one year and rest for the next two.

"These 1,000-pound cows have led a lot of people to believe all they needed to do was buy a bull and heifer out of 1,000-pound stock and they would get a whole herd of 1,000 pounders.

"It was just 15 years ago that the first Holstein cow made a 1,000-pound record. She was on the farm in Wisconsin near where I worked. I used to spend my Sundays in the pasture watching and studying this great cow. My studies led me to examine the records and I found this cow had spent two years preparing to make this production. Her five-year average was around 600 pounds of butterfat.

"She was like a pig we had in milk feeding experiments at the college. Its brother was fed skim milk and corn and grew rapidly, while he was fed corn and water and developed slowly. At the end of the first year we switched this pig to a diet of corn and skim milk and he grew so rapidly he almost burst out at the sides. He even grew more rapidly than his brother, started and fattened on milk and corn. Why? you ask. Like the 1,000-pound cow, he had spent a year resting."

The farmer goes without many things that the city man enjoys, but he has many things that are luxuries in the city.

YOUR ATTENTION IS CALLED to this Accredited Herd in which there has never been a case of Abortion.

REASONABLE PRICES ON YOUNG STOCK

THE PRACTICAL DAIRYMAN

FEEDING DAIRY COWS

By C. S. RHODE.

Feed 30 to 40 pounds of silage per cow and practically all the legume hay the cow will eat (clover, alfalfa, soybean, and cowpea). For your grain ration make an extensive use of home grown feeds. Buy only those feeds necessary to balance your home grown feeds. Usually the dairyman will need only to buy a protein feed such as cotton seed meal, oil meal, or soy bean meal. After the grain is mixed, feed each cow according to her condition and the amount of milk she is producing. Feed one pound of grain daily for each 3½ to 4 pounds of milk produced per day, or feed 2½ pounds of grain per day for every gallon of milk produced per day. Do not feed every cow in the herd the same amount because some are working harder than others.

RATIONS

No. 1	No. 2
Roughage—Legume hay at will; 30 to 40 pounds silage	Roughage—Legume hay at will; 30 to 40 pounds silage
Grain Mixture—5 parts ground corn or barley	Grain Mixture—5 parts ground corn or barley
3 parts ground oats	2 parts ground oats
1 part oil meal, cotton seed meal or soy bean meal	1 part bran
	1 part oil meal, cotton seed meal or soy bean meal

TEST RATION No. 1

400 pounds corn
200 pounds oil meal
500 pounds bran
200 pounds cotton seed meal
400 pounds oats
100 pounds gluten

TEST RATION No. 2

300 pounds bran
200 pounds oats
200 pounds oil meal
200 pounds hominy

WARTS ON THE TEATS

Warts on the teats and udder form an annoying disfigurement as well as an obstacle to milking. While perhaps harmless themselves, they may lead to abrasions or fissures, thus exposing the skin of the animal to the invasion of blowflies or infections. Long warts may be removed by twisting or tying a silk thread tightly about the base of the growth. The wart will eventually slough off.

FEEDS AND THE COW'S HEALTH

Since the dairy cow is one of the hardest worked animals on the farm and continues this hard work 365 days every year for her whole period of usefulness, the effect of feeds upon her health is important. Each feed has its own peculiar effect upon the animal body. We do not know the specific effect of all feeds, but certain effects of some feeds are well understood. Cotton seed meal is known to cause constipation, while wheat bran and linseed meal are laxative. Among the roughages, silages, succulent feeds and the legume hays are laxative, while timothy hay, grass hay, oat straw, and corn stover are constipating. Therefore in balancing a ration the effect on the cow's health must be considered and those feeds should be used to counteract the effect of each other. Thus, if the roughages are constipating in nature, a grain mixture of laxative effect should be used. The bowels of the dairy cow in milk should be kept reasonably loose.

WHAT IS A BALANCED RATION

A balanced ration for a dairy cow is one consisting of a combination of feeds, both roughage and concentrates, which furnish the required protein, carbohydrates, fat and ash in the proper proportion and amounts to nourish a cow producing a known quantity of milk and butterfat for 24 hours. That is, a balanced feed furnishes the proper amount of feed for both the maintenance and production rations for one day.

HINTS ON MILK ADVERTISING

Continued from page 66, Jan. 22 issue.

Careful preparation of advertising matter is especially necessary when advertising milk. In the survey, consumers were found that did not drink milk because they said they did not need it while others indicated that if there was sickness in the family they would use more milk. It is the opinion of the department that the feeling that milk is a food of value primarily to undernourished and sick individuals comes from past advertising of milk recommending the use of milk for such people, and points out that one of the aims of each advertiser should be to put milk on the basis of a food competing with commodities long considered as essential upon the dinner table.

Among several posters and advertisements of milk upon which the consumers were asked to pass judgment, was a picture of two dogs. One dog was well matured and the other, from the same litter, was about half as big. Similar diets with the exception of milk had been given the two animals and it was stated that "Milk Made the Difference."

"The poster presented a very interesting story but it failed to measure the psychological reaction of the reader. Association of dogs with milk rendered the advertisement of questionable value. Of seven posters this particular one drew the most criticism and was generally rated as the least desirable.

"A poster with healthy children with an appeal to mothers to watch and develop them was generally rated as the most effective. After all, it is usually the mother of the family who decides the amount of milk to be used and who does the purchasing. Maternal pride is a far better trait to which to appeal than such things as emphasizing the fact that a certain milk is clean and safe.

"In an important eastern city there is now appearing a milk poster upon the bill boards of the city with the slogan "Safe for Babies." Among the housewives in Philadelphia several were found who questioned the safeness of the milk supply. They were not aware that practically all the milk sold in the city was pasteurized and that stringent health regulations guaranteed the safeness of the milk. Such advertising as "Safe for Babies" tends to deepen the impression that milk is a commodity which may be contaminated. The only good which could come from such an appeal would be to increase the sales of the advertiser at the expense of a competitor.

"Greater foresight is needed in the preparation of copy. Maternal pride, strong and healthy children, pictures of action and strength must be associated with milk and great care must be taken to avoid associating milk with appeals which repel or deepen existing impressions that milk in some ways was particularly destined for nurseries and hospitals."

Advertisers should understand the consumption of their particular product within the home. Fresh milk and condensed

milk are not direct competitors. The manufacturer of canned milk must not think that to increase the consumption of his product he must take customers away from fresh milk. Similarly the market for fresh milk is different from that for canned milk and the advertising of the fresh milk distributor should be designed accordingly.

Housewives generally regard condensed milk as a substitute for cream rather than diluting it and consuming it in place of milk. Condensed milk is used more largely among poor families than among those with good incomes and large incomes. No cases were found of families which use condensed milk for drinking purposes, although it was determined that about one out of three families interviewed were users of canned milk in some form. Its use was most generally in tea and coffee. Many persons stated that they liked the taste of milk in this form in their beverages and others amplified their answers with the statement that they could not afford cream for use in beverages and preferred the thick canned milk to fresh milk.

Income has a decided influence upon the purchase of canned milk within the families interviewed. The families were classified by the size of their income and within each class it was noticed that the members using canned milk were larger in families which have the smallest income. The percentages of families using canned milk are as follows:

Poor families	62 per cent.
Middle class families	56 per cent.
Well-to-do families	28 per cent.
Wealthy families	12 per cent.

Convenience of canned milk to be used in emergency was mentioned by several housewives as being the reason why milk in this form was kept within the house and used occasionally. Within the wealthy group it was found that this reason was very important.

Italians declared that they were not great users of milk and their use of canned milk was equally low. Only one out of 12 families stated that canned milk was purchased for use within their households.

Canned milk competes with cream rather than with milk. Many of the users of canned milk were within the poor groups and it is quite possible that if these families were not able to purchase canned milk they would find the regular purchase of cream would amount to more than they could afford in paying for a flavoring to be used in their beverages.

Mrs. Prof.: "Are you quite sure you are true to me?"

Mr. Prof.: "Why, of course, dear; what an absurd question!"

Mrs. Prof.: "Well, then, kindly explain who this Violet Ray is you are always talking about."

TRAVERSE ECHO SYLVIA KING

Heads our ACCREDITED Herd.

His dam, a 33-lb. cow, averaged 102 lb. milk for 30 days and has a 35-lb. and a 32-lb. daughter.

Five of his seven nearest dams have one or more 30-lb. daughters.

He is bred to cows that return a substantial profit for the cost of their feed and care.

W. B. KENNEDY & SON,
BRADFORD CO., WYALUSING, PA.

Spring Brook Herd

is headed by

Cornucopia Finderne Pride

He is not only a show ring Grand Champion, but is backed by big records. His sire is a 33-lb. bull, one of the best sons of PONTIAC KORNDYKE. His dam made 26.60 lb. butter, 550 lb. milk in 7 days and is from the same dam as Finderne Pride Johanna Rue, 1,470.59 lb. butter in a year.

C. F. GILES

APALACHIN, NEW YORK

MICHIGAN HOLSTEINS

are Healthy.

MICHIGAN HOLSTEINS

are persistent producers

From this herd you can obtain Heifers sired by a 34-lb. bull from daughters of a 30-lb. bull and bred to a bull whose dam produced 35 lb. butter in 7 days.

Can sell one female or a carload, and a few real good bulls.

DAVID FALCONER

Scottville, - - Michigan.

CLUB ACTIVITIES

IN YAKIMA COUNTY

Stanley Butchart was elected president of the Yakima County Holstein Breeders' Association at its meeting held at Yakima, Washington, January 3d. Joseph Schreiner was chosen vice-president and George V. Harris was reelected secretary. The state convention will be held at Yakima, February 3 and 4, with a banquet and theatre party on the 3d.

WILL SUPPORT CLUB WORK

The Sheboygan Holstein Breeders' Association will actively support calf club work during the coming year. This was decided at the annual meeting of the organization held at Plymouth, Wisconsin, January 10th. County Agent S. S. Mathisen spoke on the tuberculosis drive and is trying to secure the signatures of 60% of the dairymen to make tuberculin testing compulsory. The annual banquet will be held February 28th.

Dr. H. A. Arpke of Sheboygan was elected president; William Lohuis, Oostburg, vice-president; John Zoberlin, Plymouth, and J. E. Stauss, Plymouth, directors; Witt Stewart, Plymouth, secretary. The directors holding over are D. W. Huenink, Cedar Grove; O. C. Baum, Random Lake; James Rock, Plymouth and Emil Titel, Plymouth.

THIRTY YEARS OF WORK

The Richmond-Riley Farmers' Club has entered its thirtieth year of organization. It had 135 members during the past year and is in a strong financial as well as social condition. Its annual meeting was held January 14th at which the principal speakers were county agriculturist C. M. Kidman, James G. Hayes of East Lansing, and Dr. Dunning. The subject of discussion was tuberculosis in the dairy herd and the audience was told that tuberculin testing of cows would soon be compulsory in the state of Michigan. A committee composed of Dr. Dunning and Chester Shirkey was named to draft resolutions petitioning the supervisors for an appropriation to put on a campaign for the eradication of tuberculosis among the herds of St. Clair County.

MOVE TO REDUCE DUES

The Waupaca County Holstein Breeders' Association held its annual meeting in the Court House at Waupaca, Wis., January 3.

There was a spirited discussion on the subject of reducing membership dues. It was argued that the dues were fixed during years of inflation and now are so high that it is difficult to obtain new members or even keep up the membership. It was finally voted that the board of nine directors should study the question and determine what action, if any, should be taken.

The moving picture films taken at the John Erickson farm at the Dairymen's Field Day in 1922, will be repaired and used as an advertisement for Waupaca County Holsteins.

John Jennings, who moved the previous resolution, then moved that the association go on record as favoring the forming of calf clubs in every school district of the County. This motion was supported by others and was passed by unanimous vote.

A. A. Washburn, editor of the Clintonville Gazette, gave an account of what Clintonville is doing in coöperating with the state and federal authorities in employing a special instructor to teach agriculture two days a week in the high schools in several townships and also to adult and junior classes. A short address was given by the Rev. S. G. Ruegg, pastor of the Congregational Church at Clintonville. A. E. Smith, vice-president, presided in the absence of the president, D. M. Jennings. The report of the secretary-treasurer, F. A. Nace was unanimously adopted.

J. H. Driessen of Marion, A. C. Klemm of Bear Creek and Arthur Krueger of Clintonville were elected to serve a term of three years on the board of nine directors.

LAFAYETTE CLUB DIRECTORS MEET

The directors of the Lafayette County Holstein Breeders' Association held a meeting at Darlington, January 6. A number of out-of-town visitors were present including members of the county board. A big call for good Holsteins was reported especially from the states of Nebraska and Kansas. Officers were elected as follows: president, Benjamin Andrews, Argyle; vice-president, Oscar Hillery, Darlington; secretary, W. J. Martin, Darlington and treasurer, M. H. Michaelson, Darlington.

WANT MORE CALF CLUBS

The North Dakota State Holstein Breeders' Association will give \$15.00 each to the Holstein calf club in the first eight counties organizing such clubs and carrying them through to the end of the year, according to W. F. Reynolds, state dairy commissioner, who is secretary of the association.

To be eligible to compete for the prize, a club must consist of seven members owning purebred calves or ten members owning grade calves. The association also agreed to offer \$10 for the best calf exhibited by a member of a Holstein calf club at the following fairs: Mandan, Fargo, Grand Forks, Valley City, Devils Lake and Minot. This club must be started by March 1st.

BUSY MEETING AT WAUSAU

At Wausau, Wisconsin, January 10th, E. A. Brehm, Jr., of Cherokee was elected president of the Marathon County Holstein Breeders' Association. Emil Herman was elected vice-president; Charles Symonds, secretary, and W. C. Wurthman, treasurer. At the morning session Harry Keller, the retiring president, was in the chair. The reports of the secretary and treasurer showed that the association broke about even during 1924 and now has in the treasury \$592.00, with a few bills outstanding.

At the previous meeting a sale committee had been appointed who now asked for \$500.00 to be set aside for advertising in well-known papers and magazines during the year. The amount was cut to \$300.00 which was duly appropriated.

The sum of \$100.00 was appropriated for the use of county club leader Merton L. Wright. The county association will give three dollars to each calf club member who exhibits at the county fair in case they do not get a prize and also add enough to any prize won to make the amount three dollars. Help will be given to send calves of championship calibre to the state fair. Secretary Charles Symonds was designated as delegate to attend the state Holstein convention and his expenses will be paid.

The association voted to incorporate and during the meeting the necessary papers were signed and sworn to and other necessary details performed, before making the application to the state department.

The proposed constitution and by-laws came up for discussion and were gone over item by item and a few changes and additions were made.

HEADQUARTERS FOR YOUNG STOCK

Every animal in this herd with the exception of the sire at its head, was raised here.

EARLY RISE HERD is under State and Federal Supervision.

MENZO A. BROOKER

R. D. 2,

South New Berlin, N. Y.

MONTANA BREEDERS MEET

At the annual meeting held at Bozeman, Montana, January 15th, Dr. Joseph Piedalue of Bozeman was elected president of the Montana Holstein Breeders' Association for the coming year; Mrs. J. H. Hofstetter of Lewistown, vice-president; and E. J. Hasberude, Montana State College, secretary-treasurer. At the annual sale Bess Cornucopia Koningen, consigned by the Montana State College brought the top price of \$200.00 going to H. W. Bunston of Hardin. Fourteen purebred Holstein cattle brought their owners \$2,005.

STEWART RE-ELECTED

Paul P. Stewart of Maynard, Iowa, was re-elected president at the annual meeting of the Lafayette County Holstein Breeders' Association.

It was decided to hold a consignment sale on March 5th at West Union and to put a county show herd on the circuit next fall. An Association herd was sent out last fall in charge of Fred Pieplow and won 112 ribbons at the Iowa, Nebraska, Kansas and Oklahoma State Fairs and the Waterloo Dairy Cattle Congress.

REGARDING DELEGATE NOMINATIONS

Petitions for nominating delegates to attend the Convention of the Holstein-Friesian Association of America which is scheduled to be staged at Grand Rapids, Mich., June 3d and 4th, will be mailed to each member of the Association, February 4, 1925. To nominate delegates a member must write on the nominating petition the names of those he wishes to take part in the convention. Only individual life members are eligible for nomination.

Nominating petitions must be mailed to Secretary Houghton on or before March 5, 1925. Secretary Houghton's notice says that members who wish to suggest any changes in the by-laws should send draft of such changes to him not later than April 24, 1925. Such proposed amendments will then be submitted to a committee on Constitution and By-Laws.

The appended table shows the number of members in each district, the number of delegates such district is entitled to under the delegate system and the number of signatures necessary to nominate a delegate in each district.

MANUFACTURED MILK MARKETS

Condensed and evaporated milk markets continue to hold a steady and firm position, with the outlook favorable for the immediate future. Results of manufacturer's efforts made to reduce stocks along in the summer, together with such control of production as it was possible to establish, have shown up each month since then in the lighter stocks and improved feeling. For the first time in months reports are now heard of occasional factories where milk receipts are insufficient to take care of orders and at other factories where buying demand is reported only fair; production is not heavy and as a result there is little appreciable surplus. Even in some districts where there were condensary surpluses, reports indicate that favorable fluid milk prices have attracted such milk away temporarily. A still further factor which seems to contribute to the support of the markets is the report that distributors who generally have been conservative in their buying policies, are not stocked up heavily, which if true means that the influence of even the relatively light stocks held by manufacturers needs to be discounted to some extent. On the whole, the feeling seems to be one of optimism, with an outlook for more active business during the month ahead.

Looking at the market from a statistical standpoint, the statement just made seems justified. No figures are available showing the January movement, but on January 1st unsold stocks as reported by manufacturers were less than one-third of what they were on January 1st, of last year, and considerable less than half of what they were on December 1st. At the same time, unfilled orders as reported showed remarkable increases, being practically double on January 1st the unfilled orders of December 1st and more than ten times heavier than on January 1st, 1924.

Total stocks of condensed and evaporated milk reported in manufacturers' hands on January 1st amounted to 117,724,000 lb. Total stocks the previous month were 158,000,000 lb. and the previous year were 191,000,000 lb. so that a very material reduction has occurred. It is worthy of note to mention the heavy reductions which have continued monthly since July 1st, when stocks were 288,458,000 lb. The reduction during that period is close to 60%. It is important to note also from the following how the January 1st stocks compare with previous years.

TOTAL STOCKS ON JANUARY 1

1920	122,917,000 lb.
1921	229,410,000 lb.
1922	179,390,000 lb.
1923	67,144,000 lb.
1924	191,312,000 lb.
1925	117,724,000 lb.

Aside from what may be termed regular business, there is

scarcely any talk regarding export business. December exports were comparatively light, amounting to only 3,095,000 lb. of condensed and 7,766,000 lb. of evaporated. Total exports for 1924 amounted to 206,029,000 lb., compared with 194,264,000 lb. in 1923.

More than twice as much powdered milk was exported during 1924 than was the previous year, the figures being 5,529,414 lb. in 1924 and 2,437,367 lb. in 1923. The December shipments were 486,958 lb. while for the corresponding month of 1923, the figures were less than 200,000 lb. The United Kingdom took 226,250 lb. or nearly one-half of the quantity, Germany took 60,450 lb., the Netherlands 39,750 lb. and Belgium took 32,371 lb. Mexico is a good customer for this product for the shipments during last December amounted to 17,113 lb.

HIGH PRICE FOR POOL MILK

Members of the Dairyman's League are rejoicing over the December net pool price of \$2.41, the highest pool price since December 1922. The amount deducted for expenses was nine cents per hundred. Approximately 138,500,000 pounds of pool milk were handled during December.

The annual meeting of the locals of the Dairyman's League Co-operative Association, Inc., are scheduled for Saturday, January 31. Each local elects five directors and each board of directors elects a president and secretary. The results of these meetings were not received for use in the February 8th issue.

LEAGUE PRICES TO CONTINUE

At the regular January meeting of the Board of Directors of the Dairymen's League Co-operative Association, Inc., held in New York City on January 16 and 17, it was recommended that the present schedule of milk prices be continued through February, unless a change in marketing conditions should make necessary a revision in some of the classes. The Executive Committee have authority to act in such an emergency.

So far as the League is concerned, however, reports indicate that there is good reason for believing these prices may be maintained throughout the month. The present prices are considerably higher than a year ago at this time. The price now in effect are: Class 1, \$3.07 per 100 lb. (3 per cent butterfat) at the 201-210 mile freight zone; class 2-A (milk for cream) \$2.10 plus skim milk value; class 2-B (plain condensed and ice cream) \$2.25; class 2-C (soft cheeses) \$2.15; class 3-A evaporated, sweetened condensed) \$1.90; class 3-B (milk powder) \$1.85; class 3-C (Swiss and other cheeses of similar type) \$1.65; classes 4-A and 4-B (butter and American cheese) price determined by average wholesale price of butter and cheese, respectively, during January.

LEAGUE DISCONTINUES MAKING EVAPORATED MILK

Discontinuation of the manufacture of evaporated milk is the surprising statement coming from the office of the Dairy-men's League Coöperative Association, Inc. The directors of the League have sold to the Borden's Company the plants at Burke, and Whitesville, N. Y., and have leased to the Borden's plants at Milton, Cooperstown and Troy, Pa.

President Slocum in an official statement says that the League has very little available milk surplus and that it will be possible "for the League to obtain possibly one cent per quart more for its members in their January sales and possibly two cents more for their February sales."

"From now on, our volume of manufactured products will be so small that the officials felt that an organization to maintain these manufactured products was unwarranted and that others in the industry who had facilities already established could act as agents for the League to handle the small amount of manufactured products which the League has."

The League will not seek for new members unless such additional members will be a distinct advantage to the present membership. It will be League policy to avoid increasing any surplus beyond its present proportions.

Heavy expenditures for advertising appearing in magazines of national household circulation has been resorted to to build up a demand for evaporated milk marketed under the Dairy-lea trademark. The League will retain the ownership of this trademark although the Borden Company have a lease by the terms of which they agree to act as distributing agent of the Dairy-lea brand of evaporated milk.

NEXT NATIONAL DAIRY SHOW

The Indiana State Fair Grounds at Indianapolis will be the place where the 1925 National Dairy Show will be staged and the dates will be October 10 to 17, reports the Indianapolis Star. The preliminary arrangements were made by a committee consisting of Charles L. Hill, Chicago, president of the National Dairy Association, Secretary Skinner and two members of the executive committee which met in January with Manager Earl K. Ferguson and a committee representing the Indianapolis Chamber of Commerce.

The Hoosier capital is well located for such a show. It is a great railroad center, readily accessible from all parts of the country. The fair grounds are large and the buildings commodious. The cattle building is ample and modern and there is lots of space for machinery exhibits.

Dad, (sternly)—"Where were you last night?"

Son—"Oh, just riding around with some of the boys."

Dad—"Well, tell 'em not to leave their hairpins in the car."

ON THE OLD SHAUL HOMESTEAD

A. H. Shaul of Jasper, N. Y. has been breeding purebred Holsteins for eight years and has an accredited herd of purebred producers. The present herd consists of twenty-one head but Mr. Shaul rebuilt his stable last summer and expects to increase the herd. He did most of the work himself with the assistance of his farm help.

Mr. Shaul, or as he is usually called, Bert, is a good caretaker and his calves are exceptionally nice. The herd is

SOME OF BERT SHAUL'S ACCREDITED HOLSTEINS

headed by King Segis Paul Posch Korndyke, a son of King Segis Paul Elnora Ina Korndyke from Miss Betsy Posch Korndyke.

The Shaul homestead contains 212 acres of which fifty acres are in timber. A large number of White Leghorns are kept and eggs are shipped. There is a sugar bush containing 500 trees on the farm and a special grade syrup is made which finds a ready market.

Mr. Shaul has two daughters, one of which graduated from high school when fifteen years old and the other graduated from Syracuse University when twenty years of age and is now teaching, getting \$1,600 for her first year which, Mr. Shaul says, is considerably better than she could do if she remained on the farm. The home has the conveniences which a good farm and a high class Holstein herd well managed will bring. It is lighted by electric current derived from a Westinghouse lighting plant.

WILL MEET AT GROVE CITY

The winter meeting of the Grove City Accredited Cattle Association will be held at Grove City, Pa., February 19th. The principal speakers will be E. B. Fitts, of State College, head of the Bureau of Dairy Extension Work and the district Holstein fieldman, Allen N. Crissey.

This will be an all day affair. It will begin at 10 a. m., with a luncheon at noon at the Penn-Grove Hotel.

BONNYMEAD HERD TO BE DISPERSED

For thirty years Bonnymead Stock Farm, on the edge of Harrisburg, Pa., has been the home of a big producing herd of purebred Holsteins. It is a source of regret to those who know the past history of this herd to learn that it will be dispersed at public auction on March 25. The entire herd now consists of 102 head and every animal will be sold. Many of the animals in the herd are young yet the average milk production for the past year was over 10,000 lb., despite the fact that one-third of the milkers were in their first lactation period. This splendid showing was made on two milkings a day and with ordinary farm care and attention. Three cows that will be sold on the 25th of March have produced over 14,000 lb. milk in a year under these conditions. It is only fair to say that one of the men in charge of the cattle has been on the farm for at least thirty years as has the capable and genial superintendent Hiram Billett.

The blood lines shown in the pedigrees of the herd are noted for production as well as individuality. The Bonnymead animals are descendants of such noted sires as King Segis, Hengerveld De Kol, Judge Segis, Pietje 22's Woodcrest Lad, King of the Pontiacs, Mooie Mutual De Kol and Pontiac Korndyke. The Bonnymead herd is under state and federal supervision but the animals will be sold subject to the standard sixty-day retest. The auctioneers will be J. C. Hess of Hershey and Glenn R. Mead of East Aurora, N. Y. We believe this is the first time Colonel Mead has sold so far south in the Keystone State. A year or two ago, the Colonel generously donated his services to sell the surplus of the Pennsylvania College Herd on Farmers' Day. His efforts pleased those who heard him and the result has been that since that time he has officiated at a number of sales in northern and central Pennsylvania, proving that a good deed never goes entirely unrewarded. The pedigrees will be explained by the veteran Holstein breeder S. R. Miller of Chambersburg, Pa. A sale of purebred Holsteins held in southern Pennsylvania without Mr. Miller would be like the play of Hamlet without the Prince of Denmark.

(Concluded on page 104.)

HICKOK PRODUCTS CO., K-22, Owatonna, Minn.

"Yes, my friends," said the theological lecturer, "some admire Moses, who instituted the old law; some, Paul, who spread the new. But after all, which character in the Bible has had the largest following?"

As he paused, a voice from the back bench shouted: "Ananias!"

HAS RAISED HIS ENTIRE HERD

When a man has raised every animal he has in his herd from stock which he himself has raised, he has a legitimate claim to be considered a real breeder. Menzo A. Brooker of South New Berlin, N. Y., has a herd of sixty registered Holsteins and, with the exception of the herdsire, every one has been raised on the Brooker farm. Years ago Mr. Brooker started with a few animals and the present herd is the result.

At the head of the herd is a young bull obtained from Dan Anderson, a well known Holstein breeder living within a few miles of Mr. Brooker. The dam of this bull, Minnie Monk of Grayfields, as a three-year-old made an A. R. O. record of 18.74 lb. butter averaging 60 lb. milk a day. She is a granddaughter of Pontiac Korndyke, being by the well known A. R. O. sire, Sir Fairview Pontiac Korndyke.

The sire of the young bull is King Reliance Lockhart Veeman, a son of Pearl Lockhart Reliance, 882.1 lb. butter, 15,837.7 lb. milk in a year as a senior four-year-old, records that stand close to the head of the Dairymen's Division list. Besides being a producer Pearl Reliance Lockhart is a show cow. Exhibited as a three-year-old at the New York State Fair, she headed her class. She is from a 26-lb. dam and was sired by King Pontiac Reliance, he by King of the Pontiacs from a 33-lb. sister of Ormsby Korndyke Lad.

HOLSTEIN BULL. Three of his dams averaged 108 pounds milk 1 day. 40.48 lb. butter 7 days, \$125.00. **WISCONSIN LIVESTOCK ASSOCIATION, Appleton, Wis.**

Wife—A woman's mind is undoubtedly cleaner than a man's!

Hubby—Undoubtedly, my dear—it's so often changed!

PIETJE ALCARTRA FAYNE

30.03 lb. butter, 707.7 lb. milk in 7 days, 104 lb. milk in a day.

On the 10th day of January, she dropped a big, strong, handsome calf, a full brother to our herdsire.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS

(Concluded from page 103.)

ACCREDITED HERD TO BE SOLD

Consignments from the herd of W. A. Woods of Carlisle, Pa., have been sold in a number of nationally advertised sales. Animals from this herd have always brought good prices. There are several reasons for this. Mr. Woods is a splendid caretaker and his animals come into the ring in the pink of condition. They are well grown and show promise of making big producers. Then, the Woods' herd is accredited and has been for some time.

At the head of the Woods' establishment stands King Ormsby Abbekerk Helena, a remarkably handsome bull. A number of good judges who have examined him claim that he is the best looking son of King of the Ormsbys they ever saw. His dam, Allamuchy K A Helena, is a daughter of Korndyke Abbekerk. As a junior three-year-old, she made a seven day official record of 20.58 lb. butter, 455.5 lb. milk. She was a daughter of a 24 lb. cow of Burke, Spofford and Koningen breeding, New York State families noted for both individuality and production. King of the Ormsbys has a number of daughters with creditable records. He is full brother to Bess Johanna Ormsby and was by Sir Pietertje Ormsby Mercedes from Spring Brook Bess Burke 2d, 38.22 lb. butter in seven days, 1,290.9 lb. butter in a year.

The entire Woods' herd will be sold. As this herd is small Ivo V. Otto also of Carlisle will have six head of cattle in the sale from his accredited herd, at the head of which was Lothian De Kol Korndyke, a bull whose daughters have made such a remarkable showing in cow testing association work that his services have been secured by the authorities of Pennsylvania State College and this bull is now in service in the State College herd.

H. E. Robertson of York, Pa., will consign half dozen animals from his herd and as everyone knows the Robertson herd won many honors last fall at leading fairs particularly in the Southern States for Mr. Robertson believes in developing this potential market which lies almost at his door and has been termed the greatest undeveloped market for Holstein dairy cattle in the United States.

The sale will take place on the Woods' Farm at Huntsdale, Cumberland Co., Pa., on March 12. Besides the cattle there will be thirty head of Big Type Poland China hogs for Mr. Woods is a believer of purebred stock of all kinds and has just as good a herd of hogs as he does of cattle.

SALE HELD DESPITE TROUBLES

On Saturday, January 10, the Holstein breeders of Seward County, Nebraska, held a sale on the Seward Fair Grounds. The sale was held under several disadvantages. It has been postponed and both weather and roads were bad, yet there was a good attendance. The twenty-nine head brought \$2,697, an average of \$93. The top price was \$175 for an animal consigned by Lloyd McGrew of Milford, and purchased by Chris Weber of Dorchester. Other consigners were: Hildebrand & Duerr, Ramsey & Son of Seward; B. H. King and L. H. Diers.

Most of the animals offered were young, and under the conditions the sale is reported as being fairly satisfactory to all concerned.

GRADES BRING GOOD PRICE

A. F. Broege of Martintown, Wis., had a splendid herd of high class grade Holsteins that had earned a local reputation as producers. It became necessary for Mr. Broege to dispose of his herd of fifteen head. They averaged over \$100 and one cow brought \$115. The sale was held about the middle of January.

When the Whole Herd

cows and heifers included, average 9,124.2 lb. milk, 315.6 lb. fat in a year of C.T.A. work—You know the stock is good.

When the State and Federal accredited veterinarians give a herd a clean bill of health you have a right to expect it to be healthy.

The individuality you judge for yourself.

This herd will please you in all three points.

And we have stock for sale.

RAY J. SABIN

Spencer, R. D. 2 New York

Cows in this Herd have produced more than 12,000 lb. milk in a year in C. T. A. work and make a good profit above feed cost.

We can show you a whole lot of first prize and championship ribbons won at local fairs.

This Herd is Accredited—has never housed a reactor.

Will price anything in the herd.

A. R. BUSH

Montrose, Pennsylvania.

Cow Testing Association Reports

HENRICO ASSOCIATION MAKES GOOD SHOWING

By L. P. EMMERICK

The Henrico County Cow Testing Association finished its year's work with very creditable production. The 576 cows showed an average production of 7,827 lb. milk and 300.61 lb. butterfat. This is the second association in Virginia to average over 300 lb. butterfat.

There were four herds that average over 9,000 lb. milk and seven that average over 325 lb. butterfat. Every herd passed the 250 mark in butterfat, and only one fell slightly under 6,000 lb. milk.

Mr. X. Beck is the owner of the highest milk producing herd. His herd of 18 purebred Holsteins averaged 10,066 lb. milk and 353.2 lb. butterfat. This is the first herd in Henrico County ever to reach an average of 10,000 lb. Butterfat production was increased about 70 lb. over the preceeding year.

Mr. H. W. Gills is the owner of the second high herd in milk and third in butterfat. His herd of 42 purebred Holsteins average 974 lb. milk and 350.1 lb. butterfat. These three high herds have been in the cow testing association since the organization three years ago. By the help of the association they have gradually increased the production of their herds each year.

Duanna Walker 2d, a purebred Holstein owned by Minniborya Farm, made the highest individual record of any cow in the association. Her record for the year 1924 in cow testing work was 20,817 lb. milk and 701.0 lb. butterfat, or 876.2 lb. butter. This is the highest record in both milk and butterfat ever made in the Henrico Association.

First place for butterfat production was taken by a herd of twenty-eight grade

Jerseys which averaged 355.4 lb. butterfat, 7,403 lb. milk. The age of the members of this herd makes the performance especially noticeable as almost one-third of the animals completing a full year's work were two-year-old heifers and the average age of the entire herd was only four years, three months.

Two purebred Guernsey heifers, half-sisters, being by the same sire, made nice showing as two-year-olds, one making 627.5 lb. butterfat, 13,419 lb. milk and the other 537.5 lb. fat. A grade Guernsey in this association produced 12,555 lb. milk, 571.1 lb. butterfat on two milkings a day throughout the year and dropped two living normal calves.

Minniborya Farm is owner of the three highest cows in milk, all of which are over 17,000 lb. milk. Three out of the four highest butterfat records also go to Minniborya Farm. This farm also has the distinction of having had the high cow every year since the organization of the Henrico Association.

TEST WORK IN MARYLAND

Two purebred Holsteins owned by Douglas Diamond of Gaithersburg, led the list of cows tested in the Maryland Associations for the month of December. Mamie one of the Diamond cows is credited with 89.2 lb. fat and 1,823 lb. milk and her stablemate with 87.6 lb. fat and 1,752 lb. milk. Black and white cows filled the ten leading places. A grade is third with 79.3 lb. fat, then comes a purebred owned by J. Homer Remsburg of Middletown with 76.2 lb. fat and 2,179 lb. milk. She is followed by a purebred owned by Powie Etchison, with 74.6 lb. fat. J. D. King of Germantown, has one purebred with 70.9 lb. fat and 1,817 lb. milk, and another with

67.7 lb. fat and 1,939 lb. milk, while W. R. Whittingham of Corbet has a purebred cow, named Queen of the Herd, with 68.7 lb. fat and 1,962 lb. milk. Twelve associations reported their leaders, in seven instances they are purebred Holsteins and in three other are grades.

The leading herd in Baltimore County was owned by H. M. Carroll of Ashland, and it averaged 1,850 lb. milk and 30.18 lb. fat. The A. C. McCardell herd led the Frederick County association with an average of 1,056 lb. milk and 36.9 lb. fat. Holstein herds, either purebred or grade, stood prominent in every association report.

TESTING IN THE KEYSTONE STATE

December production is reported by 27 Pennsylvania Cow Testing Associations. In these associations 8,030 cows were tested of which 741 exceeded 40 lb. fat and 1,130 produced more than 1,000 lb. milk. The Cumberland Association had the high ten cows averaging 68.2 lb. fat. The Warren-Elk association was second with 63.9 lb. and Washington County Association was third with 63.2 lb. A registered Holstein was the high milk producer being credited with 2,722 lb. She is owned by J. H. Neuber and is enrolled in the Sullivan County Association. Second is a grade herd owned by G. S. Henry and Son. In the Edinboro association she produced 2,682 lb. milk. A registered Holstein owned by A. C. Yoder has 2,509 lb. milk to her credit. A grade Holstein from the Henry herd leads for fat production with 91.2 lb. A purebred Ayrshire is second with 83.8 lb. and a registered Holstein owned by G. W. Strock of Mechanicsburg, was third with 83.4 lb.

TEST WORK IN WISCONSIN

Again a registered Holstein cow owned by the Makido Farms leads the list of animals tested in the Wisconsin Associations. During December the records of the Tomahawk Association credit this animal with the production of 128.9 lb. butterfat. A grade Holstein owned by Rockwell and Katterhenry of Beloit, led the local association with 117.3 lb. butterfat and stands second in the entire state. Wm. Wenger owned the purebred Holstein that, enrolled in the Cedargrove Association, produced 105.4 lb. butterfat the third highest record in the state. The herd holding highest honors for production is owned by N. S. Wakefield. This herd consisted of grade and registered Holsteins and is credited with an average of 57.2 lb. fat, 1,577 lb. milk in the Warrens Association.

Production was reported by 138 associations of which 86 were headed by black and white cows. In two instances particulars are not given as to whether the animal was a grade or purebred but in 38 associations the leader was a registered cow while in 46 associations grade Holsteins held the place of honor. Registered or grade Guernseys head 28 other associations.

Three hundred and sixty-three cows were tested in the Columbia County Association during December. Of these 110 exceeded the 40 lb. mark and nine herds produced better than a 40 lb. average. The high herd and high individual belonged to Henry Weiner, his registered Holsteins averaging 1,317 lb. milk, 46.9 lb. fat and a member of this herd produced 2,536 lb. milk, 91.3 lb. fat. Another member of this herd was second with 2,257 lb. milk, 74.5 lb. fat.

White Beauty, a grade Holstein owned by Otto Dorschner, of Hortonville, led the Dale-Hortonville Association with the production of 1,863 lb. milk, 63.3 lb. butterfat. Mr. Dorschner's herd of purebred and grade Holsteins carried off herd honors, their average being 1,303 lb. milk, 45.36 lb. fat.

Tillie, a purebred black and white cow belonging to John Steinhoff & Sons led the Norwalk Association, she being credited with 2024 lb. milk, 85 lb. butterfat. Her ration consisted of 38 lb. corn silage, 12 lb. timothy hay, 4 lb. each of oats, barley and bran. With butter at 47 cents a pound her production brought a return of \$41.83; the cost of feed amounted to \$13.87, leaving a net profit of \$27.96.

Twenty-two purebred and grade Holsteins owned by the Steinhoff's carried off high herd honors with the average production of 1,094 milk, 39.8 lb. fat.

Sixty-six cows of the 464 tested in the Clinton-Rock Association produced more than 40 lb. butterfat. The leader was a registered Holstein owned at Craighurst, the establishment of J. A. Craig, Janesville, her production being 1,742 lb. milk, 81.9 lb. fat in twenty-seven days. Next

to her was a purebred Holstein owned by Wisconsin School for the Blind also located at Janesville, with 80.8 lb. fat, 2,378 lb. milk, the highest milk production reported.

The four leading herds were all black and white cows, either purebred or grades. P. E. Offerdale & Son's herd had the highest average, their twelve grades averaging 900 lb. milk, 33.9 lb. fat.

C. Albrecht, who lives near Marshfield, has his herd of fourteen registered Holsteins enrolled in the Marshfield Association. During December this herd produced an average of 1,278 lb. milk, 42.5 lb. fat on two milkings a day.

Henrietta Champion Netherland, a five-year-old registered Holstein owned by Wm. Wegner of Grafton, led the Cedarburg-Grafton Association with 1,953 lb. milk, 105.5 lb. fat on twice a day milking. Mr. Wegner's herd of seven purebred and grade Holsteins had the high herd average 1,152 lb. milk, 50.4 lb. fat. There were 258 cows tested during the month, sixty-three of these produced more than 40 lb. butterfat. The average production of the twenty-five herds in the association was 777.5 lb. milk, 30.1 lb. fat.

There were twenty herds containing 275 cows that completed the year's work in the Oconomowoc-Hartland Association. Their average production was 8,853 lb. milk, 315.2 lb. butterfat. Twelve herds averaged over 300 lb. butterfat.

J. A. Hurtgen of Hartland owned the high herd, his purebred Holsteins averaging 11,662 lb. milk, 379.4 lb. butterfat during the year. The high cow was owned by A. J. Cull also of Hartland. She is a grade Holstein and produced 19,046 lb. milk, 651.5 lb. butterfat.

Mr. Hurtgen owned the high producing cow during the month of December, a purebred in his herd being credited with 90.9 lb. fat.

A young lady not familiar with the language of railroad men happened to be walking near a depot where a freight train was being made up. One of the brakemen shouted, "Jump on her when she comes by, run her down by the elevator and cut her in two and bring the head end up to the depot." Screaming "Murder" the young lady fled from the spot.

His daughters are not for sale. How about one of his sons?

O. I. MARTIN

Cambridge Springs Pennsylvania

Herd under State and Federal Supervision

TEST WORK IN IOWA

The average production of the 239 cows tested in the Monticello Testing Association was 580 lb. milk, 22.1 lb. butterfat during the month of December. This is an increase of 1.9 lb. fat over the November average.

The high herd was owned by Shover & Orcutt, their sixteen purebred and grade Holsteins averaging 807 lb. milk, 34.6 lb. fat. Edgetown Bess Ormsby, a purebred Holstein, owned by Shomont Farms was the high individual, she being credited with 1,843 lb. milk, 88.5 lb. fat in twenty-six days. Nine of the ten leading cows were purebred animals.

During December, 244 cows in 26 herds were tested by Homer Tauge, in the Butler County Association. Ten cows produced between 40 and 50 lb. fat and six exceeded 50 lb. The leader was a nine-year-old grade Holstein owned by Will Cheney of Greene, she being credited with 1,595 lb. milk, 66.9 lb. fat. Aaron Hardman of Clarksville owned the high herd, ten grade black and whites averaging 849 lb. milk, 39.4 lb. fat. S. Hansen of Bristow had eleven grade Holsteins with an average of 1,108 lb. milk, 37.4 lb. fat.

Twenty-two herds were tested in the Littleport-Elkader Association and the 232 cows they contained averaged 546 lb. milk, 23 lb. fat, reports the tester Marvin A. Fleming. Pauline a purebred Holstein owned by W. L. Pieck was the leader with 76.5 lb. fat. J. L. Cords owned the high herd, his eight purebred black and white cows averaging 1,125 lb. milk, 42.6 lb. fat.

RETAIL HOLSTEIN MILK

Under the name of North Platte Farms, Keith Neville and Austin Gregg, of North Platte, Nebraska operate a purebred Holstein breeding establishment and retail Holstein milk in that city. Two local dairymen, Jay Smith and Victor Anderson organized the Milk Products Company, which retails pasteurized milk. Both firms put on a delivery system, and competed with other dairymen and grocers who were retailing milk. There was not enough business for all of them, so the Milk Products Company recently suspended operations. Then Neville and Gregg purchased the business of the Milk Products Company, and now the farmers who have been supplying milk to the pasteurizing plant will have a market for their product, and North Platte Farms will supply their customers with pasteurized products, and also with Holstein milk produced at their own establishment and on the farm operated by the local State Experimental Farm, generally called the North Platte Substation.

OFF THE BEATEN PATH

Around the village of Thompson, in the northeastern corner of Susquehanna County, Pennsylvania, is a Holstein community, which includes a number of accredited herds. One of the accredited herds is owned by E. R. Gelatt & Son. In this herd there are granddaughters of the King of the Pontiacs, Colantha Johanna Lad, and King Pontiac Alcartra Pietje, as well as daughters and granddaughters of other well known herdsires.

The Gelatt herd was started in 1918 by the purchase of a cow, Maple Lane Maid De Kol 4th, from the George E. Stevenson herd. In the Gelatt herd she dropped a son which was raised and kept as a herdsire. Some of the animals in this herd are naturally hornless; are of medium size with well shaped udders, good type and straight top lines. Cows in this herd have averaged one thousand pounds of milk a month for an entire year, and the herd is handled purely from a production standpoint.

The present herdsire is King Ormsby Endercamp, a son of King of the Ormsbys from Vandercamp Segis Aaggie Jewel, 29.37 lb. butter in seven days, 21,110.5 lb. milk, 904.32 lb. butter in a year. Her dam is a 23 lb. three-year-old, and her sire is Judge Segis, a bull that has won many honors in the show ring and is regarded as one of the great sires of the breed.

Back of King Ormsby Endercamp are a number of large record animals. His dam and sire's dam have seven-day records that average 33.80 lb. butter, 662.95 lb. milk, and their year butter records average 1,097.61 lb. butter. His three nearest dams average 30.32 lb. butter, and the seven nearest, that is those appearing on a four generation pedigree chart, average exactly 30 lb.

BUYS YOUNG HERDSIRE

Irvin H. Lichtenwalner of Barron, Wisconsin, has a herd of purebred and grade Holsteins and recently placed at its head the young bull Sir Pietertje Holly Bess. This bull is a son of Sir Pietertje Ormsby Mercedes 41st and of Hollyhock Bess Colantha Lady, a heifer that has just closed a year record of over 600 lb. butter made as a two-year-old. Her dam has a year record of 872 lb. butter and is from an 887 lb. cow.

ERICKSON QUITS THE FARM

John Erickson, whose high class herd was dispersed some time ago, has definitely retired from the Holstein business and has leased his farm to Wm. Whitney a farmer who has resided in the vicinity of Waupaca for a number of years. Mr. Erickson and his family will move to Waupaca.

Will exchange few finely bred Registered Holstein heifer and bull calves for Dairymen's League certificates.

MAPLE LAWN FARMS, Cortland, N. Y.

MABEL BEETS MODEL

She has spent her whole life in this herd. Cows and heifers of this quality, from A.R.O. dams, are bred to KING PIETJE AAGGIE PONTIAC. He was by King Pontiac Alcartra Pietje and his four direct descendant dams average 611.3 lb. milk, 30.62 lb. butter in seven-day work.

AUGUSTA C. T. A. COMPLETES SUCCESSFUL YEAR

By L. P. EMMERICK

The Augusta County, Virginia, Cow Testing Association finished its year's work with very good increases over the preceding year. The 312 cows showed an average production of 6,733 lb. milk and 293.1 lb. butterfat. For 1923 the average production was 6,350 lb. milk and 275.5 lb. butterfat. This shows an average increase of 383 lb. milk and 17.6 lb. butterfat per cow.

The herd of 17 purebred Holsteins owned by the Virginia School for Deaf and Blind at Staunton had the fine average production of 11,562 lb. milk and 413.0 lb. butterfat. This gives this herd high herd honors in both milk and butterfat. It is the second year in succession that this herd has averaged over 400 lb. butterfat. The production for 1923 was 11,561 lb. milk and 400.9 lb. butterfat.

For the second year in succession Mixer Stella Dean, a purebred Guernsey carried off high honors, her production for the past year being 10,360 lb. milk, 603.3 lb. butterfat. Last year she was credited with 10,836 lb. milk, 578 lb. fat. In twenty-four months she has the unusually fine record of 1,181.3 lb.

The highest cow in milk for the year was the purebred Holstein cow Gerben Aaggie Javoca DeKol owned by the Virginia School for Deaf and Blind. Her record for the year was 14,834 lb. milk and 528.2 lb. butterfat. For the past 24 months she is credited with 31,742 lb. milk and 1088.0 lb. butterfat.

During the year 31 cows were sold for beef and 41 for dairy purposes. Forty-nine cows were bought during the year and 56 heifers freshened during this period. All except three herds are T. B. tested. No reactors were found in the herds tested. All herds are using purebred sires.

THREE YEARS OF PROGRESS

Lou Doeringsfeld and Son of Fennimore, Wisconsin, have just completed their third year in the Fennimore-Boscobel Cow Testing Association, with the highest butterfat production reported for the year. The first year 17 milkers of this herd averaged 309 lb. fat, the second year 18 milkers averaged 369.5 lb. fat and the third year 18 milkers averaged 405.1 lb. fat.

Muchy, a descendant of King of the Pontiacs, started in association work three years ago, as a four-year-old and in her first year produced 14,191 lb. milk and 449 lb. butterfat. In her second year as a five-year-old she produced 16,742 lb. milk and 601.8 lb. butterfat, and in the year just ended at six years of age the cow made a production of 14,093 lb. milk and 523.2 lb. butterfat. She gave to the herd in the three years three calves. In 365 days consecutive milking she produced 20,600 lb. milk, 936 lb. butter, 3 milkings a day for the first six months, 2 milkings daily for the last three months. Her son, by a 27-lb. son of Sir Pietertje Ormsby Mercedes 40th, is one of the

Doeringsfeld's herdsires, transmitting splendid type and milking qualities to his get.

Mouwjtjestiena Canary DeKol, the first purebred Holstein to find a place on the farm, has a yearly record of 16,588 lb. milk, and 569.7 lb. butterfat, on 2 milkings daily. Of four daughters of this cow, the first died leaving a heifer calf. The second calf is the highest three-year-old in the association this year, with 15,708 lb. milk and 541.7 lb. butterfat; the third is the highest two-year-old this year with 11,391 lb. milk and 419.9 lb. butterfat. The fourth is untested, having freshened this fall. The granddaughter of the first cow produced 1,350 lb. milk and 51.3 lb. butterfat in 30 days as a two-year-old.

Lou Doeringsfeld, and his son Carl operate the farm and believe in diversified farming, raising hogs, sheep, cattle and poultry. They are hard workers, alert to the best methods of building up their splendid dairy herd, and are good students of scientific methods of breeding and feeding. The herd is made up of large, sturdy and attractive animals of excellent conformation. Combined with good production qualities they comprise one of the best dairy herds in Grant county.

GOVERNOR SMALL BUYS BULL

Governor Lem Small of Kankakee, Illinois, and his son Bud, recently purchased from the Pabst herd at Oconomowoc, Wisconsin, a young Holstein bull, Pabst Prilly Pontiac, No. 445,679, a son of the noted California raised sire, King Segis Alcartra Prilly.

"When a man has made de same talk exactly de same way ten or 'leven times," said Uncle Eben, "I can't make up my mind whether to call it a speech or a vocal selection."

LADY HOLSTEIN BREEDER HONORED

Mrs. Elizabeth Coleman of Easton, Wisconsin, received from the National Dairy Association a diploma of honor in recognition of her achievement in developing her herd of Holstein cattle so that they averaged over 300 lb. butterfat in a year.

She has nine milkers, two of which are purebred and seven grades and they have a record of averaging 8,656 lb. milk in a period of 313 days. The average test was 3.73% and the amount of butterfat 323.6 lb., value of product over cost of feed was \$84.82. The total production of the herd was 77,851 lb. milk and 2,910.4 lb. butterfat and the profit over feed cost was \$763.43.

The admirable showing of the Coleman herd was made under many disadvantages. Owing to a shortage of water they had to drink snow water part of last winter. The snow was shoveled into tanks and melted by a heater, but the owner states that many times the cows did not get all they wanted to drink. Their feed consisted of silage and grain twice a day, hay once a day and straw once a day. The grain feed consisted of bran and oil meal, one pound was fed for each three pounds of milk produced by the cow.

FIRE TAKES KANSAS HOLSTEIN BARN

On December 30 the dairy barn owned by George Appleman of Mulvane, Kansas, was destroyed by fire together with an adjacent hay barn and silo. Fire was discovered in the hay barn by Mr. Appleman but the flames had gained such headway that the other structures could not be saved. Seven head of Holstein heifers were burned to death. The hay barn was partially filled with baled hay which, together with considerable farm machinery, was destroyed. Defective wiring is believed to be the cause of the fire. The loss is estimated at \$12,000.

Mr. Wombat insisted on his wife ordering ice cream every day. Some days he ate it and some days he didn't touch it. His wife had argued the question of having it every day, but he was firm. So she asked his chum to put in a word. After some hesitation the chum did so, and then Mr. Wombat explained his position.

"Ice cream," he started, "is a dish that I like to have on the table. You eat it or you don't eat it. In either case that ends the transaction. They can't warm it over."

"There are just two things that break up most of the happy homes nowadays." "What are they?" "Woman's love for dry goods and man's love for wet goods."

We asked an old Southern darkey if he was a married man. He replied: "Nossah, boss; Ah earns mah own libing."

Bonnymead Herd!

102 REGISTERED HOLSTEIN CATTLE WILL BE SOLD AT 102 PUBLIC AUCTION

Wednesday, March 25, 1925

Starting promptly at 10 o'clock A. M.

60 Cows and Heifers in milk; 40 Heifers up to two-year-old; 2 Herdsires, both splendid individuals.

The average production of the milking herd last year was over 10,000 lb. despite the fact that one-third were in their first lactation period. **THREE** Cows have each exceeded 14,000 lb.

All records made on twice-a-day milking and with the care given the general dairy.

Some of the best blood of the breed flows in the veins of our animals.

Bonnymead Herd is under State and Federal Supervision and the animals are sold subject to the Standard 60-day retest.

RECORDS AT RETREAT FARM

J. O. Vaughan who is in charge of the cattle owned by the Central Poor District of Luzerne County sends us a list of large records recently completed at the Retreat farm. This includes two 30 lb. seven-day records, two others over 29 lb., a 27 lb. three-year-old and a 25

lb. two-year-old. Of the entire number only two animals were mature when they freshened for these records. Three of the ten were junior four-year-olds; four others were junior three-year-olds; and one was a two-year-old heifer, yet the average for the bunch is 478.99 lb. milk, 27.34 lb. butter. The list follows:

Name	Age	Milk	Butter
Hillside Pontiac Jean	5 years	355.7	30.60
Prilly Aaggie Pontiac Lass	5 years	516.2	24.91
Hillside Pontiac Lily	Jr. 4 years	552.6	30.88

No. 4

Hayfield Herd

An Accredited Southern Pennsylvania Holstein Herd

THE first herd of purebred Holsteins in Lebanon County, to be placed on the accredited list because of passing successive clean tests, was owned by Jacob M. Brubaker, who lives about three-quarters of a mile south of Myerstown, Pa. This is a typical Pennsylvania breeders' herd for, like many other herds of which we know, it was started by the purchase of purebred calves. At that time Mr. Brubaker lived in Snyder County. At least one of the original animals is still in the herd and nearly all the others are descendants of the first ones.

Many owners of cattle make a practice of placing

BELLE DE KOL BURKE VEEMAN 2D
The Grand Old Matron of the Hayfield Herd.

cows of outstanding individuality or of great producing capacity at the end of the row so that she is the first animal a visitor sees when entering the door. Maybe the Brubakers had this thought in mind when they placed at the end of the row their grand old cow, Belle De Kol Burke Veeman 2d. Belle is very nicely marked, a little more white than black and is the darkest colored animal in the milking herd. She has a stylish head with up-turned horns, is straight, with wide hips and a very large udder. She is a producer and in six months was credited with the production of 11,000 lb. milk.

Tested as a five-year-old she has to her credit an official record of 20.22 lb. butter, 530.6 lb. milk. She has three daughters and a son in the herd. One of her daughters, Lady De Kol Burke Fayne Segis, tested as a junior three-year-old has a seven day record of 24.67 lb. butter, averaging over 80 lb. milk a day during her test.

Lady De Kol Burke Fayne is a granddaughter of Walker Pietertje Segis Fayne, a son of King Walker Fayne from Eirene Fayne, a 31-lb. daughter of King Fayne Segis. The size of this heifer, the shape of her udder, the width of her hips and her general quality would please a critical judge.

Standing between these two cows is Highland Percy Jane Denver, a cow that would attract attention in any herd on account of her evident quality and capacity to produce. On February 5, the day before the representatives of the BREEDER AND DAIRYMAN looked over her, she had milked 98.6 lb. butter in twenty-four hours and Ammon Brubaker, who has charge of the herd, was expecting her to reach the 100 lb. mark. She reached 103 lb. two different days the very next week. She was just out of official test. For the week closing February 1 she made an official record of 26.95 lb. butter, 616 lb. milk. This was made as a six-year-old for she attained that age on January 10 of this year. As a five-year-old, she is credited with 499.2 lb. milk, 25.82 lb. butter, and her freshening dates were less

A PROMISING TRIO
Hayfield Herd Youngsters. Notice their toplines.

than a year apart. As a junior four-year-old she made an official seven-day record of 458.9 lb. milk, 22.04 lb. butter. She has freshened three times and has made these three records in less than two years. Despite this fact, she is a handsome individual, her udder although large, is well held up and at a glance her quality impresses the beholder. Her head with its small horns reminds one of Colantha 4th's Johanna. Her pedigree chart presents quite a contrast. The lower half of the pedigree shows old fashioned strains of breeding noted for large production as well as good individuality. Her own dam, as a four-year-old, has an official record of 23.91 lb. butter. She is a grand-

daughter as well as a double great-granddaughter of Aaggie Hopeful's Sir Henry, a famous old sire, many of whose descendants have made good in the show ring.

The upper half of her pedigree shows fashionable breeding. Her sire, Dutchland Creamelle Denver Lad is by Dutchland Creamelle Korndyke Lad formerly at the head of the Dutchland herd. Her granddam, Dutchland Pontiac Denver, has a 28-lb. seven-day record and a year record of 774.76 lb. butter and is a daughter of April Denver, a 26 lb. cow with three A. R. O. daughters two of them with 30 lb. seven-day records.

A nice family group is represented by Mutual Pride Sadie Vale, a cow just four years old that has three daughters in the herd. This heifer has been dehorned. She has a square udder, a wide rump, and is of good type. In color she is what the breeders call variegated, the white predominating. As a two-year-old heifer

MUTUAL PRIDE SADIE VALE

24.03 lb. butter in 7 days as a two-year-old. Just four years old, and has three daughters.

she made a seven-day record of 24.03 lb. butter, 405.3 lb. milk. Calving again in eleven months, she made another record of 23.47 lb. butter, 525.8 lb. milk, as a senior three-year-old. Her sire is a son of Finderne Pride Johanna Korndyke, a bull with three daughters that have each made over 30,000 lb. milk in a year. The sire's dam has a seven-day record of 29.33 lb. to her credit, has a number of other large records and has a 30-lb. daughter. The dam of Mutual Pride Sadie Vale, tested as a junior three-year-old, is credited with 20.55 lb. butter, 481.7 lb. milk in seven days. She is a granddaughter of King Korndyke Sadie Vale, traces to King Segis through her dam and in her pedigree occur the names of a large number of large record cows and noted transmitting sires.

Space forbids individual mention of other members of the herd. These four indicate its quality. We have seldom seen a more pleasing bunch of milk producers. The young stock are well grown and show promise of making just as good cows as are their dams.

At the head of the herd is Brookside Waldorf Victoria Duke No. 359,148, a bull just four years old. Handsome and light colored, he is straight on the back, square over the rump and a very stylish animal. Taught to pose he would make a hard bull to defeat in the show ring. His pedigree shows a combination of large producing strains. His dam K. P. Reina Victoria as a

senior four-year-old made 546.6 lb. milk, 27.33 lb. butter in seven days. She was by King of the Pontiacs from Reina Victoria De Kol 2d, 527.7 lb. milk, 30.71 lb. butter in seven days as a junior four-year-old, dam of four A. R. O. cows. She is by a son of Colantha Johanna Lad and from a 25-lb. daughter of Lord Netherland De Kol.

His sire, Sir Pontiac Waldorf Pietje, formerly headed one of the leading New York State herds. He was by King Pontiac Artis Canada from Lady Waldorf Pietje, a cow that three different years made over 32 lb. butter in a week and as a junior four-year-old is credited with 36.31 lb. butter in seven days, 150.86 lb. in thirty days. She is dam of Lady Waldorf Pietje 2d, 36.10 lb. butter in seven days as a four-year-old, who in turn is dam of Lady Waldorf Sylvia, 34.45 lb. butter, in seven days as a senior four-year-old; 19,946.9 lb. milk, 903.14 lb. butter in ten months as a senior two-year-old. Sir Pontiac Waldorf Pietje is full brother to Lady Waldorf Pietje 2d. That his son is a good sire is evidenced by the shape and quality of his offspring which seem to have inherited much of his own constitution and vitality.

The Brubaker establishment is known as Hayfield farm. It consists of 102 acres and has just been sold

BROOKSIDE WALDORF VICTORIA DUKE

A well bred show bull that sires fine stock.

to a man who will use it for tobacco growing, a sure indication of its fertility.

Mr. Brubaker intends to locate on a ten acre farm and there just raise enough for the support of his family and, as he says, to keep him out of mischief. His son Ammon, to whom most of the credit is due for the building of the herd and who is the cow man of the family talks of going west but has not made any definite plans at present. It is a matter of regret that this herd, which has a wonderful reputation for production in the vicinity of Myerstown, will not be kept together, but is to be dispersed at public auction on the 18th of next March.

"Unless there are maladjustments absolutely without excuse in the economic relations of industry, agriculture, and commerce, the furnishing of food to a population which is so rapidly expanding should be the soundest and most reliable of all business. The American farmer can look forward hopefully and even confidently to a time when his will again be regarded as the most independent and secure section of our population."—Calvin Coolidge.

Politics or Business

THERE is one outstanding difference between the successful administration of the affairs of an organization under a Business form of government and the successful administration of its affairs under a Delegate or Representative form of government that has not been brought to the attention of the members of the Holstein-Friesian Association.

In a business form of government, the member or stockholder is the controlling unit and is given the privilege of a direct vote in fixing the by-laws, electing officers and otherwise governing the affairs of the organization.

Should an officer or the officers fail to properly administer the affairs of the organization, the members or stockholders by a direct vote could correct the situation by choosing more capable, or more honest and trustworthy officers.

The machinery of a Business form of government is simple. At the annual election each member or stockholder is given the privilege of presenting his views in person or through another and at the small cost of a letter or a postcard can cast his vote for or against any and all measures as he may see fit.

In a Delegate or Representative form of government such as has been adopted by the Holstein-Friesian Association, the members are denied the right to a direct vote in fixing by-laws, electing officers and formulating the policies of the Association. The members must elect representatives to act for them, hence the term "Representative Government."

Every member of the Association is not given the privilege of nominating his own representative, but he and nine other members must agree on someone to represent them, and if he lived in one of the leading Holstein states, such as the state of New York, with 4,698 members, and all the members voted, it would be necessary for a member before he was assured that his representative would be elected, that he have the support of 2,350 other members. Therefore, for ten members to work together to nominate a delegate and for 2,350 to vote together to elect their delegate, it is necessary to successfully carry on this work, that they organize for this purpose and maintain the organization from year to year.

Political or Representative forms of government are administered by opposing political parties or factions which are essential and necessary factors in the proper administration of this form of government. In a Business form of government such as is in operation in banking institutions, business organizations, railroads and manufacturing corporations and under which the Holstein-Friesian Association grew and prospered for so many years when every member or stockholder had a direct voice in choosing officers, making by-laws and formulating the policies of the Association, the organization of opposing political parties was not necessary. It is just as unreasonable to assume that the affairs of the Holstein-Friesian Association can be administered by a Delegate or Representative form of government can be administered with one party or faction in control unopposed,

as it would be to expect to successfully operate our state or national government with one unopposed political party.

A Business form of government is the most simple and direct method of managing a business organization successfully and has withstood the test of time.

The Representative form of government works very well in the administration of civil government, the chief branches of which are legislative and law-enforcing. We have no record of a successful business organization that has been administered by a representative form of government. Many co-operative business organizations have sprung up most of which have been characterized by innumerable and high salaried officers. Because of expense and inefficiency, organizations so managed usually pass out of existence. Many such organizations have the appearance of having been created to serve the management rather than the members.

Many local organizations of a like or similar character unite to carry out national or international projects and are represented at national or international conferences by delegates selected from the local organizations. The Delegate or Representative form of government is unquestionably the best form that could be adopted whereby local organizations of a like or similar character could function under one head.

The Holstein-Friesian Association primarily is a national organization created to maintain a herd registry and preserve the purity of blood of the Holstein-Friesian breed of cattle in America. It has a single Board of Officers and Directors, can be and was for thirty-six years successfully governed by a business organization. It is not composed of local organizations. The attempt to dismember it by cutting it up into local organizations for the purpose of putting into operation a political form of government is proving to be destructive and disastrous.

For thirty-four years, until the year 1918, the differences that arose among the members as to how the Association should be managed, were satisfactorily adjusted by allowing the votes cast by the majority of the members to prevail. During these thirty-four years the best interests of the breed and the welfare of the members had been served and the Association prospered. Previous to the annual meeting in 1918, a group of breeders who had conceived definite ideas as to how they thought the affairs of the Association should be managed and wanted to put their ideas into practical application, indulged in a proxy campaign but were defeated.

The following year at the annual meeting, the control of the Association was taken over by increasing the Board of Directors and resorting to methods that have since been questioned in the courts.

The year previous to the increasing of the Board of Directors, the Association was operated at a profit of over \$60,000.00; its accumulated surplus was upwards of \$300,000.00, and the fee charged members for the issuing of a transfer certificate was 25 cents. There seemed to be no legitimate reason for increasing the

transfer fee, yet at the same meeting where the number of directors were increased, the transfer fee was increased to four times what it previously had been. Nothing was said at this meeting about voting the president an annual \$12,000.00 salary, but at the first meeting of the increased Board he was voted a salary of \$12,000.00 per year, and expenses.

The extravagance that prevailed in the Association's management during the two years following the annual meeting in June, 1919, resulted in the membership registering their disapproval by the largest vote ever cast at any annual convention. They refused to indorse the conduct of the administration, failed to reelect the \$12,000.00 president, and compelled the withdrawal of the resolution introduced by a Committee on By-Law Revision asking that the directors be granted the power of altering, amending or repealing the by-laws from time to time as they saw fit; and reduced the transfer fee to fifty cents.

At the end of the two years the conduct of the group of directors who gained control at the Philadelphia meeting, was met by a vote of disapproval on the part of the membership, and it was very plain to the officers in control that when their term of office expired at the next annual meeting that they would be defeated and cut off from access to the Association's resources unless they could devise some plan whereby the members could be deprived of their right to a direct vote in choosing officers and fixing by-laws, and put such a plan into operation before the next annual meeting when they would come up for reelection.

Milk Report Sheets

Those who have tried them claim that "Breeder and Dairyman" Milk Report Sheets are just a little the handiest and best they ever used.

Designed for use in either grade or purebred herds, each sheet has room for recording the production of 25 cows for the full month, breeding and calving data, etc., etc.

They are printed on light, strong manila board and are 17 inches long by 22 inches wide. Sample 5 cents. Year's supply, 12 sheets, 50 cents.

Give them a trial. You will like them.

The Holstein Breeder & Dairyman

BOX 110, HARRISBURG, PA.

Therefore, to deprive the members of a direct vote in the administration of the Association's affairs and to do it before the next annual election, a special meeting was called at St. Paul, Minnesota, October 11, 1921, where a Political or Representative form of government was adopted.

The element that was instrumental in bringing about the adoption of the political form of government, knew the value of a well oiled political machine, its necessary and essential parts, how to organize it and to provide the necessary funds to keep it in operation at the expense of the Association and it does not appear that any time was lost in perfecting such a machine.

In the administration of the affairs of a civil government, the elective and appointive officers with their influence extending to voters living in each ward or precinct or voting district, readily provides for the burying of an invisible party organization. The machinery necessary to properly administer the affairs of the Holstein-Friesian Association did not provide the means whereby an invisible political party machine could be buried and financed at the expense of the Association, but by enlarging the Extension Department it would easily permit the organizing of a complete political party machine.

The Chairman of the Extension Committee or the Director of Extension occupies an ideal position to act as party chairman and the duties of Travelling Delegates could be assigned to the legislative committee, calf club organizers, or other so-called Field Representatives to keep in touch with the State Paid Secretaries on which the success of the committee largely depends. The Press Agent and Publicity Bureau that is being maintained by the Extension Department equals in extent the similar organizations of the national political parties, and with this vast machine adequately financed out of the Association's Reserve Fund, or through a tax on the transfer fees, presents an ideal situation to maintain the politicians in control.

Few of the members of the Holstein Association realize that one of the political duties and a very important one, that the State Paid Secretary has to perform, is the compiling of a list of members who are known to be favorable to the present administration whose names are placed on the nominating ballot.

The form of government which an organization should adopt should depend on the character of the organization and the purpose for which it was intended. In the administration of banking institutions, business organizations, railroads and other corporations and in organizations controlled by single membership, operated by one group of officers and a single board of directors, the direct or business form of government has proven by experience to be the best. Each member or stockholder is granted a direct voice in the managing of the affairs of the organization, or is permitted to choose someone to represent him in the matter of electing officers, formulating by-laws and directing the policies of the organization.

When local organizations that are managed by a business form of government wish to unite with like or similar organizations in the same states or other states to carry on state, national or international projects, they administer the affairs of the state, national

or international projects through delegate representation.

In administering the affairs of government, the local government is conducted by a direct voting system similar in character to a business form of government, but in the state government which is an organization of local governments, and the national government, which is a federation of state governments, the delegate or representative form of government is practiced, the administrative affairs of the government has to do with law enforcement and every district must have its local government.

The Holstein-Friesian Association being a national organization with a single membership and one board of officers, the delegate form of government is not applicable. The business form of government is more efficient and less expensive.

Feeding Iodine to Dairy Cows

IODINE and cod liver oil have been fed to big producing cows in order to enable them to make tremendous records, says Professor Oscar Erf, head of the Dairy Department of the University of Ohio. Scientists at the University have been making experiments in order to determine the amount of iodine in milk and several Ohio dairymen have written to the Professor suggesting the advisability of testing milk for iodine; of feeding cattle so that their milk would contain more iodine; and of then advertising this fact so as to increase sales. In his reply Prof. Erf says:—

"The fact that milk contains iodine is not a recent discovery, but feeding iodine to cows so that milk will contain it in the proper form to benefit humanity is a comparatively new idea and was first put into practice by some of the breeders in Ohio.

"Since 1913, we have been feeding iodine in various forms to cows and are of the opinion that many high records have been due, partially, to iodine in the ration. For iodine is chiefly responsible for the secretion of thyroid, which makes possible the assimilation of lime and phosphates, so essential in building up the bone and nerve and brain tissues. Iodine, however, is not the only essential mineral but must be accompanied with phosphates, magnesium, potassium, sodium and other minerals in the correct proportions.

"Goiter is prevalent throughout the central portion of United States. This is especially true in the highly cultivated northern states of the lake region. Along the coasts goiter is not as prevalent, which is undoubtedly due to the iodine in the sea water and to the consumption of sea foods such as fish, lobster, etc.

"The Cleveland and Youngstown Boards of Health have become particularly solicitous in regard to the number of school children that are affected with goiter and efforts are now being made to have iodine put into the salt or into the water at certain times in the year. They have even gone so far as to suggest the addition of iodine to certain cooked foods.

"However, it must be borne in mind that as much injury can be done to health by too much iodine as by an insufficient amount. The promiscuous use of iodine in all kinds of food and water is dangerous. The

amount required in excess of that found in natural foods should be prescribed by a physician.

"Our problem is to feed cows so that the milk will contain iodine in the proper form to benefit humanity. When we first started work along this line we realized that mineral salts were essential as catalyzers of the protein and other nutrients in themselves. Years ago before much attention was paid to nutrition, it was a common thing for the old physician to administer potassium iodide, but it seemed to be effective in many cases where other drugs were of no avail. In reality the building up of the body was due to the supplying of minerals which were needed for the natural metabolism of the body, rather than to the medicine.

"In feeding iodide of potassium years ago, we learned that, while a certain amount was beneficial, too much interfered with the metabolism of the body, causing an eruption on the skin.

"The assimilation of calcium is greatly affected by the use of iodine as indicated by the marked improvement in the bones of calves when it is fed. In many cases we fed cows iodine to reduce the bony structure in lumpy jaw. This is now quite commonly done and while iodine is not a sure preventive for this form of lumpy jaw, it does prevent a predisposition toward it. Minerals must be properly balanced for each animal since the one having a predisposition toward the disease will require a greater amount than others that have not. The quantity of milk produced by the cow is another factor that must be also taken into consideration.

"A certain amount of magnesia is quite necessary as a catalizer for some feeds, and when the correct amount is fed its influence on the increased flow of milk is marked. However, if too much is fed it apparently tends to eliminate calcium from the body and is undoubtedly responsible to a considerable extent for the soft bones of some high producers that have not been properly fed. Iodine to a certain extent seems to counteract this effect and we might add further that manganese seems to have a tendency to counteract the effect of too much magnesium, as is proven by the feeding of large quantities of red beets. This again shows the necessity of obtaining a balance that conforms with the needs of the body.

"Fortunately, the body has selective power. For illustration, lime in an inorganic state is not assimilated,

MEMBERS OF SUNNY LAWN HERD

which is not only ACCREDITED but is also the oldest herd in Northumberland County. These cows, with the other members of our herd are big producers as our C. T. A. records show. Next time you travel the Susquehanna Trail, stop at our place.

R. D. 3,

Murray A. Miller

Milton, Pa.

but when combined with other elements so as to form part of an organic compound required by the digestive system, it becomes more assimilable.

"It is not always possible to know the exact mineral requirements. For this reason a number of inorganic minerals are placed in the feed and these become assimilable in various combinations. Therefore, the mineral ration forms a small reservoir from which the body may draw.

"It is our contention that iodine to be of the greatest benefit must be fed in connection with these other minerals. There is no doubt in my mind but what the feeding of iodine will be of great assistance in preventing many cases of goiter, but some other minerals are just as important in preventing other diseases.

"We first recommended the feeding of kelp meal in 1913 for in traveling through the country my observation had shown me that where liberal quantities of seaweed were fed, goiter in calves was very rare. Seaweed contains large quantities of iodine and it was for this reason that we adopted the use of kelp which is a form of seaweed. Fish meal has been tried out and while it contains considerable iodine, very few cows seem to like it and hence refuse to eat it.

"Cod liver oil, which contains iodine, has been fed to cows with considerable success.

"While the iodine may not be entirely responsible for the favorable results from feeding cod liver oil, it is undoubtedly the most important factor. Of course, cod liver oil is rather expensive except for extraordinary cows and it is difficult to obtain kelp meal since so many of the plants making potassium and iodine have closed. Potassium can be mined in Germany at less expense than it can be obtained from seaweed in this country, and there is not a sufficient amount of iodine used to make its manufacture from seaweed profitable. For this reason we have resorted to potassium and sodium iodide and ferric citrate in order to obtain iodine in milk.

"The fact that we could eliminate goiter in calves by the use of iodine was evidence that it could be found in veal but to obtain it in milk without feeding cod liver oil, kelp meal or iodine in combination with some organic compound has been a problem.

"The question might arise as to why the feeding of iodine has suddenly come into prominence. A cow in natural state produced 1,200 to 1,400 lb. of milk, or the amount necessary to supply her calf. She roamed about in the sunlight, had plenty of fresh air, and sunlight, and fed upon grasses, grains and herbs that had not been forced in growth; nature furnished all the elements that were required. But man has changed the habits of the cows. He is making her produce a much larger amount of milk. The production of grain has been increased so that the soil has become deficient in lime, and the grain does not contain a sufficient amount of the elements required by the cow. Many of the feeds are by-products, often containing a very small percentage of minerals, sometimes no iodine whatever. Perhaps the hay has been rained on and sun bleached. The cow may be stanchioned in a dark place with poor ventilation. Lack of sunlight, lack of air and lack of exercise, refined and sunbleached feeds are all contributing factors to the need of iodine.

"The changes in plant growth together with the changes in the natural habits of the cow bring about the production of an abnormal milk unless proper feeding and care can correct this tendency.

"In certain sections where the drain on the soil for food production has been heavy this has been reflected upon human beings with the result that goiter has become quite prevalent. This has suddenly brought about the use of a mineral iodine such as potassium iodide, sodium iodide, iodine in salt and iodine in water, and while not a "cure all" it seems to be of assistance in preventing and curing many cases of goiter when properly used in connection with plenty of good milk, vegetables, fruits, fish, etc.

"However, iodine in this form is an unnatural food and should be taken by infants and seldom by invalids. It is at this time especially if there is a tendency for goiter in infants, that the proper nutrients should be provided. As a preventive for goiter, there is no food that can take the place of milk from cows that have been properly fed. Butter made from cream from such milk would likewise possess this value.

"When cows were pastured and fed on natural feeds, nature provided a sufficient amount of iodine to care for the calf and supply the needs of the human family. But as economic conditions change and crops are forced, cows produce greater amounts of milk and butterfat, there will come to the man who feeds the cow a grave responsibility, for upon him to a considerable extent will depend the physical and mental development of man."

An Advertising Gem

ADVERTISING is an art as well as a business. This is universally admitted. But what do you think of a man who would be guilty of the following literary gem when describing a pig feed?

"Farmstock" Fish Meal is the purest fish meal manufactured. It contains the minimum quantity of oil consistent with a process of manufacture that ensures the retention of the essential vitamins, the amount of oil varying from 2 per cent to a maximum (rarely reached) of 4 per cent. The very purest of materials only—white fish that a bishop might eat without compunction—goes to its manufacture, and we say confidently that, fed to the maximum amount which is beneficial for body-building, it produces only lily-white delicious fat, and succulent lean that delight the heart of the curer, butcher, and consumer.

The advertisement quoted was taken from a recent issue of the *Agricultural Gazette*, a leading British agricultural weekly.

What could that ad. writer have produced if he had taken milk for his theme!

"It is an incalculable added pleasure to any one's sum of happiness if he or she grows to know, even slightly and imperfectly, how to read and enjoy the wonder-book of Nature. We who believe in the study of Nature feel that a real knowledge and appreciation of wild things, of trees, flowers, birds, and of the grim and crafty creatures of the wilderness, give an added beauty and health to life."—Theodore Roosevelt.

A Dairyman Lawmaker

ONE of the speakers at the business meeting of the Pennsylvania Federation of Holstein-Friesian Clubs when that organization met recently at Harrisburg was Hon. Edwin P. Brown, Susquehanna County's representative in the State Legislature. Although Mr. Brown, in his speech, said he is not a purebred breeder, he is a dairyman for he is manager of one of the largest and best equipped certified milk farms in the state. This establishment known as the Loudon Hill Farm, is located near South Montrose. Approximately two hundred head of cattle are kept on the farm at all times.

Mr. Brown was born in Connecticut and is a graduate of the Connecticut State College. He became interested in producing certified milk in this state and about fifteen years ago came to Susquehanna County to operate the Loudon Hill Farm. He is president of the Metropolitan Certified Milk Producers' Association and vice-president of the National Certified Milk Producers' Association.

Naturally Mr. Brown is greatly interested in anything that would benefit farmers and the farming interests. He is an active advocate of tuberculosis eradication and adequate appropriations for indemnities and spoke on these subjects at the Pennsylvania breeders' meeting. He is a member of the Susquehanna County Fair Association, has been active in Farm Bureau Promotion, and is a member of the House Committee on Agriculture. Although Mr. Brown is a Republican, his popularity is shown by the fact that he captured all the nominations in last spring's primaries.

The first British cow to produce more than 30,000 lb. milk in 365 days two different years is the Scotch cow, Findlay Clara 2d. She is now in test and, according to the *Agricultural Gazette*, is credited with 31,220 lb. milk in 307 days and is still milking around 80 lb. a day. In her previous lactation, she produced 34,490 lb. milk in a year with an average test of 3.38% or 1,371 lb. butter.

Need More Holsteins

CAUTION to dairymen not to expand the dairy industry during 1925 has been sent out from the Federal Bureau of Agricultural Economics. The Bureau reports that domestic production appears adequate, and the foreign dairy situation is apt to keep world market prices low, and thus limit the height to which our own butter prices can rise without bringing in foreign butter. The price of milk of any description is largely regulated by the price for butter. Therefore, it is important that dairymen continue to cull their herds closely and raise only heifers from their best stock. It is more important to cut the cost of production than it is to produce more, and this holds true for many agricultural products besides milk. Cutting the cost of milk production means better cows and that of course, means more purebred Holsteins.

A Square Milk Bottle

A SQUARE milk bottle has been patented by a trio of Californians. It is expected to cut the cost of breakage, as it is not so likely to roll and fall. It is also claimed that more square bottles can be packed in a case than round ones.

The new bottle was designed by I. J. Blake, a Sacramento dairyman, and will be called the Blakehart Square Milk Bottle. The two men interested with him are W. S. Hart, and W. H. Hart, owners of a string of Pacific Coast restaurants.

Farming is not a business where men expect to get rich. The ideal is a prosperous, happy, contented, intelligent family in every farm home. To reach this ideal farming must be organized on a sound basis both practical and scientific.

Everybody is ready to sustain the law *he likes*. That is not in the proper sense respect for law or order. The test of respect for law is where the law is upheld even though it hurts.—Charles E. Hughes.

A Ton and a Half of Pork from One Litter in 180 Days Produced by a Big Type Poland-China Sow

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Junior Breeder and Dairyman

Pennsylvania Junior Judges

At the time of the recent state Farm Products Show held in Harrisburg, Pa., January 19-23, a dairy judging contest was staged, the fifty-five contestants being boys from the various vocational schools of the state. This dairy judging contest was only one of the number of contests staged at that time to which the vocational boys were eligible. The competitors were chosen by a process of eliminative contests at their own schools and only a limited number from each school are eligible to compete at Harrisburg.

The prizes consisted of cups and ribbons. The one for dairy judging was given by the Pennsylvania Federation of Holstein-Friesian Clubs which organization also gave ribbons to the first five contestants. The federation cup was won by Kenneth Bender, of Benton Vocational School with a score of 92.5; James Prudy, of Findley Township School was second with a credit of 92; Francis Crowell, of Spartansburg was third with 89.75; and there was a tie for fourth place between Clinton Shipman, of Lycoming County and Frank Steward, of Westmoreland County each being credited with 89.25. Messrs. Dennis and Fetterolf, who were in charge of the contest, ruled that the state

PENNSYLVANIA CHAMPION JUNIOR JUDGES
(Standing left to right) Dairy cup—Kenneth Bender; Corn cup—Clyde Jackson; State Chamber of Commerce cup—Willis Taylor, Zerbin Kline, Nevin Beishline; Poultry cup—Wesley Snyder.
(Sitting left to right) Potato cup—Stewart Hulslander; Swine cup—Ray Henry.

would give duplicate fourth prize ribbons to these boys and as it was determined that the Pennsylvania Federation would do the same, Albert Wacherman, of Hatfield, with a score of 88.5 was adjudged to have won fifth place.

A cup for corn judging, given by the Harrisburg *Patriot* and *Evening News*, was won by Clyde Jackson, of Unionville with a score of 84.5.

The cup for poultry judging was given by the Pennsylvania Farmer and was awarded to Wesley Snyder, of Elders Ridge, whose score was 85.75. Second prize in this contest was won by Sarah Fox,

of Westmoreland County. This girl had, the day previous, been awarded a gold medal for having and managing the best poultry project in the entire state enrolled in vocational work.

Ray Henry, of Orangeville won the silver cup for swine judging presented by the *National Stockman and Farmer*. The cup for potato judging given by the Bureau of Vocational Education was won by Stewart Hulslander, of Troy. The State Chamber of Commerce gave a very large handsome cup for the champion team of three coming from any one school. This went to Willis Taylor, Zerbin Kline and Nevin Beishline, of the Millville School. Strange to say, not a member of this team won a first prize, Mr. Beishline being fifth in potato judging, Kline third in the swine

STATE CHAMBER OF COMMERCE CUP
FOR AGRICULTURAL JUDGING
(Standing left to right) Assistant Director H. C. Fetterolf, Supervisor of Agriculture Guy Everett, Zerbin Kline, Director L. H. Dennis. (Sitting) Willis Taylor and Nevin Beishline.

judging contest, and Willis Taylor fifth in the judging of poultry. The Millville team had an average of 84.49, beating out the Westmoreland County team with a score of 83.7 and the Center County team whose score was 83.275. The Millville team were coached by Supervisor of Agriculture, Guy Everett.

The contests were held under the direction of L. H. Dennis, Director of Vocational Education, and H. C. Fetterolf, Assistant Director. The presentation of the ribbons and cups to the winners was staged in the Y. M. C. A. building on the evening of January 20. Dr. L. M. Thompson, President of the Pennsylvania Federation of Holstein-Friesian Clubs as well as the Secretary and Director Paxton attended, the two former taking part in the presentation exercises.

"Another thing I would recommend to you is to keep an account book, and enter therein every farthing of your receipts and expenditures, the doing of which will initiate you into a habit from which considerable advantage would result."—George Washington.

Novel Home Work

The students at the Sevastopol, Wisconsin, High School who are studying vocational agriculture, are expected to take care of animals as part of their home work to supplement school studies.

Stanford, John and Earl Anschutz have recently purchased purebred Holstein calves from Dr. E. C. Humke. Other students will purchase purebred sows, and several will invest in poultry for spring projects. A number of boys have been testing milk for the farmers in order to get the necessary practice required for their school work.

Iowa Will Finance Junior Judges

Governor Kendall, in his biennial message to the Iowa legislature recommended that an appropriation of \$5,000 be made to defray the expenses of the Iowa boys who will represent the United States at the World's Junior Judging Competition which will be held in London, England, next June. These boys qualified by winning the United States championship for dairy cattle judging at the National Dairy Show last fall. Senator Johnson will introduce the bill in the Iowa Senate.

The three boys are Harlan Leonard, Lester Olson, and Raymond Monahan, all of Franklin County. They won over nineteen other teams at the Waterloo Dairy Cattle Congress, where Monahan was champion Holstein judge, and Leonard the champion Jersey judge in the junior classes.

Have Beef and Dairy Calves

There are sixteen members of the dairy calf club and fourteen members of the baby beef club, sponsored by the department of vocational agriculture at the Walnut High School, Walnut, Illinois. Curtis Plum and his son Orville, of Walnut recently visited the Rock River Farm and purchased four Holstein calves, which will be cared for and exhibited in dairy calf club work by Orville, Pearl and Harold Plum.

Well Worth Winning

The Beatrice Creamery Company, of Beatrice, Nebraska, offered to give a purebred yearling Holstein bull to the person through whose solicitation the largest amount of cream was shipped to the company. The contest closed January 1st, and C. D. Jenkins, representative of the Creamery Co., reports that Kenneth Stewart of Tilden, was the winner. The animal will come from the University Extension Farm herd and will be a very choice young fellow.

Made a Good Showing

Carl Imig, of Junction City, Wisconsin, was a prize winner in the National Dairy Show in the calf club classes. He has been a member of Rudolph Calf club for three years, and plans to remain in the club at least another year.

This is what Carl has to say about his work:

"My calf is a purebred heifer. I took a great deal of interest in feeding and caring for her. She was kept in

a box stall all summer. About a month before the county fair I put a wool blanket on her and two weeks before the fair I clipped her. I spent many evenings after the day's work was done leading, posing and brushing my calf.

"I was out of luck in getting started in my club work this year. I started with another calf that did not develop as I wanted to see it do. Then I turned all of my attention to the calf I am telling you about. She had not been fed for show purposes and so was undersized at fair time.

"However, I feel that I did fairly well, I won third prize at the Central Wisconsin state fair, second at the Portage County fair and thirteenth at the National Dairy Show in a class of sixty."

Vermont Calf Club Work

In 1922 calf clubs were organized in the towns of Addison, Weybridge and Waltham, Addison County, Vermont. These three clubs had twenty-one members who exhibited eighteen purebreds and nine grade calves at the Addison County Fair that fall.

In 1923 there were clubs in the townships of Addison, Weybridge, Waltham and Salisbury. Twenty-four members exhibited twenty-two purebreds and six grade calves at the 1923 County Fair.

Last fall there was a Boys and Girls' exhibit held in connection with the County Fair. At that event thirty-two boys exhibited forty-four calves, thirty-eight of which were purebred and six grade animals. These calves were all owned, raised and exhibited by the boys, and the quality of stock shown was a credit to them in their efforts to get started in the dairy business with the right kind of stock.

The special Holstein-Friesian class consisted of fifteen calves and two yearlings, all of which were owned by the boys. The picture from which our cover illustration was made shows the class of purebred Holstein calves. All these calves were registered in the names of their youthful owners.

In addition to taking entire charge of the animals, feeding them, and fitting them for the show, the boys have learned to judge dairy cattle, and some of them can give their fathers pointers on picking out good cows.

During the Fair, demonstrations were given by teams from different calf clubs on the subjects of judging; feeding dairy cattle and fitting animals for show.

Miss Mildred Everts, the County Club Agent, in her summary of three years of calf club work tells that forty-two members have raised and exhibited at the County Fair seventy-eight purebreds and twenty-one grade animals during the time the calf clubs have been in existence. In addition, four purebreds and several grade animals were raised by calf club members this year and not exhibited.

The path of success in business is invariably the path of common sense. Notwithstanding all that is said about "lucky hits" the best kind of success in every man's life is not that which comes by accident. The only "good time coming" we are justified in hoping for is that which we are capable of making for ourselves.—Samuel Smiles.

The Junior Breeder and Dairyman

Pennsylvania Junior Judges

At the time of the recent state Farm Products Show held in Harrisburg, Pa., January 19-23, a dairy judging contest was staged, the fifty-five contestants being boys from the various vocational schools of the state. This dairy judging contest was only one of the number of contests staged at that time to which the vocational boys were eligible. The competitors were chosen by a process of eliminative contests at their own schools and only a limited number from each school are eligible to compete at Harrisburg.

The prizes consisted of cups and ribbons. The one for dairy judging was given by the Pennsylvania Federation of Holstein-Friesian Clubs which organization also gave ribbons to the first five contestants. The federation cup was won by Kenneth Bender, of Benton Vocational School with a score of 92.5; James Prudy, of Findley Township School was second with a credit of 92; Francis Crowell, of Spartansburg was third with 89.75; and there was a tie for fourth place between Clinton Shipman, of Lycoming County and Frank Steward, of Westmoreland County each being credited with 89.25. Messrs. Dennis and Fetterolf, who were in charge of the contest, ruled that the state

PENNSYLVANIA CHAMPION JUNIOR JUDGES
(Standing left to right) Dairy cup—Kenneth Bender; Corn cup—Clyde Jackson; State Chamber of Commerce cup—Willis Taylor, Zerbin Kline, Nevin Beishline; Poultry cup—Wesley Snyder.
(Sitting left to right) Potato cup—Stewart Hulslander; Swine cup—Ray Henry.

would give duplicate fourth prize ribbons to these boys and as it was determined that the Pennsylvania Federation would do the same, Albert Wachman, of Hatfield, with a score of 88.5 was adjudged to have won fifth place.

A cup for corn judging, given by the Harrisburg *Patriot* and *Evening News*, was won by Clyde Jackson, of Unionville with a score of 84.5.

The cup for poultry judging was given by the Pennsylvania Farmer and was awarded to Wesley Snyder, of Elders Ridge, whose score was 85.75. Second prize in this contest was won by Sarah Fox,

of Westmoreland County. This girl had, the day previous, been awarded a gold medal for having and managing the best poultry project in the entire state enrolled in vocational work.

Ray Henry, of Orangeville won the silver cup for swine judging presented by the *National Stockman and Farmer*. The cup for potato judging given by the Bureau of Vocational Education was won by Stewart Hulslander, of Troy. The State Chamber of Commerce gave a very large handsome cup for the champion team of three coming from any one school. This went to Willis Taylor, Zerbin Kline and Nevin Beishline, of the Millville School. Strange to say, not a member of this team won a first prize, Mr. Beishline being fifth in potato judging, Kline third in the swine

judging contest, and Willis Taylor fifth in the judging of poultry. The Millville team had an average of 84.49, beating out the Westmoreland County team with a score of 83.7 and the Center County team whose score was 83.275. The Millville team were coached by Supervisor of Agriculture, Guy Everett.

The contests were held under the direction of L. H. Dennis, Director of Vocational Education, and H. C. Fetterolf, Assistant Director. The presentation of the ribbons and cups to the winners was staged in the Y. M. C. A. building on the evening of January 20. Dr. L. M. Thompson, President of the Pennsylvania Federation of Holstein-Friesian Clubs as well as the Secretary and Director Paxton attended, the two former taking part in the presentation exercises.

"Another thing I would recommend to you is to keep an account book, and enter therein every farthing of your receipts and expenditures, the doing of which will initiate you into a habit from which considerable advantage would result."—George Washington.

Novel Home Work

The students at the Sevastopol, Wisconsin, High School who are studying vocational agriculture, are expected to take care of animals as part of their home work to supplement school studies.

Stanford, John and Earl Anschutz have recently purchased purebred Holstein calves from Dr. E. C. Humke. Other students will purchase purebred sows, and several will invest in poultry for spring projects. A number of boys have been testing milk for the farmers in order to get the necessary practice required for their school work.

Iowa Will Finance Junior Judges

Governor Kendall, in his biennial message to the Iowa legislature recommended that an appropriation of \$5,000 be made to defray the expenses of the Iowa boys who will represent the United States at the World's Junior Judging Competition which will be held in London, England, next June. These boys qualified by winning the United States championship for dairy cattle judging at the National Dairy Show last fall. Senator Johnson will introduce the bill in the Iowa Senate.

The three boys are Harlan Leonard, Lester Olson, and Raymond Monahan, all of Franklin County. They won over nineteen other teams at the Waterloo Dairy Cattle Congress, where Monahan was champion Holstein judge, and Leonard the champion Jersey judge in the junior classes.

Have Beef and Dairy Calves

There are sixteen members of the dairy calf club and fourteen members of the baby beef club, sponsored by the department of vocational agriculture at the Walnut High School, Walnut, Illinois. Curtis Plum and his son Orville, of Walnut recently visited the Rock River Farm and purchased four Holstein calves, which will be cared for and exhibited in dairy calf club work by Orville, Pearl and Harold Plum.

Well Worth Winning

The Beatrice Creamery Company, of Beatrice, Nebraska, offered to give a purebred yearling Holstein bull to the person through whose solicitation the largest amount of cream was shipped to the company. The contest closed January 1st, and C. D. Jenkins, representative of the Creamery Co., reports that Kenneth Stewart of Tilden, was the winner. The animal will come from the University Extension Farm herd and will be a very choice young fellow.

Made a Good Showing

Carl Imig, of Junction City, Wisconsin, was a prize winner in the National Dairy Show in the calf club classes. He has been a member of Rudolph Calf club for three years, and plans to remain in the club at least another year.

This is what Carl has to say about his work:

"My calf is a purebred heifer. I took a great deal of interest in feeding and caring for her. She was kept in

a box stall all summer. About a month before the county fair I put a wool blanket on her and two weeks before the fair I clipped her. I spent many evenings after the day's work was done leading, posing and brushing my calf.

"I was out of luck in getting started in my club work this year. I started with another calf that did not develop as I wanted to see it do. Then I turned all of my attention to the calf I am telling you about. She had not been fed for show purposes and so was undersized at fair time.

"However, I feel that I did fairly well, I won third prize at the Central Wisconsin state fair, second at the Portage County fair and thirteenth at the National Dairy Show in a class of sixty."

Vermont Calf Club Work

In 1922 calf clubs were organized in the towns of Addison, Weybridge and Waltham, Addison County, Vermont. These three clubs had twenty-one members who exhibited eighteen purebreds and nine grade calves at the Addison County Fair that fall.

In 1923 there were clubs in the townships of Addison, Weybridge, Waltham and Salisbury. Twenty-four members exhibited twenty-two purebreds and six grade calves at the 1923 County Fair.

Last fall there was a Boys and Girls' exhibit held in connection with the County Fair. At that event thirty-two boys exhibited forty-four calves, thirty-eight of which were purebred and six grade animals. These calves were all owned, raised and exhibited by the boys, and the quality of stock shown was a credit to them in their efforts to get started in the dairy business with the right kind of stock.

The special Holstein-Friesian class consisted of fifteen calves and two yearlings, all of which were owned by the boys. The picture from which our cover illustration was made shows the class of purebred Holstein calves. All these calves were registered in the names of their youthful owners.

In addition to taking entire charge of the animals, feeding them, and fitting them for the show, the boys have learned to judge dairy cattle, and some of them can give their fathers pointers on picking out good cows.

During the Fair, demonstrations were given by teams from different calf clubs on the subjects of judging; feeding dairy cattle and fitting animals for show.

Miss Mildred Everts, the County Club Agent, in her summary of three years of calf club work tells that forty-two members have raised and exhibited at the County Fair seventy-eight purebreds and twenty-one grade animals during the time the calf clubs have been in existence. In addition, four purebreds and several grade animals were raised by calf club members this year and not exhibited.

The path of success in business is invariably the path of common sense. Notwithstanding all that is said about "lucky hits" the best kind of success in every man's life is not that which comes by accident. The only "good time coming" we are justified in hoping for is that which we are capable of making for ourselves.—Samuel Smiles.

Canadian Membership Meeting

NEARLY 150 attended the 42d annual meeting of the Holstein-Friesian Association of Canada at Toronto, February 5th. President Walter M. Lea in his presidential address said that the registrations and transfers of the Canadian Association total more than double those of all other Canadian dairy breeds combined. We deplored the fact that the type of the early importations had been partly lost, probably due to the effect of breeding for record combinations. He commended the breeders for their splendid exhibits at leading Canadian fairs.

The report of secretary-treasurer Clemons showed a surplus of assets over liabilities of \$53,154.45. During the year 18,440 animals have been registered, 13,389 have been transferred and there were 347 additions to the membership. This is an increase of practically 40% in the number of registrations, fifteen per cent in transfers and nearly 40% gain in membership compared with 1923. During 1924 the certificates for Record of Merit work numbered 469 against 470 in 1923, while the number of Record of Performance certificates increased 94, there being 657 issued against 563 the previous year.

He reported that Holstein-Friesian cows had won almost all the dairy tests held during 1924, as well as those staged at the fall fairs.

The members adopted a plan for the advanced registration of sires, although the scheme is not at present entirely satisfactory to the Government Department of Agriculture which supervises long time tests.

As the Association published a year book during the past year which listed the largest records made by animals under their sires and under their dams, it was felt that it would not be necessary to print another such book this year.

The appropriation for fairs and dairy tests will be approximately the same as last year. The salary of the secretary and the auditors for the ensuing year was set as in 1924, Secretary Clemons receiving \$3,500 and each auditor \$25. The sum of \$10,000 was appropriated for extension work.

The members of the Canadian Association living in the province of Ontario elect eight directors at the time of the annual meeting. The men chosen are W. J. Elgie, Sault Ste. Marie; Ellsworth Plant, Brantford; George Aborgast, Sebringville; A. H. Hulet, Norwich; W. H. Cherry, Hagersville; Fred Lee, Springfield; J. S. Honey, Unionville and C. T. Houck, Chippawa. The members living in provinces other than Ontario elected their directors by mail vote, previous to the meeting. The following men were chosen: Maritime Provinces; Hon. Walter M. Lea, Victoria, P. E. I.; Quebec, P. J. Salley, Lachine Rapids, and N. Sangster, Ormstown, Manitoba, George Rice, Stonewall; Saskatchewan, C. W. Thurston, Regina; Alberta, J. H. Laycock, Okotoks; British Columbia, P. H. Moore, Essondale.

Secretary Clemons was unanimously re-elected secretary and treasurer. Mrs. Lottie Brown Hicks who has been Mr. Clemons' assistant for years and was married during the past year, was given the title Honorary Secretary. B. Mallory and George Curry were chosen as auditors. President Lea presented

Mr. Mallory with a gold headed cane in recognition of his long and valuable service to the Association.

The call for the meeting carried an amendment by R. M. Holtby providing for a reduction of registry fees. When he attempted to withdraw this motion a number of members objected, and also objected to a ruling of the chair that no one else could sponsor this motion without giving thirty days' notice of such intention. Members pointed out that their local clubs had indorsed the change and had they known Mr. Holtby would not press the amendment some one else would have done so. No vote however was taken, although members for and against the proposed change thought that those present should be given an opportunity to express their views.

The new board of directors met right after the members' meeting and elected officers as follows: President, P. J. Salley, Lachine Rapids, Quebec; 1st vice-president, C. T. Houck, Chippawa, Ont.; 2d vice-president, W. H. Cherry, Hagersville, Ont.; 3d vice-president, George V. Abrogast, Sebringville, Ont.; 4th vice-president, Joseph H. Laycock, Okotoks, Alberta.

A banquet was held at the Prince George Hotel the evening after the meeting with Hon. Walter M. Lea as toastmaster. It was well attended and a good speaking and musical program was presented.

Kansas Radio Service

RADIO service for 9,000 Kansas rural country schools and a rural Sunday service for thousands of communities without pastors was introduced by the extension service of the Kansas State Agricultural College on February 1st.

The program includes opening exercises for the schools, a housewives program at 11:00 A. M., each week day except Saturday, and a special musical program on Thursday evening. Music for morning songs, inspirational talks and five minutes of cales-thenic directions will be given to schools. Agricultural extension lectures are already sent out from the college through the powerful K. S. A. C. station.

T. B. Testing Required

THE 1923 Nebraska State Legislature passed a bill which contains the following:

"No person shall sell, offer or expose for sale, exchange or deliver any milk or cream to be used as such for human consumption, which has been obtained from any animal not examined and tuberculin tested, within one year immediately prior thereto by a duly licensed and authorized veterinarian and certified by him to be free from disease."

In case of emergency, the Department of Agriculture may grant permission to sell milk from untested cows, when it is properly pasteurized.

The oldest building in the world still standing above ground is said to be a small square temple, built by the Sumerian king, Aannipadda, of Ur, about 4500 B. C. It is nearly twice the age of the relics found in the tomb of King Tutankhamen.

NOT ABOUT COWS

Novelties in the Garden

IT is monotony that makes work seem drudgery. Very often greater muscular effort is put forth in athletics than is ever called upon in the course of every day work. Inconveniences are endured on pleasure trips that would call forth all sorts of expostulations if inflicted at home. It is not the toil, nor the long hours of labor that cause the every day tasks of life to become burdensome—it is the lack of novelty, the dreary monotony. Work becomes interesting enough when done with a new piece of farm machinery, or with a new labor saving device, or under any new conditions. And no work of any kind is so successful as that done by one who enjoys doing it. And so, what might seem drudgery to some—the cultivation of the family garden—may become a most interesting experiment if novelties are added to the list of vegetables usually grown, and many toothsome additions may be made to the family menu.

So, having plenty of garden room, and being of a somewhat experimental turn of mind, we have planted pretty nearly everything that grows except peanuts. Somehow, we never got around to trying peanuts, mainly because they need to be planted early in order to mature, and like most farmers' gardens, ours was seldom plowed until the rush of spring farm work was over. So the peanuts still remain one of the "might have beens." Nor have all our attempts been successful, for various reasons. The artichokes, which are perennials, were planted in one corner where they should have been safe, but when the hired man went out to plough the garden the next spring up they came. The mushroom experiment was also far from a success. They were planted in a box in the cellar, according to directions, and some came up, but good taste forbids telling what they tasted like. In fact, it took quite some time to live down the jokes made by the family because of the mushroom experiment.

Nevertheless, undaunted by these failures we have continued planting such things as took the fancy, sometimes just curious to see what they would turn out to be. And like many others, when ordering seeds in the early spring, our ideas were often very much bigger than our ability to care for so much garden stuff, which would bid fair to swamp us along in the hot days of August, so that we had to call for help. Year after year we have grown more than was needed for our own family use, but it has always been a great pride and pleasure to share with less fortunate friends, with their tiny town gardens.

BRUSSELS SPROUTS

One of the first "unusuals" has always been a row of Brussels sprouts. These little bud-like cabbages grow on a stem about two feet high, being produced abundantly from the top to the bottom, and have a delicious flavor. They are harder than any sort of cabbage, be-

ing available long after other vegetables are gone, for frost improves rather than hurts them. Pulled up by the roots, they may be stored in a cold cellar and kept well on into winter. They are cooked much like cauliflower, served with plenty of butter, or with cream sauce. They are about the only member of the cabbage family that can break into Society with a capital S, being often found on the menus of first-class hotels.

POP CORN

While this can hardly be classed as an unusual vegetable, yet it is surprising how few people include it among the seeds ordered when the garden is planned. Our first planting was from seed given us by a friend, and we have always saved our own from year to year, and cannot call it by name. However, it is the black variety, is tender and crisp when popped and it so large that little or none of the black shows. It may be "Black Beauty" as the description of that particular kind tallies pretty well with our usual crop. Anyhow, a generous supply of this pop-ular vegetable, or confection as it may later become, should be a part of every winter's supply of good things. Arthur Guiterman says in a very recent number of that well known weekly, *The Saturday Evening Post*—

Oh, popular is popcorn when it hops!
Unpopular is popcorn when it flops!
But there isn't any ration
For the pop-eyed population
More popular than popcorn when it pops!

There are still a number of vegetables that are seldom found in the average garden, but, lest the subject grow tiresome, they must wait until another day.

How to Cook a Husband

A GOOD many husbands are entirely spoiled by mismanagement in cooking, and so are not tender and good. It is far better to have none, unless you patiently learn how to cook him. See that the linen in which you wrap him is nicely washed and mended, with the requisite number of buttons and strings sewed on. Tie him in the kettle with a strong silken cord called comfort; duty is apt to be weak. Make a clear, steady fire out of neatness, love and cheerfulness. Set your husband as near this as seems to agree with him. If he sputters and fizzes do not be anxious. Some do this until they are quite done. Add a little sugar in the form of what confectioners call "kisses," but no vinegar or pepper. A little spice may be used—with judgment. If thus carefully treated he will keep as long as you want unless you become careless and set him in too cold a place.

"It is the duty of a citizen not only to observe the law, but to let it be known that he is opposed to its violation."—President Coolidge.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

FEBRUARY 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Washington on Learning

THERE is nothing which can better deserve your patronage than the promotion of science and literature. Knowledge is in every country the surest basis of public happiness. In one in which the measures of government receive their impressions so immediately from the sense of the community as in ours it is proportionably essential. To the security of a free constitution it contributes in various ways—by convincing those who are intrusted with the public administration that every valuable end of government is best answered by the enlightened confidence of the people, and by teaching the people themselves to know and to value their own rights; to discern and provide against invasions of them; to distinguish between oppression and the necessary exercise of lawful authority; between burdens proceeding from a disregard to their convenience and those resulting from the inevitable exigencies of society to discriminate the spirit of liberty from that of licentiousness—cherishing the first, avoiding the last—and uniting a speedy but temperate vigilance against encroachments, with an inviolable respect to the laws.

No Reflection on the Holstein Cow

THE present situation that has developed in the Holstein-Friesian Association is no reflection on the Holstein cow. We have every reason to believe that she is forging ahead, producing and reproducing in the same old way in the hands of the breeders and dairymen.

The Association that represents her has the appearances of being on a "FINANCIAL JAG." After the surplus money in its treasury becomes exhausted and no more funds are available possibly it will sober up. Whether it will recover its previous good reputation and regain the confidence of the dairy public or whether the breeders and dairymen will band themselves to-

gether to organize an Association for the special purpose of maintaining a Herd Register to preserve the purity of the blood of the breed and issuing registration and transfer certificates; an Association managed in a business way by the breeders, for the breeders, free from the Taint of Speculation, Sale Promotion and Political Manipulation, time alone will tell.

Meanwhile the hundred thousand purebred Holstein cattle born each year, that are not registered or transferred, will have to pass as grades and the breeders stand the loss. Any good which they do towards improving the dairy herds of America will not be a matter of breed record.

Delegate System Is Not Representative

IF a breeder living in the state of New York should want to send a delegate to the annual convention of the Holstein-Friesian Association to represent him and vote to decrease fees and check extravagance, it would be necessary for him to find nine other members to join with him in nominating a delegate to represent him. In case he could not find nine other men to agree with him, it would be impossible for him to be represented. In case he and nine other members would join together in nominating their delegate and every member in the state of New York voted to elect delegates, it would be necessary that 2,350 other breeders living in the state agree with him and vote for the delegate whom he had selected to represent him. Otherwise, he would be deprived of the voice of a representative of his own selection at the annual convention.

The Delegate Form of Government as it is being carried out in the Holstein-Friesian Association does not permit a majority rule. The voting power in the Association is divided according to areas and districts, making it possible for a few breeders living in certain districts to control delegates of the Annual Convention.

The area in which live the 25,040 members of the Association is divided into 51 districts. The 15,481 members residing in six of these districts have been allotted 84 delegates out of the possible 173 delegates that may attend the Convention. The other 45 districts that contain 9,559 members have been allotted 87 delegates. If 51% of the members living in these 45 districts would vote in opposition to the wishes of the members living in the six districts that comprised the majority of membership they would be able to control the Convention or 4,824 members living in 45 districts would be able to send representatives to the Annual Convention and defeat the wishes of the remainder of the membership or the wishes of 20,216 members.

If all of the 4,137 members living in the State of Wisconsin would vote in favor of decreasing the fees and adopting a Business Form of Government and send their 22 delegates instructed to vote their wishes and the 4,698 members living in the State of New York, the 2,110 members living in Pennsylvania, the 1,184 members living in Illinois and the 1,990 members living in Ohio would all follow the example set by Wisconsin and send their delegates to the Annual Convention instructed to vote for a reduced fee and the adoption of a Business Form of Government, the total

number of delegates to which they would be entitled would be 84.

If to these 15,481 breeders represented in these six leading Holstein districts we add the 4,735 breeders living in the remaining 45 districts who are in favor of reducing fees and the adoption of a Business Form of Government by the Association, 20,216 members who were in favor of reduced fees and a Business Form of Government would be defeated because they are only entitled to 84 delegates and the 4,824 members who were in favor of continuing the increased fee and the Political Form of Government would be in control.

The above shows how unfair a Political Form of Government might be when applied to managing a Business organization such as the Holstein-Friesian Association should be. Justice can not prevail in a business organization under such management.

On Taxing Newspapers

I CANNOT forbear to recommend a repeal of the tax on the transportation of public prints. There is no resource so firm for the Government of the United States as the affections of the people, guided by an enlightened policy; and to this primary good nothing can conduce more than a faithful representation of public proceedings, diffused without restraint throughout the United States.—George Washington.

We Suffer By Comparison

IN direct contrast with conditions in the Holstein-Friesian Association of America are the conditions in the Holstein-Friesian Association of Canada, as revealed at the annual meeting of that association held in Toronto, February 5th. Both registrations and transfers in our association fell off last year, but in the Canadian association there was an increase of practically 40% in registrations, a gain of 1,685, or nearly 15% in transfers, and an increase of nearly 40% in new members over the number of the previous year.

Even better was the financial report. The Canadian Association started the year 1924 with a deficit of \$123.48. It finished the year with the substantial balance of \$16,654.45. Contrast this with our own association, which despite the fact that it charges higher fees, ran \$30,000 behind last year.

What is the reason for the difference? Canadian agricultural conditions are no better than they are in the United States. If there is any difference, they're not as good. Nature seems to have favored this country during the past year, and in nearly every crop the harvest was better south of the border than it was north. The cows are the same breed and in many cases the families are common to herds each side of the border. Considering the breed herd by herd and animal by animal, we believe we have just as good stock in the United States as they have in Canada, and do not see where they could be any difference. Then the reason must lie in the management of the two associations, and in the amount of confidence the members have in the officers in the head of the respective organizations.

The official statement of the Holstein-Friesian Association of America shows that during 1924 there was a falling off in the number of animals registered, in the number of transfer certificates issued, and in the number of breeders becoming members of the National Association. During 1924, 5,217 less animals were recorded than were recorded during the twelve months of 1923. During the past year 4,312 less transfers were issued than were during the year 1923. And while we do not believe the number of members gained reflects so fully the state of the industry, yet 301 less breeders joined the association during the recently elapsed year as became members during 1923.

It is apparent that the Canadian Association and its managers have very closely confined themselves to the legitimate work of a purebred cattle recording organization. A conservative amount of extension work has been done. The inquiries for cattle have been furnished with literature descriptive of the breed, but there has been little, if any, attempt to play politics, to provide salaries for political workers disguised as extension workers or paid state secretaries. There has been no attempt to exploit half baked schemes formulated by men who have had little or no experience whatever in the dairy or purebred cattle business. Considering these things, it is very easy to see why the Canadian Association during 1924 made a profit, and the American Association during the past two years, under conditions no less favorable, so managed its business that its income ran \$90,000.00 behind its expenditures.

47,365 Less Transfers in Two Years

DURING the past two years there has been a falling off in the amount of business that has been transacted by the Holstein-Friesian Association. Instead of the Association recording an increased number of registrations and transfers each year as it did in former years and as it would have to do in order to keep up with the natural growth and development of the breed, it is recording less.

During the year ending April 30, 1920, the Secretary's report shows that 114,503 animals were registered and 131,823 transfer certificates were issued. Thus the breeders were able to dispose of all of their increase and 17,320 additional animals.

The Secretary's report for the year ending December 31, 1923 shows that 116,127 registration certificates were issued and only 91,992 transfer certificates or during that year the breeders were left with 24,135 surplus animals on their hands. The past year ending December 31, 1924 the Association issued 110,910 registration and 87,680 transfer certificates or during this time the breeders have accumulated, according to the Association's report, a surplus of 23,230. For the past two years the Association has issued 47,365 more registration than transfer certificates.

The falling off in the number of transfer certificates issued for the year 1924 of 44,143 less than were issued during the year ending April 30, 1920, represents only partly the true picture of the relations that exist between the breeders of Holstein-Friesian cattle and the Association that represents the breed.

The average increase in the number of transfers for the five years ending 1920 was 13,009. The estimated number of transfer certificates that the Association should have issued for the year 1924 in order to keep abreast with the natural increase of the breed would be 192,531. Not half of the natural increase of the breed is apparently being registered or transferred.

Thus, as a Registry Association, the Holstein-Friesian Association is drifting backwards. Under the present management, it seems that the Association has become a collector of money and a disseminator of propaganda rather than a renderer of service.

The transfer fee to members is now six times what it formerly was. The managing expenses of the Association have more than doubled. Its operating expenses during the past two years has exceeded its income in fees collected by over \$90,000.00. At the same time the Association is registering fewer animals and is issuing a decreasing number of transfer certificates, 44,143 less transfer certificates being issued this past year than the year ending April 30, 1920.

The Trend of the Times

MILK is one of our most important foods. It is essential to the life of the infant, health and normal development of children and to the well being of the nation as a whole. A good milk supply is one of the most important assets of any community, and in recent years marked advance has been made in the quality of milk in the cities and towns of this state.

Originally, milk was consumed close to the source of production; the cow supplied the needs of her owner's family, with perhaps a small surplus for neighbors. Gradually, civilization became more complex and people clustered in cities. As cities grew, dairying was pushed further away from markets, so that a system had to be evolved to transport and distribute milk from the dairy farm to the consumer.

The increased complexities in handling the milk necessitates a rather elaborate system of control which

calls into play all the resources of the sanitarian and the bacteriologist. These factors, in connection with the magnitude of the business, make the market milk industry one of the most highly specialized in agriculture.

The proper production and handling of market milk requires the highest type of scientific skill. Boards of Health in the large cities are constantly calling for better quality, quality being understood as freedom from dirt or any contamination and for increased keeping qualities which, as a general rule, means very nearly the same thing. The market milk producer of the near future is going to be considerable of a milk specialist.

Milk for Paralytics

FAVORABLE results following the use of milk injections in the treatment of general paralysis of the insane are reported by the Budapest correspondent of the Lancet on the authority of a lecturer in the Budapest Royal University who is also director of a large psychiatric institute. Some forty cases of general paralysis, chorea and epilepsy were treated with sterilized milk given in 10 c.c. doses injected under the skin of the abdomen.

Talk about appropriate names. The head of the British Government Veterinary Department is Sir Stewart Stockman. In his 1923 report he says that were 1,929 outbreaks of foot and mouth disease in Great Britain during 1923 and 1,140 in 1922. From the beginning of 1923 to the end of May, 1924 there were 3,132. In the county of Cheshire one-third of the cow population of the county was killed either because of infection or to prevent spreading.

It cost the country 3,325,286 pounds sterling as compensation for slaughtered stock in the outbreaks occurring between the end of August 1923 and May 1924.

More farmers fail because of poor farm management than because of poor production.

THE PRACTICAL DAIRYMAN

THE IMPORTANCE OF WATER

Milk is 87 per cent water, and the body contains 56 per cent water. It is obvious, then, that plenty of clean fresh water should be provided at all times. Too many farmers depend upon creeks and ponds for the drinking water of their dairy herds. These supplies often become contaminated and stagnant during dry periods, and the dairy cows suffer from lack of good clean wholesome water, which is reflected in the amount of milk produced. Also, these stagnant water supplies often cause bad odors and flavors in the milk through the introduction of undesirable types of bacteria. Whenever it is not possible for the cow to have access to fresh water at all times during the day, she should at least be watered twice a day. The average cow will drink from ten to twelve gallons of water per day and the heavy producers more in proportion.

J. P. LAMASTER.

COWS AND MINERALS

Dairy cows must have plenty of salt in order to thrive. Allow them to have free access to salt or feed it to them in their feed. Many dairymen mix 0.5 to 1 pound of salt with each 100 pounds of concentrated mixture or grain mixture, and then supply salt in addition so the cows can take what they wish.

If trouble has been experienced from goiter or "big neck" in calves this may be prevented in the future by giving potassium or sodium iodide to the cows during their gestation period. Where there is no trouble from goiter, this treatment is not needed.

Milk is very rich in both calcium (lime) and phosphorus. Therefore, dairy cows must receive liberal supplies of both these minerals to secure continual high production and to have a thrifty offspring. In the usual dairy rations there is more danger of a lack of calcium than there is of phosphorus. This is because the protein-rich feeds most common in Wisconsin are also rich in phosphorus. This includes wheat bran in particular and also wheat middlings, cottonseed meal, and linseed meal. Gluten feed, germ oil meal (corn germ meal) or brewers grains and distillers grains are not especially high in phosphorus.

When 20 per cent or more of the concentrate mixture or grain mixture consists of wheat bran, wheat middlings, linseed meal, or cottonseed meal, the cows will get plenty of phosphorus. If less of these high-phosphorus feeds are fed, it is best to supply additional phosphorus by adding bone meal, ground rock phosphate, or acid phosphate.

A large production of milk and thrifty calves are an impossibility if there is a lack of calcium in the ration. The best way of furnishing plenty of lime is to grow and feed an abundance of alfalfa, clover, or soy bean hay whenever it is possible. All legume hays are rich in lime. Furthermore, well-cured, green colored legume hay contains a vitamin which animals need to enable them to assimilate and use the calcium in their feed.

If poor roughage must be used, such as hay from the grasses (not legumes), corn stover grown on acid soil, or straw, add 3 to 4 pounds of ground lime-stone, wood ashes, or dried marl to each 100 lbs. of concentrate or grain mixture.

If there is not 20 per cent of high phosphorus feeds in the concentrate mixture (wheat bran, wheat middlings, linseed meal, and cottonseed meal), it is best to use 3 to 4 pounds of steamed bone meal, ground rock phosphate, or acid phosphate with each 100 pounds of the concentrate mixture, instead of using the limestone, wood ashes, or marl. Bone meal and the phosphates supply both calcium and phosphorus, while limestone, wood ashes, and marl furnish lime but practically no phosphorus.

If plenty of alfalfa, clover, soy bean, or other legume hay is fed, then there may possibly be no advantage in adding a calcium-rich mineral supplement to the ration. However,

even with legume hay available for winter feeding, it can do no harm and may do considerable good to add one of these lime carriers to the ration.

Fresh, green crops contain an especially large amount of vitamin needed to enable animals to assimilate calcium. Therefore, the best way of replenishing the calcium in the cow's body, which may have been seriously depleted by high milk production during the winter feeding period, is to feed a calcium supplement when she is on pasture. Therefore, it is especially important to mix one of the calcium-rich supplements with the concentrate mixture fed to cows on pasture. It is probably best to use more of the calcium-supplement than for winter feeding. As much as 8 to 10 pounds of one of the calcium supplements may be mixed with each 100 pounds of concentrate mixture. If this mixture should not be very palatable to the cows, the allowance of the mineral supplement may be reduced somewhat.

When the cows are not fed any concentrates during a part of the pasture season, the calcium supplement may be mixed with salt and the cows allowed free access to it. A mixture of one-half salt by weight with one-half limestone, wood ashes, marl, steamed bone meal, or ground rock phosphate may be used for this purpose. In recent experiments at the Wisconsin Experiment Station as much as 1/2 to 1 pound of steamed bone meal per head daily has been fed to dairy cows under pasture conditions with good results.

DAIRY BARN FLOORS

Dairy barn floors are usually made of clay, wood, concrete or cork brick. While the latter two are more expensive, when the first cost is considered, floors constructed of either material are certainly most satisfactory, permanent and cheaper over a period of years. Very satisfactory floors have been made using wood and clay, and floors of these materials are fairly easy to keep clean if properly constructed. At best, however, clay or wooden floors can only be recommended when the necessary capital for concrete or cork brick is not available or future plans are not definitely formed.

If clay is to be used, it is advisable to mix it with lime, the mixture being wet thoroughly and firmly packed. This type of floor is much superior to the common dirt floor. However, it will need constant repair, as it will continually wear in places especially at the location of the front and hind feet of the animals. A very good idea, when either dirt or clay floor is used, is to construct a wooden gutter behind the cow platform and place a 2x12 inch board on either side to prevent wearing by the constant wear due to the feet of the animals.

The wood floor is more satisfactory than the clay, in that it will last longer and is more easily kept clean. However, it will be more expensive than clay and will need replacing every few years. If wood is used, the boards should be placed tightly together to prevent any of the droppings and urine from seeping through the cracks, and thus cause an accumulation of filth and bad odor in the barn.

The concrete floor once installed is permanent. Floors of this material are easily kept clean, especially where there is running water; and much labor is saved in keeping a floor of this sort in a sanitary condition at all times. The first cost is expensive of course, but is practically the only cost.

To be satisfactory, a concrete floor should have a wood trowel finish on the cow alleys. This leaves a rough surface to prevent the cows from slipping which often causes serious injury, such as enlarged knees and the premature birth of calves.

The thickness of the concrete floors throughout the barn should be five inches, four inches of grout, (1 part cement, 3 parts sand and 5 parts gravel or stone), with a finish dressing of 1 inch, (2 parts sand and 2 parts cement).—Clemson College Dairyman.

CLUB ACTIVITIES

CENTRAL PENNSYLVANIA BREEDERS

The annual meeting of Central Pennsylvania Holstein Breeders Association was held in the Fern Hall at Halls Station, on the afternoon of February 7th. Twenty-two members were present. A banquet was served to the members and their friends in the evening.

At the business session the following officers were elected to serve for the ensuing year: President, H. H. Blair, of Williamsport; vice-president, H. R. Paulhamus, of Hepburnville; secretary-treasurer, T. L. J. Reese, of Montoursville. The executive committee includes: O. A. Shirey and Philip Antes, of Williamsport, and Lawrence Losh, of Montoursville.

The meeting was addressed by Allen N. Crissey, the district field man. The members discussed the formation of a Cow Testing Association in Lycoming County, and preliminary steps have already been taken to organize such an association.

LOUDERBACK NOW PRESIDENT

The members of the Colorado Holstein-Friesian Association at their recent annual meeting elected C. F. Louderback, business manager of the Modern Woodmen of America sanatorium, as president. Dr. George E. Carr of Brighton was elected vice-president, and Mrs. Storrs Hall, of Denver, was re-elected treasurer. The new members of the board of directors are: George T. Stinton of Colorado Springs, W. S. Patridge of Lamar, Arthur Ponsford, Ben F. Simpson and Casper Hofman, all of Denver.

PLAN GOOD PROGRAM

The Sanilac County Holstein-Friesian Association held its annual meeting at Sandusky, Michigan late in January and elected for officers the following:

President, George Black, Sandusky; vice-president, Ralph Wood, Melvin; secretary, Oscar Buschlem, Snover; members of executive committee, M. W. Frey, Brown City; Oscar Merriman, Deckerville; Ed. Van Camp, Croswell; William Malloy, Palms.

It was decided at this meeting to carry on three lines of work for the coming year—eradication of T. B. among cattle with Horace McElhinney, of Peck, as deputy to head this work; an exhibit at the local fairs, Ralph Wood to have charge of this work; while George Black will look after the advancement of the C. T. A. Work. Another meeting will be held some time in June.

MINNESOTA BREEDERS' MEETINGS

The annual meeting of the Minnesota Livestock Breeders' Association was held at the University Farm, January 2 during Farmers' and Home Makers' Week.

During 1924 the association handled \$16,231.89, which included a \$5,000 state appropriation and contribution from the business interests of Minneapolis and St. Paul in support of Junior Livestock Club work and the Northwest Dairy Show, which was held in connection with the state fair. The largest amount went to pay the premiums and expenses of the competitors at the Junior Livestock Show. Other activities to which the association contributed sums, ranging from a small amount up to nearly \$1,000 included county colt shows, the state ton litter project, beef cattle, hogs, sheep and poultry judging contests, a dairy judging contest, the dairy calf show at the state fair, and financial assistance to the Holstein, Jersey horse and swine associations of the state and to the Block and Brindle Club of the agricultural college. An appropriation of \$10,000 will be asked from the next legislature for the work of the association.

F. E. Miller, of Canby was elected president. Charles Crandall, Randolph, first vice-president; James O'Connell, Le

Sueur, second vice-president; J. S. Montgomery, South St. Paul, secretary; C. W. Glatfelter, Waterville, treasurer.

The affiliated breed associations held their special meetings. The state Holstein Breeders Association at its meeting discussed the purebred sire campaign in which they coöperated.

Forty-seven purebred sire campaign meetings were held with an attendance of 4,050. Thirteen counties have been covered with an average of sixty-four sires placed in each county.

Blue Earth County led with total number of bulls purchased, 106; Wantonwan was second with 80; Waseca third with 80. The total number of bulls of all breeds sold was 852 divided as follows: Holstein, 382; Shorthorn, 219; Guernsey, 211. Brown Swiss, 12; Jersey, 9; Angus, 7; Hereford, 7; Red Poll, 4; and Ayrshire, 1.

A resolution was proposed to have a bill presented to the legislature exempting from taxation one purebred sire on each farm. Discussion brought out that this thing had been attempted in Wisconsin several years ago and found to be unconstitutional. A committee was appointed to investigate the assessment of registered cattle. This committee will meet with committees from the other breed associations and of the State Livestock Breeders' Association.

A resolution was passed that the state association was at all times willing to give at least moral support to the efforts of Farm Bureau Agents to promote calf club and establish cow testing associations.

Another resolution was that it was the sense of the association that standards of production and conformation should be established for all animals sold through or by the association.

A third resolution recommended to breeders not already doing official test work that they place their cows on test in subdivision C which provides for milking twice a day. (Our report does not bring out whether this resolution is intended to favor official testing as against cow testing association work but it certainly seems strange that no mention whatever was made in this resolution of cow testing association work.)

Officers elected were: President, E. T. Winship; Vice-president, J. C. Marlow; Secretary-Treasurer, Robert Geiger. The directors elected were E. T. Winship, Axel Hansen, P. O. Holland, J. C. Marlow and Ben Glantz.

Many thinking farmers are changing over to the manufacturing business with butter, bacon, and eggs as products.

Home Raised Heifers

Daughters of KING MADALINE BUTTER BOY, a champion show bull whose four nearest dams have seven-day official records averaging 27.42 lb. butter, including his dam as a junior two-year-old.

Herd Accredited. What can I do for you?

Glenn C. German

Allegany County

Cuba, New York

RE-ELECT ALL OFFICERS

All officers of the Skagit County Holstein Breeders' club were unanimously re-elected at a meeting held at Mt. Vernon, Washington, January 20th.

Thomas Lockhart will still remain the head of the organization. Other officers are George Lawson of Blanchard, vice-president; Peder Lee, Mount Vernon, secretary; Peder Omdal, Burlington, treasurer, and Ben Otterstad, Mount Vernon and R. A. Waugh, Burlington, directors.

IN GREEN COUNTY

Fred C. Coldren of Juda, Wisconsin, was re-elected president at the annual meeting of the Green County Holstein Breeders Association. Conrad Oilz succeeds Albert Babler, Jr., as first vice-president, and I. C. Marty is second vice-president. John W. Keating was again named secretary, and Henry W. Habernab, treasurer.

The directors of the association named were, Iver Ellingson, J. H. Roderick, C. W. Chambers, Theodore Payrhofer, Henry C. Elmer and Roscoe Smith.

NATIONAL T. B. ERADICATION WORK

Progress in tuberculosis eradication work was reported during December, 1924, by United States Department of Agriculture.

The number of herds of cattle officially accredited as free from tuberculosis, reached the total of 60,639, containing well over a million head of cattle. Tuberculin testing was particularly active during the month in Minnesota, Iowa, Wisconsin, Illinois and New York. Each of these States had more than 35,000 head of cattle tested.

The number of counties accredited as being virtually free from bovine tuberculosis increased from 48 to 53 during December, the gains occurring in North Carolina, North Dakota and Kansas. The remarkable popularity of tuberculosis eradication work, which is conducted coöperatively by the Department of Agriculture and the various States is seen in the consistently large waiting list of herds to be tested. On the first of January, this year, the waiting list included 223,192 herds containing nearly 2½ million cattle.

KAVANAUGH CONTRASTS CONDITIONS

The annual meeting of the Shawano Holstein Breeders Association was held January 24th at Shawano, Wisconsin, county agent A. C. Murphy, acting as chairman.

The principal speaker was J. N. Kavanaugh, Brown County agricultural agent. Mr. Kavanaugh said in part:

"The permanency of the dairy industry in Wisconsin has been established and become closely allied with the lives of people from the health standpoint as well as from a commercial and financial basis, involving many millions of dollars annually.

"Cow testing associations should be established, the 'boarder cow' disposed of and butterfat produced as cheaply as possible. In the little country of Denmark, one of our greatest competitors in the dairy world, there are more than 800 cow testing associations, while Wisconsin has only 157 such organizations in operation. Thus Wisconsin farmers are feeding hays and grains to their dairy cattle and keeping no records to see which cow is paying for her feed. Such methods may be compared to the farmer who sells his oats at 30 cents a bushel when he had been offered 75 cents a bushel for the same oats."

Mr. Kavanaugh as well as M. J. Wallrich spoke on business morals in livestock sales. R. H. Fischer, secretary of Shawano County Agricultural Association urged the breeders to show livestock at the fairs for advertising purposes. The Association went on record as favoring the establishment of Cow Testing Associations in various parts of the county.

At the election of officers Richard Gehnke, Bonduel, was chosen president; Ferdinand Stegge, Embarrass, vice-president; A. C. Murphy, Shawano, secretary-treasurer and Otto Wagner, Bonduel and Norbert Brunner, Leopold, directors.

Burglar (after turning dial of radio and arousing household): "Hell, I thought that was a safe!"

NEW HOME FOR SHOW BULL

Woodcraft Pontiac Champion Star, the young bull which won the male junior and grand championship at the recent National Western Livestock Show, held at Denver, Colorado has been sold by the Modern Woodmen Sanatorium to Paul V. Patridge, manager of the Willow Springs Farm, Mt. Morrison, Colo.

Woodcraft Pontiac Champion Star won many honors for the Woodmen herd last fall. Shown as a senior yearling he

WOODCRAFT PONTIAC CHAMPION STAR

Grand Champion Holstein Bull at the Western Livestock National, Denver, Colo. Just sold by the Modern Woodmen Sanatorium to Willow Springs Farm, Mt. Morrison, Colo., Paul V. Patridge, Mgr.

was junior champion at the Iowa Nebraska and Illinois State Fairs; was junior and grand champion at the Missouri State Fair and the Kansas Free Fair. He was second in his class at the Waterloo Dairy Cattle Congress and fourth at the National Dairy Show. He is a son of King Pontiac Parthena, himself a noted show bull and a former grand champion at the National Western Livestock Show. His dam has a record of 816 lb. butter, 21,747 lb. milk in ten months.

HEADQUARTERS FOR YOUNG STOCK

Every animal in this herd with the exception of the sire at its head, was raised here.

LAST CALL

H. R. Remley dispersal sale to be held at Watsonstown, Pa., March 7, 1925.

COMING SALE OF HIGH CLASS ANIMALS

Animals from the herd of W. A. Woods, Carlisle, Pa., have sold for big prices at public sales. At the first Brentwood Sale, Princess Nell Ormsby after winning first prize in the two-year-old class in the show connected with that event, was struck off at public auction for \$3,000. The next year another two-year-old heifer, sired by the Woods herd bull, King Ormsby Abbekerk Helena, brought \$900. Therefore the news that Mr. Woods intends to sell his animals, retaining only one cow for his own use, naturally attracts the attention of eastern breeders.

The Woods herd will be sold at public auction March 12 on the farm which lies between Carlisle and Huntsdale, Cumberland County, Pa. It contains a number of well bred animals, stock of fashionable blood lines. The six three-year-old daughters of King Ormsby Abbekerk Helena are an attractive bunch, possessing much of the individuality of their sire who is regarded by many as the handsomest son of King of the Ormsbys. King Ormsby Abbekerk Helena is from a daughter of Korndyke Abbekerk and thus has the same combination of blood lines as is found in many of the animals making up the noted Winterthur Herd. There is also a yearling son of King Ormsby Abbekerk Helena from an A. R. O. daughter of King of the Ormsbys with a record of 736 lb. butter, 15,968 lb. milk in strictly official test as a two-year-old.

As the Woods herd is small Mr. Ivo V. Otto of the Boiling Springs Herd is consigning half a dozen good animals. One of his cows, Westover Madaline Burke in C. T. A. work produced in four years 54,890 lb. milk, 2,263.2 lb. butter and she made a profit over cost of her feed of \$685.76. There are two daughters of this cow in the Otto consignment, as well as two granddaughters. Both of the daughters and one of the granddaughters are by Lothian De Kol Korndyke, the splendidly bred sire that has stood at the head of the Boiling Springs Herd. The work of this bull's daughters is so impressive that the authorities in charge of the herd at Pennsylvania State College have secured his services.

One of the granddaughters is by Bonair Colantha Ormsby Champion, whose dam produced 21,022.4 lb. milk, 828.17 lb. butter in ten months in the Dairyman's Division making world's records in that division for both milk and butter at that time.

Mr. Otto consigns a bull calf by Lothian De Kol Korndyke from Boiling Springs Segis Pontiac, 26 lb. butter, 656 lb. milk in a week. This cow in five years of C. T. A. work is credited with 69,087 lb. milk, 2,907.6 lb. butter and she made above the cost of her feed a profit of \$905.01. Her full sister made the world's record in the Dairyman's Division and the entire family are noted for production as well as individuality.

From the Otto herd also comes a bull calf by Lothian De Kol Korndyke from

Boiling Springs Hartog, a 25 lb. senior three-year-old. Tested as a junior two-year-old this heifer produced in the Dairyman's Division 14,697 lb. milk, 623 lb. butter in a year, making a world's record for milk in that division at the time of making and within one-half pound of the world's butter record. Both the Woods herd and the Otto herd are fully accredited.

The herd of H. E. Robertson was exhibited with signal success at a number of great fairs last fall and from this herd there are consigned two yearling heifers from tested dams together with a yearling sister whose dam produced over 13,000 lb. milk in a year as a two-year-old; one three-year-old heifer making up a quartet of daughters of Mr. Robertson's well-known herdsire, King Piebe of York.

King Piebe of York 3d, the junior herdsire at the Robertson Farm has won many prizes in the show ring and will be represented in this sale by two yearling heifers one of which is capable of holding her own in almost any company. A good five-year-old cow, sired by a son of King of the Pontiacs and heavy in calf by King Piebe of York is also consigned.

This herd also sends King Piebe of York 28th, a son of the senior herdsire from a cow with a year record of 21,517.6 lb. milk, 852.65 lb. butter.

Mr. Woods has almost as good a reputation as a breeder of big type Poland China hogs as he has as a breeder of Holsteins. Forty registered hogs will be offered also a pair of mare mules. Mr. Woods says they are sound and quiet and as good a pair as ever grew. They weigh around 2,300 lb.

THE H. R. REMLEY DISPERSAL

On March 7th, at Watsonstown, Northumberland County, Pennsylvania, on the H. R. Remley farm, the Remley herd of registered Holsteins will be sold at public auction.

The Remley herd has won many prizes in the show ring and there is not a single blemished animal among them. Several of the females have creditable official records, and a number are of strains of breeding noted for large record making. There is a granddaughter of Colantha Johanna Lad with practically 24 lb. of butter in a week while another, a yearling heifer, is from a cow with a 33.9 lb. official seven day record made as a four-year-old.

The herdsire is from an 18 lb. two-year-old daughter of a 30 lb. cow and was sired by Cornucopia Ormsby Lad, by many believed to be the best transmitting son of that great sire, Ormsby Korndyke Lad. At this time we may mention that O. K. L. Katie Paul, a daughter of Ormsby Korndyke Lad, recently broke all Southern records by making 36.95 lb. butter during an official test week and this as a junior four-year-old. This is by far the largest record ever made in any southern state by an animal of any age.

The catalog will be prepared by the Backus Pedigree Company and the manager of that company, R. Austin Backus, will be in the box on sale day. The herd has been regularly tuberculin tested, and the animals will be sold with a 60 day retest guarantee.

The H. R. Remley farm is two miles from Watsonstown but is only one and a half miles from Dewart, a station on the Pennsylvania Railroad at which all forenoon trains stop. When writing Mr. Remley at Watsonstown for a catalog, don't forget to mention that you read of his sale in the BREEDER AND DAIRYMAN. But plan to attend, whether or not you write for catalog as there will be plenty on hand to the time of the sale.

THE BONNYMEADS HERD SALE

When the Bonnymeads herd is dispersed at public auction March 25th, there will pass out of the Holstein breeding business an establishment that has been engaged in that business for over thirty years. Bonnymeads Farms are owned by an estate and changes in the personnel of the owners throw the herd on the market. At the present time there are one hundred females besides the two herdsires. In an early issue we will attempt to give a partial history of the herd but will content ourselves at this time by saying that all the cattle on the farm to the number of 102 head will be absolutely sold on the 25th of March.

Col. Glenn R. Mead of East Aurora, N. Y., will sell this great bunch of purebreds and will be assisted by Col. J. C. Hess of Hershey, Pa., a local auctioneer held in great esteem in his section of the country, a man whose services are in great request. The pedigrees will be explained by S. R. Miller, of Chambersburg, Pa., who has known the herd for many years and knows pedigrees and Holsteins away back to the day of early importation. Manager Hiram Billett plans to have everything in good order for the convenience of visitors on sale day.

Bonnymeads Farms are within a mile of Harrisburg city line and trolley cars pass the door. This will be the greatest one day sale of Holsteins ever held in central or southern Pennsylvania. Do not miss it.

HOLSTEIN BULL. Three of his dams averaged 108 pounds milk 1 day. 40.48 lb. butter 7 days. \$125.00.
WISCONSIN LIVESTOCK ASSOCIATION, Appleton, Wis.

Will exchange few finely bred Registered Holstein heifer and bull calves for Dairyman's League certificates.
MAPLE LAWN FARMS, Cortland, N. Y.

To Avoid Inbreeding WE WILL SELL

KING RAG APPLE PLUM COPIA

five years old, showy and attractive, very kind and easy to handle.
His sire carried 68 3/4% of Pontiac Korndyke blood, his dam is the great De Kol Plum Copia, 33.26 lb. butter in 7 days as a six-year-old, 30.47 lb. butter in 7 days 120.63 lb. butter in 30 days with a daily milk average of 92.3 lb.
Come and see him and his offspring in our
ACCREDITED HERD
MAPLE RIDGE FARM
J. S. & F. R. HOWARD, Proprietors
Susquehanna County Springville, Pa.

OUR KIND

This heifer was bred in our herd as was her dam and granddam.

Such heifers grow into producing cows that make good wherever they go.

L. N. MACK & SON and
FLOYD E. MACK
Montrose, Pennsylvania

Herd under State and Federal Supervision. We have 120 head to select from.

KING SYLVIA PONTIAC PIETJE

combines individuality of a high order with remarkable breeding.
His sire is Champion Echo Sylvia Pontiac and his dam, who made 659.8 lb. milk, 26.23 lb. butter in 7 days as a junior four-year-old, is a granddaughter of May Echo Sylvia and the 33-lb. cow Alma Clyde.
The only reason I would sell him is that my herd of 60 purebreds contains many of his daughters.
Come and see him and my herd which is now on the ACCREDITED list.

MRS. MAUD DWIGHT,
South Otselec Chenango Co., N. Y.

Cow Testing Association Reports

BOTH GRADES AND PUREBREDS

From December 16, 1924 to January 16, 1925, no less than 300 cows were tested in the Spring Green-Wyoming C. T. A. The three leading places were taken by black and white cows, a grade Holstein being first with 58.8 lb. fat, another second with 55.1 lb. fat, while the third cow was a purebred Holstein with 1,353 lb. milk, 52.8 lb. fat to her credit. She was owned by Fred Meudt, who also owned the grade that won first position.

GOOD COWS IN CUMBERLAND COUNTY

In his report of the January production in the Cumberland County Testing Association, Tester A. A. Raudabaugh says that during the month 26 herds, containing 248 cows in milk were under his supervision. Of this number 71 exceeded 40 lb. fat, 21 produced over 50 lb., while 58 cows made 1,200 or more lb. milk.

The leading producer was Martha, a registered Holstein, owned by Abram M. Lehman. She is credited with 2,424 lb. milk, 77.6 lb. fat. Second is Flossie, a purebred owned by Jacob H. Lear, of Carlisle, Pa., with 75.9 lb. fat, 1,947 lb. milk. Third on the list is the registered Holstein, Veeman, owned by Paul Gible, of Hogestown, with 71.2 lb. fat, 2,093 lb. milk. The highest milk producer is a grade Holstein, owned by Samuel E. Raudabaugh, of New Kingston, with 2,458 lb. Raymond Shugart, G. W. Strock, Ivo V. Otto, and C. G. Niesley, also had cows in the leading ten, which by the way, were all black and white. Their average was 1,974 lb. milk, 69 lb. fat, and their average test was 3.5%.

Paul C. Gipple had the high average for both milk and butterfat, the figures

being 1,411 lb. milk, 47.5 lb. fat. Jacob Lear's 12 registered Holsteins averaged 1,230 lb. milk, 40.5 lb. fat. The herd of C. G. Niesley, of Churchtown, produced 11,587 lb. milk during January, with an average test of 3.92%. Despite the fact that nearly all of the animals owned by L. D. Weary, of Carlisle, had been in milk since August, his ten animals produced 11,254 lb. milk, 387 lb. fat during January.

IOWA COW TESTING

Edward Hansel of Manchester, Ia., has a Holstein cow which produced 2,858 lb. milk, 102.9 lb. butterfat in one month. This brought an income of nearly \$50.

The Hudson Coöperative Creamery Co. stood fifth among the coöperative creameries of Iowa for amount of fat handled during November—42,008 lb. In October, the Hudson Creamery was seventh having taken in 45,441 lb. in that month. The rate paid in November to 550 patrons was 54 cents a pound for butterfat, compared with 46 cents in October. The largest amount for both months was taken by Thomas Hansen of Cedar Falls, whose purebred Holstein herd earned him \$212.24 in October and \$304.45 in November. A polled Shorthorn herd was second each month. M. E. Walters' Holstein herd was third in November earning their owner \$194.34.

First place in the Tama County, Iowa, Testing Association for the month of November was taken by a purebred Holstein owned by J. E. Raudabaugh, his cow being credited with 1,655 lb. milk, 61.2 lb. butterfat. The Raudabaugh herd averaged 1,012 lb. milk, 31 lb. butterfat, but first place was taken by Robert Mit-

chell whose six grade Holsteins averaged 1,217 lb. milk, 43.7 lb. fat. The five highest herds consisted of black and whites.

Two dozen Holstein breeders living around Fort Dodge, Ia., planned to organize a cow testing association in Webster County. They have formed an organization and have elected officers as follows: R. A. Chantland, Badger, president; H. F. Steiner, Fort Dodge, vice president; H. F. Bothe, Fort Dodge, secretary-treasurer; O. E. Anderson, Harcourt, state director.

President Chantland appointed a committee of five members to formulate plans for work. They are: G. R. Peterson, A. F. Youngdale, H. F. Steiner, Robert Peterson and Merle Anderson.

The Peterson family is considered the champion calf club family of America. Several members of this family have distinguished themselves during the past two or three years and Miss Verna Peterson was acclaimed the 1923 champion show girl of America.

Roy N. Finster of Eldora, Iowa, had the leading cow for December in the Hardin County Testing Association. She was a purebred Holstein and she gave 1,950 lb. milk, 81.9 lb. butterfat, the second time in the history of the association that a cow has exceeded 80 lb. butterfat in a month.

The Finster herd had the highest average with 49.7 lb. fat. The 332 cows tested averaged 30 lb. butterfat and 750 lb. milk. It is 3.1 lb. fat and 74 lb. milk more than the average in December, 1923.

E. C. Forrest of Mt. Vernon, Ia., owned both high cow and high herd in the Linn No. 3, Testing Association dur-

ing December. His herd averaged 46.95 lb. fat and his best cow is credited with 1,624.24 lb. milk, 62 lb. butterfat.

There are now sixteen herds in the circuit. The average of the 142 cows tested was 31.04 lb. butterfat. Thirty-three cows exceeded 40 lb. and fifteen produced at least 50 lb. butterfat. Two purebred bulls were bought by association members during December reports the tester, W. L. Miller.

HOLSTEINS HEAD CLASSES

Cows milked in the Sanilac County, Mich., Testing Association are ranked monthly in order of production, the classes being for animals under three years old, for three-year-olds, for four-year-olds, for mature cows, and then there is a general milk class for all ages. The leader in each class for the month of December was a purebred Holstein.

George Black owned the leader under three-years-old with 55.5 lb. fat and the leading four-year-old with 37.2 lb. fat. W. W. Gleason owned all three of the leading three-year-olds, the place of honor being held by a heifer with 49.9 lb. fat. E. Elston's cow was first in the mature class with 68.8 lb. fat and led the entire association for milk with 2,139 lb. George Black had high herd for average production of both milk and butterfat.

YODER COW AGAIN FIRST

During January 28 herds containing 311 cows were tested in the Mifflin County Cow Testing Association by S. Rupert Harshberger. Of this number 260 cows were in milk. Thirty-one cows each produced over 40 lb. fat, nine over 50 lb., while 20 exceeded 1,200 lb. milk.

The high cow was a registered Holstein, owned by A. C. Yoder, and is credited with 2,486 lb. milk, 72.1 lb. fat. The fourth cow was a member of the same herd and has to her credit 1,931 lb. milk, 61.8 lb. fat. Grade Holsteins

owned by J. W. Kearns occupy second and third places, one having 1,708 lb. milk and 70 lb. fat, and the other 1,742 lb. milk, 67.9 lb. fat. The high herd averaged 37.9 lb. fat, 1,049 lb. milk, and is owned by Solomon Poechey.

This ends the sixth month of the Mifflin County Association, and shows a larger number of cows exceeding 40 lb. fat or 100 lb. milk than any previous month. During January eleven cows were sold because of unprofitableness.

Members of the Mifflin County Association are gratified by the fact that the third highest milk producer in Pennsylvania for December was owned by A. C. Yoder. Her total was 2,508 lb., while 8,030 cows were tested in the State.

GOOD HOLSTEINS AROUND HOWELL

The herd of purebred Holsteins owned by James G. Hayes of Howell, Mich., stands highest in the Livingston County Testing Association No. 1 for the thirty day period ending December 31. This average was 1,256.7 lb. milk, 52.4 lb. butterfat. The association leader was furnished by the State Sanatorium herd of purebred Holsteins. This cow made 2,393.3 lb. milk, 93.9 lb. fat.

August Ruttman of Fowlerville had the leader in Association No. 2, his purebred Holstein producing 1,869 lb. milk, 74.76 lb. butterfat.

N. H. Chestnut of Fenton had the high herd as well as high cow in Association No. 3, the average production being 1,108.9 lb. milk, 41.56 lb. fat, his best cow being credited with 1,972 lb. milk, 98.6 lb. fat.

J. F. Martin of Delavan, Kansas, has a Holstein cow which netted \$187 above cost of feed and is the high producing cow for the year among all those on which the Morris County Testing Association kept records. This cow produced 1,804 lb. milk containing 541.4 lb. fat during the year. The butterfat brought \$196.19 and the milk \$59. The feed cost for the year was \$76.

ILLINOIS TESTING

Purebred Holsteins made a good showing during December in the Illinois Cow Testing Associations as the three highest producers were all purebred members of the black and white breed. The leader, owned by the Rock River Farm at Byron, produced 109.6 lb. fat and 3,171 lb. milk. The cow in third place was also owned by Rock River Farms and had 86.7 lb. fat to her credit. L. M. Knox, of Morrison, had a purebred in second place with 94.2 lb. fat and 2,297 lb. milk.

The highest producing herd containing ten or more cows was owned by Frank Flack, of Jo Daviess County. His twelve purebred and grade Holsteins averaged 48.3 lb. fat and 1,421 lb. milk. L. E. Overcash, of Sterling, had twelve purebreds that averaged 48.2 lb. fat and 1,360 lb. milk. L. A. Goodenough, of Morrison, had 17 that averaged 47.7 lb. fat and 1,423 lb. milk and Wade King of the De Kalb Association had 13 that averaged 46.5 lb. fat and 1,342 lb. milk. The Rock River Dairy consisting of 82 purebred Holsteins averaged 44.5 lb. fat and 1,203 lb. milk.

Twenty associations reported their leading cow and high average herd. In four associations purebred Holsteins were the high producers and in seven others grades were in first position. In four associations the high producing herds consisted entirely of purebred Holsteins, in three associations the leading herds were grade and purebred Holsteins and in six associations the high producers were entirely grade Holsteins.

VERMONT HOLSTEIN LEADS

Pietje Pontiac Hartog 2d, owned by C. B. Dodge, of Royalton, Vt., leads the Randolph Association for the month ending January 20, with a production of 2,043 lb. milk, 59.1 lb. fat. Forty-nine cows are in the honor list and ten herds average 30 lb. or more of fat. The Dodge herd consisting of ten animals averaged exactly 32 lbs.

Three Clean Tests without a Reactor.

THE FIRST YEAR OF THE WHITEWATER C. T. A.

By J. H. LEWIS

The Cow Testing Association of Whitewater, Wisconsin, is composed of twenty-six members, of which the president is H. R. Warner, vice president W. T. Hunt, secretary and treasurer C. W. Tratt. The tester is Charles H. Hocking. During the year 1924 no less than 411 cows were tested of which 296 were Holsteins, 106 Guernseys, 8 Jerseys and one Ayrshire. Therefore the Whitewater Association is nearly three-fourths black and white. Some of the activities in the Association during its first year may be summed up briefly; twenty members have their herds tested for tuberculosis; eight herds are on the accredited list. There were 33 cows sold for dairy purposes while 45 went to the butcher's block as unprofitable. Forty-five cows produced more than 365 lb. butterfat and sixteen two-year-olds exceeded 250 lb. All the members used purebred sires and there are thirty-five silos in use among the 26 members. Soil tests were made on 15 farms. Seven grade cows were shown at the National Dairy Show and came home with two seconds, a fourth, a seventh, a tenth and three firsts in group classes. Two mixers, two picnics and one ice cream social contributed to the enjoyment of the members and their families in their moments of lighter recreation.

To Mrs. Adeline Tessene of Whitewater, belongs the honor of owning the top cow of the Whitewater Dairy Circuit. Betsy, a grade Holstein, seven years of age, produced 11,776 lb. milk, testing 4.29% fat or 505.9 lb. butterfat. She was milked twice daily, she was fed no grain until she freshened August 14, 1923. Betsy averaged 50 lb. butterfat for eight consecutive months, going dry August 15, 1924. After one month's rest she freshened again September 14, 1924, making her record of 505 lb. fat in 335 milking days.

Betsy was put on test at the age of five years. Since that time she has produced 35,337 lb. milk, the value of which was \$752.75. Her feed amounted to \$236.51, so she returned a net profit above feed cost of \$516.24.

Of the forty-five cows making over 365 lb. butterfat in the year thirty-one were registered or grade Holsteins. The highest feed bill in connection with the top producers was \$103.

Of the two-year-olds producing more than 250 lb. fat, Nora, a grade Holstein owned by Will Kienbaum led the list with the production of 11,093 lb. milk, 377.4 lb. butterfat on a feed bill of \$73.12. Next to her was Tiny, also a grade Holstein, with 8,090 lb. milk, 363.2 lb. fat on a feed bill of \$94. Nine of the leading sixteen two-year-olds were Holsteins.

The high herd average was made by Mr. Kienbaum's herd of grades, Holsteins and Guernseys, they being credited with an average production of 9,538 lb. milk, 366.6 lb. butterfat.

The average of the Whitewater Association was 7,310 lb. milk, 281.3 lb. but-

terfat, with an average test of 3.85%. This compares with an average for the Wisconsin testing associations of 7,106 lb. milk, 273 lb. fat and the United States testing association average of 6,274 lb. milk, 257 lb. fat; the average Wisconsin cow production is 4,975 lb. milk, 190.1 lb. fat and the United States cow production, 3,716 lb. milk, 160 lb. fat.

Greater improvement can be made and farmers in the Whitewater circuit, like farmers of other districts in the Badger state, are waking up to the necessity of more homegrown feed, especially alfalfa.

A pleasing feature of the association is that every member has a name for his farm. A few of them here, may indicate what, in the estimation of these dairy folks, is applicable to their places. Spreading Oak is owned by Lea Cartier, Forest View is owned by Fred Teehorn, Rolling Prairie is owned by Henry Friske while other farms are named Lone Oak, Lane View, Grand View, Shady Maples, Corner Grove, Maple Bend, and Cedar.

When one stops to consider that there are but four out and out Guernsey herds in the Whitewater Testing Association, it may be claimed with justice to the breed that this association is indeed as well in word a Holstein Association for there are several mixed herds, and in these mixed herds, Holsteins predominate.

HOLSTEINS FORM HIGHEST SIX

The five highest cows in the Montgomery County Cow Testing Association for the month of January were owned by Wm. H. Landis, East Greenville, Pa., and were registered Holsteins. The cow in first place is credited with 2,886 lb. milk, 118.32 lb. butter fat, leading for both milk and butterfat. The second cow produced 102.45 lb. fat from 2,049 lb. milk; the third had 102.13 lb. fat, 1,857 lb. milk to her credit; the fourth, 98.2 lb. fat while the fifth produced 71.41 lb. A registered Holstein in the Ursinus College herd was next with 1,776 lb. milk, 67.49 lb. fat.

As might be expected, the Landis herd leads for both high average milk and butterfat, the one dozen milkers averaging 1,528 lb. milk, 71.62 lb. fat, their average test was 4.7%. The Warren Schultz herd, which also consists of black and whites, was second for both milk and fat production, the fifteen cows averaging 1,032 lb. milk, 36.52 lb. fat.

Carl A. Sager, the tester, reports that twenty-six herds containing 312 cows in milk were under his supervision. Of this number forty-six exceeded 40 lb. fat, twenty-four produced over 50 lb. while 41 cows exceeded 1,200 lb. milk during the month. Eleven unprofitable cows were disposed of.

In a recent issue the *Railway Age* editorially says that payments made by the railways for loss and damage of freight have declined from almost \$120,000,000 in 1920 to about \$36,000,000 in 1924 and cites this as "One of the most conclusive evidences of the increase in efficiency of railway operation which has occurred within the last four years."

CRAIG'S COW AGAIN IN FRONT

A registered Holstein senior four-year-old called Echo, owned by A. B. Craig of Sewickley, Penna., lead the Montour Valley Cow Testing Association for the month of December with a production of 66.96 lb. fat, her milk averaging 4%. She produced 1,674 lb. milk. Second was a seven-year-old purebred owned by Scott Brothers with 65.10 lb. fat and 2,170 lb. milk. W. C. Chamberlain owned a purebred in third place with 65.08 lb. fat so the three highest cows were registered Holsteins. The first and third each averaged 4% fat. The Allegheny County Home owned a purebred three-year-old in seventh place with 54.54 lb. fat and A. M. McClinton had the one in ninth place with 51.12 lb. fat. Scott Brothers had a grade in fifth place with 61.94 lb. fat. The Scott Brothers' herd led for average production. It consists of ten Holsteins, four registered and six grade and they averaged 939 lb. milk and 33.97 lb. fat. The McClinton herd which consists of 12 grade and 2 registered Holsteins stood third for both milk and fat with 707 lb. and 28.20 lb. respectively.

L. M. Stark, tester of this association, reports that during December he supervised 24 herds containing 315 cows in milk and 97 cows not in milk. There were 41 cows that exceeded 40 lb. fat and 24 that averaged over 1,200 lb. milk. Members of this association killed four cows for beef and sold five others to the butcher.

TESTING IN SOUTH DAKOTA

A purebred Holstein owned by Tom Maher of Brookings, made the greatest return for her feed in the state of South Dakota for the month of December. Her product was worth \$35.51, and she produced it at a feed cost of \$7.36, leaving a net income of \$28.15. She is credited with the production of 1,922 lb. milk and 84.56 lb. fat, the highest milk and fat totals shown in the official report. Her average test was 4.4%.

Purebred Holsteins made a good showing for, besides the leader, the second, fifth and seventh cows were purebred black and whites. In second place is a cow owned by Frank Johnson of Hetland, with 1,861.2 lb. milk and 70.72 lb. fat. Fifth on the list is a cow owned by E. H. Baldwin of Clark, with 1,800.3 lb. milk and 63.10 lb. fat. Guy McKibben of Webster had the cow in seventh position with 1,553.1 lb. milk and 62.12 lb. fat.

Although defeated for first position the Holstein herds made a splendid showing. In second place comes 12 purebreds owned by Frank Johnson with an average of 1,323.3 lb. milk and 47.05 lb. fat being exceeded only by a grade Ayrshire herd of seven animals with an average of 47.47 lb. fat. Mr. Baldwin's animals averaged 46.15 lb. fat. A 20 cow dairy of purebreds owned by Thad Oviatt of Huron is fourth with an average of 43.17 lb. and eleven purebreds owned by O. E. Howell of Florence is next with an average of 43.99

lb. The Maher herd is in eighth position with an average of 35.70 lb.

Of the 1,945 cows tested 211 produced more than 40 lb. butterfat, 208 exceeded 1,000 lb. milk and 72 herds averaged more than 25 lb. butterfat per cow. Nineteen cows were slaughtered because of their failure to return the cost of their feed. Thirty cows were sold for dairy purposes largely on the strength of the records they had made. The price paid for butterfat averaged 40 cents per pound, an increase of 5 cents per pound over November. This resulted in a considerable increase in the number of profitable cows.

The Brookings association began its second year of testing on January 1. The Sioux Falls association is reorganizing as the Lake county association and expects to make a testing report for the month of January. The South Dakota testing association reports are arranged by H. M. Jones, Dairy Specialist at the State College of Agriculture.

TESTING IN VIRGINIA

By L. P. EMMERICK

During the month of December there were 15 active Cow Testing Associations. The reports from 14 of these Associations showed 234 herds and 6,426 cows on test. Of this total 524 cows produced over 40 lb. butterfat, and 164 over 50 lb. butterfat.

The high herd for the month was the herd of 21 grade Holstein cows owned by Mr. Marvin Perkins of Herndon, Va., a member of the Fairfax No. 1 Cow Testing Association. The average of this herd including dry cows was 1,122 lb. milk and 41.2 lb. butterfat.

The high cow for the month was owned by E. M. Corner of Staunton, Va., and a member of the Augusta Cow Testing Association. Her record for the month was 1,580 lb. milk and 68.0 lb. butterfat. Of the ten high cows for the month, 4 were grade or purebred Guernseys, 4 were grade or purebred Holsteins, and two were grade or purebred Jerseys.

The average production of all cows including 1,044 dry animals, was 515 lb. milk and 21.5 lb. butterfat. The highest producing Association in both milk and butterfat production was the Prince William Cow Testing Association whose 556 cows including 88 dry cows averaged 766 lb. milk, and 25.5 lb. butterfat.

During the month 128 cows were sold as unprofitable. The Fairfax No. 1 Cow Testing Association, which just finished its years work shipped 30 cows to the butcher. Twenty-six purebred cows and five purebred bulls were purchased during the month.

FOR SALE.—Yearling bull mostly black. Price reasonable for quality. Two heifers, Sixty Dollars each. Accredited Herd.

HANDSOME YOUNG BULL

born March 14, 1924

The dam is a 20-lb. granddaughter of King of the Pontiacs.

The sire, Maple Corner Supreme is from a 32.6-lb. cow that averaged 83.6 lb. milk for thirty days. His six nearest dams average 35.11 lb. butter in official work.

This Herd is Accredited.

Production
Prolificacy
Profitableness

Safety of Self and Stock

Place a Polled Holstein Bull at the head of your herd. Prices and Quality are both right.

GEORGE E. STEVENSON
727 Connell Building, Scranton, Pa.

Log Cabin Herd

is ACCREDITED and is headed by

King Hengerveld Lefa Joh

His sire is KING JOH. His daughters and granddaughters are noted for production. His backing is of the best.

His dam is YANKEE LEFA 32.09 lb. butter in 7 days averaging 81.2 lb. milk per day. As a junior three-year-old she produced 675.11 lb. butter, 14,938.2 lb. butter in a year. She is by Duteland Colantha Sir Inka—97 A. R. O. daughters, the most noted son of Colantha Johanna Lad.

RALPH C. JACKSON
Conneaut Lake, Pennsylvania.

KING PONTIAC ALCARTRA PIETJE

my senior herd bull, is admitted by everyone to be the greatest sire ever in Northern Pennsylvania.

His sons and daughters win in great show rings—his daughters and granddaughters are wonderful producers as well as choice individuals.

His dam, sire's dam and sire's sire's dam were World's Champions. Buy his sons and daughters HERE.

A. E. ROBINSON,
Susquehanna Co., Montrose, Pa.

SIZE AND TYPE COMBINED

Just another member of our herd. She and 23 others all ages, averaged 11,402 lb. milk in a year of C. T. A. work.

Owing to lack of room we wish to sell our coming calf crop.

Herd under State and Federal Supervision.

JAY B. HARBECK & SONS
Black Creek, New York

MICHIGAN HOLSTEINS

are Healthy.

MICHIGAN HOLSTEINS

are persistent producers

From this herd you can obtain Heifers sired by a 34-lb. bull from daughters of a 30-lb. bull and bred to a bull whose dam produced 35 lb. butter in 7 days.

Can sell one female or a carload, and a few real good bulls.

DAVID FALCONER

Scottville, - - Michigan.

ADVOCATES MILKING THREE TIMES DAILY

Ben J. Schumacher of Sigel, Illinois began milking his dairy three times a day January 1924 and continued through April. He states in three days his 18 cows gained 109 pounds of milk per day, or 6 pounds per cow per day. When he discontinued the three times milking the first of May, the cows dropped 80 pounds in two days and 110 pounds in two weeks. He continued to feed grain three times a day after the milking was discontinued, but it did not keep the cows from going down. Mr. Schumacher keeps daily milk and feed records on his cows and comparing the production with the corresponding period the year before there was a gain of 200 pounds of milk per cow per month, with a saving in feed cost of 20 cents per 100 pounds of milk. This increase would amount to 14,400 pounds of milk in the four months, with milk at \$2.40 per 100 pounds the value of this increase would be \$346.00.

Fred Kasserman, tester of the DuPage cow testing association claims that it pays to milk three times a day and quotes the above as well as the two following instances. In making this statement Mr. Kasserman has made no allowance for labor but simply figures the feed cost and the production earnings.

A purebred Holstein cow owned by Hyde Park Farm of DuPage County just finished a years lactation period record of 17,143 lb. milk and 639 lb. butterfat, or 799 lb. butter, with a profit above the cost of feed of \$324.08. Duchess was milked three times a day for the first seven months after freshening.

Six of the 23 cows milked at the Warwood Farm were milked three times a day and produced 394 lb. milk daily, with a profit above cost of feed of \$154.83 per month. The remaining 17 cows produced 331 lb. per day with a profit above the cost of feed per month of \$95.15.

FARM SUPERINTENDENT: Life experience in general farm and Advanced Registry work, seven years as farm manager. Experienced in showing, marketing, crops, farm and dairy machinery. Capable handling men, improving soil, buildings, developing, efficient, economical system of management. Married, no children, age 32, graduate of two years' Animal Husbandry and four years' Agricultural college courses. Box H. B., care Holstein Breeder and Dairyman, Harrisburg, Pa.

MAKING NICE RECORD

Ida Mercedes, a purebred Holstein owned by Claude Wylam, of Waverly, Iowa, produced 733 lb. butterfat from 21,200 lb. milk during the period from February 23 to December 31, 1924, inclusive. It is believed that at the close of twelve months she will have to her credit 825 lb. butterfat, 24,000 lb. milk. This is the highest record ever made in Bremer County.

King Valdessa McKinley Pondyke

A Bull of Royal Breeding

His three nearest dams all tested as heifers average 1,052.34 lb. butter in year test.

WILL HEAD ACCREDITED HERD

E. R. Gridley of Candor, N. Y., purchased from L. A. Fisher of Spencer, N. Y., the young bull Mr. Fisher offered in the HOLSTEIN BREEDER AND DAIRYMAN in his initial advertisement. This young fellow is the son of Colantha Emily Hartog, 25.70 lb. butter, 464 lb. milk in seven days as a four-year-old, a daughter of Dutchland Colantha Sir Inka Prince, a bull that formerly headed the Catatonk Herd as Mr. Fisher's es-

HE WILL HEAD AN ACCREDITED HERD Young bull sold by L. A. Fisher to E. R. Gridley, Candor, N. Y.

tablishment is called. Dutchland Colantha Sir Inka Prince was a full brother to Dutchland Colantha Sir Inka and many believe that if his daughters had had the opportunities given the daughters of his famous brother, they would have made just as great records and he would have occupied fully as high a position in the A. R. O. lists.

Catatonk herd is at present headed by Maple Corner Supreme a very handsome bull, whose six nearest dams have official records that average 35.11 lb. butter in seven days. He is a son of King Sadie Vale Supreme who was by King Korn-dyke Sadie Vale from K. K. S. V. Topsy, 40.38 lb. butter in seven days as a senior three-year-old.

The dam of Maple Corner Supreme is Albina Butter Girl Pontiac and was by Spring Farm King Pontiac 6th, whose dam, Tweede De Kol Lass, 34.39 lb. butter, was the dam of K. P. Pontiac Lass, the first cow that ever made 44 lb. butter in seven days.

Mr. Gridley, or Bert, as he is usually called, has 125 acres on which he has twenty head of accredited Holsteins. In this herd there are ten daughters of Maple Corner Supreme. This is an old established herd although Mr. Gridley has only owned it five or six years. It was started nearly fifteen years ago by W. K. Hart. In fact this locality has for many years been a Holstein community and a number of small but high class herds have made their home in this valley.

Twenty Head of Registered Holsteins

soon due to freshen. Heavy Milkers. Heifer and bull calves from 2 to 12 months old. Priced for Quick Sale.

HOW A C. T. A. HELPS

About four years ago a group of progressive dairymen living near the county line between Beaver and Lawrence Counties, Pennsylvania, felt that it would be to their advantage to know which of the cows in their herds were the most profitable and to know exactly the percentage of butterfat in the milk given by these animals. As a result twenty-six herd owners organized the Westfield Cow Testing Association.

The average milk production for the entire association for the first year was 6,218 lb. with an average butterfat production of 251 lb. A steady increase has been obtained during the four years this association has operated. During the past year the average milk production was 6,827 lb. and the butterfat production was 303.2 lb. or an increase during the four years of 609 lb. milk, 52.2 lb. butterfat per cow. In addition to the immediate gain derived from increased production, the owners found more prospective buyers visited their herds, and they found that the production records of their animals were good sales argument.

During the past year 326 cows were tested in this association of which 23 produced over 400 lb. butterfat. The highest cow was a registered Holstein, Jewel, owned by H. A. Freed of Racine. She is credited with 16,339 lb. milk, 604 lb. butterfat. Fifteen herds averaged over 300 lb. fat. Among these were the Holstein herds of H. A. Freed and H. F. Freed.

HOLSTEIN MAN HONORED

During Farmers Week the University of Wisconsin gave honorary recognition to five men for signal service to agriculture. Four of the men were residents of Wisconsin, while the other, Nicholas H. Gentry, lives at Sedalia, Missouri, and is a noted breeder of Shorthorn cattle and Berkshire hogs.

One of the men was Richard M. Smith, who has had charge of the Marinette County Farm since 1906, and has cared for the institution and that farm that it is both productive and profitable. In announcing the recognition, Professor Andrew W. Hopkins of the College of Agriculture, said that Mr. Smith had built up a splendid herd of Holsteins and an equally good herd of Poland-China hogs. He is a leader in agricultural activities, is a member of several breeder organizations, and of the Milk Producers Association.

in the whole State of Pennsylvania is offered you.

HILLSIDE ELIZABETH ORMSBY

Now has 30.73 lb. to her credit—at 3 years, 0 months, 11 days. Still in test.

She is a daughter of our noted senior herdsire,

KING PONTIAC MAPLE KNOLL ORMSBY

he by King of the Pontiacs from a 33 lb. sister of O. K. L.

Come and see her, her sire and sisters.

HILLSIDE AND SPRINGBROOK FARMS

Trucksville, near Wilkes-Barre, Pa.

Herd recently passed another CLEAN Test.

My Herdsire

He is by King Segis Pontiac Konigen, and his dam is an A. R. O. granddaughter of Dutchland Sir Pietertje Hengerveld and Beauty Pietertje Butter King.

His first twenty-two sisters tested for a year average over 20,000 lb. milk and more than 900 lb. butter.

Herd under State and Federal Supervision and passed clean at last test.

RAYMOND D. STRICKLAND

Susquehanna Co., R. D., Nicholson, Pa.

Spring Brook Herd

is composed of animals that win prize ribbons. At its head is the great bull

CORNUCOPIA FINDERNE PRIDE

His sire was by Pontiac Korn-dyke from a 33-lb. cow.

His dam made 31.11 lb. butter 685.5 lb. milk in a week and was from the same dam as Finderne Pride Johanna Rue, 1,470.59 lb. butter in a year.

The average test of this herd runs from 3.5% to 4.2%.

C. F. Giles

Apalachin New York

SOLD FROM RO-AN FARM

Roy W. Chamberlain, of Caneadea, N. Y., owner of RO-AN Farm reports he has sold the young bull recently advertised in the Breeder and Dairyman, to S. W. Cole, of Cuba, N. Y.

Mr. Cole certainly got a nice young bull, a good individual and of high class breeding. His sire was Monarch Beauty. Only three daughters of this bull have as yet freshened in RO-AN herd. Two of them were tested, one made 20.4 lb. butter, 444 lb. milk in seven days as a junior two-year-old and the other produced 21.49 lb. butter, 449 lb. milk. Monarch Beauty was by the Mighty Monarch, a son of King of the Pontiacs from Segis Hengerveld Fayne Johanna, 34.33 lb. butter in a week, 20,216 lb. milk, 1,129.37 lb. butter in 365 days, one of the handsomest individuals ever developed in the breed, a daughter of Segis Fayne Johanna, a cow that four different years produced over 30 lb. butter in a week in official test.

The dam of Monarch Beauty was by King of the Pontiacs from Tidy Abbecker Princess Jewel, 31.70 lb. butter, 607.6 lb. milk in seven days, one of the very best daughters of the great Tidy Abbecker Prince.

The dam of Mr. Cole's bull is Johanna Betsy Beryl. Freshening as a junior two-year-old, tested officially for seven days, she produced 19.03 lb. butter, 442.9 lb. milk. She also has a cow testing association record of 363.5 lb. butterfat, 9,862 lb. milk which is certainly a splendid showing for a two year old heifer. She was sired by King Segis Pontiac Lad Johanna and was from Betsy Beryl Artis, a 19 lb. junior three-year-old daughter of Sir Korn-dyke Pontiac Artis Prince. As RO-AN herd is accredited, it can easily be seen that Mr. Cole has secured a very desirable young bull to head his herd.

AWARDED MEDAL FOR JUDGING

At the Annual Stockman's Banquet held during Farmers' Week at the University of Wisconsin, Chas. Craig, breeder of purebred Holstein cattle was awarded a gold medal given by the National Dairy Exposition. Mr. Craig was high man in judging the dairy cattle classes at the National Dairy Show last fall, competing with 113 men from seven different states. Mr. Craig graduated from the Milwaukee County Agricultural School several years ago and the officers of that institution feel that he obtained the first fundamentals of dairy cattle judging at that institution.

KING'S BIG BARN BARN BURNT

Holstein breeders everywhere will regret to learn that the great barn on the A. J. King farm near Grandview, Mo., was burned on February 4. The total loss is estimated at \$50,000. Nine head of show cattle were destroyed including the well known prize winner Triune Ormsby Piebe 27th. Mr. King's many friends hope that the major part of the loss is covered by insurance.

RO-AN FARM OFFERS YOU CHOICE YOUNG SONS OF

ROYAL JOHANNA KORNDYKE

whose daughters are making splendid records in C. T. A. work. He was by Colantha Johanna Lad 8th and from a 24-lb. two-year-old that made 602.8 lb. milk in 7 days; her dam a 30-lb. cow.

Our cows are producers and choice individuals. Our herd is Accredited and has never housed a re-actor.

ROY W. CHAMBERLAIN
Allegany Co., Caneadea, N. Y.

WEST VIEW HERD NOW ACCREDITED

In sending in change of advertisement Merle W. Ongley, owner of the West View Herd announces that his cattle have just passed their second successive clean test so that his herd is now entitled to be placed on the accredited list. Mr. Ongley is located in Centerville, Crawford County, Pa., and it is well known that this county is a pioneer in tuberculosis eradication work. The West

MAPLE GROVE CLEVER KONINGEN GLISTA
the head of West View Herd.

View Herd has already had two tests and passed both clean.

Mr. Ongley advertises a young bull just passed a year old. The dam of this bull is Pauline Wetzel, a granddaughter of Finderne Pride Johanna Korn-dyke, a bull with three daughters that have each made over 30,000 lb. milk in a week. These powers of production are also inherited by his granddaughters and they have a right to this inheritance as his own dam, Finderne Pride Johanna Rue, was for a long time the world champion cow for yearly butter production with a year record of 28,403, 7 lb. milk, 1,470.58 lb. butter.

Pauline Wetzel, tested as a junior three-year-old in Mr. Ongley's herd, produced 19.76 lb. butter, 457.3 lb. milk in seven days and it must be remembered that in this small herd she did not have the care and attention given cows in large herds nor did she have any preliminary fitting. In the local cow testing association, as a three-year-old, she will be credited with about 450 lb. fat

PAULINE WETZEL

2,068 lb. milk, 70.3 lb. butterfat during January. Owned by Merle W. Ongley, Centerville, Pa.

for her lactation period. During January 1925, she produced 2,068 lb. milk, 70.3 lb. fat so that it is evident that she is again starting on another big year's work.

West View herd is headed by Maple Grove Clever Koningens Glista, a son of Clever Model Glista and Maple Grove Lady Fairview Spofford. As a two-year-old this heifer produced over 10,000 lb. milk in a year of cow testing association work and, given an official test as a

PUBLIC AUCTION

Wednesday, March 25, 1925

Starting promptly at 10 o'clock A. M.

60 Cows and Heifers in milk; 40 Heifers up
to two-year-old; 2 Herdsires, both
splendid individuals.

The average production of the milking herd last year was over 10,000 lb. despite the fact that one-third were in their first lactation period. THREE Cows have each exceeded 14,000 lb.

All records made on twice-a-day milking and with the care given the general dairy.

Some of the best blood of the breed flows in the veins of our animals.

Bonnymead Herd is under State and Federal Supervision and the animals are sold subject to the Standard 60-day retest.

Auctioneers: Glenn R. Mead, J. C. Hess

Pedigree Director: S. R. Miller

Bonnymead Farms

R. D. 1

Harrisburg, Pa.

junior four-year-old, she made 461.5 lb. milk, 20.60 lb. butter in a week, twenty-six days after freshening. Clever Model Glista is by a noted show bull and was from Glista Coreva, one of the greatest cows ever in the Cornell University herd. Two different years she has exceeded 30 lb. butter in a week; has an official record of 593.5 lb. milk 34.08 lb. butter in seven days and has a number of tested daughters, one of which made over 31 lb. butter in a week as an eleven-year-old cow.

Mr. Ongley reports that he is having good luck getting heifer calves this year. At the present time his is milking eleven head of which three are two-year-olds, two three-year-olds, and the rest are four-year-olds or over. Despite the fact that some of his animals have been milking five months or more, the herd is

averaging over 40 lb. milk per cow daily on twice a day milking. The herd average for January was over 1,400 lb. milk and 50 lb. butterfat, a showing that few can equal and one that reflects great credit upon the young owner who cares for his own cattle and is greatly interested in building up a profitable herd of choice individuals.

Young Son—Father, what is the difference between a taxidermist and a taxicab?

Father—No difference, my son; they both skin you.

Giff—"I hear that Mrs. Sweeting lost control of her car."

Gaff—"Yes, her husband couldn't keep up the installments."

Sale of the W. A. Woods' Herd

with consignments from the I. V. Otto and H. E. Robertson herds.

March 12, on the Woods Farm

From Woods Herd, which is fully accredited. One daughter of The Potentate—a daughter of a 37-lb. bull. A granddaughter of King of the Ormsbys. A daughter of King of the Johanna Lads from a 21-lb. two-year-old. Six daughters of King Ormsby Abbecker Helena, the handsomest son of King of the Ormsbys. A yearling son of King Ormsby Abbecker Helena from a daughter of King of the Ormsbys with 736 lb. butter, 15,968 lb. milk in strictly official test as a two-year-old.

Mr. Otto consigns from his accredited herd two daughters and two granddaughters of Westover Madaline Burke. She has C. T. A. records that total for four years 54,890 lb. milk, 2,263.2 lb. butter, \$685.76 profit above feed cost. The daughters are by Lothian De Kol Korndyke, as is one of the granddaughters. The other is by Mr. Otto's junior sire Bonair Colantha Ormsby Champion. A November bull calf by Lothian De Kol Korndyke from Boiling Springs Segis Pontiac, 26 lb. butter, 656 lb. milk, full sister to a former world's champion.

A young bull, born April 19, 1924, sired by Lothian De Kol Korndyke, dam Boiling Springs Hartog, 14,697 lb. milk, 623 lb. butter in a year as a junior two-year-old, world's record for milk in Dairymen's Division when made and within one-half pound of world's butter record.

From the great Robertson show herd comes four daughters of King Piebe of York and two daughters of King Piebe of York 3d, also a good five-year-old granddaughter of King of the Pontiacs, heavy in calf by King Piebe of York. Also King Piebe of York 28th, a son of King Piebe of York from a dam with 21,517.6 lb. milk, 852.65 lb. butter in a year.

The best lot of cattle ever sold in this part of the country. A pair of three-year-old mare mules weighing 2,300 lb., sound and quiet, also 40 head of Big Type Poland China Hogs.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

No. 5

The Herd at Bonnymeads

Thirty Years of Dairying With Purebred Holsteins

At one time the Bonnymeads Herd, owned by the Boyd Estate, and located just a mile from the city of Harrisburg, Pennsylvania, was the largest herd of purebred Holstein-Friesians in the Keystone State. At the time it was started few of the herds existing today had been founded. Now that it is soon to be dispersed it is surely time all breeders learned something of its history.

Although "What Might Have Been" has been the theme of many stories, there are few men or women who at some time or other have not had day dreams of what might have happened if things had turned out a little differently or if some particular turning point had never been reached during their lifetime.

Late in the fall of 1914, there was an outbreak of foot and mouth disease in the United States which materially affected the livestock industry. At that time there were a number of Holstein cows and heifers in official test at Bonnymeads Farm; in fact there were two supervisors, and each had a string of cows under his charge. Superintendent Hiram Billett knew what was likely to happen, so immediately called off the test, and from that day to this no official records have been made at Bonnymeads, despite the fact that the previous year no less than thirty animals were placed in the Advanced Register by this establishment. Previous to this outbreak of foot and mouth disease it had been decided that only animals with A. R. O. records should be used at Bonny-

HIRAM BILLETT

Manager of Bonnymeads herd for the past thirty years.

she was eliminated.

Just how many animals there were in the herd at the time testing was stopped, the writer does not know, but it was one of the largest Holstein herds then in existence. In looking up the pedigree of one of the herd-sires we noticed that in volume 43, no less than seventy-calves, 31 males and 42 females, were registered. In one place in this herd book you will find that 37 heifers were registered at one time with less than ten months between the birthdates of the oldest and the youngest. This is some indication of the size of the Bonnymeads Herd at that time.

Just when the first Holsteins were taken to Bonny-

BONNYMEADS HOLSTEIN-FRIESIANS ON ONE OF THE BRANCH FARMS.

meads we do not know. Superintendent Hiram Billett has been at the head of affairs for over thirty years, and when he came to this establishment they had about thirty head of purebred cattle. The men in charge had no knowledge of the purebred business and cared nothing for registration papers, so that when Mr. Billett investigated he found that only about a dozen animals were registered; breeding data was available for a few others but for the majority of the herd all records had been lost. From the animals of unquestioned purity of blood the present herd has descended. For many years only herdsires have been purchased, and every one of the hundred or more females at present in the Bonnymeads Herd was bred and born at this establishment as were their dams and granddams before them.

In the course of thirty years a herd is headed by a number of bulls which vary in their value as sires. The first really great sire that headed the Bonnymeads Herd was Lilith Paul De Kol Paul, No. 50835. He was a son of Lilith Pauline De Kol's Count and Coriander Paul, a daughter of Pauline Paul's De Kol. These two sires have a number of good tested daughters and the "Count" is justly regarded as one of the really great sires of the Holstein-Friesian breed. He was a son of Lilith Pauline De Kol, whose records of 28.24 lb. butter, 653.4 lb. milk, although made as a junior four-year-old, were world's records at the time of making and stood at the head of the junior four-year-old class for several years. She is said to be the first cow under full age to produce 100 lb. of milk in a day in official test. She was the first cow of any age or breed to officially average four pounds of butter a day for an entire week, and she was by the same sire as the famous Aaggie Cornucopia Pauline, also world's champion for a number of years. Through at least three of his grandparents Lilith Paul De Kol Paul traced to the famous old cow Pauline Paul, whose unofficial record of 1,153 lb. milk, 15.8 lb. butter in a year was the world's record at the time of making.

Lilith Paul De Kol Paul has twenty daughters in the Advanced Register. We believe all of them were tested in the Bonnymeads Herd. A glance at volume 26 of the Blue Book will show the records of these daughters. Nine were tested as four-year-olds, six as three-year-olds, four as two-year-olds, and one as a yearling. None were tested at full age. Four of the four-year-

olds exceeded 21 lb. of butter in seven days, the highest record being 23.56 lb. for Lilith Koningen, credited with producing 509 lb. of milk. Eleven daughters of this bull are each credited with producing over 400 lb. of milk in a week, the largest record being 517.8 lb. by Mildred De Kol Pietertje. When official testing was stopped at Bonnymeads Farm, owing to the presence of foot and mouth disease in this country, the two test strings were largely made up of daughters of this sire who, had it not been for this unforeseen happening would undoubtedly have occupied a very prominent position in the A. R. O. history. At that time there were nearly fifty cows and heifers by him on the farms, and practically every member of the present herd traces to him.

Sir Colantha Ultra De Kol headed this herd for several years. His pedigree shows a combination of noted strains. His dam, Ohio Ultra De Kol, was a granddaughter of Pietertje Hengerveld's Count De Kol. She has an official record of 537.9 lb. milk, 20.31 lb. butter. Her dam as a ten-year-old made 21.48 lb. butter in a week, and the year previous produced 16,202.8 lb. milk, 660.57 lb. butter.

The sire of "Sir Colantha" was Johanna De Colantha 5th Champion, a son of Colantha Johanna Champion from Johanna De Colantha 5th, 30.50 lb. butter in a week. She was by a full brother to Grace Fayne 2d's Homestead, 35.55 lb. butter in seven days, world's record when made. As Colantha Johanna Champion was a son of Colantha 4th's Johanna, 35.22 lb. butter in a week, 1,248.82 lb. butter in a year, it can be readily seen that Sir Colantha Ultra De Kol was regarded as a bull of fashionable breeding. He had considerable influence upon the herd.

There are two bulls in service at the present time. Count Beauty Lothian De Kol is a handsome fellow, largely white in color, with a straight top line, and is a real show bull. His dam, Beauty Lothian De Kol, was regarded as an animal of splendid type. She was from a 24.14 lb. cow and was sired by Lothian De Kol Korndyke, a bull whose daughters, although tested in a small herd have made remarkable records, records that stand at the head of the list in the Dairyman's Division. Daughters of this bull have made a splendid showing in cow testing association work and he is regarded so highly that the authorities in charge of the herd at the

PART OF THE BONNYMEADS HERD AT PASTURE.

Pennsylvania State College secured his services and he is now a member of the college herd.

Count Beauty Lothian De Kol is by a grandson of King Hengerveld Segis and traces to a number of well-known sires whose descendants are considered the elite of the breed.

The younger herdsire is Bonnymeads Alcartra Nevada. His dam is of Colantha, Pontiac and Alcartra breeding. His sire is a grandson of Sir Prilly Segis, the well-known son of King Segis and Prilly Princess Julia De Kol. Thus it can be seen that his pedigree combines the blood of a number of strains noted for both production and individuality.

Manager Hiram Billett came to the farm when he was comparatively a young man and has been at the head of things ever since. Besides the duties connected with the management of 2,500 acres, and the marketing of heavy crops of alfalfa, he also has supervision of a limestone quarry and a feed store. Farmers come from long distances to buy feed, lime, fertilizer, and coal. To his help, however, Mr. Billett generously ascribes the reason for much of his success.

E. E. Bowman has been in charge of the feed warehouse for twenty-eight years. Mike Wilt, who is in charge of the cow barn, has been at Bonnymeads over thirty years and has been in the cow barn for seventeen years. A number of other men have been there nearly as long. There is very little labor trouble at Bonnymeads, despite the fact that Harrisburg is a great railroad city and hundreds of men are employed in the railroad yards. The fact that the men have worked so steadily speaks volumes for the treatment they have received, as well as for the character of the help employed.

In the main cow stables there is room for 137 head. The stable itself is concrete throughout, and part of the barnyard is concreted also. Louden equipment is used and everything is done to insure sanitary conditions. The milk room, while part of the building, is semi-detached from the stable. There is a passageway between where the cows are housed and the milk room itself. After the milk is drawn from the cows it is carried through this passageway and dumped into a small vat which communicates with the milk room by a spout. Between the milk room and the stable is a concrete walled and floored room which is unoccupied most of the day but in which cars or milk carts could stand. The object of this designing is to eliminate any stable smell in the milk room, while at the same time the workers carrying milk from the stable to the dairy are sheltered from inclement weather and the milk protected from weather-blown particles of dust and other small objects.

The bulls are kept in roomy box stalls with yards attached. The stalls are so constructed that there are open spaces through which a man can easily pass but which are too small to allow a bull to pass through. The object is to insure the safety as well as the convenience of the attendants.

For several years the milk produced at Bonnymeads was sold at retail in the city of Harrisburg, but for the past few years the milk has been shipped to the plant of the Hershey Chocolate Company, which uses the daily

production of 70,000 cows in the manufacture of milk chocolate and similar dainties.

Bonnymeads Farms forms part of an estate which is locally known as the Boyd Estate. Under this name a limited membership has been maintained in the Holstein-Friesian Association of America, and the latest published volume shows four heirs, Mrs. Helen Boyd Dull, Mrs. Mary Boyd McCormick, Jas. Boyd, and Jackson Herr Boyd. The death of one of the heirs necessitates a change in the plans of the management and so this old established herd will be sold at public auction March 25th. Pennsylvania Holstein breeders will regret its passing.

Another for Deysher

RED Cross Heroine of Grayfields, owned by Abner S. Deysher, Reading, Pa., has qualified in the 305-day class by dropping a live calf within the required fourteen months. During the 305 days she is credited with a record of 22,067.3 lb. milk, 1,118.87 lb. butter. This is the highest record made in the ten months' division by any cow in the state of Pennsylvania; is the second highest in the United States and, we believe, the third highest in the world.

Red Cross Heroine of Grayfields is a daughter of Sir Fairview Pontiac Korndyke, a number of whose

RED CROSS HEROINE OF GRAYFIELDS
1,118.87 lb. butter, 22,067.3 lb. milk in 305 days. Owned by
Abner S. Deysher, Reading, Pa.

daughters have made large records. Daughters of this bull evidently inherit the individuality of their dam, Fairview Jessie Korndyke, 585.4 lb. milk, 30.90 lb. butter in seven days. She was long known as the handsomest daughter of Pontiac Korndyke and she had several sons which rank high as sires of producers.

Sir Fairview Pontiac Korndyke was an inbred bull as his sire, Pontiac Korndyke, was also the sire of Fairview Jessie Korndyke. He was a three-fourths brother to Pontiac Lady Korndyke, the first cow to make a 38 lb. seven-day butter record.

The size of a farmer's loss account can be measured by the amount of machinery he leaves scattered about the premises to be rotted and rusted.

Dairying will always occupy a prominent and strategic place in any successful plan for balancing agriculture.

Light On Breeding Problems

By W. Hugh Jones

I HAVE read the interesting article by Frank Resseguie on page 53 of the January 22d issue of the HOLSTEIN BREEDER AND DAIRYMAN.

Well may those engaged in the art of breeding Holsteins ask questions along the lines suggested by that article; questions that even breeders of great experience can not answer with certainty. I believe Mr. Resseguie has his own ideas as to the solution of the points he raises but which he leaves for others to expound.

Probably all authorities will agree that the Holstein is the most difficult of all well established breeds to breed true to type. The reason lies in the fact that breeders have put forth their endeavors toward bringing together the greatest possible combination of high records in the pedigree of the animal to be produced, sometimes neglecting entirely all other considerations.

I have in mind a herd that years ago, had one of the best show bulls of the breed at its head. Not only was he a high class show bull but he was the sire of many high record females. Instead of building on that type, the owners pursued high records and combinations of high records. In course of time they sold what was advertised as one of the "Greatest Bulls of the Breed." As this animal grew to maturity, he developed into such an unusually poor individual that his owners kept him in an obscure part of the barn and attempted to keep him from being viewed by visitors.

I have seen many animals that were bred in this herd in recent years and have yet to see more than one or two even moderately good individuals among them.

Although this is an extreme case, there are many other herds even among the most noted in the country that approach the same condition. With this true and with so many of our herdsires tracing their ancestry back to these "famous" establishments, how can we expect certainty in our breeding operations?

In other breeds, particularly the beef breeds, pedigrees are founded on show ring records. With such ancestry, it is practically certain that good results will follow from combining "Good" pedigrees, providing some fad such as a color craze or so called line-breeding does not interfere. The reason is that "Like does beget like." But it is also true that "Like" must appear in more than one or two lines of the pedigree and for more than one or two generations to make the "Begetting" sure.

Let me contrast our experience with our own herds of Devons, Herefords and Holsteins.

The Herefords and Devons were show yard bred for generations and could be depended on to breed practically 90% show stuff.

My father came into control of the farm in 1889

W. HUGH JONES.

with the Devon herd that his father and brother had shown on the circuit for years. He bought the bull Retainer from James Hilton of New Scotland, N. Y. This bull was seldom beaten though shown each year at from five to eight of the largest fairs of the time. He was bred to the cow Lena Pritchard, that was shown from 1886 to 1892 and seldom beaten by other than her stable mate Surprise, also strongly show yard bred. This mating got Lord Flemington who, while shown in our herd from 1889 to 1892, probably won more first prizes than any other bull of the breed. He was then sold to Hilton and continued on the circuit until about 1896. He was beaten only once

while owned by us, and that was as a calf, and we have no knowledge of his having been beaten afterwards.

He was followed by bulls of equally good breeding until 1905 with steady improvement. Our herd was wiped out by tuberculosis that year, but at the time we undoubtedly had the best show herd of Devons in the United States.

Our experience with Holsteins was entirely different but shows what can be accomplished with this breed.

My father bought his first Holsteins in 1893 but made no attempt to breed high class show stock while he had the Devon herd. After 1905 he went into the business of dealing in cattle, always buying on tuberculin test. But danger from disease became too great and, although he never lost any more animals from tuberculosis, he decided about 1910 to establish the herd on a plan practically the same as that later adopted by the government for accredited herds. He stopped dealing at once, keeping the dealers collection he had on hand; and it was not until 1913, when I got home from completing a two-year-course at State College, that we decided to attempt the establishment of the best herd of individuals possible.

Our tuberculin testing plan eliminated the possibility of buying females, and the only animals we brought into the herd were bulls for herdsires. In the purchase of these we cooperated with my uncle, G. F. Decker and his brother, H. R. Decker, neighboring breeders.

We had been fortunate in buying a bull of more than ordinary individuality "Unseen and unseen" in 1910. This was King Segis Hengerveld De Kol Burke. His daughters from quite ordinary cows were our real foundation. A little improvement in individuality was apparent from his use.

We began our real effort by the use of Tobe Rag Apple Korndyke in 1913. This bull bordered on Shorthorn character although not enough to cause his rejection as a sire. He also had a slightly uneven pelvic arch but the thurls were wide apart and high,

indicating that he would sire daughters with good rumps. Approximately 15% of his offspring were high class show animals.

The next sire was King Tweede Spring Farm, now heading Mr. Deysher's herd at Reading, Pa. This bull ranked high in individuality and in dairy indications he was superior to any other bull we have ever seen. He had some Jersey characteristics but not enough to cause his rejection, and he was not just perfect at the rump though much better than almost any bull that could be found. He was selected after months of search among many herds, some of them the most famous in the East. A slight gain in individuality with an enormous gain in production resulted from his use.

We next used Woodmont Echo Sylvia Champion, a bull we bought of Mr. H. C. Wood, Morrisville, N. Y., after months of search. My father, who selected all these bulls, was at once struck by his impressive Holstein character, his top line which was almost straight as a good Hereford's, and in fact by his wonderful individuality throughout. He was thin in flesh and so out of condition that scarcely anyone in looking for a herdsire would have given him a second thought. My

KING TWEDE SPRING FARM

His use in the Jones herd showed a gain in individuality with great increase in production.

father saw the dam, Butter Boy Empress, and advised Mr. Wood to fit her properly and show her at Syracuse. This Mr. Wood did the following year and, although showing dry, she was made Grand Champion and First Prize A. R. O. Cow.

The next year, 1922, Woodmont was exhibited at Syracuse after being fitted for only about three weeks, and won First Prize, as a three-year-old. My father considered him among the best Holstein show bulls he ever saw and about 60% of his daughters were high class show animals.

The last sire we used was King Beauty Sylvia Lyons. He was second prize calf at Syracuse in 1922, being shown by A. A. Hartshorn who had no intention of showing him until shortly before the fair. Consequently he was exhibited in very poor show condition, and we considered him much superior to the highly fitted first prize calf. This is not in criticism of the judge as, in view of the condition of the animals, the placement was justified. We dispersed our herd in 1923 and had little opportunity to observe the effect of his use but we are well pleased with the few calves we have seen.

This shows what can be done in a few years even when building up one side of the pedigree only.

Now a few words as to the principles of selection to be followed:

First, the animal must be a strictly high class individual. This means more than a straight level back and rump and includes the elusive and by some not at all recognized element of breed character as well as rugged constitution, dairy indications, and refinement accompanied by large size and well developed bone.

Next, the dam must exhibit the same characteristics.

Third, and equally important, the sire must show up well in these respects.

If possible to trace the ancestry further back, it is desirable to have every individual show up equally well; but, fine as that may appear in theory, in actual practice it is very rare among Holsteins for the animal and both parents to meet the proper standard, let alone all the grandparents.

Now as to records: It is commercially desirable that large records appear in the pedigree but it is much more desirable from a breeding standpoint that the female relatives look the part of producers than that their production is actually on record. In other words, more people have been deceived by records than by individuality.

But it takes much study and experience before proper skill in selecting breeding animals can be acquired; and the best way, we might say the only way for any breeder, is to get right down to the cow. He must feed, milk, clean stables, brush and curry, and himself do every thing for the cattle that their needs demand. Finally he should attend the shows and exhibit cattle himself. He must learn all he possibly can about breeds other than his own.

My father always says that in order to be a good judge of one breed a man must be a good judge of all breeds. The reason is plain. A knowledge of breed character is about the hardest thing to grasp in the study of any breed. Therefore it is only the best judges that recognize it and pay attention to breed character when doing their work. Also, unless they are equally familiar with breed character in all the breeds, they can not recognize foreign breed character in the breed with which they are working, and their work must be imperfect to that extent. Therefore they can not be good judges of one breed alone.

Some small degrees of success may be obtained by the study of true type models, but more than that is required for real finished success in breeding, fine as they may be for students and beginners.

A breeder must be able to select animals with the bloom off and when they are thin and tell what they will be when finished. Otherwise many of the best breeding opportunities will be passed by. He must be able to detect the poor ones when masquerading in high flesh and perfect bloom. He must be a feeder and developer or the world will never see the product of his genius for the world looks at things as they appear and has no eye for things that are good unless dressed in perfect finish and condition.

A Holstein breeder and writer of my acquaintance has several times remarked to me when a highly fitted

animal left the sale ring after selling at a high figure; "They see the fat and the fat kids them."

One of Mr. Resseguie's observations I want to especially comment on is as follows: "Some sire's offspring seem to be practically all good individuals and yet again certain bulls sire excellent type daughters and ordinary type sons and vice versa."

The word "seem" is very aptly used. No Holstein sire has practically all high class offspring. It just seems that way because they are so fortunate as to be in herds where they are kept in the pink of condition. The observer "sees the fat and the fat kids him."

Neither does any bull sire excellent type daughters and ordinary type sons or vice versa. It just seems as if they did. If a number of coins are flipped and one falls heads up twenty times in succession as would sometimes happen, the conclusion could be drawn that this coin would always fall heads up. If followed far enough it will be found only a matter of chance,—a fact true of the past but not true of the future—except so far as chance continues to work in the same direction. We hear the same comment on the fact that a bull sires mostly heifer calves or mostly bull calves. All such speculations are a matter of chance and like the various methods for the control of sex are, in my opinion, a waste of time.

Now as to Mr. Resseguie's suggestion as to publishing pedigrees in picture form;—such a plan would doubtless help some just as the true type models will help some, but it is very difficult to obtain a real true picture and the artist many times "improves" the individuality of the subject.

There is the most magnificent opportunity in the world for some breeder to bring out the outstanding show herd of Holsteins, but the master who accomplishes this work of art will go much further than the study of the true type models or picture pedigrees.

Farming is a conservative business. Money invested in it is comparatively safe, but it is evident that it does not offer much opportunity to make a fortune. Neither is there so great danger of poverty as in the city.

Missionary Spirit

AS a rule Holstein breeders are leaders in the fight to eradicate tuberculosis and we personally know a number of breeders who, during the past few years have devoted considerable time in an effort to get their neighbors to sign up and have their cattle tuberculin tested.

One of these breeders is Murray A. Miller, owner of Sunny Lawn Stock Farm, Milton, Pennsylvania. Although the Miller herd has been on the accredited list for some time and Mr. Miller is a member of the Northumberland County Accredited Holstein-Friesian Association, yet he is not content and recently was instrumental in getting the cattle owners living in West Chillisquaque township signed up to have their herds tuberculin tested on the Accredited Modified Area Plan.

Individual missionary work of this kind gets results and is far superior to the feeble efforts of any extension department located in a city a thousand or more miles from the scene of operations. Improvement and Breed Extension, like Charity, begins at and near Home.

Food for Thought

DURING the past few years Holstein breeders have developed their cattle to the point where the Twenty Thousand Pound Cow is a common occurrence.

This Bulk Milk Production has been developed with little regard to Butterfat Percentage.

In the same period Popular Inclination has Developed a Demand for Richer Milk.

An Increase in the Fat Percentage of Holstein Milk is Imperative if the Breed is to Maintain its Position in the Dairy Industry.—Richard M. Shaw in *New England Farms*.

You'll have a hard time proving a thing is immoral if it is profitable.

It takes a lot of charity to be a good neighbor.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Junior Breeder and Dairyman

Girl Wins Gold Medal

To encourage youngsters enrolled in calf club work the *Janesville Gazette* offered a medal to the owner of the animal winning grand championship in the class for juniors at the Janesville, Wisconsin, Fair. The prize winning animal was owned by Carolyn Hurley of Milton Junction, for her heifer winning the breed sweepstakes.

Here is what Carolyn has to say about her club work:

"I have been a member of the Rock county calf club since the spring of 1923. At that time my sister and I drew junior calves. I was very proud of myself when I saw her. I owned it and, although her name is Fisher Repeater Ormsby on the pedigree, I always called her "Babe."

"All summer I fed and took care of her. I worked quite hard and she responded by being very friendly. When fair time came, she had grown into a big calf. On judging day I found that there were about 30 Holstein heifers in the class I was entered. Great was my disappointment when my calf was placed 20th—way down the line from the top. I then decided I had not worked hard enough with "Babe" and also that she would never be a show ring animal.

"The spring of 1924 my father let me choose from all the calves he owned to again join the club. I selected Daryne Johanna Vale, sired by Houwtje Korndyke Vale. She is about two-thirds black and nicely marked. I worked more than ever to get her in condition. Five weeks before the fair I started to keep a blanket on her to condition her hair and hide. I brushed and washed her every day, as well as feeding her the best ration I knew. I rubbed olive oil into her skin to make it soft and glossy for I noticed last year the judge would always feel the hide of the calves to see if they were loose or harsh.

"The day before I took her to the fair my father clipped her tail, neck and around the horns. I was told by Jack Nesbit not to clip the animal all over, for that is the "lazy way of fitting." I polished her horns and hoofs. The day that she was judged I was greatly excited. I gave her the best washing and brushing she ever had in her life.

"I was very proud and well rewarded when I led her from the ring as prize winner. The blue ribbon was a real thrill. She was also made grand champion Holstein calf, winning the medal.

"Then came the state fair. Mr. Russell Clarke took a number of calves from Rock county to Milwaukee. My calf placed 11th in a class of 40 in the club contest and 12th in a class of 70 in open competition. One learns to realize that state fair ribbons are not easy to win. I took my calf home and with renewed zeal worked on her for the National Dairy show.

"When it came time for the National I was pleased when my calf was third in a class of 58. Work does help.

"This year I am going to enter the dairy calf club and also keep Daryne. I am going into the poultry club and am going to can and sew.

"I enjoy club work very much and wish every boy and girl in Rock county could have the good times and enjoyment that I have had out of club work."

Where Maryland Leads

Back of all the agricultural boys' and girls' club work, as conducted by the University of Maryland Extension Service and the United States Department of Agriculture, is the fundamental thought of acquainting the younger generation with the possibilities of agriculture and rural home life.

No other phase of agricultural club work in which Maryland boys have participated has opened up better opportunities or shown more productive results than the calf clubs. In 1924 there were 309 boys enrolled as members of dairy calf clubs, owning 370 animals, mostly purebreds, valued at \$64,745. In addition, however, and in connection with the calf club work Maryland boys have participated successfully in many local, county, state, national and even international dairy cattle judging contests. Maryland club boys have a record of two victories in the international contests in England and of two first places, two fourth places, one fifth and one eighth place out of the six national contests in which they have competed.

While all of this constitutes a fairly large contribution from the calf clubs to the dairy industry of the state, other important influences have been noted. Among other things, calf clubs have been the means of placing the first purebred dairy animals on many farms in the state and have thus paved the way for much improvement in the quality of dairy cattle maintained. Instruction given club members in feeding, in care and management, in dairy cattle judging and in the important matter of keeping individual production records has resulted in a wider dissemination and more general adoption of desirable dairy husbandry methods. In some communities the calf clubs have been responsible for an increased interest in the eradication of bovine tuberculosis; for purebred calves are not placed on farms where the herds are untested. In addition, the participation of club boys in local, county, state and national exhibits, in public demonstrations and in judging contests has done much to make known the worth of purebreds and to raise them in the estimation of the public.

Aside from all this, however, is the important fact that the calf clubs are training and preparing for the future many good dairymen. With the opportunity to see and understand the possibilities of dairying, many Maryland boys, starting with a single calf, now own small herds and are prepared to build up a business of their own. After all this is the big work that the calf clubs are doing in Maryland.

Maryland Junior Work

WILLIAM AND JOHN JOESTING, of VALE, Hartford Co. twin brothers aged 19 years. As calf club members they first secured a Holstein calf which has grown into the cow on the right. The first year she was in milk, she produced 14,189.5 lb. milk. These boys have the nucleus of a first class herd.

Photos by the United States Department of Agriculture in cooperation with the University of Maryland Extension Service.

Center Left—

This snappy looking heifer belongs to Martin Sutton, of Kent County and County Agent H. B. Derrick is showing some club members a few of her strong points. There are three Sutton boys in club work and they are building up a fine herd of purebred Holsteins.

Lower Left—

This choice heifer won first in a class of 26 at the Maryland State Fair held at Timonium last fall. She is owned by Harry Magruder, an enterprising junior enrolled in Montgomery County Club work. Harry believes his heifer will develop into a big producing cow, and she certainly looks as though she would.

Center Right—

Here we have Norman Pennington of Kent County and his two mighty good Holsteins. County Agent H. B. Derrick is holding Bess Clothilde Pontiac Burke, whose seven-day record of 606.1 lb. milk and 26.6 lb. butter made her a state champion as a junior three-year-old. The heifer is her first calf.

Lower Right—

This heifer is one of two raised by Edgar Palmer, of Perryman from the cow he originally secured when he entered calf club work. Several times she has topped her class at the Maryland State Fair and a few months before this photo was taken was placed first in the Holstein junior exhibit of the National Dairy Show. Mr. Palmer owns a good purebred bull and also is a breeder of purebred hogs.

NOT ABOUT COWS

MORE GARDEN STUFF

It is to be hoped that this "Garden Stuff" is not becoming monotonous to those who read this page, but we are going to risk mentioning a few more vegetables, which, although not unusual in themselves, are seldom found in the average garden and if we can thus introduce some of our old friends of the soil to those who we hope are our new friends of the printed page, we are amply repaid.

SPINACH

One of the most wholesome vegetables grown, often included by physicians in special diets for patients run down in health, yet apparently unappreciated by many people, is spinach. The amateur gardener has often been deterred from growing this vegetable because of its aggravating habit of going to seed. This can be avoided by sowing just a few feet at a time, thus ensuring a succession of usable plants, and also by pinching the top or center which threatens to blossom. The thick leaved variety may be sowed in the fall and is then ready for use early in the spring before gardens are plowed and the Savoy-leaved variety may be sowed as soon as danger from frost is over, while the New Zealand sorts are fine for the summer and fall crops. People who live in cities, and have the chance to buy all sorts of vegetables, fairly pounce upon spinach when it is in the market for, besides liking it, they realize its value in their diet.

KOHL RABI

Kohl Rabi is very much better than its name would indicate. One might call it a turnip rooted cabbage or a cabbage topped turnip. The dictionary says it is a race of cabbage with greatly enlarged fleshy stem. Nevertheless it is the turnip-like root that we use, and we have always dubbed it "glorified turnip" because the flavor is so much more delicate than any turnip we ever ate. It is ready for use ten to twelve weeks after sowing and should be used before fully matured, as the flavor is best then, and later the roots become fibrous and useless. This is another vegetable that should be planted a few feet at a time, to avoid loss. It may be mashed with butter or may be served with a cream dressing like cauliflower.

GREENS

People who like greens can never get enough from the early spring wild dandelions to the last of whatever varieties are grown in the garden. We know one husband who feels much abused if at least half a dozen messes of dandelion greens do not find their way to the family table every spring—and by "messes" we mean enough to be served at a second meal at least. So—garden dandelions, kale (not the pocket book variety!), Swiss chard, and mustard have always been regulars in our garden spot. Kale is hardly above zero, and is much improved by frost, so may be used even in early winter. The dwarf green curled Scotch is the best variety to sow. The men folks may be horrified at the idea of sowing seed for such weeds as dandelions but if one likes them at all there is no danger of their going to seed. Swiss chard belongs to the beet family, and the Lucullus Crumpled Leaved is the best sort of plant. The leaves are cut close to the base of the plant leaving the roots to keep on bearing more.

Perhaps the best of the lot is the "Fordhook Fancy" or Ostrich Plume mustard. The long plume like leaves are cut just like the spinach, and it may be cooked by itself or makes a grand addition to other greens, giving a sort of zip to their flavor. As soon as blossoms show themselves they should be picked off to prevent going to seed.

THE REST

The rest will have to be content with a mere mention as space forbids more. There are still salsify or oyster plant, endive, pepper grass, okra and Chinese cabbage, all of which add

something to the family table as garnishes, flavors or relishes. A nickel's worth of seed and a few fee. of ground will often give big results in the fun of raising these and the pleasure in eating them.

FROM OUR FRIENDS

MAKING COTTAGE CHEESE

"It took a city woman, a Philadelphian, to show me the best way to make cottage cheese, and, since I have never had a failure with it, while by the old method I often got it too hard, I want others to know of it. Have the milk sour enough to be set, cut into squares and pour on it boiling water, about measure for measure. Let it stand a couple of minutes, drain and season."—Mrs. A. H. F., New Jersey.

THE PROPER WAY TO COOK SWEET POTATOES

"One has to come south to find sweet potatoes properly cooked. This is how they do it down here. Peel them thin and slice about three-eighth of an inch thick, place in a flat pan with just water enough to keep from burning, but plenty of butter and brown sugar. Simmer on the back of the stove or in the oven until done. They should not be boiled first."—Mrs. N. H. E., Georgia.

A GOOD CURTAIN ARRANGEMENT

"Curtains gently swaying in the breeze sound very well in fiction, but in reality they get soiled very soon, especially in summer time when they get against the dusty screen. So last spring I hemmed my bedroom curtains at the bottom, ran a tape through the hem and fastened at each end. They can be pulled back to admit the breezes, look well and stay clean much longer."—Mrs. F. G. W., Penna.

Thank you very much.—Ed.

"ODDS AND ENDS"

A pinch of salt added to egg whites when whipping them will help to hasten the process.

Potatoes will bake much quicker if they are wiped dry, then rubbed over with grease or lard.

Grated cheese added to the crust of apple pies makes them extra delicious.

Soaking raw onions in milk for fifteen minutes before eating, will reduce their strong flavor, and render them more digestible.

One small teaspoon of baking powder added to the flour required for each pie crust will make it very flaky and nice.

Salt added to meat before cooking will ruin its flavor. Meat should be partly cooked before seasoning.

When baking pies in the oil stove oven they do not always brown nicely. Try rubbing the top crust over with milk before putting in the oven to bake.

Freshly laid eggs, when boiled do not peel easily. Use eggs about four days old, then put them in cold water before attempting to peel.

Also, fresh eggs will keep just fine if packed in salt in a crock, just so they do not touch each other or the sides and bottom of the crock.

When washing and rinsing colored cottons, add a tablespoon of epsom salts to each gallon of water, and the colors are not apt to run or fade.

If a new shoe pinches, dampen a sponge with very hot water, and hold it over the part that hurts, this will cause the leather to expand.

Would you win a housewife's heart
Do not merely praise her dinner;
Say with guile concealed by art:
My, but you are getting thinner.

Have the milk sour enough to be set, cut into squares and pour on it boiling water, about measure for measure. Let it stand a couple of minutes, drain and season."—Mrs. A. H. F., New Jersey.

THE PROPER WAY TO COOK SWEET POTATOES

"One has to come south to find sweet potatoes properly cooked. This is how they do it down here. Peel them thin and slice about three-eighths of an inch thick, place in a flat pan with just water enough to keep from burning, but plenty of butter and brown sugar. Simmer on the back of the stove or in the oven until done. They should not be boiled first."—Mrs. N. H. E., Georgia.

A GOOD CURTAIN ARRANGEMENT

"Curtains gently swaying in the breeze sound very well in fiction, but in reality they get soiled very soon, especially in summer time when they get against the dusty screen. So last spring I hemmed my bedroom curtains at the bottom, ran a tape through the hem and fastened at each end. They can be pulled back to admit the breezes, look well and stay clean much longer."—Mrs. F. G. W., Penna.

Thank you very much.—Ed.

"ODDS AND ENDS"

A pinch of salt added to egg whites when whipping them will help to hasten the process.

Potatoes will bake much quicker if they are wiped dry, then rubbed over with grease or lard.

Grated cheese added to the crust of apple pies makes them extra delicious.

Soaking raw onions in milk for fifteen minutes before eating, will reduce their strong flavor, and render them more digestible.

One small teaspoon of baking powder added to the flour required for each pie crust will make it very flaky and nice.

Salt added to meat before cooking will ruin its flavor. Meat should be partly cooked before seasoning.

When baking pies in the oil stove oven they do not always brown nicely. Try rubbing the top crust over with milk before putting in the oven to bake.

Freshly laid eggs, when boiled do not peel easily. Use eggs about four days old, then put them in cold water before attempting to peel.

Also, fresh eggs will keep just fine if packed in salt in a crock, just so they do not touch each other or the sides and bottom of the crock.

When washing and rinsing colored cottons, add a tablespoon of epsom salts to each gallon of water, and the colors are not apt to run or fade.

If a new shoe pinches, dampen a sponge with very hot water, and hold it over the part that hurts, this will cause the leather to expand.

Would you win a housewife's heart
Do not merely praise her dinner;
Say with guile concealed by art:
My, but you are getting thinner.

The Holstein Breeder and Dairyman

MARCH 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

The Stevenson Motion Under Section 32 of the General Corporation Law

JUDGE PIERCE, at Buffalo, handed down a *Pro Forma* decision denying the motion made on behalf of George E. Stevenson and others against the Holstein-Friesian Association of America, without costs and without prejudice to the Equity Action started December 26th against the Association, practically holding that the whole matter could and would be disposed of in the suit in Equity.

Our advices are, however, that an appeal will be taken from his decision and the matter threshed out in the Appellate Courts.

Facts and Kellogg's Statements

IN CONNECTION with the announcement of Judge Pierce's decision in the case brought against the Association's management by Mr. Stevenson and forty-six other members under Section 32 of the Membership Corporation Law, and in view of the fact that the case is to be appealed to a higher court and also in view of the fact that the second action brought against the Association's management by Mr. Stevenson and others under an equity proceeding is still pending, we believe that the members of the Association and our readers generally, will be interested to know just how these cases have been handled by the attorneys representing the Association's management and why it is that these cases have been appealed, evidently with confidence that eventually a decision will be rendered favorable to the members and best interests of the Association, that the extravagance that has prevailed in the Association's management for the past five or six years will be stopped and the right of the members of the Association to a direct voice in electing officers, formulating by-laws and fixing policies of the Association will be restored.

We have tried to keep our readers informed as to the charges preferred against the Association's management by printing a full text of the charges, allowing our readers to formulate their own opinions and conclusions. We regret that we have not been able to secure a copy for publication of the answers filed by the attorneys representing the Association's management. This, we believe, has been unfortunate in that our readers and members of the Association have not known to just what extent the answers filed by attorneys representing the management have represented the actual facts as they appear in the Association's printed records.

There is no reason why anyone representing the Association should attempt to mislead the court by presenting untrue or misleading statements. If the Association as an Association is guilty of law violations, such violations should be rectified and the Association placed in a position where it can function legally and in accordance with the law.

If an officer or a group of officers are charged with or are guilty of law or by-law violations and misconduct in office or have resorted to illegal methods in obtaining office, they should be called upon to free themselves of such guilt and such suspicion. Association's funds should not be used to employ lawyers to defend a member or group of members who are charged with or are guilty of irregularities in obtaining office.

If an Association had been so managed and so conducted that it is charged with or is guilty of law and by-law violations, the proper, right, and just thing to do is to rectify its mistakes and proceed to conduct its business in accordance with the law. It should not employ lawyers or permit its management to employ lawyers to misrepresent facts and conditions pertaining to its previous conduct in order to justify its guilt.

If the management of the Holstein-Friesian Association should employ an attorney to represent them who was not familiar with the facts pertaining to the Association's management and the attorney should make misleading statements, the making of such misleading statements might be justified or excusable from the standpoint that he was not entirely familiar with all the facts and details in the case, but for a lawyer who has been closely associated with the Association's management for many years there is little or no excuse to justify any errors or misstatements of facts.

Mr. O. U. Kellogg, who is acting as chief attorney for the present management of the Association, has been connected with the Association for many years. He at one time served as its President and aside from his early connections with the Association, he was identified with the movement that tried, unsuccessfully, to gain control of the Association at its annual meeting at Milwaukee in June, 1918.

When the control of the Association was taken over the following year, June, 1919, at Philadelphia, by the present management, Mr. Kellogg was appointed its chief counsel. Being identified with the group who gained control at the Philadelphia meeting, if they were guilty of any law or by-law violation in their efforts to gain control, or if they are guilty of any law or by-law violations since they were elected to office,

it may be assumed that inasmuch as Mr. Kellogg was acting as their attorney that he was advising them legally. Therefore, he is vitally interested from a personal standpoint in the outcome of the legal actions that are now pending.

First, because he has been legal adviser to the management and,

Second, because he is responsible to the management for his present position.

We do not know what salary Mr. Kellogg receives, but the association records for 1922 show that he drew \$15,000 from the treasury.

We do not wish to accuse Mr. Kellogg of wilfully, knowingly and intentionally making false statements or drawing misleading deductions in the answers filed to the charges preferred against the Association's management by Mr. Stevenson and forty-six members. But we would like to call to our readers' attention some of the statements that appear in the editorial of the *Holstein-Friesian World* under date of February 21, 1925.

When the fee for issuing a transfer certificate was increased to four times what it formerly was at the Philadelphia meeting, the members generally were displeased because at that time the Association was in its zenith of prosperity, financially and otherwise. It had upwards of \$230,000.00 set aside in the Reserve Fund, its net worth was over \$367,000.00 and the financial statement for the year ending April 30, 1919, shows that the Association was operated at a profit of over \$60,000.00. There was no just reason for increasing the fees.

In the answer referred to above, printed in the *World*, prepared by Mr. O. U. Kellogg, apparently in an attempt to justify the increase of transfer fee at the Philadelphia meeting, appears the following statement:

"That prior to the annual meeting in June, 1919, the fee for the transfer of an animal by a member if made within a fixed time was twenty-five cents. An investigation made prior to said meeting, disclosed that the actual cost to the Association for making a transfer was 72½ cents."

The above statement of Mr. Kellogg's cannot be justified by the actual facts in the case as they appear in the printed records of the Association, for on page 354 in Volume 41 of the Herd book, is a table which gives the number of certificates issued, the gross earnings per certificate, the cost of issuing a certificate and the net earnings of each certificate issued by the Association for the year ending April 30, 1913, to the year ending April 30, 1919.

Fiscal Years	Number of Certificates Issued	Gross Earnings Per Certificate	Cost Per Certificate	Net Earnings Per Certificate
1912-1913	93,112	\$1.21	\$0.52	\$0.69
1913-1914	104,815	1.04	.46	.54
1914-1915	134,456	1.12	.43	.69
1915-1916	141,427	1.12	.46	.66
1916-1917	149,731	1.08	.54	.54
1917-1918	179,807	1.08	.53	.55
1918-1919	188,279	1.05	.58	.47

If you refer to the above table, you will find that the Association's records show that the average fee collected for each certificate issued for the year end-

ing April 30, 1919, was \$1.05, that the average cost for issuing a certificate during that year was 58 cents and the net profit on each certificate was 47 cents. Yet Mr. Kellogg in his answer as published, tells the court that it cost the Association 72½ cents to issue a Transfer certificate. Where did he get this information?

Further on Mr. Kellogg states:

"The last five years since June, 1919, under its present management, have been the most successful of all the years of its history, notwithstanding the unfortunate conditions that have existed and that during that time it has passed through a period of great depression in all its business enterprises as is evidenced by the fact that its membership has been increased to 25,064, an increase of 10,723 within that time. Its reserve fund has been increased from \$232,000 in June, 1919, to \$325,673.76, at the present time, and during the great business depression of last year 1,690 new members were added to its membership while in 1918, the year before its present management took charge of defendant's affairs, only 1,320 members were added to the Association, and during all this time it has maintained at large expense a successful extension department."

It is true, according to the Association records, that it has a membership of 25,064, and that during the past five years, its membership has been increased by over 10,000. It is also true that the year ending 1918, the Association added 1,329 members to its list and that during the year 1923 the Association admitted 1,690 new members. (The records show 1,792). But it is NOT true that the present management took charge of the Association in 1918. Mr. Kellogg and those working with him tried to get control of the Association at the Milwaukee meeting in 1918, but were defeated. It was in June, 1919, that they took charge of the Association's affairs. During the year ending April 30, 1919, the Association admitted 3,136 new members. For the benefit of our readers, we are printing below the number of new members admitted to the Association each year from April 30, 1919, to April 30, 1924.

By studying the table, you will see that the percentage of increase in new members for the year ending April 30, 1919, over the year ending April 30, 1918, was 136% and under the present management, which assumed control in June, 1919, the percentage of increase dropped from 136% to 15% and there has been a decrease in the percentage of members taken into the Association each year as compared to the number that was admitted during the year ending April 30, 1919, when 3,136 new members were admitted.

By studying the table showing the number of new members admitted to the Association yearly, it can readily be seen that under the present management there is a decreased number of members joining the Association instead of an increase.

Year ending April 30, 1918—1,329
Year ending April 30, 1919—3,136 ... 136% increase
Year ending April 30, 1920—3,608 ... 15% increase
Year ending April 30, 1921—2,182 ... 30% decrease
Year ending April 31, 1921—(8 mos.)

—778 ... 63% decrease

Year ending Dec. 31, 1922—1,726 ... 45% decrease
 Year ending Dec. 31, 1923—1,792 ... 43% decrease
 Year ending Dec. 31, 1924—1,491 ... 52% decrease

Mr. Kellogg in referring to the Association's finances compares the Reserve Fund of \$232,000.00 in 1919 with a Reserve Fund of \$325,673.76 for the year 1923.

The Reserve Fund does not represent the total assets of the Association, but only a part of the accumulated profits set aside in the form of permanent investments. Therefore, to compare the finances of the Association for the year 1919 with the year 1923, it is only fair that the figures representing the total net worth of the Association be used and not the amount that happens to be in the Reserve Fund which can be changed at will by an unanimous vote of the directors.

If we refer to the Association's printed records in Volume 41, page 280, we will find the following:

"Cash and securities on hand in 1895 were \$15,056.45; on April 30, 1919, these items reached a grand total of \$367,251.26."

If we refer to the report of the Finance Committee as presented at the Richmond Convention, June 4, 1924, we will find that it gives the total net worth of the Association for the year ending December 31, 1923, as \$418,853.59. If to the total net worth of the Association in 1919, which is given as \$367,251.26, we add the interest to December 31, 1923, at 4%, the total net worth of the Association should be \$435,804.82, but the report of the Finance Committee for the year ending December 31, 1923, gives the total net worth of the Association as \$418,853.59 or \$16,951.23 less than it should be if the total assets of the Association in 1919 had been drawing interest at 4%.

In this connection it is interesting to note what the Association's net worth should have been on December 31, 1924, if the present management had so conducted the Association's affairs that the interest on its net worth had been allowed to accumulate.

In 1919, the total net worth of the Association was \$367,251.26. Interest on this amount at 4% from April 30, 1919, until December 31, 1924, is \$83,243.61. This interest added to the 1919 net worth of the Association should make the total amount \$450,494.87.

The preliminary published report of the Association's finances for the year 1924 states that it was operated at a loss of over \$30,000.00. Therefore, if we deduct \$30,000.00 from the total net worth of the Association as given in the report of the Finance Committee for the year ending December 31, 1923, it will give us the total net worth of the Association December 31, 1924, as \$388,853.59.

If we subtract this amount from the total net worth of the Association in the year 1919 of \$367,251.26, plus interest at 4%, or \$450,494.87, we will have a difference of \$61,641.28.

During the time that the present management has been in control of the Association, the net worth of the Association has decreased \$61,641.28 from what it should be if the total net worth of the Association had been drawing interest at 4% during their administration and, to this loss or depreciation must be added all of the money collected for increased transfer fee.

The transfer fee was increased 400% for the first two years of the present management's administration, it was increased 200% for the third year and it has been increased 600% for the past three years. The question naturally arises, what has become of this vast sum of money? How can it be accounted for?

It ought to be an easy matter for an Association and its officers to obey the law just as well as for an individual to obey the law. No one gets into trouble who obeys the law. No one needs lawyers to defend them when they obey the law. Honest men with honest purposes understand that the law was made to be obeyed, and most men who, for any reason, show a contempt for the law usually find out that it doesn't pay to "monkey with the buzz saw."

An Answer for Everybody

THE HOLSTEIN-FRIESIAN WORLD, the official organ for the extravagant management in control of the Holstein-Friesian Association, in a message to the members, states that the very life of the Association itself is threatened.

Mr. Kellogg, attorney for the extravagant management, states to the courts:

"The last five years since June, 1919, under the present management, has been the most successful of all the years in its history."

You have your choice.

Secretary Jardine

WHEN this issue of the BREEDER AND DAIRYMAN reaches its readers, there will be a new Secretary of Agriculture, Wm. M. Jardine.

William Jardine, father of the new Secretary, crossed the plains in 1864, traveling by ox-team. A few years later, he married and homesteaded in Oneida County, southeastern Idaho, very close to the Utah state line. For forty-five years he operated this homestead, and additions to it as a livestock, hay and grain ranch.

Secretary Jardine, the eldest son, spent the first seventeen years of his life on this farm. Before he went to college he broke horses, fenced lands and assisted in the general farm work. During his stay at the Utah Agricultural College, from which he graduated in 1904, he made quite a reputation as an athlete. Following graduation, he was manager of the Utah Arid Farm Company which operated a large tract of land at Nephi, Utah. During the school years of 1905-1906 and part of the following year, he was a member of the teaching staff at the Utah Agricultural College. Early in 1907, he assisted in dry land cereal investigations for the United States Department of Agriculture. In July 1910, he became agronomist for the Kansas Agricultural College and Experiment Station. He was made dean of agriculture and director of the experiment station in 1913 and five years later was appointed president of the institution. He is prominent in a number of agricultural societies and associations, has written many papers and bulletins and has quite a reputation as a judge and lecturer.

Do not forget that the price of anger is helpless regrets.

Medill McCormick

THE death of Medill McCormick, senior United States Senator for Illinois, which occurred at Washington, February 25, attracted nation-wide notice, because of the prominence of the deceased statesman and because he was found dead in his room.

Senator McCormick was less of a politician than he was a statesman. A man of wealth, the source of which was the harvester industry, he had devoted much of his life to politics and had earned an honored name for sincerity and earnestness.

Senator and Mrs. McCormick owned the Rock River Farms at Byron, Ill., the home of a herd of Holsteins which have attracted attention on account of immense herd production. The milking herd was enrolled in the Ogle County Cow Testing Association and the state report shows that the herd led the association for high average production a number of months and occasionally led the entire state, a remarkable showing as from seventy-five to eighty cows in all stages of lactation were in milk and their production reported. Holstein men asked if the Rock River Farms Herd will be dispersed. We have no authoritative information but it has always been understood that Mrs. McCormick was even more interested in the herd than was the deceased senator, and it is well known that she spent most of her time on the farm, preferring to do so rather than sojourn in Washington. It is expected that the McCormicks will continue to operate Rock River as a purebred Holstein establishment.

The Way of the World

The More You Pay the Less You Get

THE February 21st issue of the *Holstein-Friesian World* has some illuminating and interesting figures as to its value as an advertising medium. It lists ten sales it advertised giving the amount of advertising space taken in it and the average selling price. Evidently the writer is either devoid of a sense of humor or else must have had his mind on other

things for the sale to which was given the most advertising space, eleven pages, realized an average of \$202.75, the lowest of the listed ten. The Monclova Farms Sales took the next largest amount, devoting the sale advertising ten and one-half pages and realizing an average of \$205, the second smallest average. The sale to which the smallest amount of space, one and one-half pages was devoted, averaged \$213.

Therefore it looks as if the more space devoted to advertising sales in the *Holstein-Friesian World*, the lower the price received for the cattle. That's the interpretation of their own figures.

An Explanation

AN advertisement of the Falconer herd recently appearing in the HOLSTEIN BREEDER AND DAIRYMAN carried a statement that this herd was accredited. Mr. David Falconer, in correcting this statement, says that while no tuberculosis has ever been discovered in the herd yet he has never had it placed on the accredited list. The words should have been "Tuberculosis Free."

Animals from this herd have gone from Scottville to other parts of Michigan and even to other states and have always given a good account of themselves. In the course of eighteen years of doing a big business and shipping to all parts of the Union, no animal has ever given a positive reaction to the test. In addition the entire herd is regularly tested and always have been given a clean bill of health.

Half the troubles of mankind come from ignorance—ignorance which consists less in not knowing things than in willfully ignoring the things that are already known.—Henry Van Dyke.

The finest education is that which puts a man in closest touch with his fellow men. The best learning is that which intensifies a man's patriotism as well as clarifies it.—Henry Van Dyke.

CLUB ACTIVITIES

ONONDAGA CLUB MEETING

President Murphy presided over the meeting of the Onondaga County Holstein Breeders' Club held January 23d, at the Yates Hotel, Syracuse, N. Y.

Farm Bureau Agent Ward gave a report of his year's work. He said that he was ready to help dairymen if they made their needs known, advocated elimination of scrub animals, continuation of tuberculosis eradication, junior project and C. T. A. work, and making county exhibits at the State Fair. His assistant, Mr. Zaner, who is in charge of junior project work, said that one of the juniors won the championship in the open classes at the state fair and as a result was sent to the National Dairy Show. He asked aid in securing the best individuals possible at a reasonable price for the boys to work with during the coming year.

When Mr. A. L. Brockway was called upon he asked that Mr. Powell speak in his stead. The veteran breeder and Holstein enthusiast advised securing the best animals possible for club work. It was the tendency in New York State to secure cheap calves. He told of selling a calf from his own herd at a special price to a young lad who, after the fall shows wrote him that he had won one first, two seconds, and a third prize with his animal, and the only reason he did not win first every time was that he did not have his animal as well groomed as did some of the others. He had the individual to work with and was taught experience. Mr. Powell said a few words about the importance of the State Fair and of the importance of having Eastern judges. The tendency was to accept the Western point of view of large sized animals and to sacrifice dairy quality. He criticized the area plan of tuberculin testing, saying that it favored one township at the expense of another, and so was apt to prove detrimental to the advancement of dairying and the purebred industry.

After luncheon Mr. Zaner spoke on the importance of cow testing association work which could be carried on easily and cheaply. No other business was run without attempting to find out the cost of production and the difference in the earning capacity of animals. The discussion indicated that an association may be formed in Onondaga County.

The well known feed man, Harry Mason Knox, spoke on the importance of selecting pure feeds for dairy animals and combining them so that the animals relished them and got maximum nutrition from them. He said the importance of protein had been overstressed. It was not the quantity but the way the various nitrogenous substances were associated, that made them valuable for nutrition and production. One waste in dairying was buying and feeding too much protein which often overworked the digestive systems of the cow so that she was not in physical condition to produce her best. Valuing feeds from figured out digestible nutrients was a fallacy. The dairy cow on her home farm could tell the dairy farmer the best feed to use.

President Murphy endorsed the statements of Mr. Knox by a recital of experiences with his animals.

YOUR ATTENTION IS CALLED to this Accredited Herd in which there has never been a case of Abortion.

REASONABLE PRICES ON YOUNG STOCK

HARRY C. REYNOLDS

SCRANTON

PENNSYLVANIA

Prof. Rider of the Syracuse Agricultural College, spoke on selecting and feeding dairy cows. He agreed partially but not entirely with the previous speakers. Good animals with inherent dairy quality, properly fed, meant success in dairy husbandry. Standard feeding statistics helped in studying out proper rations for dairy cows. In the past too narrow rations had been fed; to-day wider rations are being used. A 15% protein ration may be all that is needed; an 18% or 20% might be better for another farmer. The age of the animal, period of lactation, whether or not she is in calf, were determining factors. The amount and quality of roughage, carbohydrates and mineral matter were also to be considered.

A. L. Brockway, R. E. Deuel and Chas. Bigler were appointed a committee to investigate the possibility of retailing a special Holstein milk for Syracuse babies.

The members voted against the proposed abolishment of the state fair commission and endorsed the effort to secure an appropriation of four million dollars for tuberculosis eradication.

WASHINGTON STATE ASSOCIATION

At the annual meeting of the Washington State Holstein-Friesian Association held in Yakima, February 4, Harvey Shoultes, Chehalis, was re-elected president; H. C. Davis, Granger, vice president; Harold C. Stimson, Hollywood farms, secretary-treasurer; Peter Omdahl, Mount Vernon; John L. Smith, Spokane; Thomas J. Owens, Kirkland; George S. Bulkley, Carnation Milk Farms, directors.

Resolutions were passed requesting Governor Hartley to re-appoint Dr. L. C. Pelton, state supervisor of dairying and livestock: urging the legislature to prohibit the use of dairy terms in substitute butter advertising, and asking the United States department of agriculture to lower the perfect milk score from 4 per cent to 3.5 per cent fat.

A feature of the entertainment was a milkmaids' contest which was witnessed by several hundred people. Mrs. Herbert Mills of Wenas won the Easter bonnet offered as a prize by C. A. Harrison of the Commercial Hotel, by milking 18.3 pounds in 4 minutes. She beat Miss Emma Engler by 4.6 pounds. The second prize was \$5.00 in cash, given by the Yakima Commercial Club. Mr. Harrison announced that at the state fair this fall, he would offer a prize for a similar contest open to any milkmaid in the state.

FOUR MEN FOR TWO POSITIONS

An aggressive program was mapped out by the Idaho Holstein Friesian Association at its meetings early in January. It planned to organize a number of county associations which will be federated into the state club.

The principal speaker was Professor F. W. Atkeson of the State University of Idaho who said that the purebred livestock in Idaho showed great promise. The meeting endorsed the movement for a state dairy show.

The delegate plan of the Holstein-Friesian Association of America allots two delegates to the state of Idaho. The meeting nominated four men for the two positions.

R. T. Davis of Weiser was re-elected president; Alex Thompson, Pocatello, vice president, and Charles Warren, Boise, secretary-treasurer. On the board of directors were named, Herman Weick, Notus; Joe Walker, Declo; F. W. Atkeson, Moscow; John P. Neilson, Weston; George A. Pincok, Sugar City, and A. H. Jaegels, Buhl.

GOOD TURN OUT

About 40 members of the Jackson County Holstein-Friesian society attended the annual meeting held at Rives Junction, Michigan, February 11. An address was given by county agent Roy E. Decker. The following officers were elected: President, Ben Smith, Rives; vice president, Vern Clough, Tompkins; secretary and treasurer, Arthur Perrine, Rives; directors: Burr Wood, Emmett Noon, Dennis Cobb, George Hamp and Vern Wheeler.

HEAR SEVERAL SPEAKERS

At the annual meeting of the Michigan Holstein-Friesian Association held at Lansing, February 4, officers were elected as follows: President, M. W. Wentworth, Battle Creek; vice-president, J. E. McWilliams, Mt. Clemons; secretary, J. G. Hays, East Lansing; treasurer, Silas Munsell, Howell; Board of directors, J. R. Strange, Grand Lodge; John Butth, Grand Rapids; W. E. Robb, Flushing; H. W. Norton, Jr., Lansing; E. L. Salisbury, Shepherd; Dudley Waters, Grand Rapids.

The speakers included Jack Poynton of Hoards Dairyman, and Carl F. Huffman of the Dairy department at the Michigan Agricultural College, who spoke on the "Relation of Minerals, Vitamins and Light to Nutrition of Dairy Animals."

O. E. Reed, head of the College Dairy Department urged the breeders to co-operate in ridding the nation of one million unprofitable cows which would solve the problem of dairy overproduction.

At a general meeting during the week, J. M. Kelley said that, while Wisconsin produced 76% of the country's cheese, because the manufacturers refuse to combine and market their product under trade names, it is impossible to buy a pound of Wisconsin cheese in New York.

"Instead of a breeding ground for prime dairy cattle, the people of New York look upon Wisconsin as the breeding ground of a certain type of politician."

COREY DONATES CALF AS PRIZE

A purebred Holstein bull calf donated by William B. Corey of Davisville, R. I., through the Washington County Pomona Grange, was awarded to Sheffield Greene, Jr., of the Dunn's Corner Sunshine Club. The Washington County Pomona Grange voted to add to the other prizes they give for Junior work, prizes of one or two calves for dairy club work, to take the place of the calf offered this year by Mr. Corey. There are approximately 700 members of 4-H clubs in the county. Sheffield Greene, Jr., was awarded the championship last year in state dairy club work. The champion for this year will not be announced until the state club work camp and short course in June.

BOUND TO INTEREST

Buchanan County Holstein breeders gave a dinner at Independence, Iowa, for all dairymen interested in Holsteins. At the business meeting the following officers were elected: Albert Sloan, Rowley, president; C. E. Meythaler, Independence, vice-president; C. L. Bayer, Independence, secretary. For directors, William Ross, Lamont; H. W. Bacon, Hazleton; T. E. Wilson, Rowley; Guy Stoddard, Jesup, and Ross Miller, Independence, were named.

A county Holstein breeders' picnic will be held sometime in the early part of June. A committee consisting of H. W. Bacon, Will Ross and J. Deitz are to meet in the near future and make arrangements for a Holstein calf club.

GROWING INTO DAIRYING

Professor Earl Weaver, head of the annual husbandry department at the Iowa state college gave a talk entitled "Growing Into Dairying," to the members of the Hamilton County Holstein Breeders association at the recent annual meeting. Floyd Johnston, secretary of the State Dairy association, spoke on calf club work. The following officers were chosen: President, Ed Erickson of Randall; vice president, Boyd Weidlein; secretary-treasurer, Howard M. Evans; state director, H. W. Gleim, all of Webster City.

MISSOURI ASSOCIATION OFFICERS

At the recent meeting of the Missouri Holstein-Friesian Association the following officers were elected: President, Glenn G. Davis, Columbia; vice president, F. W. A. Vesper, St. Louis; secretary-treasurer, A. B. Cole, California; directors: A. H. Kuhne, Troy; E. A. Walkenhorst, Concordia; E. A. Williams, Barnett; E. C. Adams, Blue Springs; A. C. Ragsdale, Columbia.

OTSEGO COUNTY CLUB

The Otsego County Holstein Breeders' association held their annual meeting at Cooperstown, New York, and elected the following officers: President, Dorr W. McLaury, Milford; vice-president, William Brown, Unadilla Forks; treasurer, C. J. Armstrong, Milford; secretary, Bliss Burton, Middlefield; directors, Earl L. Hall, Onondaga; F. H. White, Springfield and Ford McLaury of Portlandville.

Dr. H. J. Metzgar spoke on breeding troubles and Mr. Brown reported the recent meeting of the state club.

Mr. Brown was voted chairmanship of the membership committee with power to select his own assistants and Mr. White will report the club at the next meeting of the state association. The president appointed Messrs. Brown, White and Burton to confer with Professor Wing of Cornell University on the subject of cow testing.

CHOOSE GILDNER AGAIN

W. E. Gildner of Mason City, Iowa, was re-elected president of the Cerro-Gordo County Holstein-Friesian association at the annual meeting January 30th. The other officers are: I. L. Walls, Burchinal, vice president; Andrew Olson, Schermerhorn farms, secretary-treasurer, and Henry Bruns, Thornton; James Skinner, Thornton; Homer Hadlay, Mason City; Julius Thompson, Mason City, and C. C. Rice, Clear Lake, members of the board of directors. E. J. Peake was re-elected as district director of the state association.

County Agent Marion E. Olson said that there would be 10 yearling heifers, 12 calves, and two cows entered in the calf club exhibitions at the North Iowa fair next fall. He also spoke on cow testing association work. The association unanimously endorsed that tuberculosis eradication area plan for Cerro Gordo County.

PLAN RACINE COUNTY HERD

About 80 attended the annual meeting of the Racine County Holstein Breeders' association held at Yorkville, Wisconsin. Leon Robbins of Racine, livestock editor of the Wisconsin Agriculturist, was speaker of the evening. It was determined to exhibit a herd representing Racine county at the next state fair and a committee was appointed to select the animals.

Harvey Nelson was re-elected president. Reuben Klofonda was elected secretary-treasurer. Vice presidents for the townships were elected as follows: Caledonia, George Bie; Yorkville, Clinton Skewes; Raymond, Joseph Walker; Norway, Hans Olson; Dover, Stanley Overson; Watertown, W. Lewis; Rochester, Enoch Haus; Burlington, William Rogers.

BULL CLUB NEWS

The Montgomery County Holstein Bull Association held its annual meeting at Schwenksville, Pennsylvania, January 26th, and elected officers as follows: President, Charles E. Wismer, Graterford; vice-president, Christian K. Wismer, Graterford; secretary and treasurer, E. L. Detwiler, Collegeville. Tuberculosis eradication and the proposed appropriation for indemnity were the chief subjects of discussion.

HEADQUARTERS FOR YOUNG STOCK

Every animal in this herd with the exception of the sire at its head, was raised here.

EARLY RISE HERD is under State and Federal Supervision.

MENZO A. BROOKER

R. D. 2,

South New Berlin, N. Y.

Accredited Herd Dispersal MARCH 18

At Myerstown, Lebanon Co., Pa.

Having sold my farm I am compelled to dispose of my Accredited Holsteins including my herdsire

BROOKSIDE WALDORF VICTORIA DUKE

His sire is Sir Pontiac Waldorf Pietje, son of the 36-lb. junior four-year-old, Lady Waldorf Pietje and full brother to Lady Waldorf Pietje 2d, 36.10 lb. butter in a week as a four-year-old.

His dam is a 27.33 lb. four-year-old daughter of the great King of the Pontiacs and was from a 30-lb. granddaughter of Colantha Johanna Lad.

He is a toppy, stylish animal of splendid type. Both he and his offspring will please you.

Just a Walking Milk Machine—a granddaughter of Dutchland Creamelle Korndyke Lad, her dam, 23.91 lb. A. R. O. She recently made 26.95 lb. butter, 616 lb. milk in 7 days and since then has twice produced 103 lb. milk in a day.

A granddaughter of Finderne Pride Johanna Korndyke.

A 24-lb. two-year-old, also her three daughters.

A 24.67-lb. junior three-year-old and her dam, a 20-lb. cow that produced 11,000 lb. milk in 6 months. Both splendid individuals.

A young bull ready for service. Also choice yearling heifers and heifer calves.

The size, type, condition and above all the producing capacity of Hayfield Herd are bound to please you.

Everything must go—also horses, farm machinery and implements, etc., etc.

JACOB M. BRUBAKER

MYERSTOWN, PENNSYLVANIA.

Hayfield Farm is only three-fourths of a mile from Myerstown.

ONE BANKER'S VIEWPOINT

During the meeting of the Pennsylvania Bankers' Association held at Harrisburg, February 23, one of the principal addresses was given by E. B. Harshaw of Grove City, President of the association. In his address Mr. Harshaw said

"Regarding agriculture, I am happy to say that the State of Pennsylvania has in no way felt the keen depression at any time which affected the Western and Southern states, and that the bankers of Pennsylvania, have not been hurt by the large credits to farmers on over-valued land, and that the banker-farmer problem in Pennsylvania is more a matter of leadership, and of intelligently understanding the farmer's needs. The Western and Southern farmers have frequently been criticized on one crop and raise only that crop, buying all their milk, butter, eggs and vegetables, it frequently happens that they are so situated on account of climate, transportation and soil that there is really only one crop which is profitable for that particular community, while on account of the closeness and magnitude of the markets in the State of Pennsylvania, and the variety of products required to furnish them, we are in a happy situation of being able to diversify our crops with the least difficulty and most profit.

"More and more the city banker, as well as the country banker, is realizing and accepting his duty to agriculture, and is discovering that the stability of his community depends on the farmer's success.

"At all times we bankers have been ready to come to the aid of the merchant or manufacturer, but only recently have we begun to study the real needs of the farmer.

"Let a depression hit the business interests of the country, and at once the business man of town hunts up his banker and the banker gives him eager attention, but in too many cases the farmer is overlooked.

"We are able to visualize the farmer in single units, only thinking of him as a single farmer, forgetting that in the aggregate his business, to most of us amounts to more than all our manufactories and merchants and that it is much more regular.

"In our own community, and the same applies to most farming communities in the last depression, our deposits only dropped 10 per cent, while in many communities depending largely on manufactories and merchants, the deposits dropped 50 per cent, followed by many failures, while the sections with diversified farming and no farmland speculation had few.

"More and more is the problem of developing good farming districts near manufacturing centers being discussed, and the conclusion is being reached that manufacturing plants must be located in the midst of good agricultural conditions and surroundings in order that their employees may properly live at reasonable prices.

"Nothing will increase the wealth of a community as rapidly as a prosperous agriculture. Compared with manufacturing, the farmer sends practically nothing out of the community but brings everything in. His wealth is made by the sunshine and rain, both free as air, to which is added his own labor while the manufacturer must bring in his raw material or deplete some mineral or lumber deposit already there, while the farmer uses elements, which cost nothing, to create wealth."

IDAHO BULLS WIN

Posch Ormsby Pietertje, owned by Clifford Tholl of Delco, Idaho, was the grand champion Holstein bull at the Ogden Livestock Show. The junior champion was Duke Netherland Paul De Kol exhibited by Aloys Schuyler of New Plymouth, Idaho.

A rich man lying on his deathbed called his chauffeur and said: "Ah, Sykes, I am going on a long and rugged journey, worse than ever you drove me."

"Well, sir," consoled the chauffeur, "there's one comfort; it's all down hill."

Mary had a little Ford
She liked it very well.
She ran into a telegraph pole,
And now it looks like—rain!

Cow Testing Association Reports

COW TESTING WORK IN PENNSYLVANIA

BY I. O. SIDELMAN

Cow testing association work in Pennsylvania dates from 1910 when the first association was organized in Chester County. There has been considerable ebb and flow in the work since that time and associations have operated in forty-three different counties. At the present time there are 42 associations in operation with 1,045 members and 14,051 cows on test.

For the year 1922-23 the average yield per cow was 7,178 lb. milk and 284.7 lb. butterfat. This is an increase of 391 lb. milk and 20.7 lb. butterfat above the average of the previous year. The 1924 summaries thus far complete indicate another material gain. The average yield of association cows is eighty per cent above that of the average cow of the State.

The records clearly show the benefits of continuous testing. There is always a considerable change in association membership—old members dropping out and new members joining—but in spite of this handicap, material gains are made each year. Association methods in dairying when consistently followed always result in placing the dairyman's business on a better economic basis.

The Volant Association, which operates in part of Lawrence County led for average butterfat production during 1923-24, the figures being 7,531 lb. milk, and 332.3 lb. butterfat for approximately 225 cows. The Torrey-Berlin association of Wayne County is second with 320.8 lb. butterfat and 8,310 lb. milk for 242 cows and the Cumberland Association third with 312.6 lb. fat and 8,713 lb. milk for 293 cows.

A purebred Holstein, Lady Clothilde

owned by A. W. Young of Somerset County, was the highest producer having 932.4 lb. butterfat and 25,981 lb. milk to her credit.

Increased production is shown where the association operates over a lengthy period. The Grove City Cow Testing Association has been operating seven years. The first year the average production was 5,098 lb. milk and 225 lb. fat. There has been a steady increase year after year and the figures for 1923-24 are 6,798 lb. milk and 309.4 lb. fat or an increase of exactly 1,700 lb. milk and 84.4 lb. fat. In the Cumberland Association, which has been in operation five years, there is a much greater increase. The first year the average was 7,325 lb. milk and 244.6 lb. fat and for the recently ended year the average was 9,779 lb. milk and 348.4 lb. fat, an increase of 2,454 lb. milk and 103.8 lb. fat.

Striking increases are shown for individual herds. Harry C. Gates of Canton, had his herd in cow testing association work 1913-14. The average number of cows on test month by month during the year was 20.8 and their average production was 7,467 lb. milk and 272.2 lb. fat. Mr. Gates has dispersed his well known herd of purebred Holsteins but they finished the year 1921-22 with an average of 13,231 lb. milk and 469.4 lb. fat for the eleven cows on test. G. V. Strock of Mechanicsburg, enrolled his herd in the Cumberland County Association in 1920. The first year they averaged 9,074 lb. milk and 295.6 lb. fat. For the year 1922-23 they averaged 12,061 lb. milk and exactly 400 lb. fat and the average number of cows on test monthly was 24.66. There was an increase during the four years of 2,987 lb. milk and 104.4 lb. fat.

GOOD IOWA HOLSTEIN HERD

Twenty-five herds containing 298 cows were tested in the Cerro Gordo, Ia., Testing Association during January. Their average milk production was 851 lb. and the average butterfat was 33.9 lb. All the herds are headed by purebred sires.

A purebred Holstein, owned by Keeler and Hadley, was the individual leader, her production being 2,178 lb. milk, 87.1 lb. fat, the average test being 4% fat. The animal in second place was also a member of the Keeler & Hadley black and white herd. This animal produced 83.3 lb. fat in twenty-two days.

Eight animals in this herd produced 1,585 lb. milk, 61.9 lb. butterfat, the highest average reported during the month.

BLACK AND WHITE, ANYHOW

A grade Holstein owned by B. F. Nelson, Northfield, Minn., was the leader in the Rice County Testing Association in January. She produced 1,578 lb. milk, 69.4 lb. fat on twice a day milking according to the tester Walter Seaman. Twelve purebred Holsteins owned by F. W. Kuhlman of Wheeling township won high herd honors with 1,416.6 lb. milk, 46 lb. butterfat.

TWO GOOD PUREBRED HERDS

A. F. Bennett of Pewaukee, Wis., owned sixteen purebred Holsteins that averaged 354.5 lb. fat during the past year in the Pewaukee-Sussex Cow Testing Association. Harvey Bartlett had nine purebred Holsteins that averaged 347.5 lb.

A six-year-old purebred owned by A. F. Bennett led with 15,599 lb. milk, 559.9 lb. fat. The second high cow belonged to the Harvey Bartlett herd and she produced 13,461 lb. milk, 536.6 lb. fat.

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

WISCONSIN COWS IN JANUARY

Two grade Holsteins and one purebred passed the 70 lb. mark in the Saukville Association. John N. Schinker of Port Washington owned the animals in first and third place, the leader, a grade Holstein being credited with 75.9 lb. butterfat from 1,809 lb. milk and the other producing 70.9 lb. fat, 1,774 lb. milk. The grade in second place was owned by Robt. Riewesthal, she being credited with 71.5 lb. fat, 1,746 lb. milk.

High herd average was held by eighteen purebred and grade Holsteins in the Schinker herd, their average production being 1,087.3 lb. milk, 39.7 lb. fat.

A purebred Holstein owned by Wm. Wegner led the Cedarburg-Grafton Association. She is credited with 2,145 lb. milk, 88 lb. butterfat. Mr. Wegner's herd of nine purebred and grade Holsteins had the high herd average with the production of 1,307 lb. milk, 54.5 lb. butterfat, their average test being 4.17%. Wm. Butth had the herd in second place, his ten grade Holsteins averaging 1,263 lb. milk, 46.9 lb. fat.

There were 266 cows tested during the month with an average production of 921 lb. milk, 35 lb. butterfat. Fifty-three cows exceeded the 40 lb. mark; 20 made over 50 lb.; nine over 60 lb. and five produced more than 70 lb. fat.

U. C. Boss of Oshkosh owned the leader enrolled in the Neenah Association. She is a grade Holstein and is credited with 69.9 lb. fat, 1,705 lb. milk. Forty-two cows in this association produced 40 lb. fat or more.

A herd of eighteen registered Holsteins owned by Charles Jones of Dodgeville headed the Dodgeville C. T. A. by averaging 1,293 lb. milk, 42.1 lb. fat.

Mr. Jones owned three of the five high cows. The first produced 2,133 lb. milk, 93.9 lb. fat, 4.4% fat. The second produced 1,962 lb. milk, 70.6 lb. fat, testing

3.6% and the third produced 1,723 lb. milk, 55.1 lb. fat, testing 3.2%.

Nellie Burke Korndyke, owned by Joe Van de Loop of Rudolph led the Rudolph Testing Association with the production of 1,878 lb. milk, 65.7 lb. butterfat. The eleven members of the Van de Loop herd averaged 1,139 lb. milk, 42.2 lb. fat.

Fifty-four cows of the 323 tested in the Denmark Association exceeded 40 lb. fat. A six-year-old registered black and white cow produced 2,114 lb. milk, 71.9 lb. butterfat and became the leader. She is owned by Harry Hansen of Denmark. The high herd is owned by Lawrence J. Larsen, also of Denmark, their average production being 1,719 lb. milk, 53.4 lb. fat for seven registered Holsteins. They were milked three times daily.

Fred Appleyard of Neillsville, owned the high individual enrolled in the Neillsville Association No. 1. She is a grade Holstein and is credited with 1,705 lb. milk, 75.6 lb. fat. Mr. Appleyard's herd carried off high herd honors with an average of 1,158.5 lb. milk, 42.3 lb. fat.

Four hundred and ninety-two cows were tested in the Clinton-Rock Association. Of these forty-four produced more than 40 lb. butterfat. A grade Holstein was the leader she being credited with 1,231 lb. milk, 66.5 lb. fat in the herd of J. A. Jones & Sons. Ten grade Holsteins owned by P. E. Offerdale & Son carried off high herd honors with an average of 39 lb. fat, 1,120 lb. milk.

High herd in the Leopold-Pella-Tilleda Association was owned by Hubert Maas, Tilleda, his eight purebred Holsteins averaging 1,085 lb. milk, 38.5 lb. fat. Ten grade and purebred Holsteins owned by Chas. Vierbicher followed closely with 1,039 lb. milk, 38.1 lb. butterfat to their credit. A member of the Vierbicher herd was the high individual, she having 1,891 lb. milk, 70 lb. fat to her credit.

TUTS AGAIN TO THE FORE

Cow Testing Associations spot the best cows in the land as well as aid in weeding out the low producers. "Tuts" a purebred Holstein cow owned by Mast Stoltzfus, Morgantown, Pa., a member of the Goodville Association in Lancaster County produced 2,538 lb. milk during January.

TUTS—PENNSYLVANIA'S JANUARY C. T. A. CHAMPION

Owned by Mast Stoltzfus, Morgantown, Pa.

The milk tested 3.9% yielding 99 lb. butterfat. This cow leads all Pennsylvania Association cows for the month in milk production. She was kept under ordinary farm conditions but was milked three times a day. Her feed for the month consisted of 540 lb. hay, 1,000 lb. silage and 650 lb. grain.

Last year "Tuts" was credited with 16,809 lb. milk, 646.6 lb. fat, she headed the Goodville C. T. A. for butterfat production.

Another Holstein cow owned by Mr. Stoltzfus produced 1,885 lb. of milk during January of this year. Last year the Stoltzfus herd averaged 11,724 lb. milk, 405.6 lb. butterfat.

FIRST IN IOWA

Iowana DeCola Ollie, owned by the Iowana Farms is high cow for January in the Davenport, Iowa, Testing Association. She produced 2,408 lb. milk, 72.2 lb. butterfat. The Iowana Herd had the highest average for both milk and fat, their figures being 1,128 lb. milk, 39.1 lb. fat.

JANUARY VIRGINIA TESTING

During the month of January there were 15 active Cow Testing Associations in Virginia with 282 herds and 7,454 cows reported on test. Of this total 622 cows produced over 40 lb. butterfat, and 195 over 50 lb. butterfat.

J. B. Manuel of Manassas, a member of the Prince William C. T. A., had the second high herd, despite the fact that some of his twelve purebreds and grade Holsteins were dry. They averaged 1,099 lb. milk, 42.3 lb. butterfat. The leading herd averaged 45.7 lb. fat. Of the ten high herds four were purebred or grade Holsteins, four were Guernseys and two Jerseys.

A purebred Holstein produced 1,692 lb. milk, 87.5 lb. butterfat, in the Prince William C. T. A. She was owned by F. A. Lewis of Manassas, and her record was surpassed only by a purebred, but unregistered, Guernsey, with 1,525 lb. milk, 93 lb. fat. In the list of the ten high cows occurred the names of seven purebred or grade Holsteins.

The average production for all cows for the month including 1,193 dry cows was 526 lb. milk and 21.6 lb. butterfat. The high average association in butterfat was the Rockingham Association with an average production of 536 lb. milk and 26.1 lb. butterfat. The Prince William C. T. A. had high honors in milk with an average production for its 522 cows, including 82 dry cows, of 679 lb. milk and 25.2 lb. butterfat.

There was a heavy consignment to the butcher during January, 1,443 cows being sold as unprofitable. During the month nine purebred cows and two purebred bulls were purchased.

CRAIG HAS GOOD PAIR

Aaggie and Echo, two purebred Holstein cows owned by A. B. Craig of Sewickley, Pennsylvania, lead the Montour Valley Testing Association for the month of January, Aaggie being credited with 1,633 lb. milk, 68.59 lb. fat as a

senior three-year-old, and Echo with 1,646 lb. milk, 62.62 lb. fat as a senior four-year-old. Rose, a purebred Holstein owned by A. N. McClinton, was fourth with 2,024 lb. milk, 60.24 lb. fat and the purebred Holstein Genesta, owned by Scott Brothers, was next with 1,897 lb. milk, 56.91 lb. fat to her credit. Purebred Holsteins owned by the Allegheny County Home, Bell Brothers, and Dr. George W. Ely, appear in the honor list. Rose was first for milk, with Genesta second and a County Home cow third.

The Scott herd, which consists of two registered and seven pure grade Holsteins, averaged highest for both milk and fat, the nine animals averaging 1,095 lb. milk, 39.09 lb. fat.

The Montour Valley Association started its year of operation on July 1. Daisy a registered Holstein, owned in the County Home herd has produced the most milk for the first six months, 8,520 lb. Queen, a stable mate, was second with 8,003 lb. Daisy is only second for fat, however, having 252.61 lb. credited to her, while a purebred Holstein herd owned by McPherson Brothers of Bridgeville leads with 275.93 lb. fat.

During January, twenty-four herds containing 341 cows in milk were under the supervision of tester L. M. Stark. Fifty-six cows exceeded 40 lb. of fat and 20 produced over 50 lbs., while 41 cows made 1,200 or more pounds milk during the month.

SOUTH DAKOTA TESTING

Members of the South Dakota Cow Testing Associations started the new year right by making high herd averages. Two herds exceeded 51 lb. butter per cow during January. The previous high record was 50.64 lb. made in March, 1924.

Gus Hintermeister of the Beadle County association leads the field with 51.63 lb. butterfat from each of his seven grade Holsteins. E. H. Baldwin of the Clark association is a close second with an average of 51.16 lb. from his five purebred Holsteins.

Mr. Hintermeister, who had the highest averaging herd, feeds alfalfa hay, corn fodder, a small amount of ear corn and considerable ground oats and barley.

Lewis Larson of the Day County association owns the highest producing cow, a purebred Holstein producing 98.74 lb. butterfat in the 31 days.

The highest average per cow is reported by the Kingsbury association, their 240 cows averaging 800 lb. milk and 31.25 lb. butterfat for the month.

Lewis Larson also owns the cow returning the greatest income over the cost of food, a purebred Holstein making 98.74 lb. butterfat did so at a food cost of \$10.56 leaving \$28.94 income above food cost. This cow was fed a daily ration of 45 pounds of corn silage, nine pounds of sweet clover, 15 pounds of oats and one pound of oil meal.

Of the 1983 cows tested, 131 failed to return butterfat equal to the cost of their food, 289 exceeded 40 pounds of butterfat for the month and 338 exceeded 1,000 lb. milk for the month. Nineteen cows were sold to the butchers.

SET GOOD EXAMPLES

At the State Juvenile Home at Toledo, Ohio, there is an attractive herd of Holstein dairy cows. The bookkeeper's figures for the year ending September 1, 1924, show that these cows produced 197,793 lb. milk which had a value of \$5,409.77; that the feed they consumed was worth \$2,525.07, and that the net profit per cow per month was approximately \$15. The entire herd at present is composed of forty-nine head, and this includes a very promising two-year-old bull, purebred and registered. The size of the cows is shown by the fact that a sterile one recently butchered dressed 907 lb.

The youngsters at the home do part of the work connected with the dairy and learn, by practice as well as precept to be good farmers and dairymen.

THE KIND WE RAISE

They are bred to

MODEL DARIUS KING SEGIS

son of the famous Clara Clothilde Lyons, 639.8 lb. milk in 7 days, 20,771.2 lb. milk, 723.4 lb. butter in 10 months as a senior two-year-old.

FRED B. KEENEY

Wyoming Co. Laceyville, Pa.

Choice Young Cows

Good Size, Type and Producing Capacity

YEARLING HEIFERS AND HEIFER CALVES

King Reliance Lockhart Veeman heads this herd. His dam held the world's record in the Dairyman's Division with her record of 882.10 lb. butter, 15,837.7 lb. milk made as a senior four-year-old. She is also a New York State Fair prize winner.

Heifers and calves increasing in value every day.

Waldron Herd is headed by two splendidly bred sires

KING SYLVIA PONTIAC PIETJE and KING DIXIE KEYES

Big records all over their pedigrees.

Entire Herd has passed a CLEAN T.B. Test and is under State and Federal Supervision.

Our stock will please you and we want to sell.

MRS. MAUD DWIGHT
Chenango Co.
South Otselic, N. Y.

Cows in this Herd have produced more than 12,000 lb. milk in a year in C. T. A. work and make a good profit above feed cost.

We can show you a whole lot of first prize and championship ribbons won at local fairs.

This Herd is Accredited—has never housed a reactor.

Will price anything in the herd.

A. R. BUSH
Montrose, Pennsylvania.

Seven Day Milk Records

made in

Log Cabin Herd

629.6 lb. as a 4-year-old
564.3 lb. as a 3-year-old
436.6 lb. as a 2-year-old
435.1 lb. as a 2-year-old
409.6 lb. as a yearling

By Daughters of one bull.

They are bred to a son of YANKEE LEFA, 32.09 lb. butter, 568.8 lb. milk in 7 days, she by Dutchland Colantha Sir Inka.

Log Cabin Herd is Accredited, and has never housed a reactor.

RALPH C. JACKSON

Conneaut Lake, Pennsylvania

TRAVERSE ECHO SYLVIA KING

Heads our ACCREDITED Herd.

His dam, a 33-lb. cow, averaged 102 lb. milk for 30 days and has a 35-lb. and a 32-lb. daughter.

Five of his seven nearest dams have one or more 30-lb. daughters.

He is bred to cows that return a substantial profit for the cost of their feed and care.

W. B. KENNEDY & SON,
BRADFORD CO., WYALUSING, PA.

UNCLE SAM'S HOLSTEIN HERDSIRE

BY M. H. FOHRMAN

The first proved bull used by the Bureau of Dairying in the experiment to compare outbreeding and line breeding was Denton Colantha Sir Rag Apple 87426, born on April 21, 1911. He is a son of Colantha Johanna Lad and Dutchland Rag Apple Aaggie. Rags, as he is known by his intimates, has been in service on the farm of the United States Department of Agriculture at Beltsville,

NAME	LB. MILK	TEST	LB. FAT	AGE
Lady Colantha Calamity Wayne	716607	16,717	3.63%	607 2 yrs. 0 mos.
Lady Colantha Watson Piebe	716608	15,952	3.36%	536 2 yrs. 3 mos.
Lady Colantha Boon Heroine	723604	15,103	3.64%	549 2 yrs. 1 mo.

This has raised the total of yearly-record daughters of Denton Colantha Sir Rag Apple to 35. It might be of interest to note that up to and including the issue of Vol. 34 of the Blue Book, there were only six sires with 50 or more yearly-record daughters, eleven with 35 or more, and only 33 with 25 or more.

These 35 daughters of Rags have completed a total of 65 long-time tests. A majority of these records were made in

Md., since the fall of 1919. He is being mated to the foundation females, to which he is unrelated, and his daughters constitute the first outcross generation. They in turn are being mated to another unrelated proved sire;—but that makes another story.

Since Rags began service at Beltsville five years ago, it has been a long wait for the first daughters dropped there to develop and pass through a whole year of test work, but three of them have now completed their two-year-old records and the results are quite gratifying. These three have performed as follows:

NAME	LB. MILK	TEST	LB. FAT	AGE
Lady Colantha Calamity Wayne	716607	16,717	3.63%	607 2 yrs. 0 mos.
Lady Colantha Watson Piebe	716608	15,952	3.36%	536 2 yrs. 3 mos.
Lady Colantha Boon Heroine	723604	15,103	3.64%	549 2 yrs. 1 mo.

a small herd where help is limited and the cows pay their way at the pail. No special feeds were provided and the records were made by cows standing in stanchions and milked only twice daily. Many of the records fall in the Dairyman's Division and the cows were not milked more than twice a day at any time.

Below is a summary of the 65 records made by the 35 daughters of Rags:

365-DAY RECORDS

CLASS	NO. RECORDS	AV. MILK	AV. FAT	AV. AGE
Two years old	13	14,744	503	2 yrs., 7 months
Three years old	7	15,859	538	3 yrs., 5 months
Four years old	1	20,038	760	4 yrs., 3 months
Mature	5	16,672	573	6 yrs., 4 months
Total	26	15,615	536	3 yrs., 7 months

305-DAY RECORDS

CLASS	NO. RECORDS	AV. MILK	AV. FAT	AV. AGE
Two years old	11	10,751	370	2 yrs., 6 months
Three years old	9	12,626	414	3 yrs., 6 months
Four years old	13	13,045	455	4 yrs., 6 months
Mature	6	12,885	467	5 yrs., 9 months
Total	39	12,272	435	3 yrs., 11 months

Twenty-five of these 39 records were made on twice a day milking.

Considering only the best record of each daughter, we find sixteen in the 365-day class with an average production of 15,939 lb. milk and 554 lb. fat at the age of 3 years and 5 months. This group includes:

NAME	LB. MILK	LB. FAT	AGE
Old Inn Ruby Colantha	415517	24,133	852 6 yrs., 4 mos.
Old Inn Judith Colantha	452272	20,038	750 4 yrs., 3 mos.
Old Inn Johanna Colantha	336220	18,408	629 6 yrs., 2 mos.

There are two others above 600 pounds, and six more have exceeded 500 pounds of fat, all with the first or second calf.

The other nineteen daughters accomplished their best work on ten month tests, and the average production of this

group is 13,149 lb. milk and 458 lb. fat, average age 4 years. Nine of these cows were milked only twice daily while on test. Three of the nineteen exceeded 19,000 lb. milk in 305 days, and the best performers were:

NAME	LB. MILK	LB. FAT
Old Inn Grace Colantha	363337	19,358 738
Old Inn Duchess Colantha	405258	19,611 648

There are 24 daughters of Rags now in the herd at Beltsville, and at the age of 13 years he is still an active breeder. Three of these daughters have completed year records and seven others are now on test.

Two of his sons are in service in college herds and eighteen more are now

being tried out in the herds of dairy farmers.

There are bulls of the breed whose tested daughters, collectively and individually, will exceed the performance of these animals; but, in full justice to Rags, consideration should be given to the moderate conditions under which these

cows were tested, and to the facts that this showing is based in the records of thirty-five (or 83 1-3 per cent) of the total number of the forty-two daughters in

DENTON COLANTHA SIR RAG APPLE

Uncle Sam's Holstein-Friesian herdsire.
Photo taken at the age of 9 years,
11 months.

the herds where official testing is carried on, that were old enough to have completed a year's work.

SHADY VALE FARM

Shady Vale Farm is the name of an accredited Holstein-Friesian breeding establishment located at Harris Station, Ross County, Ohio. Shady Vale Farm is owned by Mrs. I. T. Shade. The milking herd at Shady Vale is small, Mrs. Shade planning to never keep more than ten cows. These animals are milked twice daily, given just good ordinary care and feed and produce from 48 to 60 lb. milk daily under these conditions—certainly evidence of producing capacity and profit earning ability.

At the head of the herd stands Sir De Colantha Checker De Kol No. 294246, a very handsome bull, four years old and his owner says "as straight and handsome as a sire can be." His dam is a daughter of Johanna De Colantha 5th Champion, a grandson of Colantha 4th's Johanna and a son of the 30 lb. cow, Johanna De Colantha 5th. His sire is a son of Friend Hengerveld De Kol Butter Boy from Maple Crest Pontiac Ogden De Kol, a 28 lb. daughter of Pontiac Aaggie Korndyke, thus showing a combination of blood lines found in many of the largest record cows of the Buckeye State.

Mrs. Shade, who also raises purebred Rhode Island Red fowls, has an unusual love for the dairy cow especially for the docile, beautiful Holstein which she believes is the greatest milk machine that walks the earth.

GROWING INTO THE BUSINESS

Walter H. Wieckert, Appleton, Wis., has a herd of fifty-two Holsteins. In 1912 he finished an agricultural course of study at the University of Wisconsin and then purchased three purebred Holstein females from Fred Ziegler and two more from Michael McCarthy, well known owners of black and white cattle. These five were the only Holstein females ever bought by Mr. Wieckert. In 1924 the Wieckerts milked twenty-four cows, although eight of that number were two-year-olds, the milk production one day reached 1,100 lb. The average test for the year was 3.6%.

At the head of the herd is Sir Burke Johanna, a two-year-old bull purchased from the Murphy Farms, Egg Harbor, Wis. The four nearest dams of this bull have year records that average 1,000 lb. butter.

Two cows in the herd milked 124 lb. in a day. They are Johanna Queen Tirania Mechthilde with an official record of 695 lb. milk, 29.56 lb. butter and Terra Firma Netherland Johanna, with a record of 673 lb. milk, 29.22 lb. butter as a four-year-old.

Johanna De Kol Tirania, a six-year-old has given 600 lb. milk, 26.20 lb. butter in a week and milked 90 lb. in a day while Terra Firma Ormsby Bab has a two-year-old record of 503 lb. milk, 23.15 lb. butter in seven days, milking 75 lb. in a day.

Mr. Wieckert is a firm believer in cow testing associations claiming they invariably help to eliminate low producing cows from the herd and teach the dairyman economical feeding. Any animal in the Wieckert herd that fails to reach the production standard is not sold for breeding purposes but is eliminated and sent to the block.

NEEDED ON YOUR DESK

"In the time of peace prepare for war" is a world wide maxim. There are many people who believe that there is a milk war coming in the east and a disorganization of business because of the conflicting views of the Dairyman League members and the Non-poolers. If trouble of this kind does come dairy owners will be at a loss in order to know how to profitably dispose of their product. In previous milk wars, considerable milk was marketed in the form of soft cheese. Dairyman who are interested should get circular 94, just published by the Iowa Agricultural Experiment Station at Ames. This is entitled "Soft Cheeses that Are Easily Made" and contains instructions for making such cheeses at home or in factories.

The eight-page circular includes directions for making neufchatel, pimento, olive, sandwich nut, cream, skimmed milk, cottage, buttermilk and club cheeses.

FARM SUPERINTENDENT: Life experience in general farm and Advanced Registry work, seven years as farm manager. Experienced in showing, marketing, crops, farm and dairy machinery. Capable handling men, improving soil, buildings, developing, efficient, economical system of management. Married, no children, age 32, graduate of two years' Animal Husbandry and four years' Agricultural college courses. Box H. B., care Holstein Breeder and Dairyman, Harrisburg, Pa.

"Are you sure you love me?" said a pretty girl to her admirer.

"Love you!" echoed the smitten one. "Why, darling, while I was bidding you goodbye on the porch last night your dog bit a piece out of the calf of my leg, and I never noticed it till I got home."

MILLER BROTHERS
Clarks Summit,
Lackawanna County, Pennsylvania.

LEADERS FOR THE YEAR

Sixteen purebred and grade Holsteins owned by M. Weber & Sons of Merton, Wis., averaged the highest in the second year of operation of the Merton Cow Testing Association. Their figures were 11,863 lb. milk, 417.4 lb. fat. A grade Jersey herd was second and a Guernsey herd, purebred and grades, third. The fourth herd, owned by Jungbluth Bros. also of Merton, consisted of thirty purebred and grade Holsteins and their average was 10,331 lb. milk, 358 lb. butterfat.

The four highest cows for 1924 belong to the Weber herd, with records of 12,525 lb. milk, 572 lb. butterfat; 14,857 lb. milk, 571.8 lb. fat; 16,913 lb. milk, 564.8 lb. fat; and 16,931 lb. milk, 549.6 lb. fat.

During the year 414 cows tested averaged 8,192 lb. milk, 310 lb. fat. There were 108 cows that averaged over one lb. fat a day for the entire year and 209 cows that exceeded 300 lb. during the year.

A REAL JEWEL

H. A. Freed of Racine, Pa., is the owner of Jewel a ten-year-old Holstein cow that leads the Westfield Testing Association for the month of January, having to her credit 1,929 lb. milk, 81.2 lb. fat. There are four other black and white cows in the leading ten.

During the month, twenty-four herds containing 253 cows were tested by John Barto. Of this number 39 exceeded 40 lb. butter fat, and eight produced over 50 lb. while 13 made 1,200 or more lb. milk. The Westfield Association operates in part of Lawrence County, Pennsylvania.

ARIZONA PRODUCERS

During January 828 cows in thirty-three herds were tested in the Maricopa County Testing Association and averaged 783 lb. milk, 27 lb. fat. The highest producer was Clara 3d, owned by W. M. Painter & Son of Tempe, Arizona. She had 78.6 lb. fat credited to her. The purebred Holsteins, Johanna and Birthday, in the herd of B. Coman, of Phoenix, were second and third, with 68.6 and 68.8 lb. fat respectively. A mixed herd consisting of Holsteins, Jerseys, and Guernseys averaged 425 lb. fat, while the purebred Holstein herd owned by B. Coman was second with an average of 40.9 lb. fat.

WORK OF AN IOWA C. T. A.

James C. McCormick, tester of the Sac County Cow Testing Association, has compiled a report of the first year's work of that organization which was sent out by County Agent W. A. Posey. It tells that 425 cows in twenty-four herds finished work during the year, 201 being nine months or more in milk. One cow produced over 500 lb. fat, five made between 450 and 500 lb. and nine others exceeded 400 lb. The highest producer was a purebred Holstein, eight years of age owned by H. C. Hoft, Jr., of Wall Lake, Iowa; her production was 521.4

lb. fat, 15,158 lb. milk and her average test 3.43. She weighs about 1,650 lbs. and the tester says she is of excellent type and far superior to some of the animals he has seen at large shows.

During the year there were 39 animals sold for beef, 38 sold for dairy purposes, 4 tuberculin reactors, 82 were first calf heifers freshening too late to make a record of nine months or were bought after the first three months of the testing year had expired, 52 did not milk nine months, and nine died of various causes. Of the 52 not milking nine months it can be said that most of them were unprofitable, although some were due to breeding failures, etc., and in one case one man was forced to dry up several cows, as the result of losing his barn by fire and not having adequate means for caring for all of the animals in his herd.

The average for the 201 cows milking the allotted nine months' period was 6,740 lb. milk and 263.1 lb. fat. The association expects to raise this average considerably during the next year.

The association started its second year of work with nineteen members, which has since been increased to twenty-one with more in prospect.

IN MONTANA

The report of Elmo Briggs, tester of the Bitter Root Valley, Montana, Testing Association shows that 287 cows in twenty-two herds averaged 712 lb. milk, 27 lb. butterfat for the month of January.

Star, a grade Holstein belonging to D. C. Gray, was the leader with 82 lb. fat. Three registered Holsteins owned by Hollister & Ford of Darby produced 79, 69 and 68 lb. butterfat, thus taking second, third and fourth positions. This herd averaged 45 lb. fat.

SOUTH DAKOTA TOO

Spotty, a grade Holstein, owned by Otto Keup of Wentworth, S. D., led the 238 cows tested in the Lake and North Minnehaha Testing Association during January, by producing 1,383.3 lb. milk, 65.01 lb. fat, with an average butterfat test of 4.7%. Her feed consisted of 279 lb. alfalfa, 620 lb. corn fodder, 279 lb. oats and 31 lb. bran and was valued at \$8.07. Her net profit was \$17.23.

The average milk production of all the cows tested was 621.2 lb. and the average fat production was 24.88 lb.

FROM FISHER TO FISHER

A recent transaction in New York State Holsteins was a sale of three head by L. A. Fisher of Spencer, N. Y. to H. H. Fisher, of the same town.

The trio included the six-year-old cow, Pauline Inka Celeste and a pair of twin heifers, two years old, granddaughters of Princess Aaggie Inka, 31.68 lb. butter, 479.5 lb. milk in a week as a senior three-year-old. This cow is a daughter of Dutchland Colantha Sir Inka Prince, a

PAULINE INKA CELESTE

87 lb. milk in a day. Sold by L. A. Fisher to H. H. Fisher of Spencer, Tioga Co., N. Y.

bull that formerly stood at the head of the Catatunk Herd as the Fisher establishment is called.

Pauline Inka Celeste is a granddaughter of Dutchland Colantha Sir Inka Prince and is sired by King Rag Apple Celeste, a bull of Korndyke blood, whose dam, Johanna Celeste, is a 30.50 lb. daughter of Colantha Johanna Lad. This sale occurred January 6 and three weeks afterwards in her new home Pauline was milking 87 lb. daily.

All the cattle in the township of Spencer have recently been tuberculin tested on the area plan and this is the second township in Tioga County in which the cattle have been tested. As everyone knows, New York State is making a determined effort to eradicate tuberculosis among her cattle and has in two years expended eight million dollars for this purpose while an appropriation of four million dollars is expected this year which will be devoted to the same cause. No state in the Union is making a harder effort to have all its herds free from disease of any kind.

FRIDAY ALL RIGHT

Friday is not an unlucky day for H. O. Neimann, the well known Holstein breeder of Avoca, Ia., for on Friday, February 6, Roy T. Wills of Miami, Oklahoma, came to his place and purchased six head of females paying \$2,500 spot cash for them. Mr. Neimann was accompanied by R. A. Arnold of Norwalk, Ia. Mr. Wills confined his purchases to the Neimann and Hargrove & Arnold herds.

LAST CALL

W. A. Woods' sale to be held at Huntsdale, Pa., March 12.
Jacob M. Brubaker dispersal sale to be held at Myerstown, Pa., March 18.

THE BRUBAKER SALE

On March 18, on Hayfield Farm which is only three-fourths mile from Myers-town, Lebanon County, Pa., the accredited herd of Holsteins owned by Jacob M. Brubaker will be dispersed at public auction. This was the second herd of cattle to be accredited in Lebanon County and the first purebred Holstein herd to be placed on the list.

The Brubaker cattle are large sized and in splendid condition. When this issue of the BREEDER AND DAIRYMAN went to press Highland Percy Jane Denver, a member of the herd was milking right around 100 lb. daily. She has a 26.95 lb. official butter record made this year and her showing is all the more creditable as she is a regular breeder dropping her calves less than a year apart.

The February 22 issue of the BREEDER AND DAIRYMAN carried a write-up of this herd to which we refer our readers. We will say, however, that there are a number of family groups that should be kept together. For instance there is Mutual Pride Sadie Vale, just four-years-old. She has three daughters, evidence enough that she is a regular breeder. As a two-year-old, she made an official record of 24.03 lb. butter, 405.3 lb. milk. She is a granddaughter of Finderne Pride Johanna Korndyke and is from a 20 lb. three-year-old daughter of King Korndyke Sadie Vale.

The herd bull, Brookside Waldorf Victoria Duke, now just four-years-old, should go where his quality would be appreciated. A mere glance over the calves in this herd show that it is headed by a high class sire. He is also well bred, his dam being a 27 lb. four-year-old daughter of King of the Pontiacs and from a 30-lb. granddaughter of Colantha Johanna Lad. His sire, Sir Pontiac Waldorf Pietje, formerly headed one of the most noted herds in New York State. He is from a 36-lb. four-year-old that has a 36-lb. daughter that in turn is dam of a 34-lb. four-year-old that milked nearly 20,000 lb. and produced over 900 lb. butter in ten months as a senior two-year-old.

Mr. Brubaker, having sold his farm, has to sell his entire herd. He thus gives anyone needing Holsteins an opportunity to secure high class producing stock from a healthy herd at prices set by the purchasers.

WOODS—OTTO—ROBERTSON SALE

Four years ago Princess Nell Ormsby, consigned by Wm A. Woods, of Carlisle, Pennsylvania, to the First Brentwood Sale was struck off for \$3,000, after winning first prize in the two-year-old class in the show which was staged as a drawing card to that sale event. The next year, another two-year-old heifer from the Woods herd brought \$900. Mr. Woods plans to sell all his herd with the exception of one animal (retained for family use) on his farm near Huntsdale, Cumberland County, March 12. In this sale there will be at least six three-year-old daughters of King Ormsby Abbekerk Helena and so half sisters to the \$900 two-year-old.

A bull in the Woods sale that should prove a desirable herdsire is a yearling

son of King Ormsby Abbekerk Helena, from a daughter of King of the Ormsbys with a year record made as a two-year-old in strictly official test of 736 lb. butter, 15,968 lb. milk. Forty purebred Big Poland China Hogs will also be offered.

Realizing that his herd is small and that men needing cattle would not be apt to travel long distances to attend a small sale, Mr. Woods induced his friends, Ivo V. Otto of Carlisle and H. E. Robertson of York, to consign a few good ones. Mr. Otto consigns two daughters and two granddaughters of Westover Madaline Burke, a cow that produced 54,800 lb. milk, 2,263.2 lb. butter in four years of C. T. A. work. During these four years she made a profit over the cost of her feed of \$685.76. Both the daughters of this cow consigned by Mr. Otto were sired by Lothian De Kol Korndyke. Daughters of this bull have made a splendid showing in C. T. A. and official work and have made world's records in the Dairyman's Division. So highly is this sire regarded that he has been secured to head the Holstein herd owned by the Pennsylvania State College, which is surely evidence of his quality when State College authorities with all the herds of the State to pick from decide upon such a sire, tried and proven worthy.

There are also two good young bulls from the Otto herd, sons of Lothian De Kol Korndyke. They are both from cows that made a splendid showing in official and C. T. A. work and the fact that they are from healthy stock should induce spirited bidding for them, for the Otto herd as well as the Woods herd are fully accredited.

The Robertson herd has won high honors in the show ring at fairs of state and national character. Cows and heifers in this herd have made tremendous records and the animals composing the Robertson herd are of what is generally called fashionable blood-lines. Mr. Robertson consigns four daughters of his senior herdsire King Piebe of York, two daughters of his junior herdsire, King Piebe of York 3d as well as a granddaughter of King of the Pontiacs bred to King Piebe of York. A son of the senior herdsire from a cow with a butter record of 852.65 lb. made in a year complete the Robertson consignment.

SALE AT WATERLOO

A consignment sale held under the management of the State Association was held at Waterloo, Iowa, February 17. In this sale the Sherman Brothers of Jesup dispersed their herd. The top price was \$230 which Charles Thompson of Hopkinton paid for Wildare Superb Countess, a cow five years old with a year record of 726 lb. butter made as a two-year-old. A. R. Kullmer of Dysart paid \$220 for Wayside Rose De Kol 2d, a cow with two year records.

The top bull was a yearling, King Aaggie Lulu, consigned by Val J. Kies of Jesup. Despite the fact that his dam had made over 34 lb. butter in seven days, he went for \$150 to N. J. Frost of Jesup. The Sherman herdsire, Sir Henrietta Bess Ormsby sold for \$135.

The total realized was \$6,060 or an average of less than \$100. N. J. Mikkelsen of Cedar Falls, was the heaviest buyer taking ten head.

The following is a list of buyers with the number of cattle each took:
Charles M. Thompson, Hopkinton, three; Helge E. Madsen, Cedar Rapids, five; N. J. Mikkelsen, Cedar Rapids, ten; Hans Hansen, Cedar Falls, one; Peder Pedersen & Sons, Cedar Falls, three; N. J. Frost, Jesup, one; L. L. Appleby, Hopkinton, one; Russell H. Sage, Waterloo, one; Clyde Thompson, Hopkinton, one; F. H. Myrick, Jesup, one; L. A. Wissink, Dunkerton, two; Burne & Walderbrach, Ryan, one; F. M. Boss, Ryan, one; R. H. Wilson, Cedar Falls, six; Buchanan county home, three; G. H. Warriner, Jesup, two; Sans & Son, Clarion, one; A. R. Kullmer, Dysart, one; F. R. Bragonier, Buckingham, two; G. W. Bohrens, Cedar Falls, two; Albert Lorenz and Harman Bern, Gladbrook, one each; E. W. Kern, Luzerne, two; Harold Wehrman, Luzerne, four; W. V. Stickney, Vinton, two; and one each to H. C. Luloof, Waverly, C. R. Besh, Denver, E. H. Snavely, Waterloo, R. S. McGinnis, Stanley, and J. Wilson, Independence.

GOOD BULL CHANGES HOMES

Maxwell A. McKenzie and Archibald G. Campbell of Barneveld, Wis. have purchased Antrim Pride Sir Albina No. 256544, the high class bull that for several years has headed the good herd owned by Walter Hodgson of Arena. This bull is by Finderne Pride Johanna Korndyke three of whose daughters have made over 30,000 lb. milk in a year, and is from Trilly Albina Korndyke, second prize four-year-old at the 1918 New York State Fair.

Antrim has been shown locally and he and his offspring have won a number of prizes. A story of the Hodgson herd written by J. H. Lewis appeared in our issue of October 22, 1924.

HEAVY FINE FOR LAW BREAKING

Tony Murr, a California dairyman, who sold unpasteurized milk in the town of Arcata, the milk produced by cows that had not been tuberculin tested, was fined \$500 by the Local Court of Justice. The payment of the fine, however, was suspended, provided that he does not sell any more milk until granted special permission by the State Department of Agriculture.

Will exchange few finely bred Registered Holstein heifer and bull calves for Dairyman's League certificates.

THE BREED SWEEPS MARYLAND C. T. A.

Lilly May Pietertje Queen, alias "Love," a purebred Holstein owned by John M. Dennis and Son of Lutherville, produced 2,288 lb. milk, 101.8 lb. fat during the month of January, and not only led the Baltimore County Association, but also the entire State. The Dennis herd consisting of 48 registered Holsteins, averaged 938 lb. milk, 32.05 lb. fat. The nine leading producers were all purebred Holsteins, and the tenth was a grade Holstein—a clean cut victory for the breed. Claria, owned by Bowie Etchison, was second with 948 lb. fat; Rose, owned by Millard Rice, third with 91.5 lb. fat and 2,409 lb. milk; Summers, owned by J. D. King of Germantown, fourth with 96.6 lb. fat; Bell Daw DeKol 3rd, owned by W. R. Whitingham of Corbett, fifth, with 86.4 lb. fat; K. V. H. Ormsby Korndyke, sixth, with 83.7 lb. fat. She was owned by H. M. Carroll of Ashland. Purebreds owned by Millard Rice and Mack Walker of Gaithersburg, tied with 82 lb. fat, the Rice cow producing 2,486 lb. milk. Alice, owned by J. B. Diamond, was credited with 79.9 lb. and the grade was 78.7 lb.

There must have been bootlegging in Mother Goose days. Remember that song about a "pocket full of rye"?

WHY THEY CHANGED

In the story of Amsdale appearing in this paper a few issues ago we told why the Amsden Brothers changed from breeding Shorthorns to Holstein-Friesian. When their herd consisted entirely of Shorthorns the average daily milk production was 600 lb. When they had an equal number of Holsteins the daily average milk production was between 1,300 lb. and 1,400 lb.

The Amsden herd has been established nearly 30 years. A number of good bulls have headed the herd, but it is believed that the best one was Dutchland Sir Hengerveld Colantha. Although the Amsdens do not test their cows, several daughters of this bull have made records and at least two have been tested for a full year. Amsden June Colantha is credited with 1,084.36 lb. butter in 365 days with an average fat test of 4.10%. Another daughter, Amsdale Daisy Colantha has a year record of 1,848.12 lb. milk, 837.85 lb. butter.

Dutchland Sir Hengerveld Colantha was by Colantha Johanna Lad, and was from a daughter of Pietertje Hengerveld's Count De Kol, thus having in his pedigree a cross of blood lines found in many of the greatest record daughters of his famous sire.

In the Amsden herd there are a number of daughters of Dutchland Sir Hengerveld Colantha and the younger members of the herd have descended from him. The present herdsire is King Echo Sylvia Colantha Spofford. His sire, Sir Champion Sylvia, is a son of Champion Echo Sylvia Pontiac from a 30-lb. daughter of the twice 37-lb. cow, Belle Model Johanna 2d. The three nearest dams of Sir Champion Sylvia have seven-day records averaging 36.21 lb. and his seven nearest dams average 35.43 lb. The dam of this young herdsire is Sadie Butter Girl Spofford. As a five-year-old she made a seven-day record of 647.6 lb. milk, 29.99 lb. butter and then, calving exactly a year from her previous freshening, made a seven-day record of 700.7 lb. milk, 30.55 lb. butter.

SIX WANDERING HEIFERS

Six purebred Holstein heifer calves mysteriously disappeared from the farm attached to the Women's Reformatory at York, Nebraska. Although careful search was made no information was found until they were brought back by a farmer living near the reformatory who found them wandering on the highway. Where they were for a number of days is still a mystery. Evidently the reformatory is a good place for them.

There's good in everything. Even the billboards can act as windbreaks when you have tire trouble.

Twenty Head of Registered Holsteins soon due to freshen. Heavy Milkers. Heifer and bull calves from 2 to 12 months old. Priced for Quick Sale.

Herd under State and Federal Supervision.

SALE OF IDEAL KING CLOTHILDE

As a result of advertising in the BREEDER AND DAIRYMAN, the handsome bull Ideal King Clothilde has been sold by Cecil Resseguie to Allen Brumbaugh of Greencastle, Pa.

Ideal King Clothilde is a very handsome fellow, mostly white in color, straight on the back, and in every way a pleasing animal. He is the son of King Pontiac Alcartra Pietje, and his dam is Miss Korndyke Clothilde, one of the handsomest cows in the Ideal Herd. At the advanced age of twelve years she made a seven-day official record of 26.01

IDEAL KING CLOTHILDE
sold to Allen Brumbaugh, Greencastle, Pa., by Cecil L. A. Resseguie, Kingsley, Pa.

lb. butter, 558.7 lb. milk. She is full sister to Spring Brook Clothilde 2d, 100.5 lb. milk in a day, 30.17 lb. butter, 641 lb. milk in seven days, 127 lb. butter, 2,705 lb. milk in thirty days. These two full sisters are from an A. R. O. dam and were sired by Walker Korndyke Copia, a bull with a large number of good daughters and granddaughters scattered throughout northern Pennsylvania.

King Pontiac Alcartra Pietje, sire of this young bull, is undoubtedly the most noted Holstein herdsire even in northern Pennsylvania. His sons and daughters have won high honors in the show ring, and his daughters and granddaughters are noted for production. One of his daughters, also a member of the Ideal Herd, has produced 104 lb. milk in a day, 30.03 lb. butter, 707.7 lb. milk in seven days. He was by King Segis Pontiac Alcartra, and his dam was Fairmont Zerma Segis Pietje, the former world's champion junior four-year-old, 35.61 lb. butter in a week.

GOOD WORK IN PENNSYLVANIA

Two counties in Pennsylvania have had all their cattle tuberculin tested under the area plan. The second time of testing revealed a very small proportion of reactors. In Mercer County there was only .79% of disease found, while in Crawford County 99.2% passed clean. These figures, which are official, conclusively show the effectiveness by which tuberculosis is being eradicated from Pennsylvania herds.

HOLSTEIN BULL. Three of his dams averaged 108 pounds milk 1 day. 40.48 lb. butter 7 days. \$125.00.

DEMAND FOR ACCREDITED HOLSTEINS

* Murray A. Miller of Milton, Pennsylvania reports a good demand for his accredited Holsteins. Mr. Miller has a herd of big producers and recently sold four cows, which will be added to the herd now owned by the Orphan's Home at Loysville, Pa.

Another sale Mr. Miller recently made is of a young bull, which was purchased by C. C. Gingrich of Lawn, Pa., who owns the second herd of Holsteins to be accredited in Lebanon County. This bull was born April 24, 1924. He was light in color, a very nice individual with a remarkably straight top line. His dam, Fayne Pontiac Pet Lady, has a good A. R. O. record. Freshening the first time when only 23 months old she produced 12,382 lb. milk in 11 months, milked only twice a day. She is a granddaughter of Inka Prince Paul, whose dam, Inka Princess Mutual De Kol, produced 33.25 lb. butter, 711.9 lb. milk in a week. This was the highest milk record made in the state of Pennsylvania for several years, in fact it stood at the head of the list for eight years less one day. This cow has a number of record daughters, including one that made over 30 lb. butter in a week and 27,911.4 lb. milk, 1,087.68 lb. butter in a year.

Mr. Gingrich's new herdsire is a son of Susquehanna Judge Segis Leoraline, a real show bull, whose four nearest dams have official records that average 29.75 lb. butter in seven-day test. His dam was a great young show cow that was accidentally poisoned. As a three-year-old she made 23.71 lb. butter in a week. His two granddams in seven-day test averaged 31.61 lb. butter and averaged 80 lb. milk a day during their test weeks. The Judge is a grandson of King Aaggie Segis and a great-grandson of Dutchland Colantha Sir Inka, sires regarded very highly for the producing capacity of their descendants.

HOLSTEINS SHINE HERE

Veeman De Kol Hollandia Grace, owned by the DeWilde Dairy of New Hampton, Ia., is high cow for January in the Chickasaw Testing Association No. 2 by the production of 1,674 lb. milk, 75.3 lb. butterfat. The January champion of the county is owned by F. W. Morf of Chickasaw Association No. 1. She is a grade Holstein named Pet and produced during January 1,920 lb. milk, 76.8 lb. fat.

In the Number 1 association H. M. Herrick's purebred Holstein herd of twelve cows averaged 1,270 lb. milk, 43 lb. fat. Fifteen purebred Holsteins owned by J. D. Herrick & Son was second with an average production of 1,030 lb. milk, 40.2 lb. fat. In Number 2 association the DeWilde Herd of eight purebred Holsteins averaged 1,365 lb. milk, and 50 lb. butterfat while six purebreds owned by Johnson Bros. had an average of 1,186 lb. milk, 42 lb. fat and were second highest.

Bonnymeads Herd

CONSISTING OF
102 REGISTERED HOLSTEINS

WILL BE SOLD AT PUBLIC AUCTION

Wednesday, March 25, 1925

Starting promptly at 10 o'clock A. M.

There are 60 Milking Cows and Heifers. Several cows have produced 14,000 lb. of milk in a year and the entire herd averaged over 10,000 lb. last year despite the fact that one-third of the

number were in their first lactation period. This splendid showing was with twice-a-day milking and with the general care and feed given BONNYMEADS STOCK.

There are 40 Heifers—two-year-olds, yearlings and calves, all increasing in value every day.

Both herdsires will be sold. Their individuality will please you.

This herd was founded with the best producing blood lines of the breed. It has been handled from a strictly business dairy standpoint.

The yield is weighed at every milking and can be ascertained not only for the animals themselves but also for their dams and granddams, as no females have been purchased for more than thirty years and everyone now in the herd is of our own breeding for generations.

Bonnymeads Herd is under State and Federal Supervision and the animals will be sold subject to the Standard 60-day retest.

Holsteins—Apples—Foxes—Law

Diverse Activities of One New York State Farmer

NINETEEN years ago a pair of twin heifer calves were sold by Wm. Rood of Binghamton, New York. For many years Mr. Rood had a large herd of purebred Holsteins and animals from this establishment started a number of herds in New York, Pennsylvania and surrounding states. The heifers in question were Sister Colantha De Kol No. 165659 and Sister Colantha Netherland No. 165660. They were of Rood breeding for several generations, and were daughters of Prince Colantha De Kol Abbekerk and Echo Netherland. The calves were not esteemed very highly

by the seller and we understand that they went for veal prices, \$10 for the pair. They passed into the ownership of C. F. Giles of Apalachin, N. Y. and Mr. Giles was a farmer who believed in giving his stock the best of care. They developed into a pair of fine animals and they certainly started their owner as a Holstein breeder for the first three calves of Sister Colantha De Kol were heifers while Sister Colantha Netherland produced heifer calves at four successive freshenings. Mr. Giles surely had dandy luck for, of the first eight calves dropped on his place, seven were heifers and formed the foundation of a very nice herd.

Although nearly nineteen years has passed since the purchase above recorded, no other females have ever been added to this herd. Naturally the stock on Spring Brook Farm is of uniform type and quality. The first two sires used in the herd were rented: one was

Aaggie Cornucopia Pauline Count 2d, a grandson of the famous former world's champion Aaggie Cornucopia Pauline; the other was Star Farm Mercedes Colantha, a brother to King Segis.

C. F. GILES
Farmer and Business man.

In 1912, a herdsire was purchased. This was Johanna Katrino De Kol. His sire was a bull of De Kol and Johanna breeding, his dam a daughter of Hollander Johanna Lad. His daughters and granddaughters were good producers and nice individuals.

Then Mr. Giles purchased from Fred Blewer of Owego, N. Y., the bull Sir Abbekerk Hengerveld Korndyke. This bull was nearly all white. His dam was a daughter of Tidy Abbekerk Prince and has official records of 26.96 lb. butter in seven days, 102.19 lb. butter in thirty days from 2,-047.6 lb. milk. After staying

awhile in the Spring Brook Herd this bull was sold to another breeder and his place was taken by another Blewer bull, Sir Korndyke Change Vale, a son of King Korndyke Sadie Vale Wayne and Change Princess Butter Boy, 565.5 lb. milk, 35.25 lb. butter in a week, 2,317.7 lb. milk, 126.25 lb. butter in thirty days. After a year or two this bull was sold back to Mr. Blewer who used him for a time and then sold him for service on one of the dairy farms operated by the State of New York.

In partnership with E. W. Graves, whose farm is about two miles distance from Spring Brook Farm, Mr. Giles purchased Cornucopia FINDERNE PRIDE, a bull whose two nearest dams had seven-day records that average 32.15 lb. butter, 639.7 lb. milk. He was by Cornucopia Korndyke Pontiac, a bull with a long list of good record daughters, a son of Pontiac Korndyke

and the 33-lb. cow Ada Cornucopia Posch. Cornucopia FINDERNE PRIDE was from FINDERNE Pontiac Pride, 685.5 lb. milk, 31.11 lb. butter in seven days, a daughter of Gordon Glen Pontiac and Jondine Pride,

A FEW MEMBERS OF THE GILES HERD

who was also dam of the famous Finderne Pride Johanna Rue, 36.87 lb. butter in a week, 28,403.7 lb. milk, 1,470.59 lb. butter in a year, world's record when made. This cow has a long list of big records and is the only cow with five granddaughters that have each produced over 30,000 lb. milk in a year.

Cornucopia Finderne Pride is a dark colored bull, long bodied and deep chested. In regard to his individuality we need only say that he was grand champion at the fair held at Athens, Bradford County, Pa., in 1924 and that his offspring were the first prize "get of sire" at that event.

In partnership with Mr. Graves, Mr. Giles, recently purchased King Sadie Vale Hengerveld Ormsby, the good sire that for several years has headed the accredited herd of Miller Brothers, a herd established in 1880 and, we believe, the oldest established herd in the State of Pennsylvania. This bull has been used in four small herds and he has a number of splendid daughters in each one. He is a son of King Sadie Vale Hengerveld and his dam, S. V. H. Effie, has a number of official records making over 24 lb. butter in a week as a junior two-year-old, 26 lb. as a junior three-year-old while as a junior four-year-old she made 28.33 lb. butter, 617.3 lb. milk. The next year she made 28.23 lb. butter in a week and, continued on year test, is credited with 1,085.6 lb. butter, 24,050.5 lb. milk. She was by Sir Veeman Hengerveld. Her dam, Netherland Effie Ormsby, has a seven-day record of 26.41 lb. butter, a year record of 789 lb., has a 30-lb. daughter and two others over 23 lb. and was by a son of Sadie Vale Concordia the first cow to make 30 lb. butter in seven-day official test.

The Spring Brook herd is not large, as Mr. Giles is more of a fruit grower than he is a dairy farmer, but it makes up in quality what it lacks in size. At the present time it consists of between twenty and thirty head. Animals from this herd have been exhibited at the Athens Fair several years always with a considerable degree of success. In 1923, Martha Hengerveld Colantha, a daughter of Sir Abbekerk Hengerveld Korndyke and a granddaughter of Johanna Katrino De Kol carried off the grand championship. In 1924, Colantha Abbekerk Korndyke, a daughter of Sir Abbekerk Hengerveld Korndyke from a daughter of Star Farm Mercedes Colantha and Sister Colantha Netherland was the grand champion, while Mercedes May

Colantha 2d, a daughter of Sir Korndyke Change Vale was second to her in the mature class.

Spring Brook Farm contains only 100 acres and, as was said before, it is more of a fruit and garden truck establishment than a dairy farm. There are around 1,000 apple trees and, during the winter, apples are taken into the city markets two or three times a week. After picking they are placed in storage and gradually marketed so that the maximum price is obtained. From one orchard containing 320 trees nearly all Spy and Baldwin and set eighteen years, Mr. Giles one year obtained 3,800 bushels of apples valued at \$4,000. The quality of this crop as well as the quantity attracted the attention of the nursery company from whom the trees were originally purchased and was pictured in their advertising.

Mr. and Mrs. Giles have been married forty-six years. They had one daughter who died at the birth of her son. This young man is now studying at Cornell University, entering when he was seventeen

years old. Despite his youth, he graduated from the Owego High School at the head of a class of forty and it is noteworthy that his mother, when she graduated from the same school, was second in her class. C. F. Giles is sixty-four

and was married when he was eighteen. His mother's father was named Barton and cleared part of the farm from the original forest. Mr. Giles' father and mother bought out the other heirs and Mr. Giles has spent his life upon the farm on which he was born. He was the oldest of three boys. One graduated from Harvard, went into the theatrical business in Boston and is reputed to be a millionaire.

Mr. Giles is highly regarded in his own community. He has been Justice of the Peace for twenty-eight years; has been president of the local school board for twenty years. He is a member of the Farm Bureau and is interested in all movements for the improvement of the agricultural interests. He is a believer in purebred stock, he and his father at one time kept purebred Essex hogs and he exhibited Shropshire sheep when the Athens Fair was started sixteen years ago.

The Giles family, including the hired man, took a well earned vacation at the Athens Fair in 1924. Taking along five tents, they stayed the week and besides having a good time carried off quite a little prize money and also the two ribbons given by the

C. F. GILES AND SOME OF HIS APPLES

Pennsylvania Federation of Holstein-Friesian Clubs to the champion male and champion female exhibited at that event.

The raising of Silver Black Foxes is interesting quite a number of Holstein-Friesian breeders. Mr. Giles is secretary-treasurer of the Hiawatha Silver Black Fox Corporation. The Hiawatha Fox ranch is located near Apalachin, Tioga County, N. Y. The editors of this paper had the pleasure of looking over this establishment late last fall. At that time there was 190 Silver Black Foxes on the ranch. Should any of our readers be in the vicinity of Apalachin, we advise them to pay a visit to the establishment and see one of the largest Silver Fox breeding establishments in the country.

The Value of the Dairy Interests to the Southern States

A. M. LOOMIS, secretary of the National Dairy Union, calls attention to the change in the oleomargarine war. Until the use of coconut products became general in the manufacture of imitation butter there was a clashing of interests of two groups of American producers, the cotton growers and the dairy farmers. Less than two per cent of the cottonseed meal now produced is used in the manufacture of oleo, while on the other hand the cattle industry is using one-half of all the oil meal and oil cake produced by the cotton oil industry. The purchases of cottonseed meal for feeding dairy cattle will run to at least thirty million dollars while they sell only two million dollars' worth of oil to the makers of imitation butter. In other words the dairy industry is fifteen or sixteen times as important to the cotton growers as is the oleo industry.

Despite this fact, representatives of the oleo industry, frightened by the wave of sentiment against them in the Western dairy states, have recently undertaken to again stir up the cotton growers against dairy interests. Several Southern Senators made an attack on the activity of the dairy interests and even the Governors of some Southern states have joined this movement which is clearly founded on a mistaken idea of the relative importance of the dairy and oleomargarine industries to their own constituents.

The National Dairy Union has supplied the exact facts of record to senators who joined in this controversy. During the year ending July 1, 1924, there were 239,698,000 lb. oleo manufactured in this country, and in this amount 20,640,000 lb. cottonseed oil were used. At an approximate value of 10 cents a pound this would be valued at \$2,064,000. Statistics are available for a year ending July 31, 1924, as to the amount and value of cottonseed meal fed to cattle. During this year 1,518,000 tons of cottonseed cake and meal were produced. It is estimated that 750,000 tons were fed

cattle in this country and the value of this amounted to thirty-five million dollars. It is very evident that it would be better for the South to lose their oleo-making customers than their cattle owning customers. Practically every commercial dairy ration contains more or less cottonseed meal.

Ohio Farmer Goes to Washington

ON March 16th, President Coolidge appointed Renick W. Dunlap of Kingston, Pickaway County, Ohio, Assistant Secretary of Agriculture.

Mr. Dunlap comes very near being a real dirt farmer. His father, Nelson J. Dunlap, began farming on one of the farms he now owns soon after his return from the Civil War. He has been such a successful farmer that he now owns more than 1,000 acres of good land and has given three farms to his children.

The new Assistant Secretary was born on a farm in Pickaway County in 1872. Most of his ancestors, his uncles and many of his cousins on both sides of the family, were or are farmers, breeders and feeders of livestock. His family has been a factor in the development of the country since the colonial period. His great-grandmother was a granddaughter of Benjamin Franklin.

Mr. Dunlap received his early education in the local district and high schools, working on the farm in spare time. He entered the College of Agriculture of Ohio State University in 1890 and was graduated in 1895. After graduation, he has been engaged most of the time in managing his own farm which, until 1923, was operated as a grain, cattle, and hog farm, to which now has been added dairying. Mr. Dunlap has either bought or sold stock on the markets at Chicago, Buffalo, Pittsburgh, Kansas City, East St. Louis, New Orleans, Jacksonville, Fla., Fort Worth, Cincinnati and Columbus. He has owned herds of purebred Shorthorn cattle and Duroc hogs and has exhibited animals of his breeding at county fairs and at the Ohio State Fair. He has judged horses, cattle and hogs at many fairs and expositions. He has long been a member of the Grange and Farm Bureau.

For several years he was Ohio State Dairy and Food Commissioner. Then he went back to farming until 1915, when he was made Secretary of the State Board of Agriculture. For a time he had cahрге of a 60,000-acre ranch in Florida. In June, 1923, he again went back to his farm in Ohio, which he will leave to become Assistant Secretary of Agriculture.

A wise, skilled, and unselfish leadership can do more than anything else to rescue agriculture. The farmer needs leaders who will stay with him, who have the tact and the courage necessary for management, and who have the fidelity to refuse political preferment and business opportunity. There are such leaders. In the sacrifices they make to serve the farmer lies the greatest hope for his salvation.—Calvin Coolidge.

I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views.—Abraham Lincoln.

who was also dam of the famous Funderne Pride Johanna Rue, 36.87 lb. butter in a week, 28,403.7 lb. milk, 1,470.59 lb. butter in a year, world's record when made. This cow has a long list of big records and is the only cow with five granddaughters that have each produced over 30,000 lb. milk in a year.

Less than two per cent of the cottonseed meal now produced is used in the manufacture of oleo, while on the other hand the cattle industry is using one-half of all the oil meal and oil cake produced by the cotton oil industry. The purchases of cottonseed meal for feeding dairy cattle will run to at least thirty million dollars while they sell only two million dollars' worth of oil to the makers of imitation butter. In other words the dairy industry is fifteen or sixteen times as important to the cotton growers as is the oleo industry.

Despite this fact, representatives of the oleo industry, frightened by the wave of sentiment against them in the Western dairy states, have recently undertaken to again stir up the cotton growers against dairy interests. Several Southern Senators made an attack on the activity of the dairy interests and even the Governors of some Southern states have joined this movement which is clearly founded on a mistaken idea of the relative importance of the dairy and oleomargarine industries to their own constituents.

The National Dairy Union has supplied the exact facts of record to senators who joined in this controversy. During the year ending July 1, 1924, there were 239,698,000 lb. oleo manufactured in this country, and in this amount 20,640,000 lb. cottonseed oil were used. At an approximate value of 10 cents a pound this would be valued at \$2,064,000. Statistics are available for a year ending July 31, 1924, as to the amount and value of cottonseed meal fed to cattle. During this year 1,518,000 tons of cottonseed cake and meal were produced. It is estimated that 750,000 tons were fed

cattle in this country and the value of this amounted to thirty-five million dollars. It is very evident that it would be better for the South to lose their oleo-making customers than their cattle owning customers. Practically every commercial dairy ration contains more or less cottonseed meal.

Ohio Farmer Goes to Washington

ON March 16th, President Coolidge appointed Renick W. Dunlap of Kingston, Pickaway County, Ohio, Assistant Secretary of Agriculture.

Mr. Dunlap comes very near being a real dirt farmer. His father, Nelson J. Dunlap, began farming on one of the farms he now owns soon after his return from the Civil War. He has been such a successful farmer that he now owns more than 1,000 acres of good land and has given three farms to his children.

The new Assistant Secretary was born on a farm in Pickaway County in 1872. Most of his ancestors, his uncles and many of his cousins on both sides of the family, were or are farmers, breeders and feeders of livestock. His family has been a factor in the development of the country since the colonial period. His great-grandmother was a granddaughter of Benjamin Franklin.

Mr. Dunlap received his early education in the local district and high schools, working on the farm in spare time. He entered the College of Agriculture of Ohio State University in 1890 and was graduated in 1895. After graduation, he has been engaged most of the time in managing his own farm which, until 1923, was operated as a grain, cattle, and hog farm, to which now has been added dairying. Mr. Dunlap has either bought or sold stock on the markets at Chicago, Buffalo, Pittsburgh, Kansas City, East St. Louis, New Orleans, Jacksonville, Fla., Fort Worth, Cincinnati and Columbus. He has owned herds of purebred Shorthorn cattle and Duroc hogs and has exhibited animals of his breeding at county fairs and at the Ohio State Fair. He has judged horses, cattle and hogs at many fairs and expositions. He has long been a member of the Grange and Farm Bureau.

For several years he was Ohio State Dairy and Food Commissioner. Then he went back to farming until 1915, when he was made Secretary of the State Board of Agriculture. For a time he had charge of a 60,000-acre ranch in Florida. In June, 1923, he again went back to his farm in Ohio, which he will leave to become Assistant Secretary of Agriculture.

A wise, skilled, and unselfish leadership can do more than anything else to rescue agriculture. The farmer needs leaders who will stay with him, who have the tact and the courage necessary for management, and who have the fidelity to refuse political preferment and business opportunity. There are such leaders. In the sacrifices they make to serve the farmer lies the greatest hope for his salvation.—Calvin Coolidge.

I shall try to correct errors when shown to be errors, and I shall adopt new views so fast as they shall appear to be true views.—Abraham Lincoln.

The Strickland Farm and Herd

FROM his earliest years, Raymond D. Strickland of Nicholson, Pa., has resided on the farm he now owns. It belonged to his grandfather, Oliver Squiers, who was generally termed the best farmer in that part of the country. Mr. Squiers believed in conserving fertility, building up the soil and doing his work in the best possible manner. Consequently the Strickland farm is in a high state of fertility.

Mr. Strickland took to farm life as naturally as a duck takes to water and preferred to spend all the time he possibly could with his grandparents, who practically adopted him and brought him up. When Mr. Squiers died, his grandson took over the farm on which his grandfather had spent forty years.

This farm contains 160 acres, of which about 140 are tillable. As it lies on a ridge, it is well drained and is admirably adapted to dairying and livestock raising. Fine crops of corn, alfalfa, clover and timothy are grown and two or three carloads of hay are sold annually, besides the amount consumed by the dairy.

Raymond Strickland started his herd of purebred Holsteins about ten years ago, but when America entered the world war Mr. Strickland answered his

DUTCHLAND PIETERTJE BEAUTY
Dam of the senior herdsire. By Dutchland Pietertje Sir Aaggie from a daughter of Beauty Pietertje Butter King.

country's call and served with credit until honorably discharged. At the time he entered the army he sold the purebreds he then owned to his father. He again started in the purebred business after he returned by purchasing three cows from E. H. Titus, paying \$500 for the trio, \$200 for one and \$150 for each of the others. One of these animals, Annie of Fairland, was an extra fine individual and a heavy producer and her descendants are among the best of the present herd.

Having only a few animals, Mr. Strickland did not feel like investing much money in a herd bull but, at the same time, he wanted to head his herd with the best sire he could possibly obtain. He made arrangements with a near-by Holstein breeder, Foster Riker, who owned the noted herdsire, King Hengerveld Hartje. The Strickland cows were mated with this bull. The splendid showing made by the daughters of King in official test in cow testing association work and in the general dairy show that Mr. Strickland made a wise choice.

King Hengerveld Hartje is one of the best sires that ever stood in the State of Pennsylvania. His daughters developed into large, handsome, big produc-

ing cows with splendid udders. A few daughters of this bull have been tested and have made big records. One daughter, Walker Hartje Spofford, went into a Maine herd, in which she produced 960.60 lb. butter, 26,233 lb. milk in ten months, making a world's record in the ten months division at that time. While the other daughters of this sire have not had equal opportunities, they have creditably acquitted themselves whenever they have had a chance. King Hengerveld

STRICKLAND'S SENIOR HERDSIRE

Hartje was by King Segis Hengerveld and was from the 30 lb. four-year-old, Maid of Elmwood Hartje. Her sire was Butter Boy of Elmwood, a son of De Kol 2d's Butter Boy 3d and Jolie Johanna, the grand champion show cow at the St. Louis World's Fair.

Sometime afterwards Mr. Strickland and one or two neighbor dairymen went to the establishment of E. C. Brill, the well-known New Jersey breeder, and purchased King Model Pontiac Korndyke. This bull was backed by remarkable records. His dam as a three-year-old made 413.8 lb. milk, 20.35 lb. butter in seven days. She was sired by a son of Pontiac Pet, 37.68 lb. butter in a week and her dam was Aaggie Pauline Sarcastic, 36.35 lb. butter, 619.9 lb. milk. King Model was from Mabel Segis Korndyke the first cow under full age to be credited with a 40 lb. official seven day butter record.

The present herd contains a number of daughters of King Model Pontiac Korndyke. They are dairy type animals, generally light in color, good individuals and large producers.

In 1919, Mr. Strickland purchased Dutchland Pie-

STRICKLAND'S JUNIOR HERDSIRE

tertje Beauty, and she is still in the herd. She had a seven day record, made at the age of 26 months of 321.9 lb. milk, 14.22 lb. butter. Her dam was a record daughter of Beauty Pietertje Butter King and from a 27 lb. daughter of Helena De Kol Artis. Her sire, Dutchland Pietertje Sir Aaggie, is backed by large records and has a number of high record daughters, including several that have made over a thousand pounds of butter in year test. In her new home Dutch-

land Pietertje Beauty dropped a very nice bull calf by King Segis Pontiac Konigen which was retained for the herdsire. His young offspring show great promise.

The junior herdsire is a son of King Hengerveld Hartje and was from Fawn Beauty De Kol, 24.19 lb. butter, 637.5 lb. milk in seven days. For two weeks this cow averaged over ninety pounds of milk a day and her milk record at the time of making was the largest amount credited to any cow tested in Susquehanna County. She was not only a big producer but was also a splendid individual, two reasons why her son was retained for service.

Mr. Strickland made a few official records with his animals. Besides testing Fawn Beauty De Kol, he made a 20 lb. seven day record on a two-year-old daughter of Dutchland Creamelle Korndyke Lad and a 19 lb. record on a two-year-old daughter of King Segis Pontiac Konigen. However, he believes that the cow testing association is the most practical means whereby dairymen can get an accurate check on the cow's production and profit-earning ability and so whenever possible he has been a member of the local

STRICKLAND'S DAIRY AT PASTURE

association. His milkers have made a creditable showing. Titusdale Annie Russell, a daughter of his foundation cow, Annie of Fairland produced 12,321 lb. milk, 391 lb. fat in eight months and several other members of the herd have done almost as well.

The Strickland herd is under state and federal supervision and was given a clean bill of health at the last test. No animal bred at this establishment has ever reacted to the tuberculin test when the herd has been tested and the owner says that the herd is also free from abortion or any of the other diseases that impair a dairyman's profit and disturb his serenity.

The farm buildings are modern and up-to-date and are lighted by acetylene gas. The dairy barn is equipped with Star equipment and drinking cups. A mechanical milker is used. Mr. Strickland is a believer in up-to-date machinery, uses a tractor and fills his own silo with his own cutter. A radio receiving set has been installed in the comfortable farmhouse so that the Stricklands, like many other farmer readers of the BREEDER AND DAIRYMAN, can enjoy up-to-date music nightly, hear market reports and lectures and still stay in their own homes.

Will Require More Farmers

THAT a larger farm population than there is at present will be required within the next twenty-five years is the belief of Dr. Gray, economist in the United States Department of Agriculture. Owing to our increasing population he estimates that forty million acres of crop land must be added to the present

crop area. Assuming no change in the amount of man power per acre such an increase would require about one million two hundred thousand additional farm workers or a farm population of 3,500,000 greater than the 1920 amount. This increased requirement of 40 million acres is based on the average assumption of a ten per cent average increase in yield per acre which can be accomplished by better agriculture, increased use of fertilizers and a large resort to mechanical methods of working the soil and harvesting the crops.

During the past seventy-five years, the proportion of agricultural workers to all workers in this country has been reduced from 65 per cent to less than 25 per cent, yet the value of agricultural products produced per capita has remained practically the same. While no one knows what the future will bring, it is doubtful if there will be as great a revolution in farm machinery during the next twenty-five years as there has been in the past quarter of a century.

A Move for Economy

ECONOMY is the watchword of the day. During the inflation caused by war times, money circulated rapidly. Prices of materials and labor rose and taxes rose in proportion. Now money is not so plentiful but taxes show very little sign of coming down, yet throughout the entire country there is a general opinion that the burden of taxation should be reduced.

Governor Christianson of Minnesota is more sensitive to the feeling of the citizens of Minnesota than are most of his state officials. The Governor announces that he will enforce a statute which requires his written permission before any official of the state spends public money for out-of-state trips. If such officials wish to make semi-social trips to officials of other states or to Washington, they will have to pay their bills out of their own pockets. The Governor intimates that when Minnesota seems to need representation at Washington, he will call on the Minnesota Senators and Congressmen. If Governor Christianson sticks to his present stand he will be very unpopular with the railroads, the Washington hotel keepers, and with a number of men who like to air their views at public expense, but we believe he will make many friends among the electors of his own state.

Official figures show that 55% of all the incomes of the farmers of Wisconsin is derived from the sale of milk. In addition 7% comes from the sale of cattle and calves. Add to these the 12% from the sale of hogs, in that state largely a by-product of dairying, and you have approximately three-quarters of the farm income coming directly and indirectly from the dairy cow.

The public is that small portion of the people which is in the foreground at the moment. It is the mirror of passing fashions, the court of temporary judgments, the gramophone of new tunes. The people is a broader, deeper word. It means that community of human thought and feeling which lies behind the talk of the day.—Henry Van Dyke.

NOT ABOUT COWS

Merely Women

WITH more or less resignation, this country has settled itself to accepting the presence of women in many fields of activity, hitherto the exclusive property of men. Once in a while one meets a man, who, so far as women are concerned, still lives in the era of kerosene lamps, parlor organs and dear old Dobbin. He welcomes progress in all things except in women's activities, which he would stop at all cost. But, like Mrs. Partington, who tried to keep the Atlantic Ocean out of her kitchen with a mop, he is attempting the impossible. Like the horses that used to be afraid of automobiles, these old fossils will soon pass on, and their places will be taken by a younger generation who cannot remember different conditions. Out of possible hundreds the following instances, picked at random, show the various lines of activity to which women have penetrated. Now, it is not for one moment being forgotten that woman's most glorious work in life is to be wife, mother and home maker. To be such is the first natural instinct of the average normal woman. But—husbands, children and homes do not fall to the lot of all women, nor to many to whom they are given do they fill the entire horizon. There are literally hundreds of instances in which women can and do fill all the functions for which Nature designed them, yet have time and energy for outside interests. And into many of these very outside interests are led by their love of home and family. Take, for instance:

MRS. M. A. FERGUSON OF TEXAS

About the very latest in public jobs for women is governing a state, work for which they are eminently fitted by nature and home experience! The story of Mrs. Ferguson, the new Governor of the largest state in the Union, is too well-known to need repetition here. Naturally a home body, a true daughter of the soil, she sought the highest office in the power of the state to confer, to bring about the vindication of the man she loved, her husband, Jim Ferguson. Twice he had been elected Governor of Texas, and during his second term he became the storm center of a political tornado. Eventually, the Senate voted to impeach him, but before that could be done, he resigned, that he might not be prohibited from holding office again, as would be the case should the impeachment proceedings go through. Several times he tried to clear his name and win his way back into politics by running for various offices, but each time he had been thwarted. A few months ago, he made one final, desperate effort by announcing himself as a candidate for Governor, and so strong did his chance of success seem that his opponents took up the old impeachment charges, and the Supreme Court ruled against his name being placed on the ballot. There came "Ma" to the rescue, in one of the most amazing political campaigns in history, in

which all the honors went to the lady. As a tribute to the women of Texas for their support in the campaign, Governor Ferguson has appointed as Secretary of State, Mrs. H. W. Meharg of Plainview, another home loving mother, with six children, a devoted church worker, one of the best women speakers in Texas, who won many votes for the successful candidate in the campaign.

MRS. NELLIE TAYLOR ROSS OF WYOMING

Although not figuring in a story of so much human interest as the preceding, yet Mrs. Ross deserves mention as really the first woman Governor in the United States, for her induction into office preceded that of the far-famed Governor of Texas. On October 2, 1924, William B. Ross, Governor of Wyoming, died at Cheyenne, following an operation for appendicitis. At the November election, a month later, his widow was elected to fill out his term which had yet two years to run, and she took the office in order to carry out his plans and policies.

MRS. ROSS TYLER BARRETT OF OREGON

Mrs. Barrett, the only woman city manager in the country, was appointed to that position in Warrenton two years ago. Warrenton is a thriving seaport town, situated at the mouth of the Columbia River, and owes much of its growth to Mrs. Barrett's constructive work. Among other things she appointed a new fire chief, she fired the chief of police, she bought a \$13,500 fire engine for the town. She floated a bond issue to finance a water system for the city, which gives enough water from a pure mountain stream to supply a million people. She brought to completion a \$60,000 school house in which were installed electric driers for children who got wet on their way to school. She made a trip to Washington to interview President Coolidge and congressional committees regarding the deepening of the harbor at the mouth of the Columbia River, an interview that was entirely successful. In her official position she has worked shoulder to shoulder with men and has always found them ready to help and to co-operate with all her plans.

MRS. MABEL W. WILLEBRANDT OF CALIFORNIA

Mrs. Willebrandt, an assistant Attorney General in the Department of Justice, is one of the many women occupying a position of importance and occupying it capably. Her particular job is to handle cases arising out of the prohibition and internal revenue laws, and perhaps the reason she has been allowed to have such an important position is that no male politician would jeopardize his political future by doing such work. She has made quite a stir in the enforcement of the prohibition laws, directing her attention particularly towards some forty-five Federal District Attorneys whom she believed to be lax in the performance of their duties. In Boston and in Northern New Jersey

she made trouble for some of them, dismissals resulting, and in all probability, it was her gentle hand that stirred things up at the Federal prison at Atlanta, where several millionaire bootleggers were buying soft snaps. Yet, owing to the fact that she does her work in a businesslike way, is attractive and pleasant, and above all does not pose as a reformer, Mrs. Willebrandt does not seem to antagonize people, but gets on well with all those with whom she comes in contact while doing her official work.

MRS. MARY VAIL AUDRESS OF NEW YORK

Notwithstanding all the jokes about women and their inability to handle figures or to understand their own bank accounts, one woman has shown such a talent for finance that she has been appointed assistant cashier in one of the foremost banking institutions in the world. The Chase National Bank of New York City has shattered tradition and made history in the banking world by inviting Mrs. Audress to become one of its operating officials in the main office, where hitherto only men had been employed. Mrs. Audress herself sees no reason why this should be anything unusual, for she credits her sex with intuition, a passion for accuracy, and a capacity for detail. She says that women are usually very methodical, thorough in everything they do, and sympathetically can put themselves in other people's places. She claims that they have proven themselves competent, judicial, and unfurried workers. For years, Mrs. Audress, a woman of wealth and culture, lived a life of leisure. Then came the war and she was one of the first seven women sent to France by the Red Cross, spending the entire period as near the front as she could get, and receiving medals from America, France and the Near East. After the war, leisure soon palled, and she entered the banking business through a Paris bank, eventually finding her way into Wall Street, New York City.

MRS. HELEN TAFT MANNING OF PENNSYLVANIA

One of the favorite subjects for debate—at least in print, has always been on whether a woman can successfully follow a career and still be a good wife and

mother. Usually women who engage in outside interests to any marked degree are those whose families are grown up and away from home or those who have never had any family. But Mrs. Manning disregards all rules and precedents, for when she assumes her duties as Dean of Bryn Mawr College next September, her oldest child will be four years old and her youngest eight months, and those who know her best feel assured that she will perform her duties capably yet not neglect husband, home or babies. The Mannings will live in a house on the Bryn Mawr Campus, and Mr. Manning will take an associate professorship at Swarthmore College, near by. Her previous experience as Dean, also as acting-president of Bryn Mawr when President M. Carey Thomas was abroad, her high standing as a scholar, her social career as daughter of a President of the United States, and her motherhood all combine to make Mrs. Manning an ideal Dean for a woman's college.

LADIES ALL

Columbus Junction, a little town of 400 souls in Luisa County, Iowa, lays claim to the distinction of honoring women in its election to town offices above all other towns. It has a mayor, treasurer, assessor and all four councilmen of the female sex, there being not a single male officer in the town.

The First Lady President

ONE would hardly consider Assyria as an up-to-date country, yet that country elected the first woman President any nation ever has had. Her excellency's name is Lady Surmas Mar Simoon and she has jurisdiction over 80,000 square miles of territory.

An old adage says "It's not what we *make* but what we *save*." This may be amended by "It's not the amount of money the farmer takes in during the year but the sum available for his own use that determines success or failure on the farm."

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year,
(two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

MARCH 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

One Breed Association Recognizes Danger

PERSISTENTLY and consistently, issue after issue, THE HOLSTEIN BREEDER AND DAIRYMAN has called attention to the danger of advanced registry work as at present conducted—danger that good producers be ruined for breeding purposes by forced feeding and ruthless manipulation in order to get excessive production; danger that poor cows be excessively fattened and so handled that their reported production is far in excess of their natural capacity; danger that their progeny, especially their sons, be used to breed from and animals naturally better be discredited because they are not from advanced registry animals. Our views have been distorted by would-be critics who use exaggeration, ridicule and even plain mendacity and who apparently stop at nothing in order to attain their point. But officials of the American Guernsey Cattle Club have been investigating the records of their breed and have found that the conclusions of THE HOLSTEIN BREEDER AND DAIRYMAN are true of Guernsey as well as of Holstein Advanced Registry work.

"The American Guernsey Cattle Club was the first organization to create a system of registering cows for meritorious performance in the production of milk and butterfat over a period of a year, under the supervision of Experiment Stations." "It was hoped that this system, called the Advanced Register, would furnish a means of recording animals that were rich in the prepotent trait of high and efficient production." The Advanced Register work in the Guernsey Cattle breed as well as in our own, owing to the immediate commercial return as a result of publicity obtained, has brought about a situation that can no longer permit the Advanced Register to be regarded as a measuring instrument of natural ability.

The Guernsey Herd Register shows that twice as many progeny are registered to cows producing 400 lb. butterfat as there are to an equal number of cows with year tests averaging over 800 lb. fat.

In the March 15 issue of the *Guernsey Breeders Journal*, these stirring words appear: "Advanced Register work in America has developed into a competitive activity, with the result that too many breeders have lost sight of its real spirit and purpose. Consequently we have artificial weather conditions in the barn, especially selected and compounded feeds, and in some cases, no attention has been paid to the economical production phase of testing. In many cases cows have been made sterile as the result of unwise feeding, forcing or other causes. We believe that the time has come when no breed can afford longer to sacrifice its great producing cows on the altar of publicity."

Any breed that worships excessive production regardless of profit earning capacity, health of the animals and reproduction, is going astray. Our dairy cows are kept for their earning capacity, not as racing animals. They must make milk and butterfat at a profit over the feed and labor cost, otherwise owners with no other source of income will have to go out of business. They must reproduce their kind, otherwise the breed will become extinct. The only reason that this last fact has not sooner forced itself upon the attention of those who have the welfare of the dairy breeds at heart is because a large proportion of the animals to be tested came from sisters, aunts, cousins and other relatives of the animals with forced records. The family of the individual dies out but the family name is carried on by collateral relatives and the strain is advertised at the expense of the individual performer.

The founders of the Holstein-Friesian Advanced Registry instituted that system with a view of breed improvement and had no thought of record commercialization. This is borne out by statements printed in the early volumes of the Dutch Friesian Herd Book. In Volume 2 appears this statement written by Solomon Hoxie, the father of the Holstein-Friesian Advanced Registry system, "The Association prefers records that have been produced without forcing. Every record has to be established by the appearance of the cow as well as by the sworn statement of its owner." Then again in Volume 3, you will find this statement: "It is the policy of the Association to avoid giving countenance to exaggerated statements of the quality and characteristics of this breed, and also to avoid giving special prominence to any particular breeder or breeders, or to any particular animal or animals."

As breeders and as an Association we have strayed far from the path marked for us by the early pioneers. Isn't it about time we admitted the error of our ways?

State Associations as Selling Mediums

IN his final report to the Ohio Holstein-Friesian Association, E. M. Clark, the retiring field secretary told of the sale activities of the organization under his charge. On May 1, 1924, A. V. Case was employed as sale agent to sell cattle in Ashtabula and Trumbull Counties; after three months Geauga, Lake and Portage Counties were added to his territory. September 1, 1924, E. E. Spring was appointed sales agent for Fulton County and evidently for Northwestern Ohio. Evidently Mr. Case worked eight months and Mr. Spring

four months, a total of twelve months. In this time they sold cattle that brought \$14,202.50.

The Ohio Holstein-Friesian Association received from the breeders 10% commission on these sales or \$1,420.25. From this amount Mr. Spring and Mr. Case had to be paid, to say nothing of the salary of Mr. Clark. These sales are inferred to have resulted from inquiries sent the Ohio Association or forwarded by the Extension Department of the National Association or else received from responses to advertisements carried in two papers, one of which is a high class dairy paper of national circulation. Deduct from the \$1,420.25 the expenses of this advertising, a proportionate amount of Mr. Clark's salary and office expenses, and pay for the time of the two sales agents—equivalent to one man's time for the year—and it will be seen that the Ohio Association either did not make a financial success of its Holstein selling, or else its agents received very low pay for their time.

When it is remembered that Mr. Pollock, when the Ohio State organization was being formed, stumped that state, urging the breeders to join the association and so get a man to sell their stock, it can be seen he promised something which no state association, financed from fees paid direct by the breeders and indirectly by half of the surplus transfer fee imposed at the Kansas City Convention, have ever been able to perform.

Quackery

One Cure for All Evils

THE *Holstein-Friesian World*, in attempting to answer the various charges and accusations of Extravagance and Mismanagement, Law and By-Law violation brought against the present management of the Association, have adopted a policy of accusing everyone who openly protests against the extravagance and mismanagement of acting with ulterior motives.

The use of a direct vote or proxy vote is the only means whereby the members of an Association or Corporation can join to protect their interests, clean out any rotten spots that might occur in their organization or protect the organization from undesirable influences that might want to fasten themselves upon it for the purpose of exploiting its resources.

Previous to the Milwaukee Meeting in 1918 there was a bold attempt to gain control of the Association by a group headed by Fred F. Field and O. U. Kellogg and their campaign was backed by the *Holstein-Friesian World* and the *Black-and-White Record*.

Their efforts to gain control of the Association was defeated by the votes of the members in the hands of such men as E. A. Powell, John Arfmann, G. F. Gregory, H. J. Russell, E. B. Bennett and Wm. Bishop.

After the *World* and its backers were unable to gain control of the Association they came out with a sweeping editorial about the misuse and prostitution of proxies and condemned the System because the breeders used their voting power to protect their rights and interests against an undesirable influence.

At the Philadelphia Meeting in June, 1919, when the *Holstein-Friesian World* and its backers had cunningly, by "gum-shoe" methods, gathered up a few

thousand proxies and were able to control the meeting, increase the fees and put in a hand-picked Board of Directors, they said nothing about the proxies being misused or prostituted. If they were ever misused or prostituted, in our opinion, one of the times was at the Philadelphia Meeting in June, 1919.

In an editorial appearing in the March 14, 1925, issue of *The Holstein-Friesian World*, in upholding the Delegate or Political Form of Government, this statement appears: "There was a real danger in the proxy system not fully appreciated until the Syracuse meeting of the Association in 1921 and that was the danger of some group obtaining control of an annual meeting by proxies secured upon some popular issue, and then using them to control and put over any ulterior purposes of their own that may have been kept carefully in the background during the campaign to secure proxies."

Let us carefully check up the above statement with the actual facts in the case and see what ulterior purpose, if any, Mr. Brockway, Mr. Brill, Mr. Newman, Mr. Peasley and others had in mind when they were soliciting proxies before the 1921 meeting.

Certain amendments, that appeared in the call of the annual meeting, introduced by the Committee on By-Law Revision, of which Mr. James A. Reynolds of Cleveland, Ohio, was Chairman, made it very plain to the membership generally that an effort was on foot to get further control of the Association's management by the group that came into power at the Philadelphia Meeting.

The letters that were sent out by Mr. Brockway, Mr. Brill, Mr. Newman, Mr. Peasley, and others called to the members' attention the extravagances and deception that had prevailed in the Association's management during the previous two years and warned them of the attempt that was on foot to gain further control of the Association and asked the members to send their proxy to be used to carry out the purposes that were outlined in the letters and these votes were not used for any ulterior purposes, as the records of the meeting show.

There was not a word in the printed call of the meeting about records or about the litigation pending in the courts against the Association.

There was nothing in the letters sent out by Mr. Brockway, Mr. Brill, Mr. Newman, Mr. Peasley and others about records or about the litigation in the court pending against the Association.

There was no reason for discussing the matter of records or litigation on the floor of the annual Convention. Notwithstanding the fact, the group that were accused of extravagantly managing the Association for the previous two years and were trying to gain further control of the Association through a By-Law amendment, did all in their power to stampede the Convention, to create a smoke-screen of deception and, if possible, prevent the breeders from questioning them collectively or individually on the floor of the Convention as to what had become of the vast amount of money which had been collected in increased fees.

Apparently their attempt to free themselves of guilt, by discrediting their accusers, was not confined to the Convention hall.

The members of the Holstein-Friesian Association will remember the propaganda that was broadcasted through the *Holstein-Friesian World* and other dairy and agricultural publications in which Mr. Koenig, the Publicity Agent employed by the Association, carried paid advertisements.

There was no HOLSTEIN BREEDER AND DAIRYMAN at that time to come out and speak the truth so these statements were allowed to go out unchallenged except for an occasional article published or letters written by men who were in sympathy with those who were fighting for the rights and interests of the dairymen who bred purebred Holstein-Friesian cattle.

In the propaganda that was so widely broadcast through the *World* and through the Publicity Department of the Association, the men, who voted to preserve the Association and the interests of the members at Syracuse, were held up in ridicule and accused of fighting for ulterior motives.

Having no case, the policy of "hollering loud and long and resorting to ridicule and abuse," was adopted.

We are printing on an adjoining page, copies of the letters mailed out by Messrs. Brockway, Brill, Newman and Peasley, soliciting proxies which were voted at the Syracuse Convention.

These letters review the history of the Association during the previous two years, warn the breeders of the attempt that was being made to gain further control of the Association and tell very plainly for what purpose they wished to use the proxies.

Below we are printing the amendments referred to in the letters that appeared in the call of the Annual Meeting as sent out by the Secretary.

The Committee on Revision of By-Laws, Mr. Jas. A. Reynolds, Mr. Fred Pabst and Mr. C. M. Horn.

To amend Section 16 of Article 11, of the By-Laws to read as follows:

"The President shall be the *chief executive officer* of the Association. His duties shall be those usually pertaining to that office. It shall also be his duty to enforce the By-Laws of the Association and the directors and orders of the Board of Directors. He shall sign all certificates of membership which may be issued, but such signature may be affixed by printed facsimile.

"The President shall be the custodian of all bonds and renewals thereof, given by officers of the Corporation; shall deposit said bonds for safe keeping in a place of public deposit, and shall report the terms and conditions of such bonds to the Board of Directors annually in writing."

The above amendments were defeated by the votes of the members at the Syracuse Convention.

"The By-Laws of the Association may, from time to time, be altered, amended or repealed by the Board of Directors of the Association as the advisability of such action may become apparent."

The above amendment was defeated by the votes of the members at the Syracuse Convention.

By FREDERICK M. PEASLEY, CHESHIRE, CONN.:

To rescind the following resolutions adopted at the last Annual Meeting which reads as follows:

Resolved: That the Board of Directors are hereby instructed to investigate the question as to the advisability of selecting a National Home for this Association, either by purchase, or by erection of a suitable building, with power to act in accordance with their judgment; the building to be of such a character, and the location to be such, as will in their opinion best suit the needs of this Association for the years to come.

The above resolution was rescinded by the votes of the members at the Syracuse Convention.

By A. L. BROCKWAY, SYRACUSE, N. Y.:

To amend Article IV., Section 66, with respect to fees for transfers, to read as follows:

"Transfers to members, if filed within six months of date of sale, \$0.50; if filed after six months from date of sale, \$1.00. Transfers to non-members, if filed within six months from date of sale, \$1.00; if filed after six months from date of sale, \$2.00."

The above amendment was carried by the votes of the members at the Syracuse Convention.

After reading the amendments that appeared in the call of the meeting, the purpose of which is self-apparent, and reviewing the letters and knowing how the proxies were used at the Annual Meeting, we ask our readers to judge as to the justice of the statement appearing in the *Holstein-Friesian World* that, "the proxies used at the Syracuse meeting were prostituted."

The *Holstein-Friesian World*, in their efforts to uphold the Delegate Form of Government, has made it very clear to their readers that the purpose underlying the change in the Association's management, from a Business to a Political Form of Government, was purely for the purpose of allowing the management that gained control at the Philadelphia Meeting to remain in control against the wishes of the majority of members.

There are no legitimate reasons for a business organization such as the Holstein-Friesian Association of America to adopt a Delegate or Political Form of Government. Such a Government permits extravagance and mismanagement and places the members in a position where they are unable to protect their rights and interests by a direct voice. No business organization could survive under such a Form of Government. Extravagance and mismanagement would prevail in Banking Institutions, corporations and railroads if such a Form of Government was inaugurated and it would soon force these institutions out of business.

A political Form of Government has been in operation in the Holstein-Friesian Association at three annual Conventions and extravagance has crept into the Association's management to the extent that it has run behind over \$90,000 during the past two years, notwithstanding that at the first meeting in which this System was put into operation, the transfer fee was boosted to six times what it was in 1919 right in the height of war prices.

At the Syracuse Convention Mr. C. W. Newman held the confidence of upwards of 2,000 breeders who had intrusted their proxies to him.

Mr. M. S. Prescott, Editor of the *Holstein-Friesian World*, was intrusted with two proxies.

A few months later, after the *Holstein-Friesian World* had tried to discredit Mr. Newman and others through their columns, its Editor, Mr. Prescott, appeared at the Special Meeting in St. Paul, Minnesota with twelve proxies. Mr. Newman had over 1,800 when he left home and 200 letters and proxies were awaiting him on his return that came too late to be voted at the Special Meeting.

The breeders, we believe, know in whom they can put their trust.

THE BUSINESS FORM OF GOVERNMENT

Under the Business Form of Government, The Holstein-Friesian Association grew from a very small beginning until it was the largest and most influential and most prosperous organization of its kind in the world.

At the Syracuse Meeting in June, 1921, the Members' Votes prevented the President from becoming the Chief Executive Officer.

The Members' Votes kept the power to alter, amend or repeal the By-Laws in the hands of the members where it rightfully belongs.

The Members' Votes reduced the transfer fees from \$1.00 to fifty cents.

The Members' Votes passed a resolution preventing the Board from removing any of the offices from their present location and the Members' Votes defeated for reelection the \$12,000 President.

Where the Members' Votes prostituted at the Syracuse Convention because their votes were used to protect their rights, interests and the best interests of the Association and defeat the efforts of those who were greedy for more power and more money?

THE POLITICAL OR DELEGATE FORM OF GOVERNMENT

The Political or Delegate Form of Government deprives the members of a direct vote in managing the Association's affairs.

The Political or Delegate Form of Government can only be properly administered by two or more opposing parties or factions as in our State and National Governments.

The Political or Delegate Form of Government permits a small group to rule.

The Political or Delegate Form of Government is expensive to operate.

Under the Political or Delegate Form of Government, in the Holstein-Friesian Association, the transfer fee has been increased six times what it was previous to 1919.

Under the Political or Delegate Form of Government, the Holstein-Friesian Association's operating expenses during the past two years has exceeded its income by more than \$90,000.

Under the Political or Delegate Form of Government, the Association is failing to properly record the natural increase of the breed. While the breed is increasing in numbers, the number of registration and transfer certificates which the Holstein-Friesian Association is issuing, is decreasing.

Under the Political or Delegate Form of Government, the number of transfers issued by the Association from year to year is decreasing.

Under the Political or Delegate Form of Government, the number of new members joining the Association from year to year is decreasing.

The Political, Delegate Form of Government; the creating of fictitious values at consignment sales of a State and National character; the increased and unnecessary tax upon the breeders and owners of Holstein-Friesian cattle all reflect unfavorably upon the Holstein industry and are working to the destruction of The Holstein-Friesian Association of America.

MR. BROCKWAY'S LETTER OF WARNING

May 14, 1921.

To Members, Holstein-Friesian Association of America:

Do you want to help save the members of the Holstein-Friesian Association nearly \$100,000.00 per year? If so, just support the plan to reduce transfer fees from \$1.00 to 50 cents as outlined by the proposed amendment which I have introduced in the call for the annual meeting June 1st, and which I hope you will carefully read.

We don't need this great extra tax upon our members at all. It is absolutely unnecessary, it is causing wastefulness and extravagance in the affairs of the Association and I am going to prove it to you by telling you a few facts.

When this big advance from 25 cents to \$1.00 was proposed at the Philadelphia meeting in 1919, the finance committee of which I was chairman, strongly opposed it, because for the year ending April 30, 1919, at the old rate of 25 cents, we had spent \$71,449.58 for total publicity work, including prizes, and besides, we carried more than \$52,000.00 to our surplus account—truly a magnificent financial showing. Hence, we could not see the necessity for increasing the fee at all, much less to FOUR TIMES THE FORMER AMOUNT!

President Aitken disparaged the old 25 cent rate by stating that even dog associations charged \$2.00 for transferring a dog. We, of the finance committee, felt that instead of the low fee being a reproach to our Association, we should, instead, have been given credit for good business management.

But the Directors out-voted the Finance Committee, and I was directed to present to the annual meeting the resolution to increase the transfer fee to \$1.00 which I subsequently did.

Do you realize that last year's budget appropriation for extension service alone, as shown on page two of the call was \$140,600.00 and that the finance committee's estimate of this year's income was \$600,000.00? Do you realize that for the year which ended April 30, 1921, the Association collected from transfer fees alone, the vast sum of over \$180,000.00?

Can you think of a particle of good you or any member has received from this enormous annual expenditure during the last two years, either by way of a definite policy or in concrete results?

It is true that a considerable number of field men have been employed, at salaries equalling those of such sterling officials as Secretary Houghton and Superintendent Gardner, and that these fieldmen spent large sums of money for traveling expenses in assisting Mr. Aitken to carry on "whirlwind campaigns" and in organizing state clubs.

Judged by results—and I believe Mr. Aitken will have to agree—these "whirlwind campaigns" conducted at large expense to the breeders, have been proven total failures. As proof of this, consider that with the expenditure of this enormous amount of money—more than we have ever spent before—our cattle are selling for less than half the prices they brought two years ago, or even before the war.

President Aitken has, for the past two years, been drawing a salary of \$12,000.00 per year, or \$2,000.00 more than the salary of the Governor of the great state of New York. The first year it was paid to him as President of the Association, although the by-laws do not provide for any salary for the President. Hence, the next year the salary was paid to him as "Director of Extension Work." All former presidents have served the Association entirely without pay.

I am also rather surprised to observe that the budget for the year 1920-21 does not list the salary of \$12,000.00 which Mr. Aitken has received, although it carefully listed the salaries of the Treasurer, the Auditor, the Secretary and the Superintendent of Advanced Registry. There is an item of \$118,200.00 in the budget for extension service, and the \$12,000.00 salary of Mr. Aitken was probably paid from that fund. BUT WHY WAS IT NECESSARY TO CONCEAL THIS ITEM?

I am in favor of extension work, but not the kind we have been getting for the past two years, for it is like throwing away vast sums of money which belong to our members. Good, strong extension work can be conducted at one-fourth the expense and yield splendid results. This is a time for economy. LET US CALL A HALT!

Suppose we start right now. Reduce the transfer fee from \$1.00 to 50 cents at the coming meeting. Abolish the office of

"Director of Extension Work." Let us stop these "whirlwind campaigns" on which certain gentlemen have been spending our money for the purpose of getting still more money out of our pockets and putting a still higher tax on our business as breeders.

Let us go still further and adopt the resolution introduced by Judge Peasley of Connecticut, and rescind the action taken at St. Paul last year, appointing a Committee with power to "select and buy" an Association Home, which might completely wipe out all of the reserve in our treasury; such a home is absolutely unnecessary.

Let us defeat the proposed amendment to give the Directors power to "make, amend or repeal" our by-laws. This right has always belonged to the membership and it should never be taken away from them. Our \$600,000.00 annual income and our \$300,000.00 reserve on hand, would be entirely out of the control of the membership if this resolution should pass.

MAKE NO MISTAKE! This plan is an attempt to get more power into the hands of a few men and to oust from office Frederick L. Houghton as Secretary, and Malcolm H. Gardner whose life has been devoted to our interests as Superintendent of Advanced Registry.

These plain facts call for prompt action. The power that you have IS YOUR VOTE. If you cannot be present at the meeting DO NOT FAIL TO SEND YOUR PROXY SO THAT YOUR VOICE MAY BE HEARD in opposition to these dangerous propositions.

If you will sign the enclosed proxy and mail it back in the enclosed envelope, I will execute the trust in accordance with your wishes, and I kindly urge you to act at once.

Faithfully yours,
A. L. BROCKWAY.

MR. BRILL'S LETTER TO THE MEMBERS

POUGHQUAG, N. Y., May 19, 1921.

MY DEAR SIR:

I have received a letter from Judge Peasley of Connecticut, warning us against the proposal to buy or erect a building for centralizing the Association's business, which would deprive us of the valuable services of Mr. Houghton and Mr. Gardner and probably wipe out our entire reserve fund of \$343,000.00.

I have also received a letter from Mr. Brockway, of Syracuse, urging the reduction of the transfer fee from \$1.00 down to 50c. I heartily approve both of these propositions, and believe that every member feels the same about it, but these letters don't mention all of the danger; they point out only a part of it.

They have forgotten to mention the *greatest danger* of all, and I want you to know about it. This danger is very cunningly covered up in the innocent little paragraph at the bottom of page four, of the call for the annual meeting, which reads as follows:

"The By-Laws of the Association may from time to time be altered, amended or repealed, by the Board of Directors of the Association, as the advisability of such action may become apparent."

Now let us see what this means! Our by-laws govern our officers and directors. They are the only protection which the members, including you and me, have against extravagance and wrong doing; for 36 years the power to make, amend or repeal these by-laws, has been in the hands of the membership, where it rightfully belongs. Why, then, should we surrender this right at this time?

Don't take my word for it. Just turn to the by-laws, and observe that Section 1, Article 8, reads as follows: "Amendments to the constitution or by-laws, may be made at any duly qualified meeting of the corporation, provided *thirty days' notice* of such proposed amendment has been given by the secretary."

Notice the difference between this time honored by-law as it now exists, and the one they want to put through at the Syracuse meeting. If this attempt succeeds, a few directors could completely change our by-laws without consulting the membership, and *entirely without notice*. It would make the offices of secretary and superintendent of Advanced Registry, appointive by the directors instead of elective *by the members*, as it now is, and our faithful officials, Secretary Houghton and Superintendent Gardner, who have served us so nobly and so long, would probably be removed. It would take away from us the

only protection we now have in safeguarding our property interests in the Association.

We have \$343,000.00 in our reserve fund, and an annual income of about \$600,000.00. It is high time that somebody should use plain words. This move looks like the well laid plan of a few so-called "big men" to get control of our Association, and to so fix things that you and I, as members, will no longer have a word to say about how our affairs should be conducted. It looks like a plan to squeeze out the men who milk their own cows, and leave the "small fry" with nothing to say but pay the bills and keep still.

At the Philadelphia meeting, the directors passed a resolution, *behind closed doors*, giving Mr. Aitken \$12,000.00 a year, absolutely without authority, because the by-laws do not provide for a salary for the president. All former presidents have served without pay. Not a word about this \$12,000.00 salary appeared in the call for our annual meeting. It was never mentioned on the floor of the convention, and was concealed from the membership by the absolute silence of its sponsors. Furthermore, they have concealed it in the last budget which carefully lists the salaries of the secretary, the treasurer, the auditor and the superintendent of Advanced Registry, but it *does not say a word* about the largest salary of all, the \$12,000.00 paid to Mr. Aitken.

If a few directors will do a thing like this *when they have no authority*, what in the world are they likely to do when we give them the power to "alter, amend or repeal" our by-laws, without consulting us, and entirely without notice?

This proposed amendment is wrong in principle and deserves *overwhelming defeat*. I am sending you this letter as a warning, and I want your help. There is only one hope to save this desperate situation, Mr. Member, and that is *your vote and my vote*, not the vote of the politicians or of the millionaires in our Association. We breeders and dairymen are the backbone of our Association, because we are in the majority, and can win if we act right now and pull together.

If everyone of you will act and act quickly, we will defeat these efforts to take the control of this Association out of our hands. But, if we fail now, they will amend the by-laws so we can never get control of our own affairs again. *It will be too late.*

If you have already sent your proxy to Judge Peasley, of Cheshire, Conn.; Mr. Brockway, of Syracuse, or Mr. Newman, of Wyalusing, Pa., it is all right, as I understand they are all alarmed about these dangers and are going to fight this raid on our rights! If you have *not* sent your proxy, please don't delay a moment longer, but sign and mail it to me, and this is what I promise you I will do:

I solemnly promise to go to the Syracuse meeting, and to vote your proxy and to "fight my head off" if needs be, to help defeat these vicious plans. But to do so *I must have your support!* We can't win unless we *all* act. You know how important it is to have a big bunch of proxies to back up a fighter in a convention. Therefore, don't scatter your proxies too much, send them to me and get your friends to do the same.

We must reelect Mr. Houghton. We must reelect Mr. Gardner. We must stop extravagance. We must protect our by-laws. Will you help by mailing me your proxy to-day?

Very respectfully,
JACOB S. BRILL.

The letters of F. M. Pearsley and C. W. Newman will appear in our next issue.—Ed.

Much and loud noise is being made about coöperation in these days. In the midst of it all, there is one thing to remember, to-wit: Coöperation that does not cheapen your cost of selling, improve your service and get you a competitive market for your products is not a very good brand of coöperation.—*Sioux City Livestock Record*.

Whilst we deliberate how to begin a thing, it grows too late to begin it.—*Quintilian*.

Recently a husband came home half-shot. His wife finished the job.

THE PRACTICAL DAIRYMAN

DAIRY BARN CONSTRUCTION

COST

The cost of the dairy barn should be in proportion to the size of the farm, its income, and in keeping with the possible returns on capital invested. Barns may be built with the cost from \$25 to \$50 per cow, which will meet all requirements for satisfactory barns. As high as \$100 per cow can be invested without placing an undue overhead on the maintenance of a herd, but when the cost runs much higher than this, the interest on investment, depreciation, insurance and taxes are such that even good cows cannot make a profit, when they must pay for such high overhead. Enough money should be invested, however, to make a dairy barn substantial and provide conveniences for feeding, milking, and cleaning. Money invested in a dairy barn should be required to return at least 10 per cent on the investment, that is, each cow must first pay 10 per cent on her quota of capital invested in buildings, in addition to labor and feed requirements, before the net profit can be determined.

SUNLIGHT

Sunshine is the cheapest and best germicide and is one of the essentials for the normal growth and health of dairy stock. Therefore, dairy barn construction should be such as to provide all the sunlight possible. A minimum of 4 square feet of window glass per cow is required. Windows which are long up and down are best because they admit direct sun rays farther into the barn and therefore cover more floor space. Sunlight will not only help to kill undesirable bacteria, but will also aid in keeping the barn clean because dirt and dust are more easily seen and therefore more likely to be removed than in the case of a dark barn. No mistake can be made by putting in too many windows. The best size of a pane is one 10 by 12 inches, each sash containing nine panes, and each window should be put in from 4 to 5 feet from the floor to prevent breakage by the animals.

To get the most sunlight inside it is best to build a rectangular barn and to run long way north and south. Such an arrangement provides abundant sunshine on the east side in the morning and on the west side in the afternoon.

VENTILATION

A cow needs just as much air in the barn as she does on the outside. A normal cow breathes about 60 cubic feet of air per minute to provide the oxygen necessary to purify the blood

used for body purposes and milk production. If fresh air is not provided, the cow will retake into her system the carbon dioxide which is thrown off as a waste product, and if forced to live under these conditions for any length of time, she will have less disease-resisting powers, and will also handle feed less efficiently. In order to furnish the necessary fresh air, the barn should be constructed so as to allow 500 to 600 cubic feet of air space per cow.

The windows should be hinged at the bottom so as to open inward and so that the current of incoming air is directed upward and over the backs of the cows, thus avoiding direct draft. Several loft holes will offer further ventilation in carrying the warm air through the loft to the outside roof ventilators on the top of the barn of two-story construction. At milking time the loft hole doors may be closed to prevent dust from falling into the milking barn. In the case of a single-story barn these roof ventilators will be especially valuable in summer. In either case, however, the outside roof ventilators should be placed at intervals of 35 feet, or one for every twenty cows. These ventilators should be two feet square. Roof ventilators should be provided with dampers so as to allow partial closing in extremely cold weather to prevent the escape of too much of the body heat and thus make the barn too cold.

In case of the two-story barn, the loft holes can be made any size so long as they are provided with doors which may be shut to regulate the escape of body heat in cold weather.—*Clemson College Bulletin No. 62*.

PREVENTING HORNS FROM GROWING

When the calf is about ten days old you can feel a button-like lump where each horn will later appear. This is the best time to prevent the growth of horns. With scissors clip the hair from the button-like lump. Wrap the end of a stick of caustic potash or caustic soda in paper to protect your hands. Dip the end of a stick in water and hold it as you would a pencil. Rub the skin over the lump until it bleeds at the center. Rub vigorously, especially on the highest part of the lump and for a space around it about the size of a dime. Do not make it wet enough so the caustic potash will run.

Labor leaders to coal operators—"There are our demands. If they are not granted we will refuse to go on strike next winter."

CLUB ACTIVITIES

DELAWARE BREEDERS MEET AT WINTERTHUR

The second winter meeting of the Delaware Holstein-Friesian Breeders Association was held at the Winterthur Farms, February 24. Nearly 200 were present at the meeting which was presided over by the president, Harry B. Clark of Kenton, Del.

A judging contest was staged. The visitors were asked to attempt to place four cows in their relative places as producers according to the barn records. Although 175 took part in the contest, no one was able to correctly place the animals which were three-year-olds. Their milk records totaled 69,800 lb. Willard Cloud of Kennet Square estimated their total as 70,000 lb. and was awarded the prize, a handsome bull calf.

Miss M. E. Barger of the Interstate Milk Producers' Association gave an illustrated lecture, showing slides depicting dairy scenes in many countries. Miss Barger said that purebred Holstein-Friesians were first brought to America about one hundred years ago.

After dinner, which was served in the farm clubhouse, H. E. Robertson of York, Pa., spoke on retailing Holstein Milk. He said that milk from Holstein-Friesian cows had proven popular with mothers in his territory who desired the best milk for their infants.

J. Russell Danks, superintendent of the dairy department at Winterthur was nominated delegate to the convention to be held at Grand Rapids, Mich., June 4.

WAUKESHA BREEDERS MEETING

Members of the Waukesha County Holstein Breeders' Association re-elected their officers at a meeting held February 27 at Eagle, Wisconsin. They are: President, Fred J. Southcott,

The Kind We Raise

Cows of this size, type and evident producing capacity, bred and raised on this farm, are mated with

MODEL DARIUS KING SEGIS

whose dam produced 639.8 lb. milk in a week, averaged 79.8 lb. milk a day for three months and produced 2,771.2 lb. milk, 732.4 lb. butter in 10 months all as a two-year-old heifer.

This herd is Accredited.

Stock for sale at reasonable prices

FRED B. KEENEY,

Wyoming Co.

Laceyville, Pa.

Dousman; corresponding secretary, Will L. Baird; field secretary, L. V. Garvens. Mr. Southcott and Mr. Baird were re-elected members of the board of directors and Arthur Bennett was elected to succeed T. F. Schroeder as a member of the board.

The secretary-treasurer's report showed he handled \$118,412.44 during the past year.

After dinner, which was served in the parlors of the Congregational church, the members and friends listened to several addresses, the principal speakers being Dr. James S. Healy, on Possibilities of Federal Test Work, Stuart Reid on Coöperation Versus Competition, and J. F. Thomas who spoke on Progress in Area Testing and Cow Testing Association Work.

CONNECTICUT CLUB MEETING

Waldo S. Kellogg of Derby was elected president and Morton E. Pierpont of Waterbury, treasurer of the Connecticut Holstein-Friesian Breeders' Association at its annual meeting held at the Connecticut Reformatory at Cheshire, February 21st. At the directors' meeting former President Angus P. Thorne was appointed secretary. Vice-presidents are as follows: Thomas Holt of Newington; George C. Erskine of Cheshire; Albert E. Johnson of Bethlehem; Lyman Keeler of Danbury; H. O. Daniels of Middletown; R. A. Birdsall of South Willington; E. C. Rogers of Putnam.

After lunch the visitors were taken through the Reformatory by Superintendent Erskine and saw the shops in which the boys are taught various trades. In the dairy barn one of the chief attractions was a fine string of daughters of Far Oaks Sir Homestead Darkness, the well-known show bull. The junior sire is North Star Neeltje Champion, who was just ten months old on the day of the meeting.

RE-ELECT HANSEN PRESIDENT

About 40 owners of Holstein cattle attended the annual meeting of the Scott County Breeders' Association held at Jordan, Minn., February 13.

President Axel Hansen discussed dairy conditions as he saw them during his travels in various parts of the country last fall.

The club will encourage calf club work by offering \$15.00 as prizes for Holstein calves exhibited next fall in the boys and girls club department at the Shakopee and Jordan fairs.

The officers were re-elected. They are: Axel Hansen, president; Jos. Erkens, vice-president; Jos. C. Munsch, treasurer; Edw. J. Leibbrand, secretary, who, together with Frank Suel, Henry Arens and Wm. F. Marschall, compose the board of directors.

CUNNINGHAM SUCCEEDS WHIPPLE

M. B. Cunningham was elected president, H. A. Simmons, vice president and Lloyd Whipple, secretary-treasurer of the Clarke County Holstein Breeders Association at a meeting held at Vancouver, Washington, February 14. Mr. Cunningham succeeded Mr. Whipple as president.

It is planned to hold a combined picnic and dairy institute some time during June when several dairy problem experts will be engaged to speak. The institute was planned originally for this winter but was postponed because of bad weather.

RE-ELECT WARFORD PRESIDENT

LaVerne Warford of Virgil, Illinois, was re-elected president of the Kane County Holstein Breeders' Association at the annual meeting held February 5th. Tracy Herd of Hampshire was elected vice-president and E. B. Cromer of Moosheart, secretary and treasurer. The latter is in charge of the dairy and poultry farm at Moosheart the great philanthropic institution owned by the the Loyal Order of Moose.

It is planned to show a county herd at the Central States fair, which will be held at Aurora next fall.

SOUTH DAKOTA ASSOCIATION MEETS

At a meeting held at Mitchell, S. D., February 11, the following were elected officers of the South Dakota Holstein Friesian association:

President, Frank Johnson, Hetland; vice president, B. C. Graber, Marion, and F. W. Barth, Mitchell, secretary. It was decided to encourage the formation and operation of boys and girls Holstein calf clubs and to hold an association picnic at Brookings in June.

WILL FURNISH THE CALVES

Members of the Henrico Holstein-Friesian Association at the annual meeting held at the Chamber of Commerce, Richmond, Va., on February 2d, re-elected J. A. Loving, president, H. W. Gill, was elected vice-president.

It is planned to hold a purebred Holstein calf sale in Westmoreland County during the month of April and calves are to be provided by the members of the Henrico County Association. The next meeting will be held some time in March.

FORM NEW IDAHO CLUB

At a meeting held in Caldwell, Idaho about the middle of February, Hermann Weick of Notus was elected president of the Canyon County Holstein-Friesian Breeders' Association. J. G. Lupton was named vice president and D. A. Stubblefield of Caldwell was elected secretary and treasurer. These officers, with Clarence King and Fred Osterkamp constitute the board of directors.

The association went on record as favoring a bill which would require a license to sell oleomargarine, another bill that would prevent false advertising of imitation dairy products and favoring a bill creating a director of dairying in the State Department of Agriculture. A number of members spoke advocating calf club work.

MANUFACTURED MILK MARKETS

Imports of butter, cheese and manufactured milk showed a big falling off for December 1924 as compared to the corresponding month of the previous year, the amount being only about a quarter of the amount imported a year ago. The figures for December 1924, were 760,278 lb. against 3,038,942 lb. for December 1923. The amount of cheese imported during December 1924, was 5,632,014 lb., while during December 1923, the amount was 7,284,212 lb. The imports of condensed, evaporated and powdered milk were 538,458 lb., while during December 1923, 1,356,982 lb. were brought into this country.

The amount of butter exported during the last month of the recently ended year was 481,252 lb., as compared to 422,746 lb. for December 1923. More than 8,000,000 lb. were exported during the recently ended year, against less than 6,000,000 lb. for the year 1923. Cheese exports tell a different story for 4,299,127 lb. were sent out of this country during 1924, while 8,331,321 lb. were exported during the previous twelve months. More than twice as much was exported in December as was exported in the corresponding month of the previous year, the figures being 647,998 lb. against 320,943 lb.

The oleomargarin trade shows a great falling off. A little more than three and one-half million pounds were exported during 1923, while only a trifle over 900,000 pounds were sent out of this country during the past year.

REVIVAL OF GERMAN BUTTER IMPORTS

German demand for foreign butter within the past year revived to such a degree as to affect materially the world butter market. In fact, the recently renewed butter import trade of Germany is about the most encouraging development, from the point of view of the butter producer, in the whole foreign situation at the present time. In the first eight months of 1924 there was imported into Germany a total of 62,043,058 lb. butter. Imports during the preceding year were almost negligible. Economic conditions in that country were such that even the domestic product could not be purchased freely in the German cities. A competent observer reports that on one particular day last year there was just one barrel of butter in all Berlin. While Germany must continue to import butter, much of

course, depends upon general economic developments in that country as to how near the imports may again approach the volume of 111,000,000 lb. imported annually before the war. It is still somewhat uncertain, too, what policy may finally be adopted in Germany regarding the proposed import duty on butter. On the whole, however, it appears now that economic conditions are such that if no considerable import duty on butter is imposed, German demand may be the most important factor in relieving the American butter market from foreign competition.

RYE HILL KORNDYKE KONIGEN

A milk record of 25,207 lb. in one year, second in Missouri to the famous Missouri Chief Josephine, has been made by Rye Hill Korndyke Konigen, owned at Fredmar Farm, F. W. A. Vesper proprietor. Josephine's record was 26,861.5 lb.

RYE HILL, KORNDYKE KONIGEN
25,207 lbs. milk in 365 days as junior four-year-old. Owned by F. W. A. Vesper, St. Louis, Mo. Photographed as a two-year-old.

The butter record of Rye Hill Korndyke Konigen was 953.63 lb. and was made as a four-year-old.

As a junior two-year-old this heifer produced 22,686.6 lb. milk and 824.57 lb. butter in 365 days. During her latest test she was cared for by E. E. Brasfield, a 1923 graduate of the Missouri College of Agriculture.

DEMAND FOR TESTED STOCK

More than twenty carloads of purebred Holstein cattle were sold during 1924 by John C. Buth, sales manager of the Kent County Holstein Breeders' Association. During 1923 the association sold only two carloads. The gain is attributed to the fact that all herds in Kent County, Michigan, have been tested for bovine tuberculosis.

Fond Parent—"Now, Doris, if you won't kiss your uncle, I shall have to send you to bed."

Doris (after a few moments' silence)—"Very well—good-night, mama."

YOUR ATTENTION IS CALLED to this Accredited Herd in which there has never been a case of Abortion.

LAST CALL

G. A. Spencer herd dispersal at Dalton, Pa., March 23d.
Bonnymeads Farms herd dispersal to be held at Harrisburg, Pa., March 25th.
George C. Wilson herd dispersal at Tyrone, Pa., March 26th.
L. R. Harris will disperse his herd at Lambertville, N. J., April 1st.

HOLSTEIN SALE AT TYRONE, PA.

On Thursday, March 26, at Tyrone, Pa., the entire herd of purebred Holsteins owned by George C. Wilson will be dispersed. This herd is headed by Lola Cybele Pontiac Homestead, a three-year-old son of the 30.48-lb. cow, Cybele Walker Ramoua Fayne. This cow has a year record of 1,105.33 lb. butter, 23,734.5 lb. milk and she is a granddaughter of Mooie Fayne De Kol.

The Wilson herdsire is by Lola Segis Pontiac Homestead, a son of Piebe Laura Ollie Homestead King, famous for the show qualities of his daughters and granddaughters and for being the sire of May Walker Ollie Homestead, 31,610.6 lb. milk, 1,523.23 lb. butter in a year, the American dairy champion in yearly work. Lola Segis Pontiac Homestead is a son of Lola Pontiac Segis, 772.8 lb. milk, 34.132 lb. butter in seven days, 24,292.6 lb. milk, 1,012.52 lb. butter in a year as a junior four-year-old. Lola Pontiac Segis is one of the good daughters of King Segis Pontiac Count.

The dam and sire's dam of the Wilson herdsire have records that average 32.3 lb. butter in seven days, 1,058.9 lb. butter in yearly work.

There are nine young daughters of Lola Cybele Pontiac Homestead in the sale as well as one daughter of a 36-lb. sire, one daughter of a 32-lb. sire and a granddaughter of May Walker Ollie Homestead, the American Champion for year work.

In addition to the heifers there are eleven cows selected for individuality and breeding and handled for production. The Wilson herd of which W. W. Seeds is superintendent, is under state and federal supervision and 100% clean.

A LITTLE MORE ABOUT THE BONNYMEADS HERD

Contrary to the general belief, the Bonnymeads Farms are not being broken up although the herd which has been established over thirty years, will be sold at public auction, March 25. A number of changes will be made and the big barn, which has been a center of attraction for many years and to which visitors to Harrisburg, interested in agriculture were usually taken, will be fixed over into an orphanage. A portion of the fields surrounding the barn will be used as orphanage grounds. Plans are not completed at the present time and we assure our readers that when the new arrangements are made we will be pleased to carry the news and if possible to show pictures of the orphanage and some of its inmates. Owing to the alterations which are necessary it will be many months before any cattle will be required to furnish milk for the orphanage. While it is to be regretted that such an old established herd is to be dispersed, the reason is a good one.

The Bonnymeads cows have been milked twice a day and have made splendid records, several producing over 14,000 lb. milk in a year, and it must not be overlooked that during 1924, the output of the entire herd of sixty milkers, one-third

of which were in their first lactation period, averaged over 10,000 lb. There are few herds in the country of equal size that equal this showing.

The auctioneers on this occasion will be Colonel J. C. Hess of Hershey, a local auctioneer in such demand that he is kept going practically every working day and Colonel Glenn R. Mead of East Aurora, New York, who comes south on this occasion, will officiate at the "Bert" Spencer sale at Dalton on March 23 and then will help to sell over one hundred head on the Bonnymeads Farm on the 25th. S. R. Miller of Chambersburg, Pa., without whom no sale in Southern Pennsylvania is complete, will expound the pedigrees.

The Bonnymeads Farms are located one mile east of Harrisburg on the William Penn Highway, which passes by the office and the main barn at which the sale will be held. Parties coming by train can take the trolley marked "H" which leaves Market Square, Harrisburg, on the hour and half hour and passes by the Pennsylvania and Reading Railroad stations, a few minutes later and runs along the William Penn Highway, passing by the farms. The conductor will tell you where to get off. Don't overlook the fact that the Bonnymeads herd is under state and federal supervision and that all animals are sold subject to the standard sixty day retest. Visitors to the Bonnymeads sale are invited to visit the office of the BREEDER AND DAIRYMAN in the Evangelical Building, Third and Reily Sts., Harrisburg.

DISPERSAL OF NEW JERSEY ACCREDITED HERD

By R. AUSTIN BACKUS

L. R. Harris, who carefully selected a very high quality herd of about 30 head, because of going into other business, has found it necessary to disperse his herd at his farm at Lambertville, New Jersey on Wednesday, April 1st.

This was the first accredited herd in his county, and every milking animal in the herd has made official records except two first calf heifers.

Among the animals in the herd is a 24.71-lb four-year-old—who made 903 lb. butter in a year and produced 22,000 lb. milk. Also a 24.76-lb. four-year-old Mt. Hermon bred cow. Likewise a 24-lb three-year-old with her three daughters, and a 20.72-lb. two-year-old and her two daughters.

All the animals are outstanding individuals, for even first calf heifers in this herd are milking over 70 lb. milk in a day, and individual animals of the herd have averaged as high as 80 lb. milk in a day for 100 days. The senior Herdsire is a wonderful show bull—having been made Junior Champion at Trenton in 1921 and Grand Champion at Fleming and second at Springfield, Mass. in 1922. His dam is a twice 32-lb cow and his ten nearest dams average over 31-lb. Eight daughters of this bull will be sold—all from high record dams which are in the herd. The junior Herdsire is a son of King of the Sadie Vales—from a 28-lb four-year-old—who made 939 lb. in a year.

All interested in increasing the production and quality of their herds should avail themselves of this wonderful opportunity.

The sale is under the management of R. Austin Backus, Mexico, N. Y., with Baxter as auctioneer.

FIVE CLEAN TESTS

Too late for insertion in the issue of March 8, an advertisement was received from G. A. Spencer of Dalton, Pa., announcing that his entire herd of accredited Holsteins would be dispersed March 23.

The Spencer herd enjoys a well deserved reputation for individuality and production. It contains thirty-eight head of females and is a young herd for there is only one animal that has passed the age of five years. There are twenty cows a few of which are due to freshen about sale time, some of them will freshen next fall and there are also two-year-old heifers due to freshen at that time.

The blood lines are those best known in northern Pennsylvania. Many of the animals trace to Sir Veeman Hengerveld, King Korndyke Sadie Vale or King Pontiac Alcartra Pietje, sires with a nation-wide reputation.

The Spencer herd is fully accredited, in fact, has passed five clean tests. Glenn R. Mead of East Aurora, N. Y., will be the auctioneer and the sale will start promptly at noon, March 23.

OHIO ACCREDITED HERD SOLD

The accredited herd of Spayd & Wright was dispersed on the Wright farm about five miles from Bellevue, Ohio on February 27. There were thirty-eight purebred Holsteins in this sale, nine of them under two years old and the average was \$105.36, the total being \$4,004. In addition there were two registered Jerseys and fifteen grade cows of different breeds. One of the registered Jerseys went for \$90 and the other for \$87.50 and the average for the grades was \$68.

The top price was \$250 received for Josephine Burke De Kol Pontiac, a five-year-old granddaughter of King of the Pontiacs. Her dam as a four-year-old made 24.4 lb. butter, 651 lb. milk in a week, was from a 26 lb. cow and was sired by a son of Sandes De Kol Burke. Josephine's bull calf brought \$47.50. Two cows sold for \$200 each. They were full sisters, Minnie Korndyke Hengerveld, a six-year-old and Midget Korndyke Hengerveld, a four-year-old, granddaughters of Hengerveld Homestead De Kol from a 21 lb. three-year-old granddaughter of Pontiac Korndyke.

Colonel C. E. Baylor was the auctioneer and the sale was managed by F. G. Johnston of Columbus, Ohio.

This grand old cow produced 95 lb. milk in a day. She has sisters, daughters and granddaughters in Catatank Herd.

They are bred to

MAPLE CORNER SUPREME

whose dam produced 32.63 lb. butter, 629.6 lb. milk in 7 days. His six nearest dams average 35.11 lb. butter.

Will sell Cows, Heifers or Calves.

Twenty 1000 lb. Sisters

Are You Aware That

ORMSBY KORNDYKE HOCKSTER LAD

the head of our Accredited Herd has TWENTY Sisters that have each produced over 1,000 lb. butter in Yearly Test—that he is by Ormsby Korndyke Lad from a 35 lb. cow that heads a 30-lb. three generation group?

Let us sell you one of his sons. Can also spare a few heifers.

CHENEY BROTHERS & JONES
Randolph, Virginia.

Cow Testing Association Reports

GRADE AND PUREBRED

The leader in the Westfield Cow Testing Association for the month of January was a grade Holstein owned by W. H. McCullough. She is credited with 89.7 lb. fat, 1,868 lb. milk. Jewel, purebred Holstein, owned by H. A. Freed of Racine was second with 77.5 lb. fat, 2,040 lb. milk. The five leading cows were black and white.

During the month 24 herds containing 274 cows were tested by Mr. John Barto. Of this number 44 cows produced over 40 lb. butterfat, 15 over 50 lb. while 18 exceeded over 1,200 lb. milk. The Westfield Association operates in part of Lawrence County, Pa.

LEADING TEN PUREBRED HOLSTEINS

Purebred Holsteins owned by J. H. Lear of Carlisle, Pa., were first and second in the Cumberland County Testing Association for the month of February. Desse being credited with 87.1 lb. fat, 1,643 lb. milk and Spot with 81.5 lb. fat, 1,941 lb. milk. The highest milk producer was Adeline owned by Paul C. Gible of Hogestown. She produced 2,474 lb. milk. Her fat production, 79.2 was third. Virginia owned by Ivo V. Otto of Carlisle produced 2,194 lb. milk, 75.7 lb. fat. Mr. Otto had two, Mr. Gible three, Mr. Lear three, and A. N. Lehman two in the honor list, the leading ten cows all being purebred Holsteins. These ten averaged 1,943 lb. milk, 72 lb. fat and their average test was 3.7%.

During the month 25 herds containing 221 cows in milk were tested by A. A. Raudabaugh of New Kingston. Of this number 65 produced over 40 lb. fat, 27 over 50 lb. while 53 cows exceeded 1,200

lb. milk. Ten cows were discarded because of being unprofitable and seven were butchered.

The Gible herd averaged 1,675 lb. milk, 54.6 lb. butterfat and led the herd average division. The Lear herd, which consists of 11 purebred Holsteins, stands second with 1,436 lb. milk, 51.3 lb. fat.

C. G. Niesley has purchased a purebred Holstein bull calf from the I. V. Otto herd. The dam of this calf has a five-year average of 13,817.4 lb. milk, 581.5 lb. butterfat.

Drinking cups were installed in the stables of Vance McCormick, J. W. Raudabaugh and Paul N. Lehman. The result was an average daily increase of 2½ lb. milk.

HOLSTEINS LEAD IN VIRGINIA

The herd of eighteen purebred and grade Holsteins owned by S. C. Harley, Manassas, Va., took high butterfat average in the Prince William County cow testing association for the month of February. The herd averaged 993 lb. milk and 37.8 lb. butterfat. W. T. Thomasson's herd of 29 grade and purebred Holsteins was second high butterfat herd with an average of 960 lb. and 33.2 lb. The herd of J. N. House consisting of 22 purebred and grade Holsteins had third high average with 989 lb. and 34.2 lb.

Segis Queen Homestead, a purebred Holstein in the herd of P. A. Lewis, was high butterfat cow for the month. She gave 1,753 lb. milk containing 85.8 lb. butterfat. Grace Butler, a grade Holstein in the same herd, carried second butterfat honors with 1,745 lb. milk and 69.8 lb. butterfat.

A total of 565 cows were tested in the

Association. Seventy-seven dry cows were recorded during the month. Of the 483 milking cows, 56 made over 40 lb. butterfat and 25 made over 50 lb. butterfat. Eight made over 60 lb. butterfat. A total of 373,272 lb. milk and 13,823.4 lb. butterfat were made in the Association during the month. Seven unprofitable cows were sold.

ILLINOIS COW TESTING

A purebred Holstein owned by W. T. Rawleigh, Freeport, led the Illinois Cow Testing Association for January by producing 2,986 lb. milk, 134.2 lb. butterfat; purebred Holsteins owned on the Rock River Farm at Byron were second and third with 2,712 lb. milk, 103.2 lb. fat and 3,026 lb. milk, 93.8 lb. fat respectively. A grade Red Poll was next followed by four purebred Holsteins, then a registered Brown Swiss and then another purebred Holstein. Each of these ten animals produced 83.5 lb. fat or more.

The leading herd consisted of six purebred Holsteins owned by F. Beckman, Deerfield. Their average was 54.1 lb. fat, 1,649 lb. milk. The herd of Frank Plack, consisting of 13 purebred and grade Holsteins, averaged 1,536 lb. milk 53.4 lb. fat while 19 purebreds owned by A. D. Cornue of Hebron averaged 1,251 lb. milk 47.3 lb. fat.

Twenty-two associations reported production. In twelve of these the largest producing cows were purebred Holsteins while three other associations were headed by grade Holsteins. In exactly half of the Illinois associations the highest producing herd consisted of purebred Holsteins while in four others the leading herd was part purebred and part grade Holstein.

BEST COW AND BEST HERD

A registered Holstein owned by J. D. McDonald of West Salem, Wisconsin produced 14,606 lb. milk, 541.5 lb. fat last year in the West Salem-Bangor Cow Testing association. The McDonald herd averaged 12,455 lb. milk, 453.2 lb. butterfat.

The average production of the 356 cows completing the year's work was 7,374 lb. milk, 316.1 lb. fat. No less than 99 averaged a pound of fat daily for the year, 49 produced between 400 and 500 lb. and 11 exceeded 500 lb.

STATE PUREBRED HERD

The state reformatory at Ionia, Michigan owns a good purebred Holstein herd of 162 animals. Nearly 60 cows have A. R. O. records. One, Reformatory Century Pontiac has a seven-day record of 31.39 lb. butter and a 334-day record of 1,018.96 lb. The test was ended by her freshening. Last July the 60 cows in milk averaged 1,343.5 lb. which is said to be the record for state institutional herds. The entire production of the herd is consumed at the institution.

PENNSYLVANIA COW TESTING

In January, 9,241 cows were tested in the 28 Pennsylvania associations. Of this number 1,170 exceeded 40 lb. fat, 411 gave more than 50 lb. and 773 produced over 1,200 lb. milk. The highest milk producer was a grade Holstein owned by G. H. Henry & Son, enrolled in the Edinboro Association. She is credited with 2,623 lb. milk and her production of 89.2 lb. fat was second being exceeded by another grade Holstein owned by John Doane with 99.4 lb. fat. The third highest fat producer was owned by Mast Stoltzfus of Morgantown, is a purebred, and is credited with 88.1 lb. fat. Registered Holsteins are second and third for milk production. One owned by A. C. Yoder of Mifflin County is credited with 2,486 lb. and the other owned by John H. Neuber in the Sullivan

County Association producing 2,576 lb.

Cumberland County led in ten cow average, the figures being 69 lb. fat, Juniata being second with 67.9 lb. The Washington County Association finished its year's work with an average production of 8,100 lb. milk, 291.7 lb. fat. The highest producer is a registered Holstein owned by T. L. McCarrell of Hickory and produced 21,399 lb. milk, 742 lb. butterfat. The McCarrell herd had the best average 448.3 lb. fat being 107 lb. ahead of its nearest competitor.

The report for the Center County Association, which closed its first year of work last August, says that the leader, a purebred Holstein, was owned by J. J. Markle of State College and produced 10,010 lb. milk, 523 butterfat. The purebred Holstein herd of A. C. Hartle and Bros. of Bellefonte averaged 344.2 lb. butterfat, the highest figures reported.

GOOD IOWA HERD

William M. Voelker of Ryan, Iowa has a herd of fifteen purebred Holstein cows that averaged during January 52.5 lb. butterfat, one cow making 124.5 lb. She was the second cow in the state and the herd ranked third for the month.

Mr. Voelker says his father started with purebred Holsteins twenty years ago and every effort has been made to build up a producing herd. The majority of the cows carry Segis blood and the herd sire is a son of Sir Johanna Payne. The oldest cow in the barn, a daughter of Sir Johanna Payne, is seven years old. During January six two-year-old heifers averaged 62 lb. fat. Mr. Voelker is also a breeder of Silver Laced Wyandotte chickens and Chester White hogs.

FIRST TESTING IN COUNTY

Howard L. Hurd of Knox Ridge, Me., recently made creditable official records on some of the animals in his fine herd of registered Holsteins. Harry Goodine of Orono was the official tester. One two-year-old heifer produced

370.6 lb. milk, 14.15 lb. butter and another made 368.6 lb. milk, 14.14 lb. butter; a three-year-old made 402.8 lb. milk, 15.87 lb. butter. There were two four-year-olds in the bunch, one made 542.6 lb. milk, 20.87 lb. butter and the other 581.3 lb. milk, 22.04 lb. butter. This second went off her feed during the latter part of the test or would have made over 600 lb. milk. Her best day was 93 lb. The testing was done under adverse conditions, without any fitting and the cows were kept in stanchions. All the records made represent their everyday dairy work.

This is the first advanced registry testing ever done in Waldo County and indicates that this county has just as good cows as can be found in other dairy sections of the state.

HONORED IN OWN COUNTRY

T. J. Hilliard of Fairfield, Ill., is experiencing quite a demand for any Holsteins he cares to sell, and better yet, the demand comes from his own neighborhood showing that his cattle are highly esteemed by those who should know them best. Four different parties from Fairfield recently purchased purebreds from Mr. Hilliard. To Norman Heidinger went a young bull about eighteen months old; Amos McNeil also took a bull; Hal Bradshaw purchased three two-year-old heifers and a sale was also made to Mr. Blaney. When it is considered that these four men all get their mail from Fairfield, it certainly indicates that the Holstein herd owned by Mr. Hilliard has a splendid local reputation for both individuality and production.

"Papa, what do you do all day long at the office?" inquired the young daughter of the editor of THE HOLSTEIN BREEDER AND DAIRYMAN.

"Oh, nothing," replied her father, deeply absorbed in the evening paper.

"Well, then," pursued the little girl, "how do you know when you are through?"

THE POLAND CHINA ADVERTISER, : : : : Bluffton, Ohio

SPECIAL

We offer TWO Bull calves born March 1st. Both are from cows that produced over 22 lb. butter, 500 lb. milk in 7 days as three-year-old heifers. Both are by our high class herdsire. Also have other choice calves—male and female—from good producing dams.

This herd has been established 22 years and is on the ACCREDITED list.

MRS. MARY F. WITTER & SON

Allegany Co., Cuba, N. Y.

YOUNG STOCK

sired by

MAPLE CORNER SUPREME

His dam produced 32.6 lb. butter in 7 days and averaged 83.6 lb. milk for 30 days.

His six nearest dams average 35.11 lb. butter and he is a choice individual.

The females in this herd are good individuals and big producers. Nearly all have creditable official records. Buy from this Accredited Herd.

C. F. GRIDLEY,

Tioga County, Candor, N. Y.

60 Accredited Holsteins

Cows with individuality bound to please—big milkers and profit earners.

Heifers and calves increasing in value every day.

Waldron Herd is headed by two splendidly bred sires

KING SYLVIA PONTIAC PIETJE and KING DIXIE KEYES

Big records all over their pedigrees.

Entire Herd has passed a CLEAN T.B. Test and is under State and Federal Supervision.

Our stock will please you and we want to sell.

COW TESTING ASSOCIATION CHAMPIONS

By J. H. LEWIS

Rockwell & Katterhenry, of Beloit,
Rock County, Wisconsin, members of the
Beloit Cow Testing Association, have
achieved the goal of their ambition by
returning one of the cows of their herd
the top butterfat producer of the state in
cow testing association work. The cow
that recently won the title answers to the
sweetly seductive title of "Beauty."

Beauty, according to the testimony of
her proud owners, is a grade cow. Her

THE GRADE HOLSTEIN, BEAUTY
22,950 lb. milk, 872.1 lb. fat in a year.
Champion of Wisconsin C. T. A.

sire was a son of Mercedes Lad Johanna
but was never recorded. She was shown
at the National Dairy Show in Milwaukee
and acquitted herself for the year with
distinction by giving birth to a nice heifer
calf. Her half sister "Kit" has a record
of 804.2 lb. butterfat in her year in cow
testing association work, placing her in
high position among the top notch pro-
ducers, a very fine record of itself were
it not for the swift pace set by her own
kinslady.

Following is the record of the Rock-
well & Katterhenry herd in the associa-
tion year 1924:

	MILK (LB.)	FAT (LB.)
Beauty	22,950	872.1
Kit	23,374	804.2
Margie	15,904	547.6
Blossom	14,924	544.2
Black Legs	16,108	541.2
Betty	13,446	410.3
Canary	12,081	437.6
Carnation	13,339	440.8
Johanna	12,330	400.7

Rockwell & Katterhenry have been
on the farm they now operate since
1913, and they have been members of
the Beloit Cow Testing Association four
years. They showed 18 head of Hol-
steins in the grade cow classes at the
National Dairy Show and took five firsts
out of a possible six.

At present the herd consists of 60 head
of cows and heifers. They are all big,
stretchy animals, with ample consuming
power and are in mighty good hands
from the standpoint of care and intelli-
gent feeding. At the head of the herd is
the bull Clothilde Creamelle Denver, pur-
chased from the Jefferson County Farm.

A. J. Cramer, fieldman for the Rock
County district of the Wisconsin State
Dairy Association camped on the Rock-
well & Katterhenry farm to make sure
that the record of production was unim-
peachable when given out. Local testers,
when a good cow is running high on pro-
duction, are sometimes inclined to put on
all the cow can carry and perhaps stretch
a point or two in her favor. Cramer is
a stickler for accuracy and, district or
no district, when a cow shows a ten-
dency toward championship honors he
steps in to see that she is timed as accu-
rately as a race horse legally entered on
a well organized circuit. For that reason
the record made by the Beloit cow is
therefore all the more cause of con-
gratulation.

Beauty is eight years old and in her
championship year returned to her owners
\$367.36 above feed cost. Her products
for the year sold for \$508.73, and her feed
cost was only \$141.37. The cow re-
ceived abundant feed of the right sort.

During the year's test Beauty con-
sumed 9,378 lb. silage, 1,478 lb. alfalfa
hay, 934 lb. mangels, 180 lb. mixed hay,
366 lb. soy bean hay, 2,453 lb. corn and
cob meal, 76 lb. gluten feed, 1,718 lb.
oats, 945 lb. bran, and 1,246 lb. oil meal.

Her production of 22,950 lb. milk is
more than 16 times her body weight
which is 1,400 lb. Her feed consump-
tion, exclusive of pasture, was 4,000 lb.
less than the lbs. milk she produced. She
returned \$3.59 for every dollar's worth of
feed consumed.

This cow is one of nine half sisters
with an average production of 555 lb.
butterfat for the year. These cows are
all granddaughters of Mercedes Lad Jo-
hanna. They were the greatest attraction
in the grade cow exhibit at the National
Dairy Show held in Milwaukee last fall,
at which they won premiums amounting
to \$510.00.

The two owners are real boosters for
cow testing associations and through their
efforts, interest in this work has been
maintained in Rock County at a time
where there appeared to be an inclination
among dairy farmers to drop out until a
more prosperous time in the farming in-
dustry.

W. R. Katterhenry runs the farm and

HALF SISTERS OF BEAUTY
Results achieved by heading a herd with a purebred Holstein bull.

owns a half interest in the herd of grade
Holstein cattle headed by bulls that have
the ability to turn out producers that av-
erage 555 pounds of butterfat in 365 days.
There is glory enough in the achieve-
ment of the Beloit Holstein cow Beauty
for all owners of Wisconsin farm herds
because it has been shown that good pro-
duction can be made with the regular run
of farm herds. Now and then a great
chortle of glee comes from some remote

KIT, HALF SISTER TO BEAUTY
23,374 lb. milk, 804.2 lb. fat in C. T. A. work.

corner of the state about some cow mak-
ing a world's class record. It follows
upon investigation that it is some rich
man's hobby and the exultation is con-
fined exclusively to the fellows who play
for high stakes with cows much as gam-
blers play poker with cards, their
chief interest being in pulling down big
stakes. The dairy industry in this coun-
try would soon be in a deplorable state
were such a practice the common pro-
cedure. What makes Wisconsin a great
dairy state is the labor of dairy farmers
seeking a livelihood and trying to lift
themselves from the depths of adversity
to a position of independence and com-
fort. When such men and women attain
the honor of returning a butterfat cham-
pion in competition with cows on test
in the average run of cow testing asso-
ciations it is a real achievement and Rock-
well and Katterhenry, dressed up in blue
denim and rubber boots, are agricultural
captains of industry in a truer sense than
the pampered pets of aristocracy lolling
softly on cushioned divans, pretending to
be something they are not.

Wisconsin's prestige as the greatest
dairy state is safe in the hands of cattle
owning farmers looking after their own
herds—men who can manage and care for
a cow of Holstein blood and make her
the champion producer of the state.
Beauty deserves her name and title.

KNOX'S NEW BULL

F. H. Knox & Co. of Collins, Mich.,
reported delivery of their new bull, Ma-
tador Kolrain Finnerne, shipped from the
Carnation Milk Farms. The bull is a
son of Segis Matador Walker and from a
cow with a record of 30.67 lb. butter.
Mr. Knox is well known in Ionia County
as one of the most prosperous farmers
and is building up a herd of cattle strong
in De Kol and Ormsby blood.

A city boy who had never seen a wind-
mill before exclaimed: "Gee, mister,
that's some electric fan you've got out
there cooling the cows!"

A LITTLE ABOUT SYLVDALE HERD

In the fall of 1911 Glenn L. Warner, of
Cuba, New York purchased his first two
purebreds. One was a heifer nearly a
year old, the other was about eighteen
months old. They were half sisters being
from the same dam, were of good size
and type and of De Kol breeding.

The noted sire Colantha Johanna Lad
8th was born on the farm adjoining Mr.
Warner's establishment. These two
heifers were in due time mated with this
bull and each presented their owner with
a heifer calf. One of the calves named
Rose Maude Colantha was tested by Mr.
Warner when she was a four-year-old,
and produced 654 lb. milk, 27.46 lb. butter
in a week. The other, Colantha Maude
De Kol, made 634.6 lb. milk, 30.46 lb.
butter in seven days as a senior three-
year-old, becoming the youngest 30 lb.
cow in Allegany County. Rose Maude
produced 99 lb. of milk her best day and
Colantha Maude 98 lb. Later this pair
of heifers was sold to the Bonalevo herd
and the younger cow was exhibited
several times and won a number of
prizes.

For three years Colantha Johanna Lad
8th was used in this herd. He was fol-
lowed by King Maxie De Kol Segis,
a full brother to Fancher Farm Maxie,
46.84 lb. butter in seven days as a four-
year-old. The present herdsire is Sir
Champion Sylvia, a son of Champion
Echo Sylvia Pontiac and of Belle Model
Champion Sylvia, 30.29 lb. butter in a
week. Her dam Belle Model Johanna
2d, has two different years made over
37 lb. butter in seven-day test and she
has three daughters that each have made
over 30 lb. butter in a week.

The seven nearest dams of Sir Cham-
pion Sylvia have seven-day official records
that average 35.43 lb. butter. His off-
spring in the Sylvdale herd are very prom-
ising. This herd has been accredited for
about two years and is noted for indi-
viduality as well as production.

HAIDEE-ORMSBY BULL

Spindler Brothers, of Stratford, Wis-
consin, have purchased from Philip
Mattes & Sons of Thorpe, a young bull,
King of the Haidee Ormsbys. He is a
son of King Korndyke Haidee Ormsby,
and his dam Piebe Colantha Roy has
a record of 803 lb. butter, 17,218 lb. milk
in a year which was the highest record
in Clark County over all breeds in 1920,
the year it was made.

A farmer boy had spent a sultry half-
hour, hauling and driving a new calf to-
ward the barn. A steer dashed by, headed
for the pasture, and the calf followed.

"Go to thunder, you darn fool!" mut-
tered the boy. "You'll know the differ-
ence when supper time comes."

"Will some one solve this knotty
problem for us?"

A young man becomes engaged to a
young lady. Later he discovers she has
a wooden leg.

Should he break it off?

COLANTHA MAUDE DE KOL

634.6 lb. milk, 30.46 lb. butter in 7 days,
98 lb. milk in a day as a senior three-year-
old.
Bred, raised and tested in SYLVDALE
Herd.

We now offer calves, either sex, of May
Echo Sylvia blood. This is YOUR op-
portunity to secure animals of this great
producing strain from an Accredited Herd.

A. L. BOWELL & SON,
Thompson, Pa.

HOLSTEINS IN MONTGOMERY COUNTY

Holsteins occupy prominent positions in the Montgomery County Testing Association's February report. The three leading herds for milk production and the four leading ones for butterfat production consist of purebred Holsteins. Twelve cows owned by Wm. H. Landis of East Greenville, Pa., averaged 1,389 lb. milk, 47.63 lb. butterfat. A dozen cows owned by A. K. Rothenberger of Norristown, stand second for milk with 913 lb. and third for fat with 33.48 lb. The ten cow dairy of the Ursinus College herd stood third for milk production with 892 lb. and second for fat with 33.97 lb. The J. L. Overly & Son herd located at Red Hill averaged 32.12 lb. fat.

Landis cows stood first and second for both milk and butterfat production. The leader is credited with 2,624 lb. milk, 86.59 lb. fat and her stablemate with 1,985 lb. milk, 71.46 lb. fat. Copia, a member of the Rothenberger herd, is third with 63.31 lb. fat and her stablemate, Mollie, is fifth with 60.19 lb. A purebred of the Ursinus College herd is fourth with 63.08 lb. fat.

During the month seven unprofitable cows were disposed of, making a total of 54 weeded out since the association started. The number of cows producing over 1,200 lb. milk was 27 while thirty-four cows exceeded 40 lb. fat and ten cows produced over 50 lb. Tester Carl A. Sager's report is complete and full of information yet was mailed from Norristown under date of March 3d. He and County Agent Waltz deserve much credit for getting out their report so promptly.

GOOD C. T. A. RECORD

Baroness Netherland Pontiac owned by Vernie Howard of Granton, Wisconsin, has produced in the past twelve months 18,968 lb. milk containing 608.1 lb. butterfat equal to over 760 lb. butter. The total value of her product, says tester Thorwald Christofferson, was \$300.04 and the total feed cost was \$92.96, so that she made a profit over cost of feed of \$207.08. Baroness was milked four times a day during December and three times a day during January and the rest of the year she was milked twice a day and was fed the same as the cows in the general herd.

HOLSTEIN LEADS COLORADO

A purebred Holstein owned by the American Beet Sugar Company and kept on their farm at Lamar, was the high cow in the state of Colorado for the month of December. The high herd consisted of Holsteins and Guernseys and was owned by Earl Cogburn of La Salle. Their milk average was 1,149 lb. and butterfat average was 54.1 lb. They produced 100 lb. milk at a feed cost of \$1.11 and a pound of butterfat at a feed cost of twenty-eight cents.

Much from Little—The Returns from a Classified Advertisement appearing in THE HOLSTEIN BREEDER AND DAIRYMAN.

TO HERD BUILDERS

There are several ways of building a herd. One is to purchase a few animals for foundation stock and gradually grow into the business. Many of the present herds in the country have been developed this way. Another is to start with a few animals and gradually add to the number as opportunity and finances permit. A third way is to buy a number of animals at one time and then defer more purchases until several can be obtained at one time. This way has the advantage of getting related animals and of lowering the overhead expense of travel, etc., inspecting herds in search of stock.

To people who like to purchase this way the Maple Grove Stock Farm offers an opportunity to obtain ten yearling heifers of closely related lines of breeding. These heifers are sired either by Clever Model Glista or by Maple Grove Ybma Glista, the two sires in service at Maple Grove. Clever Model Glista is a son of the 34 lb. cow Glista Coreva. Maple Grove Ybma Glista is a son of a cow that made 27 lb. butter, 641.3 lb. milk in the Maple Grove herd and he was sired by Model Daniel Glista, whose dam Glista Dinah is a 31 lb. daughter of the 34 lb. cow, Glista Coreva.

The Maple Grove herd is accredited and has been accredited for years. It is located at Centerville, Crawford county, Pa. In this connection it must be remembered that all the cows in the Crawford County have been tuberculin tested at least twice and at the recent test 99.2% of the tested stock passed clean.

NEW VIRGINIA HOLSTEIN CHAMPION

The senior four-year-old cow, V. P. I. Lady Korndyke De Kol 516287, owned by the Virginia Polytechnic Institute at Blacksburg, Virginia has recently completed a yearly record of 19,091.3 lb. milk containing 735.9 lb. butterfat, or 919.8 lb. butter. This record becomes the new Virginia State record in this class, the former record having been held by a cow owned by the college whose record was 19,619.9 lb. milk and 715.7 lb. fat, or 858.9 lb. butter.

As the record of Lady Korndyke De Kol indicates, she was a very good tester throughout the entire record, having averaged 3.85% test throughout the 12 months. She is one of the best type Holsteins in the entire college herd of 40 purebreds, being a large cow with a splendid spring of ribs and excellent top lines. She was a very persistent milker throughout the entire period, having made in her last month on test over 45 lb. butterfat and 1,000 lb. milk. She was bred in the Institute herd and is a daughter of Virginia Korndyke Butter Boy and V. P. I. Lady Johanna De Kol.—V. P. I. Dairy Department.

"We are now passing the oldest inn in England," shouted the guide in the front seat as the motor coach rolled over the landscape.

And a husky voice from the back seat asked: "Why!"

WE HAVE SECURED

KING RAG APPLE PLUM COPIA

for additional service in our herds. His dam made 30.47 lb. butter in 7 days, 120.63 lb. butter in 30 days with a daily milk average of 92.3 lb. as a five-year-old, and as a six-year-old made 33.26 lb. butter in 7 days.

He will be bred to daughters of GRAND CHAMPION SEGIS 2D.

YOU know their Quality.

Our herds contain 120 head and are under State and Federal Supervision.

L. N. MACK & SON and FLOYD E. MACK
Montrose, Pennsylvania

THE WITTER HERD

For more than twenty-two years there has been a purebred Holstein herd at Cuba, New York. It was established by the late E. H. Witter, and since his death two years ago has been carried on by the Witter family. Mr. Witter was born on the farm fifty-three years ago, and the farm has always been run as a dairy establishment.

The present Witter herd contains about 40 head more than half of which are milking. It is accredited and has always been headed by good bulls. The present herdsire is King Walker Lyons Arcady. He is from a daughter of Ormsby Korndyke Lad and was sired by a son of the 40 lb. four-year-old Highland Burke Joh.

The younger members of the dairy are daughters of King Madaline Butter Boy, also a very handsome bull. This bull exhibited at the Erie County Fair, Hamburg, New York when he was a calf. This is one of the best fairs in western New York, and there are always a lot of good animals exhibited. King Madaline Butter Boy not only won first prize in his class, but was also awarded the junior championship.

The Witter farm is in Allegany County, close by the Cattaraugus County line. All the animals in Allegany County have been tuberculin tested under the area plan, and the cattle men of this county have always taken a prominent, progressive position in the campaign for tuberculosis eradication. The Witters, years ago saw the advantage of having a clean herd, and so their establishment has been on the accredited list for a number of years.

PROMINENT IOWA BREEDER

Paul P. Stewart of Maynard, is one of the leading Iowa Holstein breeders. When Mr. Stewart was a boy he wanted to work at a dairy products plant and so later went to Ames and took a course in dairy manufacturing. After his return he worked awhile making butter and cheese, then started a cheese factory on his father's farm to which farmers of the locality brought their milk.

Selling the product was hard and before a market for all the "make" could be found the farmers were patronizing creameries. Stewart bought a number of cows to furnish milk and rented 400 acres including his father's farm.

Then Mr. Stewart started to improve his herd. He purchased a purebred bull and found that the daughters of this bull produced more than did their dams. Then he joined a cow testing association, started weeding and gradually went into purebreds. One of the bulls owned by Mr. Stewart in partnership with two other breeders was Tritomia Pietertje Ormsby, grand champion at the 1921 Waterloo Dairy Cattle Congress and National Dairy Show.

BULLY FOR MABEL

Mabel, an eight-year-old Holstein owned by H. C. Holt, Jr. of Wall Lake, Ia., was milked eleven months during 1924 and is credited with the production of 11,158 lb. milk, 521.4 lb. butterfat.

Spring Brook Farm

VIRGINIA STATE HOLSTEIN RECORD BROKEN

The cow, Mary Abbekerk Alcartra, No. 417366, owned by H. S. Seward of Petersburg, Va. has recently completed a record which breaks both the State Seven-day Record and the State Thirty-day Record for butter production. This cow produced in seven days 544.5 lb. milk containing 30.73 lb. fat, or 38.41 lb. butter, showing an average test of 5.644%. Her thirty-day record was 2,895.8 lb. milk containing 111.34 lb. butterfat, or 139.17 lb. butter.

Both of these records now become state records superseding the records which were held by the cow Ivy Lodge Rose 2d, owned by J. C. Stafford of Petersburg, Va. The former state record was for 736.5 lb. milk in seven days, containing 30.18 lb. butter, and for thirty days 2,810.0 lb. milk, containing 120.00 lb. butter.

With this new record cow Seward Stock Farm has now six State Record cows in the Short Time Division (7 and 30 day records), and in the Long Time Division (305 day record) this same farm owns five record cows.

F. A. BUCHANAN,
Supt. Official Testing.

THREE GOOD FEMALES SOLD

N. W. Johnson, of Paulding, Ohio, has sold C. Cormon, of the same town, two cows and a two-year-old heifer. One of the cows, Canary Aaggie Pietertje 2d, is from a daughter of Brightest Canary and was sired by Sir Inka Prilly Segis, a son of King Segis and Inka Prilly, a 30 lb. daughter of Prilly Princess, the oldest daughter of the famous foundation cow, Prilly.

Hesseltje Pontiac Clothilde, the other cow, was from a daughter of Sir Olive Pontiac Hesseltje and was sired by Clothilde Pontiac Beets Korndyke, a son of the well-known A. R. O. sire Fairview Pontiac Beets Korndyke, whose daughters have made such a splendid showing in official short time and long time work and also in the general dairy.

The heifer, Clothilde Hesseltje Canary, was from a daughter of Clothilde Pontiac Beets Korndyke and was sired by King Pabst Canary Korndyke, a son of Pabst Gipsy Korndyke and Canary Faforit.

Mr. Cormon certainly secured animals of producing strains and readers of the BREEDER AND DAIRYMAN will wish him success.

THE INVENTOR OF BARBED WIRE

Barbed wire was invented by Jacob Haish, of DeKalb, Ill., Mr. Haish celebrated his ninety-ninth birthday on March 10. Although he has been an invalid for more than a year, he is president of a DeKalb bank and still transacts considerable business by telephone from his bed.

Georgette: "How do you like my little brother?"

George: "He's all right in his way, but he's always in ours."

King Sylvia Korndyke Tweede

OUR JUNIOR HERDSIRE

is by a noted show bull and is from a daughter of

King Tweede Spring Farm

the only living bull with two 30 lb. two-year-old daughters.

Let us price a few good ones to you.

Herd Accredited.

Maple Ridge Farm

J. S. & F. R. Howard, Props.
Springville, Susquehanna Co., Pa.

KING PONTIAC ALCARTRA PIETJE

my senior herd bull, is admitted by everyone to be the greatest sire ever in Northern Pennsylvania.

His sons and daughters win in great show rings—his daughters and granddaughters are wonderful producers as well as choice individuals.

His dam, sire's dam and sire's sire's dam were World's Champions. Buy his sons and daughters HERE.

A. E. ROBINSON,
Susquehanna Co., Montrose, Pa.

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

Just Your Kind of Bull for \$400

Hillside Volunteer

75% white and extra well grown.

Sire: King Pontiac Maple Knoll Ormsby—You all know him.

Dam: Hillside Rosemary 460.8 lb. milk, 30.74 lb. butter in 7 days.

Full brother to Hillside Pontiac Rose, 25.24 lb. butter in 7 days, 2,011.7 lb. milk, 102.8 lb. butter in 30 days at the age of 25 months.

Herd just passed another Clean Test.

HILLSIDE & SPRINGBROOK FARMS

Trucksville, near Wilkes-Barre, Pa.

SPOT VEEMAN ARTIS

One of 6 daughters of Sir Korndyke Pontiac Artis Prince in RO-AN Herd. She has 75% the same breeding as my great 31 lb. cow, Inka Veeman Artis.

Such cows are bred to

ROYAL JOHANNA KORNDYKE
a bull of splendid breeding and individuality whose daughters are doing splendidly both in official and C. T. A. work.

Herd Accredited. — Never a Reactor.

ROY W. CHAMBERLAIN
Allegany Co. Caneadea, N. Y.

SONS AND DAUGHTERS OF CHIEF TACORA KORNDYKE PIEBE

whose dam produced 13,999.9 lb. milk, 543.81 lb. butter in 349 days at just three years old.

She is full sister to a 35 lb. cow and her dam produced 654.1 lb. milk, 30.12 lb. butter in a week, 26,011.1 lb. milk, 1,060.81 lb. butter in a year.

Our cows produce from 10,000 lb. to 15,000 lb. milk in a year in C.T.A. work.

Herd under State and Federal Supervision, last test CLEAN.

RAY J. SABIN
R. D. 2, Tioga Co., Spencer, N. Y.

SILVERWOOD HERD

One of the best herds in north-eastern Susquehanna County is the Silverwood Herd owned by H. S. Brown & Sons, or Thompson, Penna. A number of good bulls have headed this establishment. The older cows are by Walker Korndyke Copia and the younger ones by King Pontiac Alcartra Pietje. These two sires are two of the best ever in northern Pennsylvania. Their daughters and granddaughters have not only made good in everyday dairy work but when tested have made nice records and have won high honors in the show ring.

The Browns have some very nice calves sired by Dutchland Konigen Sir Ascalon. This bull was by King Segis Pontiac Konigen and was from Dutchland Colantha Ascalon 811 lb. butter in a year as a three-year-old. She was a daughter of Colantha Johanna Lad and her dam Pontiac Ascalon has a record of 29.2 lb. butter in seven days, 1,015.65 lb. butter 22,827 lb. milk in a year. Pontiac Ascalon was a famous old show cow. She was a daughter of Pontiac Korndyke and she has three daughters with long time records including one that made 1,263 lb. butter, 26,485 lb. milk in a year. Silverwood Herd is under state and federal supervision. The animals are large, well grown and in good condition and have a splendid reputation extending through Susquehanna and adjoining counties for production.

CLEANS UP

Two state records were broken within a period of one year by the senior two-year-old, Prilly McKinley Valley Vale, owned by R. T. Davis of Weiser, Idaho. As a two-year-old she made 535.1 lb. butter in ten months. Freshening again as a senior two-year-old she produced 13,704 lb. milk, 614.9 lb. butter in a similar period. Her dam, Valley Vale Prilly of Donnybrook, as a senior three-year-old produced 15,903.6 lb. milk, 710.86 lb. butter in ten months, which is the state record for that class. Evidently this family intends to monopolize the state champion list.

WASHINGTON STATE STOCK

On October 1, 1924, the state of Washington owned 297 purebreds and 315 grade cows at the various state institutions. The number of cows in milk during the past fiscal year ranged from 247 to 287. During the first nine months of 1924, they produced 2,927,239 lb. milk, and 103,193 lb. butterfat. The average fat per cow varied from 37.97 lb. in February to 46.05 lb. in May.

GOOD DEMAND FOR BULLS

Harry Newell of Alburnett, Iowa, sold three young bulls during the month of January. One went to W. L. Powell, Walker, the second to M. S. Hickman, Marion, and the third to Leonard Stone, Central City. Mr. Newell has been secretary-treasurer of the Linn County Association for several years, and is a staunch advocate of junior club work.

SIZE, TYPE AND PRODUCING CAPACITY

RESSEGUIE APOLOGIZES

Cecil L. A. Resseguie, the enterprising young Holstein breeder of Kingsley, Pa., wishes to apologize to readers of the BREEDER AND DAIRYMAN. Like most Holstein owners, Mr. Resseguie puts off registering his calves until he can send in a number of applications. One he delayed registering was his young herdsire which he named and has been advertising as "King Ideal." Much to his chagrin, Secretary Houghton said that the name of King Ideal and also of Ideal King had been taken so the young bull was finally named Ideal King Creamelle, a name even more descriptive of the breeding. However, as the poet says, "A rose by any other name would smell as sweet."

Ideal King Creamelle is a son of Dutchland Konigen Creamelle Boy and Pietje Alcartra Fayne, 30.03 lb. butter, 707.70 lb. milk in a week. She is the highest official record daughter of the famous sire King Pontiac Alcartra Pietje. Year after year this cow has made good both in official work and in the general dairy and it must not be forgotten that as a junior three-year-old she has a C. T. A. record of 718 lb. butter, 17,168 lb. milk. She is a beautiful individual and Mr. Resseguie's ideal type. Naturally it is very easy for him to use an attractive slogan when advertising his herdsire, "The Bull With an Ideal Dam."

The Ideal Herd has just passed its fourth annual test and passed clean. When to large production, choice individuality and good breeding, is added health, Mr. Resseguie has certainly every right to call his aggregation of accredited Holsteins the Ideal Herd.

HERDSIRE TRANSACTION

Mrs. L. B. Jones & Son of Kenton, Ohio, have sold to E. V. Jones of the same address, a half interest in the well bred herdsire, Ormsby Segis Echo No. 360862. This bull is now three years old and is a son of Echo King Sylvia from Queen Ormsby Segis Walker, a good A. R. O. daughter of Ormsby Segis Lad. Ormsby Segis Lad was by King Prilly Segis from Mabel Ormsby Pontiac, a daughter of Ormsby Korndyke Lad with a record made as a three-year-old of 607.3 lb. milk, 36.28 lb. butter in seven days, 23,032.3 lb. milk, 1,104.7 lb. butter in a year.

Echo King Sylvia has a number of big producing daughters in the noted Bell herd. He is a son of King Vadessa Pontiac and May Echo Sylvia, 41 lb. butter in a week. This cow is credited with producing 1,005.6 lb. milk in seven days, the highest production ever credited to any one cow.

FOR SALE—17 Holstein thoroughbred Cows and a Bull. Selling out. Fine collection of cows for breeding and foundation herd. Sire of bull, King of the Ormsbys. Theo. Baylor, 52 Broadway, New York City.

Dear Editor: "Which is the most important—a man's wife or his trousers?" Answer: "Well, there are lots of places a man can go without his wife."

BRED IN THE PURPLE

The handsome little heifer here depicted is a member of the purebred herd at Tip Top Farm, Waverly, Pa. Robert Winship, manager of Tip Top Farm says this little beauty was two and one-half months old at the time her picture was taken. She is a daughter of King Hengerveld Hartje and Segis Tobe Korndyke, a cow purchased from B. F. Jones & Son.

Segis Tobe Korndyke as a three-year-old made a seven-day record of 19.73 lb. butter, 424.7 lb. milk and as a two-year-

A FUTURE CHAMPION

Owned at Tip Top Farm, Robt. Winship, Mgr., Waverly, Penna.

old has a 305 day record of 398.32 lb. butter, 8,895.10 lb. milk. She has two tested daughters, Tobe Tweede Pontiac Lass, 28.29 lb. butter, 532.60 lb. milk as a three-year-old and Tobe Korndyke Pontiac Lass, 20 lb. butter in a week and 70 lb. milk per day at twenty-five months old. Segis Tobe Korndyke is a daughter of Tobe Rag Apple Korndyke and the 25-lb. cow; De Kol Segis Hengerveld.

King Hengerveld Hartje is known as one of the best Holstein sires ever in northern Pennsylvania. His sire was King Segis Hengerveld and his dam was a 30-lb. four-year-old granddaughter of De Kol 2d's Butter Boy 3d and Jolie Johanna, the grand champion show cow at the St. Louis World's Fair. The daughters of King Hengerveld Hartje are noted for size and producing capacity. Only a few daughters of this sire have ever gone into herds where they have been tested under favorable conditions but one did, Walker Hartje Spofford, making 960.60 lb. butter, 26,233 lb. milk in 305 days, the milk record being world's record at time of making.

At Tip Top Farm they have a nice little purebred Holstein dairy, keep purebred Cheshire hogs and S. C. White Leghorn fowls. They also grow good fruit on Tip Top Farm which is rightly named as it has an altitude of 1,600 feet above sea level.

A CONNECTICUT DEAL

C. S. Longley, of New Haven, Conn., recently sold a yearling bull to Samuel L. Pierce of Southbury, Conn.

This young herdsire is well grown and largely black in color, has a straight top-line, and is deep bodied. He was sired by a 36 lb. grandson of Colantha Johanna Lad and was from a 23 lb. two-year-old daughter of a 24 lb. cow. The sire is now at the head of the American Thread Co. herd at Milo and the dam is owned by The Connecticut Reformatory, Cheshire, Conn.

FROM PENNSYLVANIA TO NEW YORK

Miller Bros., of Clarks Summit, Pa., have sold to E. W. Graves, South Apalachin, N. Y., and C. F. Giles, Apalachin, N. Y. their five-year-old herdsire, King Sadie Vale Hengerveld Ormsby.

King Sadie Vale Hengerveld Ormsby is a son of King Sadie Vale Hengerveld and S. V. H. Effie, 28.33 lb. butter, 617.3 lb. milk in seven days as a junior four-year-old. As a five-year-old this cow has a year record of 1,085.6 lb. butter, 24,050 lb. milk. She was a daughter of Sir Veeman Hengerveld and was from a 25-lb. three-year-old daughter of Sadie Vale Sir Ormsby, whose dam, Sadie Vale Concordia, was the first cow to make 30 lb. butter in a week.

King Sadie Vale Hengerveld has a long list of good record daughters. He was from S. V. H. Belle De Kol, 37.38 lb. butter in a week as a senior three-year-old. She is one of the highest record daughters of Sir Veeman Hengerveld and she has two daughters that, as two-year-old heifers, each produced over 660 lb. butter in long time test.

King Sadie Vale Hengerveld Ormsby is a bull of splendid individuality and his daughters are very promising. There are big records in his pedigree for his ten nearest dams average 29.61 lb. butter in seven-day test. The establishments of Mr. Graves and Mr. Giles are about a mile apart and in his new homes this bull will be bred to daughters of Cornucopia Finnerne Pride whose dam, Finnerne Pontiac Pride, has seven-day records of 685.5 lb. milk, 31.11 lb. butter and is a maternal sister to Finnerne Pride Johanna Rue, 1,470.59 lb. butter in a year, world's record at time of making.

The Miller Bros. herd is, we believe, the oldest herd in the state of Pennsylvania. It is on the accredited list and has a splendid reputation for the producing capacity of the animals as well as their health and individuality.

The editors of the BREEDER AND DAIRYMAN are greatly pleased at this sale. King Sadie Vale Hengerveld Ormsby is a tried and proven sire, a sire whose daughters have already made good in the general dairy and whose own individuality would please the most critical judge. To help place such a sire at the head of good herds, would please anyone who has the welfare of the dairy industry and the Holstein breed at heart. Nearly a year ago Mr. Graves subscribed to the BREEDER AND DAIRYMAN. As our readers know the Millers advertised their sire as their herd is small and contains a number of his daughters. Mr. Graves had seen sisters of this bull at cattle sales and at the National Dairy Show and always thought he would like to have a bull of this family. When he saw the advertisement, he promptly got in touch with Mr. Giles for these two gentlemen own Cornucopia Finnerne Pride. The deal was closed and the bull is now at the Graves establishment. Under date of March 12, Mr. Graves wrote, "I am very much pleased with King Sadie Vale Hengerveld Ormsby. He is very quiet and easy to handle."

Bonnymead Herd!

102 REGISTERED HOLSTEIN
CATTLE WILL BE SOLD AT 102
PUBLIC AUCTION

Wednesday, March 25, 1925

Starting promptly at 10 o'clock A. M.

60 Cows and Heifers in milk; 40 Heifers up
to two-year-old; 2 Herdsires, both
splendid individuals.

The average production of the milking herd last year was over 10,000 lb. despite the fact that one-third were in their first lactation period. THREE Cows have each exceeded 14,000 lb.

All records made on twice-a-day milking and with the care given the general dairy.

Some of the best blood of the breed flows in the veins of our animals.

Bonnymead Herd is under State and Federal Supervision and the animals are sold subject to the Standard 60-day retest.

Bonnymead Farms are situated one mile east of Harrisburg on the Wm. Penn Highway. Parties coming by train should take trolley car marked "H" which leaves Market Square, Harrisburg, on the hour and half-hour and passes by the Farms.

SATISFACTION OR YOUR MONEY BACK

Since his early boyhood days Henry C. Glissmann of Omaha, Nebraska, has been a prominent figure in western Holstein circles, and it is said that Mr. Glissmann bought more purebred Holsteins in the Eastern states and sold them in the West than has any other person since the first purebred black and white cows were brought to America.

Naturally, the dairyman's problems would interest Mr. Glissmann. He is a member of the Cow Barn Supply Company, which markets a number of supplies that are, or should be, in every cattleman's stable. One of the products handled by this concern is the Eureka Teat Reamers, which were, we believe, de-

signed by Mr. Glissmann. This company sends these Reamers out with a money back guarantee if they are not satisfactory. Mr. Glissmann says that a Reamer is an instrument that is a real boon to dairymen and breeders. They have been sold for a few months with a money back guarantee, and so far only one has ever been returned, and there is reason to believe that in that case a cure was effected before the goods were returned. However, as nearly all cattleman are honest, the Company will continue to do business on these terms—money back if not satisfied.

One of the greatest handicaps to marriage is that the poor nut of a husband learned to make love before he learned to make a living.

WORLD'S GRAND CHAMPIONS FOR 6 YEARS

The Hampshires have won over all breeds in the carload classes at the International at Chicago, the greatest livestock show in the world.

As usual the Hampshires not only won the grand championship, but had the heaviest carload for their age of the entire show.

Not only at the International, but at practically all of the large shows during the past few years, Hampshires have carried off the highest honors in the carload classes. These honors have been won by average farmers. The Hampshire hog and good home-grown feed have achieved the desired results.

A copy of the HAMPSHIRE ADVOCATE, the official breed paper, will be sent to you free upon request. The Hampshire Advocate Company can put you in touch with breeders who have these profitable money-making brood sows.

Work and Holstein Milk Keeps C. F. Gridley Young

C. F. GRIDLEY

IN the year 1912, Charles F. Gridley of Candor, Tioga County,

New York, purchased a pair of heifer calves from John Elsbree, a well-known Pennsylvania Holstein breeder. These two animals, now past thirteen years old, are still in the Gridley herd and a majority of the animals in the herd are descendants of this pair. One is Milanhurst Esmeralda No. 210267, a daughter of Prince Tromp and Jenett Esmeralda and the other is May Colantha Korndyke No. 174227, a daughter of Woodcrest Aaggie Lad and Viola Colantha Korndyke. An accompanying illustration shows these two heifers soon after they came into the Gridley herd. A representative of the BREEDER AND DAIRYMAN had the

privilege and pleasure of examining these two animals, now fine, large cows that bear evidences of being big producers, but failing light prevented photos being taken. We feel, however, that the story is not properly illustrated when pictures of these two animals are not shown and hope to rectify this omission a little later.

Several good bulls have headed this herd. One of these is King Pontiac Canary 7th. His sire is King Pontiac Canary, a son of King of the Pontiacs and Canary Hartog De Kol, 533.6 lb. milk, 26.49 lb. butter in seven days. His dam, Lilith Canary Hartog has an official record of 478.6 lb. milk, 29.12 lb. butter in seven days. She was by Lilith Paul De Kol's Count and her dam, Jacoba Hartog Canary, is a 30.82 lb. daughter of Canary Mercedes Alban, also the sire of Canary Hartog De Kol. As

might have been expected from his breeding, King Pontiac Canary 7th proved to be a high-class sire. Daughters and granddaughters of this bull are found in a number of herds in southern New York and he has a nice lot of daughters in the herd of Charles F. Gridley and also in the herd of E. R. Gridley, a nephew of Charles, who lives about a

couple of miles distant on the same road.

King De Kol Quality headed this herd for a time and the two and three-year-old heifers now in it are by him. His dam was by Reuben Colantha De Kol. His sire, King Quality Walker, was by King Quality from Tennessee Walker Pietertje, thus combining noted strains of breeding of the Bonalevo Herd.

The next sire was Maple Corner Supreme, owned jointly with W. K. Hart and Fred E. Hilbert. Maple Corner Supreme is a very handsome bull and is backed by large record animals. His dam Albina Butter Girl Pontiac as a two-year-old made 22.44 lb. butter in a week and as a three-year-old is credited with 25.89

lb. Tested as a five-year-old she made official records of 32.63 lb. butter, 629.6 lb. milk in seven days, 126.59 lb. butter in thirty days with a milk average of 83 lb. daily while in 192 days she produced 572.25 lb. butter, 12,715.5 lb. milk. Her dam, Albina Butter Girl De Kol made 29.09 lb. butter, 619 lb. milk in a week as a junior four-year-old while her sire, Spring Farm King Pontiac 6th was by Spring Farm King Pontiac from Tweede De Kol Lass, 34.39 lb. butter in a week, the dam of K. P. Pontiac Lass, 44.18 lb. butter in seven days. Maple Corner Supreme was sired by King Sadie Vale Supreme, a son of King Korndyke Sadie Vale from K K S V Topsy, 40.38 lb. butter in seven days as a senior three-year-old. Her dam, King Segis De Kol Korndyke Topsy was

a 33 lb. four-year-old, sired by King Segis De Kol Korndyke, a son of the former world's champion Pontiac Clothilde De Kol 2d. The six nearest dams of Maple Corner Supreme have seven day records that average 35.11 lb. butter and a number of animals that have held world's records in various classes are closely related to him.

Maple Corner Supreme is

THE C. F. GRIDLEY HOMESTEAD

a very nice individual, in fact he is a real show bull and has won honors at the Tioga County Fair. His offspring appear to possess his constitution as well as his type and conformation and his heifers are exceptionally promising. We are pleased to report that this good bull has been spared for future usefulness and he is now heading the high-class purebred Holstein

MILANHURST ESMERALDA AND MAY COLANTHA KORNDYKE
The foundation pair of the Gridley herd.

herd owned by L. A. Fisher of Spencer, New York. Mr. Fisher, who has had many years' experience in some of the best herds of the country, saw this bull and his offspring, recognized his value as a sire, and promptly secured him to head the Catatonk herd, where he will have the opportunity a bull of his quality and breeding deserves.

The Gridley herd is accredited and the owner proudly boasts that it has never contained a reactor. Every precaution is taken to insure and protect the health of the herd, which now numbers thirty head.

Mr. Gridley is seventy-six years old and a bachelor. He was born on the farm which he now owns. This farm consists of 300 acres but the father of Mr. Gridley owned 1,600 acres in this neighborhood which has

MORE LIVESTOCK ON THE GRIDLEY FARM

been divided among members of the Gridley family or else sold. Mr. Gridley has very little patience with the proposed Child Labor or 20th amendment, for he was brought up to work as were his brothers and it evidently did not hurt them for Charles is six years past the allotted three score and ten. One brother, the father of E. R. Gridley, lives in the village of

Candor and is eighty years old while another brother living in Amboy, Ill. has reached the age of eighty-six.

Mr. Gridley enjoys the Holstein-Friesian business and is never so happy as when working around his cows. A little more than a year ago he thought he would try some official testing, so sent for a tester and milked some of his cows four times a day. One of the animals tested was Burke Colantha Canary Lady, a daughter of King Pontiac Canary 7th. When the test closed about six weeks after she was fresh, she had an official record of 435.6 lb. milk, 23.08 lb. butter and during her test gave 85 lb. milk in a day. Mr. Gridley says that he experimented a little when feeding her following the advice of one of would be friends and consequently she went off-feed otherwise she would

BURKE COLANTHA CANARY LADY
23.08 lb. butter in 7 days, 85 lb. milk in a day. A product of the Gridley herd.

have made a larger record. Next time he says he is going to take nobody's advice but will do just as he thinks advisable and he believes he can make a 30-lb. record with this cow.

There are few men nearing eighty years that would stay up nights and milk cows four times a day just for pleasure and in Charles Gridley we have one Holstein-Friesian cattle breeder who enjoys his daily work among his stock. Needless to say the stock show that they have the care and attention of a master.

Mr. Gridley is a farmer who deliberately chose farm-

THE MILKING DAIRY AT C. F. GRIDLEY'S

ing for a business and then studied that business. His fields are well tilled, his fences well kept up and, should you pass along the highway you can see at a glance that a good farmer lives at this establishment. While dairying is the main business, the owner is a believer in diversified agriculture and his poultry flocks are of as high quality as his accredited, purebred Holstein-Friesian herd, cattle, every one of which, with three or four exceptions, were bred and raised on this farm.

Why I Started Breeding Registered Holstein-Friesians

By A. C. Slifer

THE first Holsteins that the writer knew of in this vicinity were owned by Mr. Chester Butler who ran a creamery near Chilisquaque, Penna. The first ones coming into Buffalo Valley were bought from him by Mr. Lincoln Mertz who at that time lived on the Miller farm just south of Oak Heights. Another of our progressive farmers, Mr. Adam Grove, saw one of these cows and her week old male calf and immediately wanted the calf for a herdsire. At that time four weeks old veal calves were worth from four to five dollars and Mr. Mertz's price on this week old purebred was ten. Mr. Grove rather prided himself on being shrewd in a deal and thought he ought to get the calf cheaper but Mr. Mertz was adamant as to

to her. She gave one glance at the wreckage and then one at him and remarked: "Why you Wooden Nutmeg, why didn't you close the shutters?" Now if Henry knows nothing of this incident when he gets to the next world it will not be because he did not hear often enough of it in this. It was a handy measuring stick wherewith his wife could remind him how smart he wasn't.

But to get back to my story. About three years after the advent of the bull calf Mr. Grove sent the writer word that he had some cows to sell. I was running an intensive retail dairy at the time and replenished my herd quite a little by buying females ready to milk and then selling the calves at ten days of age. I went to look at Mr. Grove's cows and the first one to come up for inspection was a three-year-old grade Holstein coming with second calf that he priced at thirty dollars. The second was a short two-year-old, one of the daughters of his new bull and with a heifer calf by her side which he priced at thirty-five dollars. Mr. Grove was going on to price more of them but after taking a half way careful look at the first pair I told him we had gone far enough and that I would take this first pair. He at once wanted to back out as he wanted to keep the younger heifer and had put the extra five dollar price on her so that I would not take her. I however held him to his offer and finally placated him by agreeing to return the calf to him after the heifer was accustomed to her new home. This heifer we named Peg.

I had a well equipped dairy, at the time with a 24 bottle steam Babcock tester in the dairy room and scales at the barn and it was not long until it was quite evident that this heifer was worth a whole lot more to me than the average cow that I could buy. Practically everything was cheaper in those days but I figured that this heifer was worth at least \$25, net profit per year above the average, or \$250 for the time during which I had her. (\$250 profit on a ten dollar investment in a bull calf. Now some of you Junior boys, get out your pencils and figure out what percentage that was on the investment. Then worry Dad until he gets a good calf for you.—Ed.) I did not wait until she was gone to try and get some more into the herd like her. Mr. H. D. Roe and his records were just coming into the limelight then and I sent to him for a good bull calf. This started the ball rolling and it hasn't stopped yet.

The trouble is that many honest folk dislike the emotions of horror, pity and dread so much that they shut their eyes, and walk through the world with their heads in the air, breathing a little atmosphere of their own, and congratulating themselves that the world goes very well now.—Henry Van Dyke.

Why worry about trouble that cannot come until tomorrow?

A. C. SLIFER,
Holstein breeder of Lewisburg, Pa.

price so Grove finally agreed to take the calf on one condition, namely, that he, Mertz, was not to tell Grove's women. This may seem funny but is only human nature for of all places that a man would care to appear foolish the last would probably be at home.

This reminds me of a one time neighbor who, whether he deserved it or not, we boys had placed in the henpecked class. One summer day his wife put on her sunbonnet and went away for the day and left him monarch of all he surveyed. As ill luck had it a heavy shower came up during the afternoon and Henry took shelter in the house. During the heaviest part of the storm it began to hail and break the window panes on the west side of the house. Henry valiantly manned the carpet and as fast as a glass crashed in he would fill the opening with an old coat or rug or some such thing. Henry had an idea it was rather fortunate that he was at home to take care of things and while in this cheery mood his wife came in and he intimated as much

Purebred Hogs Profitable

By LORING T. BUNN, *Secretary of Hampshire Swine Record Association.*

THE future of the hog business is what many farmers are interested in at the present time and it looks much brighter than any time since the inflation period caused by the world war.

There are several reasons for this opinion, the most important of which is the inexorable law of supply and demand. For several years there has been enormous numbers of hogs slaughtered for consumption, each succeeding year establishing a new record. The peak has been reached and it is safe to predict that marketing will fall off considerably starting with the month of February. The government reports that there are fewer hogs on the farms at the present time than any time in the last fifteen years.

The enormous demand for pork and pork products will not diminish—in fact consumption both at home and abroad ought to increase in 1925. The European financial situation is gradually righting itself and business in our own country is in a prosperous condition. In the last ten years the consumption of pork has increased 25% and with our population increasing each year there is bound to be more and more pork consumed.

A GROUP OF GOOD PRODUCING PUREBRED SOWS IS A SPLENDID INVESTMENT.

There have been plenty of farmers who have made money out of purebred hogs even in 1924. These men are the ones who have raised purebred hogs, have used sanitary measures and have fed them properly. The ton litters which have been raised throughout the U. S. in the last few years have proved conclusively that purebred hogs are much more efficient than crossbreeds or grades. In most cases the determining factor of whether a profit or loss was made in the hog business was whether purebreds were raised or not. This not only applies to the man who is raising breeding stock but it applies to the feeder as well.

In the first place the purebred sow will farrow and raise more pigs per litter. This means that fewer sows can be kept and yet raise the same number of pigs. It also means that the cost of the pigs will be reduced very materially as the overhead expense will not be as high. Then the quality of purebreds will have a great influence as purebred hogs will put on more pounds of

pork with the same amount of feed than grade hogs will.

J. M. Ballard is one of the biggest feeders of hogs in the U. S., produces and feeds out about 2,000 a year. He is worth many thousands of dollars and feeding Hampshire hogs is responsible for his success. Mr. Ballard has shown two of the grand champion carloads of hogs over all breeds at the International and every hog that he has on his farm and all his producing sows and gilts are purebred Hampshires. He has found that Hampshires are extremely healthy, will produce and raise large litters, and reach a marketable age in a very short time.

He has found that keeping down the expense is very necessary to successful production. Careful buying, saving unnecessary labor, avoiding needless expense of equipment, and attention to details in producing hogs are some of the things that he emphasizes. Feed of course is the greatest expense in connection with raising hogs and Mr. Ballard has found that alfalfa cuts down his feed bill very materially. Alfalfa is grown so that his hogs during the summertime have access to it at all times. In the wintertime he is able to winter his sows on a quarter of a pound of tankage, an ear and a half of corn, and about four pounds of alfalfa hay daily. He is very careful in regard to sanitation and uses the McLean County system.

In journeying through the country one will notice farms that look prosperous—farms with good equipment, fertile fields, and good crops. If one will investigate they will find that practically all have been made possible by the use of purebred stock whether cattle, hogs, sheep, or a combination of them. Remember this fact in raising livestock—that it is not the quantity of animals that are raised but it is the quality and the way that they are taken care of that determines the profit.

We are members of one great body. Nature planted in us a mutual love, and fitted us for a social life. We must consider that we were born for the good of the whole.—*Seneca.*

Improving the quality of purebred livestock by rigid culling and by selling only worthy animals for breeding purposes is urged and practiced by progressive farmers.

Polled Cattle are Historic

FOR many years George E. Stevenson of Scranton, Pa., the leading breeder of polled Holsteins in this country, has claimed that the trait of hornlessness is dominant and is so confident of his theory that he has sold both males and females with an absolute guarantee that they would be parents of only polled Holsteins whether mated with horned or hornless stock. Mr. Stevenson's contentions are borne out by the conclusions of a Swedish investigator, Professor E. O. Arenander of the Ultuna College of Agriculture, Upsala, who has sent the results of his studies on polled cattle, translated into English, to the *London Livestock Journal*, says the *Idaho Farmer*.

The Professor has been looking into the history, zoological characters and economic qualities of polled cattle for thirty years, in fact, it has been a life study with him. He finds that ever since the neolithic or later stone age, there are evidences of polled cattle in Switzerland and Poland in historic times.

Pictures of polled cattle are found in the tombs of ancient Egypt. In ancient Assyria, also, there were polled cattle, likewise in Asia Minor. Greek writers speak of polled cattle in Scythia. The Latin historian Tacitus relates that the cattle of the Teutons—among whom the Swedes are especially mentioned—lacked "the ornament of the forehead," that is, horns.

At the present time polled cattle are distributed chiefly over northern Europe.

Professor Arenander finds that, when crossed with horned cattle, polled cattle are proved to possess an especially strong dominance against every kind of horned cattle, having thereby proved themselves a separate, natural type.

He even contends that hornlessness is an earlier stage of development than equipment with horns. Therefore, when hornlessness spontaneously appears in hornless herds, this must be looked upon as a reversion to the ancient type and not as new formation or mutation.

From the Official Penn State Report

THERE is room for great improvement in dairy practice in Pennsylvania. Investigation of the feeding of dairy cattle leads to the belief that not over one-half of the dairy cows in the state are fed balanced rations. Experiments have demonstrated that balanced rations increase the milk production nearly eleven pounds daily per cow. This means that the production of Pennsylvania dairy cows would be largely increased, if they were fed properly.

Profitable production depends not only upon economical feeding, but also upon careful breeding and selection. It is believed that fully one-third of the dairy cows in Pennsylvania should be discarded as unprofitable producers. With the remaining two-thirds the dairymen of the state would realize greater profits than with the entire present number.

In an investigation on veal production it was determined that a first-class veal carcass could not be produced on any other than a strictly whole milk ration. When milk substitutes were used, the carcass was always graded low when sold on the Philadelphia market.

An extensive study of the dairy herd records of the

College herd revealed the fact that some sires are prepotent in increasing the production. Others are just as outstanding in decreasing production. It was shown that the best way to select a sire is according to the records of his daughters. It was found that the average yearly production of milk and butterfat increased with the age of the cow up through the seventh year. A young cow, after freshening for the first time at the age of two to three years, produces an average of sixty-eight per cent as much milk as during her maximum production year. A cow with her second calf at the age of three to four years produces an average of eighty-six per cent as much milk as during her seventh year. At the age of four to five years she produces ninety-two per cent, and at the age of five to seven she produces ninety-five per cent as much milk as at seven years of age.

New York Takes the Lead

NEW York State now leads in the number of accredited herds according to Commissioner C. P. Norgord, who is in charge of the tuberculosis eradication work in the Empire State. There are 10,704 accredited New York herds, her nearest competitor being Indiana with 8,500 herds on the accredited list. New York State made a gain of 6,714 during the year.

During 1924 there were 17,021 herds tested, and there are now 40,770 herds containing 586,760 cattle under state and federal supervision. Practically all this testing has been done by township areas.

At the close of the year the cattle in 213 townships had been tested one or more times. One county, Essex, has become modified or accredited. Another, Steuben, is practically in this class, and all the cattle have been tested in the counties of Cattaraugus, Greene and Allegany. The average salvage obtained for condemned animals was \$14.50 in 1921, and \$19.00 in 1924. Due to this the average indemnity paid by the state has decreased from \$76.26 in 1922 to \$50.88 in 1924.

General Conditions and Dairy Prices

WHEN there is full employment, the demand for dairy products is increased. Prices of industrial stocks are a good measure of industrial conditions. When money is cheap, the price of stocks usually rise somewhat in advance of improved business conditions. The prices of butter and cheese tend to lag about eight to ten months behind the stock market. For the period of 1897 to 1913, prices of creamery extra butter in New York City correlated with industrial stocks, giving butter a lag of ten months, showed a correlation of 0.30. The correlation between stocks and prices of cheese, giving a lag of eight months, was 0.55. The price of milk at New York, Chicago, Philadelphia and St. Louis correlated with prices of industrial stocks, giving milk a lag of fourteen months, showed a correlation of 0.56.—*The Agricultural Situation*, by Warren & Pearson.

In every other line of business except farming, accurate record is kept of business receipts and expenditures.

Pennsylvania Cattle Owners Talk to Legislators

CATTLE owners from practically every county in Pennsylvania appeared before the Senate Appropriation Committee, April 1 in an endeavor to secure an appropriation of \$3,250,000 for financing tuberculosis eradication work and the payment of indemnity for animals condemned in that campaign. The hearing was held in the Senate Chamber and the farmers and their friends occupied the entire Chamber and a large part of the Senate galleries.

Morris T. Phillips, Pomeroy, Pa., himself a Guernsey breeder, was in charge of the meeting. Mr. Phillips is president of the State Agricultural Council, which is made up of representatives of agricultural associations. Mr. Phillips gave a short history of the test and said the campaign was a health measure for the promotion of the general welfare. He introduced the various speakers to the Committee.

Dr. T. E. Munce, head of the State Bureau of Animal Industry, said that there were one and a half million cattle on the 20,200 farms of Pennsylvania. Eradication of bovine tuberculosis is important to both producer and consumer. Medical authorities estimate that 25% of the tuberculosis in children came from diseased cattle. 16% of the cattle of the state are now under official supervision for the prevention and eradication of tuberculosis. All the cattle in Mercer, Crawford, and Jefferson Counties have been tested under the area plan which has also been conducted in forty-six townships in ten other counties. In addition the owners of 195,328 cattle have signed up to have their cattle tested. He showed that while Pennsylvania ranks third among all states in the value of dairy products and sixth in the total number of dairy cows, she ranks only fourteenth in the number of cows under official supervision. Lack of adequate funds for paying indemnities and financing the work was a distinct check upon Pennsylvania livestock industry. He figured that \$3,257,000 would be required for these pur-

poses during the next two years.

Mr. E. B. Harshaw, president of the Grove City Bank and president of the Pennsylvania Bankers' Association told how the banks in his district had advanced money in order to enable dairymen to test their herds and replace diseased animals with healthy cows.

Dr. L. M. Thompson, president of the State Federation of Holstein-Friesian Clubs, said that the dairymen of northern Pennsylvania were likely to lose their New York market if New York State pushed the work as it had been doing during the past few years and Pennsylvania lagged behind.

E. S. Bayard, editor of the *National Stockman and Farmer*, Philip H. Dewey, master of the State Grange, and Wm. B. Griscom, milk distributor of Philadelphia, gave evidence as to the demand for milk from tested cattle. Dr. Charles H. Miner, secretary of the Department of Health, said that while the children of the cities were partly protected by milk pasteurization, the rural districts must depend upon raw milk and he endorsed the testimony of Dr. Munce as to the danger to children from milk produced by diseased cows. His department endorsed the T. B. movement.

Mrs. J. Duncan Just of the State Federation of Women's Clubs, said the movement had the endorsement of the organized women of the state. John T. Shirk, Holstein breeder of Lancaster, said that Lancaster city had an ordinance which will prohibit the sale of milk from untested cows after January 1, 1926. Similar action has already been taken by the City of Baltimore to which goes much milk from southeastern Pennsylvania.

Secretary of Agriculture Willits endorsed the statements of the speakers, and a number of dairymen from different counties told of the demand for cattle tested in their localities and urged the Legislators to provide adequate funds for the furtherance of the campaign to eradicate tuberculosis from the herds of the state.

There's a real thrill in finding a friend who asks no more than he is willing to give.

KING PIETJE AAGGIE PONTIAC

my senior herdsire, is by the great King Pontiac Alcartra Pietje from a 31.78 lb. cow whose dam made 25.31 lb. butter in a week and was from a 31 lb. daughter of a 34-lb. cow.

Then my herd is under State and Federal Supervision and has always been handled from the standpoint of profitable dairy production.

Let me sell you some choice heifer calves.

The Junior Breeder and Dairyman

Maryland Junior Club Family

Club work, like most other things, generally starts small and grows big, or at least bigger. The nice little string of purebreds shown in the photograph belongs in Kent County Maryland, and had its start in the winning of a dairy cattle judging contest at the Timonium Fair in 1922. Stanley Sutton, who happened to be one of the four lucky winners in the contest, took home with him the Holstein bull calf shown at the left of the line as his prize. The three purebred Holstein heifers were purchased afterward. The Sutton boys—there are three of them—now have a foundation herd of Holsteins that looks promising, while their father owns the young bull at the right, which he purchased to keep the boys from getting too far ahead of their "dad."

Stanley Sutton is 19 years old and is a son of L. A. Sutton, of Chestertown. In 1923 he was selected as one of the club members to represent Maryland in a competition staged at the Eastern States Exposition,

shown in the photograph. Left to right: Stanley Sutton, Martin Sutton, Walter Morris, County Agent H. B. Derrick, Albert Nicholson, Albert Sutton and Wilbur Morris.

Timothy and His Calf

Timothy Waby of St. Charles, Minnesota, has a ten-months' old grade Holstein calf on which he won first prize at the 1924 Winona County Fair. Timothy had two calves of almost equal merit and had quite a time trying to decide which one would make the better one to show. Tim wrote an article entitled "The Story of My Dairy Calf," which is herewith reproduced:

I joined the boys' and girls' club because last year while at the Winona County Fair I saw how interested the boys and girls were in their calves. I saw how they fed them and the pride they took in caring for their calves, and it made me want to feed one too. I also saw how much pride each member took in leading his prize calf in the parade. It made me feel as though

MEMBERS OF THE KENT COUNTY CALF CLUB
on the Sutton Farm, Chestertown, Md.

held in Springfield, Mass. In the dairy cattle judging contest there, he won first place.

Stanley is not the only member of the Sutton family to win honors, Martin, seventeen, owns a purebred Holstein heifer which placed sixth at the Timonium Fair in 1923 and ninth at the National Dairy Show. Last fall the same heifer as a yearling placed fifth at Timonium. In addition, Martin was one of the high scoring boys in the dairy cattle judging contest and was on the team that represented Maryland at the National Dairy Show at Milwaukee. Stanley's other brother, Albert, fifteen years old, has already done well with seed corn and will probably soon be ready for other enterprises.

Stanley Sutton is an all round club member and the leader of the boy's club in his section of the county. In addition to his success in the dairy field he has grown purebred seed corn for a number of years and sold it successfully. Last year he handled the largest community tomato plant bed in the State and grew and sold approximately 400,000 tomato plants. Some of the members of the club over which Stanley presides are

I could just as well have the pride that member had if I won in the club.

When the calf I selected was born, she was a well-marked heifer calf. She grew well and I decided she would be a good calf to feed for the boys' and girls' calf club.

I asked my dad if I could have the calf and join the boys' and girls' calf club. He said I could if I would take good care of her and feed her carefully, and that is just what I have been doing.

I always liked the *Holstein* breed of cattle best because they are great milk producers. So I knew I would have more interest in a calf of that breed.

I always fed my calf twice a day with skim milk, ground oats and bran with some oil meal. I always fed her myself, because I thought that someone else would not feed her just right.

I have learned that if a calf is neglected, she will not do as good or be as good as the calf that has been fed and well cared for, and I am working hard to be one of the winners.

NOT ABOUT COWS

"A Yaqui Indian Easter"

AS Easter Sunday approaches the majority of American people will look forward to an inspiring sermon commemorating the Resurrection of Christ, and probably a program of glorious music within a church decorated with beautiful Easter flowers. The children will enjoy egg hunts, in some cities egg rolling contests will be held in the parks, the stores are full of Easter toys and candies, while amid all these festivities in our Nation a few hundred of people, known as the Yaqui Indians are preparing for their Easter in a much different manner.

We really know very little of the Indian races, nor where they originally came from. There are three Indian languages in this country, totally different. All the tribes differ in physical and moral characteristics, and even those who instruct and have charge of them on the Reservations and in the large government schools know very little of their minds. A few make industrious, intelligent citizens, the remainder are "grown up" children.

Perhaps no community in all the United States shows the Indian of yesterday to such an advantage as Arizona. Here he is seen doing the vocations that have followed his tribesmen through more than a century while his religious ceremonials are the same as those of his great-great-grandfather.

Cochise, Arizona, is named for the last chief of that fierce and warlike tribe, the Apaches. Near Cochise is a fortress of natural formation in the Dragoon Mountains, and here the old chief made his last stand and was vanquished. In Northern Arizona is the Navajo Reservation, and in this same Reservation on the Painted Desert live the Hopi Indians. The Navajos herd sheep, weave wonderful rugs and are quite industrious. The Hopi make pottery and live in their cliff dwellings which are very picturesque but not so sanitary. Other Arizona tribes are the Maricopas and Papogoes.

The Yaqui Indians originally came from old Mexico, and are natives of that country, drifting across the border into Arizona, driven from their wretched homes by the cruelty of the Mexicans. They really do not come under the control of our government but are looked after for humanity's sake.

Dotted here and there on the vast barren desert of southeastern Arizona are their little villages usually located near some larger town or city where they can beg or steal, for they are lazy and very inefficient. The largest Yaqui village is near Tucson, upon the desert, where the only respite from the blazing sun is under the sparse shade of the Mesquite tree, and the only vegetation is sage brush and cacti. Over all tower the barren peaks of the Santa Catalinas.

At Easter time these Yaquis have their dances which are a strictly religious ceremony with them and they prepare for the occasion several weeks in advance.

These dances continue for three days from dusk to dawn, the tribesmen dancing in relays until they fall upon the ground exhausted, fresh dancers taking their place.

The music is provided from peculiar instruments of at least six different kinds, the musicians squatting upon the ground. The dancers have bunches of bones and seeds tied to their ankles, and hold clusters of them which they shake and rattle as they dance.

There are a number of different dances, meaning different things, the significance of which is known only to the tribesmen. However, the Sun Dance is the symbol of death and resurrection. These dances are done in the peculiar syncopated style of the Indian, which can best be described as a "clog dance." The Indian is entirely naked except for a short skirt around the hips, and as he shuffles to the weird music perspiration streams over his copper colored body while the alkali dust rises in clouds. Wilder and wilder shrieks the music, faster and faster dance the braves, working themselves to a higher exaltation of religious feeling, occasionally breaking into a high chant. Around the musicians and dancers squat the onlookers, silent and apparently indifferent. Occasionally one will arise and shuffle away. Mere passing of time means nothing to them. They do not resent spectators but firmly refuse to allow any pictures to be taken, and pass up sums of money from moving picture concerns that would bring luxuries to them.

In one hut which they designate as a church, they have an altar upon which reposes an image representing Christ. As their religion is Catholic they keep candles burning, while women and children dressed in their best apparel keep coming and going to this chapel to place offerings of such flowers as they can obtain.

At times a dance composed of both men and women is carried on, here they join hands, dancing in a circle first inside then gradually advancing out, then back again.

People interested in Indian tribal customs come many miles to see these Easter ceremonies, but the Indians attend strictly to their own business and only ask to be let alone. Their sincerity is emphasized by their refusal to commercialize their ceremonies, for any movie picture concern would give a large sum to film the entire proceedings and would make big money on the investment.

If you can picture these scenes in your mind, while overhead swing the brilliant stars of an Arizona night, the moon slowly rising over a distant, jagged mountain peak, throwing into relief the ghastly desert plants, here and there a Saguaro Cacti like some giant sentinel standing watch, the smell of the sage brush and alkali dust, the white desert sand, while above the beating of the music and chanting of the Yaqui dancers a coyote in the hills wails his mournful cry, you will have some idea of the Yaqui Indian Easter.

The Vogue for Collars and Cuffs

NEVER was a more unbecoming style introduced than that of a couple of years ago, when contrasting collars for dark colored gowns were banished, for a bit of lace or linen at the neck softens the harshest of features, and adds beauty to the prettiest of faces. Indications this Spring seem to point to a renewal of the use of collars and cuffs, in lingerie and tailored styles, for daytime frocks of all sorts. To those who are clever with their needles this vogue will afford an opportunity to refurbish their old gowns and add an attractive feature to the new ones.

Linen in white and natural color may be used for the wide collars, with cuffs to match in size and shape, so becoming to the younger folks, while the rolling collar with jabot, or lace edged ruffles of batiste may be used for those no longer as young as they used to be. Hand embroidery on fine linen makes a good semi-lingerie set, or figured silk may be used giving preference to stripes or polka dots. If stripes are used, the matching of them should be watched carefully or much of the beauty will be spoiled. If plain silk is used, fagoting in contrasting colors makes an effective trimming. A high stock of ribbon or silk is also one of the new fashions, but it is doubtful if it will appeal to women who like the freedom and comfort of the low neck, especially in warm weather.

The Church Budget

IT will soon be time to be making the annual financial canvass for the church budget, and in connection with this it may not be amiss to ponder over the following statistics, prepared by *The American Education Digest*, showing the division of our domestic income:—For the church, we pay three-fourths percent; schools, one and one-half percent; government, four and one-half percent; crime, eight and one-fourth percent; investment, eleven percent; waste, fourteen percent; luxuries, twenty-two percent; living costs, twenty-four and one-half percent; miscellaneous, thirteen and one-half percent. Stress is

usually laid on the amount we pay for luxuries, with special mention of chewing gum, cosmetics and tobacco. But please note that we waste eighteen times as much as we give to the church.

The Oldest Known Records

THE earliest bookkeeping of which there is any record is a recently discovered record of the tithes paid by the farmers living around Ur of the Chaldees, to the priests of the temple of E-Nun-Mah, the Moon God, at least five thousand years ago. These tithes were in the form of butter, milk, cheese, corn and oil.

The Moon God was supposed to control the weather, especially the rainfall which in that dry country greatly influences the growth of crops. This age old superstition has not yet entirely died out as every farmer knows. The records not only show the receipts but also the issuing of the same; rations of the temple servants; oil for doctoring a man who was sick and all the petty routine of a big estate agency. The old Sumerians were a businesslike people. Every month the complete list of tithes received was written on sheets of clay nearly a foot square, ruled very much like the pages of a modern ledger. The records were discovered by an expedition from the University of Pennsylvania of which Mr. C. Leonard Woolley is the head.

A city girl went farming
The poor thing didn't know how,
She early rose one morning
To milk the Holstein cow.
But she ain't gonna milk
No mo', no mo',
She ain't gonna milk no mo'.
The old cow's tail
Swung like a flail,
So she ain't gonna milk no mo'.

Every man may become wretched by envying other men their good fortune.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc., Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year, (two years \$1) payable in advance.

Copy for the publication should be received not later than the 27th or 28th of each month preceding date of issue.

APRIL 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

Members Should Decide Policies

WHEN C. V. Gregory, editor of the *Prairie Farmer*, spoke over the radio on cooperative marketing recently, he said something that many who study farmers associations are coming to believe, and something the HOLSTEIN BREEDER AND DAIRYMAN has preached since its first issue. Mr. Gregory spoke from Chicago, where many farmers' and breeders' organizations have their headquarters, yet he said: "We hear much of the loyalty that members owe to their officers. We hear little of the loyalty that an officer owes to the membership, yet that is even more important Successful democracy depends not only on the consent of the governed, but on their actual control of the government."

"A Review"

IN OUR March 22d issue we reviewed briefly the methods resorted to by the "POLITICAL-DEALING ELEMENT" in their effort to gain control of the Holstein-Friesian Association.

We referred to the unsuccessful attempt at the Milwaukee Meeting in 1918 to take over the Association's management and we made reference to the successful attempt to gain control of the Association at the Philadelphia Meeting in June 1919 by putting through a By-Law amendment, increasing the Board of Directors and placing in office a hand-picked Board by a procedure that has been questioned in the court.

Reference was made to the payment of a \$12,000.00 salary to the President, and his activities during the two years following the Philadelphia Meeting in building up a Political Organization at the expense of the breeders by Whirl-wind Campaign methods and placing a man in charge in the person of a State-Paid-Secretary to look after the Political welfare of the group that gained control at the Philadelphia Convention.

We called our readers' attention to the various Constitutional amendments that appeared in the call of the Annual Meeting at Syracuse in June 1921 and the

statements that were made by Mr. Brockway, Mr. Brill, Mr. Peasley, Mr. Newman, Mr. Kerrick and others in their letters sent out to the membership soliciting proxies to be voted at the Syracuse Convention.

We printed Mr. Brockway's and Mr. Brill's letter in full and in this issue we are printing the letters sent out to the members by Newman, Kerrick and Peasley.

We wish our readers to judge whether the proxies were prostituted at the Syracuse Convention, as has been contended by certain breed publications who represent the "POLITICAL-DEALING ELEMENT," or whether the proxies were used to carry out the purposes for which they were solicited, namely TO PROTECT THE RIGHTS OF THE MEMBERS AND THE BEST INTERESTS OF THE ASSOCIATION.

By reviewing the facts as they appear in the letters and the editorial, it is very clear that the members of the Holstein-Friesian Association of America have fallen prey to a carefully laid plot.

At the Philadelphia Meeting in June 1919, the transfer fee was boosted from twenty-five cents to \$1.00. At that time the Association had accumulated assets of over \$367,000.00. Its net earnings for the previous year was over \$60,000.00. There was no legitimate need of more money, yet, a tax on the members was increased 400% WHY?

It appeared that the "POLITICAL-DEALING ELEMENT" was using the Association's funds to build up a Political Organization to maintain themselves in office and to promote the selling of cattle at consignment sales of a State and National character. The members resented this conduct on the part of the officers and they realized the unnecessary burden inflicted upon them through the increased transfer fee.

At the Syracuse Convention, two years after the "POLITICAL-DEALING ELEMENT" gained control of the Association, the members, by the largest vote ever cast at any annual Convention, defeated a resolution endorsing the conduct of the officers and, further, they defeated for re-election the \$12,000.00 President. They reduced the transfer fee from \$1.00 to fifty cents and defeated the By-Law amendment that would have placed the power of Altering, Amending or Repealing the By-Laws in the hands of the Directors. They did all in their power to place the Association in a position where it could pursue safe and sane policies and because the members used their votes to protect their rights and defeated the efforts of the "POLITICAL-DEALING ELEMENT," *The Holstein-Friesian World*, their official organ, came out in bitter editorial attacks, contending that the members' votes were used for ulterior motives—"That the proxies were prostituted."

It must have been plain to the "POLITICAL-DEALING ELEMENT" that they would be defeated for re-election at the next annual Convention and thus the Association would be freed from the tentacles of the Political, Speculative influence that fastened itself upon the Association at the Philadelphia Convention, unless by some "Hook or Crook" the members could be deprived of their right to a direct vote in Electing Officers, Fixing By-Laws, and Directing the Policies of the Association.

Failing to have their conduct in office endorsed by a vote of the members at the Syracuse Convention and realizing that many of their number would be defeated for re-election at the next Annual Convention unless they could disarm the members and deprive them of their direct vote, the officers called a Special Meeting at St. Paul on October 11, 1921, and were successful in putting into operation a Political Form of Government.

At the annual meeting held in Kansas City in June 1922, the "POLITICAL-DEALING ELEMENT," who failed to have their conduct in office endorsed by the votes of the members at the Syracuse Convention, were able to retain office because they had brought about the adoption of a Political Form of Government, which deprived the members of their direct voice in Electing Officers, Fixing the By-Laws, and Directing the Policies of the Association.

At this Convention the transfer fee was increased from fifty cents to \$1.50, fifty cents on each transfer was to be turned over to the State organizations, built up by the \$12,000.00 President, and thus the Political management were able to saddle the expense of maintaining their Political Organization on the breeders of Holstein cattle.

Thus the warning expressed in Mr. Brill's letter to the members under date of May 19, 1921 has come true.

"THIS MOVE LOOKS LIKE THE WELL LAID PLAN OF A FEW SO-CALLED 'BIG MEN' TO GET CONTROL OF OUR ASSOCIATION, AND TO FIX THINGS THAT YOU AND I, AS MEMBERS, WILL NO LONGER HAVE A WORD ABOUT HOW OUR AFFAIRS SHOULD BE CONDUCTED. IT LOOKS LIKE A PLAN TO SQUEEZE OUT THE MEN WHO MILK THEIR COWS, AND LEAVE THE 'SMALL FRY' WITH NOTHING TO SAY BUT PAY THE BILLS AND KEEP STILL."

An Overlooked Point

DEAR EDITOR:

THERE are a few opportunities you missed in your editorial in the March 22d issue of the HOLSTEIN BREEDER AND DAIRYMAN.

The World said in their issue of March 14, "In most instances the votes of this proxy control were cast directly contrary to the wishes of an overwhelming majority of the members present and who had listened to the discussions on the matters to be voted upon." They then mention the Milwaukee meeting in 1918 and the Syracuse meeting in 1921 as outstanding examples.

The question is not:—Were the proxy votes cast for or against the wishes of the members attending the meetings? The question properly stated is:—Were the proxy votes cast for or against the wishes and interests of a majority of the entire membership?

The fact that millionaires, speculators, and politicians attended the meetings in large numbers during the later years the proxy system was in force, and that they were unchanged in their opinions by listening to the discussions and arguments before the convention, is an argument for rather than against the proxy system.

The ordinary breeder largely does his own work and cannot afford the time and money necessary in attend-

ing an annual meeting far from home. He would greatly enjoy a trip of this kind:—which to him would be a treat but which to the "high ups" is a matter of every day occurrence. When his absence from home means the leaving of the herd in the hands of hired help that requires constant supervision or, means an over burden for the women folks, the breeder who values his animals must not hesitate to stay at home rather than risk the result of years of labor or be guilty of a selfish act. The expense was another factor prohibiting a vast number from attending.

Under the delegate system the same factors prevent these breeders from attending the meetings, even if the political organization of State Secretaries permits their selection as delegates. With expenses of delegates paid by the association, the other disadvantages against the ordinary breeder still apply and the millionaires, speculators, and politicians get the "dough" as usual.

This may be away beyond the understanding and comprehension of the millionaires and some of the speculators, but undoubtedly the politicians are fully aware of these things and for that very reason established the delegate system so that the majority of those who are so fortunately situated as to be able to attend may have things according to their wishes, regardless of the wishes of the majority of the association.

The World can discover but few instances where the proxy votes were cast against the wishes or interests of the majority of the members of the association, outside of the special meeting in 1921. Certainly they were not at Milwaukee in 1918 or Syracuse in 1921. I venture the opinion that the delegate votes have been cast against both the wishes and interests of the majority of the members at every annual convention since the delegate system was established.

ASSOCIATION MEMBER.

Not a Gamble

THE raising of purebred live stock is not a gamble nor a rich man's hobby. Purebred live stock of the right sort are 40 to 50% more profitable than scrubs. "Crooks" discredit it to a considerable extent by their activities in the trade. Parasites, middlemen, speculators and shysters are always numerous in any prospering business. Where treasures are laid up or in circulation, thieves always abound.

Fifteen to One

THE Holstein-Friesian Association of America, it seems, is being operated as a Promoting Organization to promote the Speculative Side of the Purebred Dairy Cattle Industry. It is rendering the breeders and dairymen little service other than merely issuing registration and transfer certificates, for which service it collects an increased tax to promote speculation.

The Holstein-Friesian Association of America offers no reward to the breeders and dairymen who conduct their business on an economical basis and who make records consistent with economical production, which records may be assumed to be a reliable index of the

milk producing and transmitting qualities of the animals in question.

On the other hand, the Association at times has offered prizes and paid bonuses to that class of breeders who have been willing to spend large sums of money in feed and labor to fit cows for test and have employed experts to care for them while on test in order to produce phenomenal records at great expense and at the sacrifice of the future usefulness of the animal. Such breeders have not only been rewarded by receiving a prize or a bonus, but the Association has caused to be circulated through the medium of the agricultural press and through the mails, articles and reading notices, inferring that such animals possessed superior qualities. Yet, the record, because of its cost, has no bearing on economical dairy production and, because of the variation in butterfat percentage, has no scientific value in selecting breeding stock and, because of the injurious effect upon the animal's health, the practice of making phenomenal records has jeopardized the future welfare of the breed by destroying the future usefulness of many good breeding animals whose health should have been preserved to perpetuate the breed.

Since the present management came into control of the Holstein-Friesian Association in June, 1919, every phenomenal record but two at that time on the Association's books have been surpassed by other records.

Previous to the annual meeting in June, 1919, when the present management came into control, the Holstein-Friesian Association of America had not participated in the buying and selling of cattle or the promoting of the buying and selling of cattle at consignment sales of a State and National character or of any character.

Immediately following the Philadelphia Convention, the Holstein-Friesian Association for the first time became active in promoting cattle sales. Through the efforts of its \$12,000.00 President; Sale Organizations were built up in the leading Holstein States and a sale manager placed in charge in the person of a State-Paid-Secretary.

The cost of organizing and promoting consignment sales of a State and National character was expensive; therefore, when the management of the Association was taken over by the "DEALING ELEMENT" in June, 1919, they were able to saddle the sales expense on the breeders and dairymen, by forcing them to pay an increase in transfer fees. And then what happened?

At the first so-called National Consignment Sale held under the auspices of the State-Paid-Secretaries, consignors indulged in buying each other's cattle to such an extent and at such high prices that the average price received at this sale was \$3,075.00. One of the consignors, a Director of the Association, purchased a cow consigned by his brother (or rather bid her off) at the "snug" little sum of \$30,000.00. Is such conduct on the part of the Association's officers helpful to the Holstein-Friesian industry or to the Association?

Why is it that since the present management assumed control at the Philadelphia meeting in June, 1919, that the National Association has promoted, through its Advanced Registry Department, the mak-

ing of phenomenal records, when the dairy public knows and the breeders and dairymen generally know that these records, because of their cost, have no bearing on economical milk production, and, because of the great variation in butterfat percentage, the records are unreliable in selecting breeding stock and, because of the detrimental effect on the animal's health, her future usefulness is impaired or may be entirely destroyed?

Why should the Holstein-Friesian Association continue to encourage the making of phenomenal records when scientific investigators and the agricultural press make it so plain that these records have no tangible value and the practical application of official testing has so clearly demonstrated that it is not a sound business proposition?

As the records of the Dixon Test Plant, conducted by the Illinois Holstein-Friesian Association, clearly demonstrate the practical application of the Advanced Registry theory is unsound from a financial and economical standpoint.

Thirty purebred Holstein cattle maintained under one roof at the Dixon Test Plant, whose average yearly milk production was 20,903 lb., showed an average loss of \$441.53 over and above the value of their milk.

Why should the Holstein-Friesian Association of America advocate such a system of caring for cattle, particularly when the animal's usefulness is not improved and may be and usually is partially or wholly impaired?

Why is it that since the present management came into control of the Association in June, 1919, at the Philadelphia Meeting that the Association has taken on the burden of promoting consignment sales of a State and National character when the breeders know and the dairy public knows that it is the most hazardous and expensive method of disposing of live stock and that price boosting and the buying of each other's cattle by consignors has been indulged in until the whole affair has assumed the aspect of a "Public Scandal," and has been dubbed in the agricultural press, "Cattle Swapping Organizations"?

Will we find our answer in the kind of men who make up the Board of Directors?

If the Board of Directors was made up of Practical Dairymen it would be expected that they would so manage the Association that the dairy interests would be best served. If the dairy interests were best served the Association would be fulfilling the purpose for which it was originally intended.

If the Board of Directors was made up largely of men who were breeding purebred Holstein cattle as a hobby or of men who were interested in promoting the speculative side of the purebred Holstein cattle industry it would naturally follow that they would try to use their influence to so manage and so conduct the Association that its influences and resources were devoted to promoting the particular side of the purebred Holstein industry in which they were interested.

The Speculators and Dealers have found the wealthy breeders, and those who breed cattle as a pastime and a hobby, their chief clientele because it is the wealthy men who can afford to pay the high prices, and natu-

rally the Speculators would be most interested in this class of customers. Therefore, a combination of Speculators and Dealers and their victims would make a vicious combination to gain control of any breed association such as the Holstein-Friesian Association of America and divert its influences and its resources to promoting speculative schemes.

The Board of Directors of the Holstein-Friesian Association is composed of sixteen members. One member and only one could be classed as a breeder and dairyman. Of the other fifteen directors, nine are breeding Holsteins as a pastime and a hobby or are not dependent upon the returns from their dairy for a livelihood. Three are herdsmen or have charge of herds where the making of records has been indulged in extensively; one is a Professional Politician, and two, Dealers and Sale Promoters.

Check over the list of consignors to sales of a State and National character and see how often the names of Officers and Directors appear. Check over the list of the men who have paid the "high dollar" at these sales and see how often the names of Officers and Directors of the Holstein-Friesian Association appear. Study the list of phenomenal records and see how often the names of Officers and Directors appear as being owners of cattle with phenomenal records.

In such a standard publication as *The Breeders' Gazette*, in its issue of November 20, 1924, under the heading "All Around the Farm," appears the following statement:

"Every artificial 'boom' in prices is a 'boomerang.' It is a two-edged sword by which the victor who uses it ultimately is slain. Every form of speculation requires a final crop of 'suckers' or ultimate 'holders of the bag.' These are the people who are the last buyers of cattle or commodities that have been toll-gated through many hands."

In the December 8th issue of the same publication under the same heading further reference is made to Speculation:

"A son of one of my boyhood neighbors was victimized by a hog journal's fieldman to the tune of \$30,000. He is one of many young men who were swindled by fieldmen in the days of '\$60,000' boars. In many cases these 'busted' young men and their 'I-told-you-so' bankers, relatives and friends now regard the improved stock breeding business as a 'crooked game,' or as a hobby for rich men who ride it, as plug-hat gamblers, and have no interest in it as a practical farm enterprise."

Mr. Robert Scoville, President of the American Guernsey Cattle Club, in an article printed in *The Breeders' Gazette* under date of March 26th, refers to Advanced Registry Test in part as follows:

"The underlying principle of testing is to measure and record the producing ability of a cow, as an aid in determining breeding progress. Advanced Register Testing has unfortunately grown into a competitive game, rather than a constructive breeding standard. There are too many high records that do not tell the true story of the producing ability of the cows in question, because they do not represent her normal dairy capabilities.

If disgrace has been reflected upon the Holstein-

Friesian industry and the purebred cattle industry generally by the "craze" to make phenomenal records and the creating of fictitious values at public action, WHO ARE THE GUILTY PARTIES?

Peasley Defines the Different Ways

Fellow Members of the Holstein-Friesian Association of America:

The time is near at hand when our Association will again meet to elect its officers and directors, and to determine some questions that are vital to the future welfare of the organization.

Among the members of the Association there are two well defined groups, each having decidedly different ideas about the general plan of management. The first of these groups advocates the following principles, to wit:

First: That the powers of the Association which have to do with carrying out the purposes of its organization should remain in the control of the members, to be exercised by them, at their annual meetings, through their by-laws, and that powers should only be delegated to the Board of Directors to such an extent as will enable them to perform their duties under the direction of the membership.

Second: That officers and directors should conduct the Association's affairs between its annual meetings in strict conformity to the provisions of the constitution and by-laws; and that the making, amending or appealing of those by-laws should remain the sole right of our members.

Third: That the fees levied against members should be limited to such sum or sums as will meet the expenses of recording, registering and transferring our cattle, and the issuance of certificates therefor; that only such reasonable expenditures be incurred as are necessary to a normal and healthy growth in popularity of the breed; and, that the purposes of the Association as now controlled by its members, can best be carried out by retaining its offices as now located.

The second of these two groups contends, that the powers of the Association should be more largely in the hands of the Board of Directors; that some of the officers chosen by the members, and particularly the secretary, should be appointed by the Board of Directors; that the fees charged against members for the services which the Association renders to them should be so large as to provide a fund with which to employ a large number of high salaried men, under large expense, to travel about the country, in an endeavor to extend the popularity of the breed.... They desire to centralize the office of secretary now located at Brattleboro, Vermont, and that of the Superintendent of Advanced Registry, located at Delevan, Wis., and to bring them both together at one central location.

To the principles and purposes of the first group mentioned, I hereby subscribe, and for the triumph of these principles at our next annual meeting, I appeal to the membership of our Association. It is by and through the application of these principles that our Association and our breed have made their unsurpassed progress and advancement; and, it is only by holding to these principles in my opinion that we may hope to retain our position of supremacy and keep our good Association off the rocks of adversity.

Against the undermining of these principles, Frederick L. Houghton, the Association's tried and true secretary, has always stood steadfast and with the rights of our membership uppermost in mind. The opposition to these principles culminated several years ago in a violent and unjust attack upon Mr. Houghton; and upon this attack the members put their stamp of disapproval so emphatically that no similar attempt has been since made.

If Mr. Houghton cannot be reached by a direct attack, the same practical result can be reached by removing the office of secretary in which he has so faithfully served us to some Western location under the pretext of getting more efficiency by a centralized office, and with the alluring appeal to the members for an "Association Home."

We are at the "parting of the ways." Shall we proceed with those who have an abiding faith in the integrity of the members of the Association at large; or, shall we surrender the organization to the gentlemen who so ardently wish to run it

for us as they see fit? What they failed to do in their direct attack upon Mr. Houghton, they seek to accomplish by the election of officers and directors of their choice, and by amendments to our by-laws in keeping with their sinister purpose.

Let us rescind the action taken at St. Paul giving power to a committee to select and purchase a site for an "Association Home." Let us adopt the district plan for electing directors proposed by Mr. Reynolds of Pennsylvania, and by all means, let us take such positive, outspoken action, as will retain Mr. Houghton as the faithful and efficient secretary of this Association. Let us reduce the transfer fee from \$1.00 to 50c.

The one strong weapon with which you can fight that which is wrong, and support that which is right, is your vote. It is unfortunate that we cannot all attend the annual meeting, and each personally participate in the deliberations of the meeting and in the election of our officers; but, we can each of us voice our wishes by the use of our proxy.

If you cannot personally attend the annual meeting; if you believe as I do regarding these matters, and wish to add the strength of your vote to those who appreciate the vital importance of the matters which are to be considered; if you wish to see the transfer fee reduced from \$1.00 to 50c; if you believe in retaining to the members the rights which belong to them under our constitution and by-laws; if you believe that the faithfulness of Mr. Houghton should be rewarded and that the welfare of the Association, its members and the Holstein industry will be best subserved along these lines, I shall be very glad to represent you and I enclose a proxy for this purpose.

If this proxy is entrusted to me, I shall look upon it as a sacred trust given into my hands for the good of our Association and its membership. In its use I shall be guided solely by an earnest desire to promote justice, fairness and the very best interests of our Association.

A stamped envelope all ready addressed is enclosed for your convenience. You have but to sign and date your proxy, and deliver it in this sealed envelope to one of Uncle Sam's messengers, and you may be sure that your voice will be heard at the annual meeting although you are personally unable to be there. Will you please mail your proxy to-day?

For the permanent welfare of the Association, I am

Sincerely yours,

FREDERICK M. PEASLEY.

May 12, 1921.

Plain Breeder and Dairyman Talk

May 10, 1921.

Fellow Members:

We believe that you will appreciate this special letter as a message of warning of a very serious danger which threatens the future of The Holstein-Friesian Association of America.

We ask you to carefully read and consider the resolution passed at the St. Paul meeting last year (which is printed on the enclosed circular) and consider the dangerous consequences with which our Association is threatened by that resolution.

The powers given to the Committee are alarming in their scope and we earnestly urge you to join with us in removing this very grave danger, by arranging to rescind the resolution at the coming Syracuse meeting.

Why, think what it means. It means that the reserve fund of \$330,000.00 which is now in our treasury, in charge of our good honest and trusted treasurer, Wing R. Smith, is to be spent for real estate.

It means that they want to purchase real estate and erect buildings to constitute a "Holstein Center" under the pretext that it is desirable to have both offices under one roof. But let us see just what the REAL FACTS are, and what the consequences are SURE to be.

They know perfectly well that Secretary Houghton, that tried, true, honest and faithful official who has so efficiently served us all for nearly thirty years, with his lifelong home and his many interests located in Brattleboro, could not possibly change his residence to some undetermined location, to retain the Secretaryship of our Association, and it, therefore, follows that we would surely be deprived of his valuable experience and services.

The purpose behind this scheme is nothing new.

Certain persons with selfish personal interests have tried

to defeat Secretary Houghton before, and having repeatedly failed, they are now trying the scheme of ousting him from the Secretaryship by moving the office away from Brattleboro.

Furthermore, it is perfectly well known that Superintendent Gardner will never follow the office away from his home town, and it, therefore, means that that GRAND OLD MAN, whose very life is wrapped up in our Advanced Registry work, is booked to be thrown into the discard.

Do not forget that for years these two officials have been the very back bone of our Association. They are the men with whom you and we transact our business—the most important business of the Association. You know and we know that their respective offices are both splendidly and efficiently organized and are working perfectly. They are men of the highest integrity and experience. They have our business well in hand, and each has a force of especially trained people for doing this very special and exacting work.

In Heaven's name, why part company with such men—the very men under whose ministrations our Association has always prospered—the two men more responsible than any others for the piling up of the fine surplus in our treasury! Yes, and why part with that surplus by investing it in land and brick and mortar, when it is ABSOLUTELY NOT NEEDED?

Why, we ask, should these offices be removed? One is located in the east, and the other in the west. Is this not a fair division, if geographical location is to be considered? Is there the shadow of a doubt in the mind of a single one of our 18,000 members that such a change would result in the slightest improvement in the service? Of course not!

As a matter of pride, no doubt, Pennsylvania would like to have this "Holstein Center" within its boundaries. So would any other state. But Pennsylvania asks for nothing of the kind. It merely asks for these offices to remain right where they are, and that they continue to function as they have been doing in the past.

Now we are just plain breeders and dairymen. We believe this whole thing is wrong, and so we are doing this entirely in the interest of our Association, and, therefore, for the benefit of its entire membership.

WILL YOU DO YOUR SHARE? Let us settle this thing for all time. Won't you sign the enclosed post card proxy and mail it AT ONCE? Send it right away in order that we may properly list you as a staunch supporter and that we may arrange to have your proxy voted at the Syracuse meeting, to beat this movement.

If you can get even one other member to sign a proxy you will be doing double duty, and it will be correspondingly appreciated. Won't you let us hear from you by return mail?

Faithfully yours,

C. W. NEWMAN.

J. G. KERRICK.

GARLIC AND DAIRY COWS

One minute after garlic is eaten by a cow the disagreeable flavor and odor of this pungent plant may be detected in the milk, is the conclusion of the Bureau of Dairying after investigation.

In the tests, which were made by giving to several persons samples of milk from cows milked at different periods after having been fed garlic and from check cows, it was found that the intensity of the bad flavor and odor increased until it reached a maximum ten minutes after feeding the odorous ration. Bad flavor and odor were present to an objectionable degree when the cows ate one-half pound of garlic tops four hours before milking. As the time between the eating of the garlic and milking time increased the bad flavor and odor diminished and in seven hours practically disappeared.

When the cows have inhaled garlic for ten minutes, the milk had the characteristic flavor and odor but was free from the objectionable flavor and odor when drawn ninety minutes after garlic was inhaled.

The Department of Agriculture reports the experiments and its conclusions in *Bulletin 1326*, compiled by C. J. Babcock. Copies of this publication may be obtained free by addressing United States Department of Agriculture, Washington, D. C.

Men who talk about going back to the old farm expect to hire enough help to do the work.

CLUB ACTIVITIES

PENNSYLVANIA BREEDERS TAKE NEW JERSEY TRIP

About forty Holstein enthusiasts of Bucks County, Pa., drove to Cedar Grove, N. J., Saturday March 14th, and inspected the Essex County Hospital herd. The distance of eighty-five miles from Doylestown to Cedar Grove was covered in about four hours. Dairy superintendent Mark Kenney welcomed the visitors, and immediately a basket lunch was held, cake and Holstein milk being served by the hospital farm staff.

The present hospital herd was started about two years ago when the former grade herd was disposed of. The product of the herd is used by the 2,200 inmates and 1,200 employees of the hospital. The herd is producing about 400 quarts daily.

Superintendent Mark Kenney selected the foundation stock taking an entire herd from one of the best dairy farmers of Ohio who had been twelve years breeding Holsteins. In several instances families of four and five generations of females were purchased.

During the past two years the herd of eighty cows averaged better than 12,000 lb. milk per year. A row of twenty-five cows pointed out to the visitors had averaged better than 20,000 lb. milk. Chesney Freda Lothian has produced 104 lb. milk in a day, 680 lb. in a week and has made a year record of 26,478 lb. milk, 1,296 lb. butter. The herdsires are King Sweet and Prince Riverside Hartog Ormsby, a former prize winner at the California State Fair.

After the herd was inspected, two judging contests were held one open only to Bucks County breeders and a team contest between four members of the Essex County Holstein Breeders Association and four members of the Bucks County Association. In the challenge contest W. M. Hunsberger of Plumsteadville, Pa., was high man. In the individual contest Mrs. Mabel Briggs, Yardley, Willis M. Hunsberger, Plumsteadville, and Irwin G. Myers of Chalfont, made a triple tie each scoring 100. The prize was \$5 given by the Essex County Association and the contestants unanimously voted to donate it to the Bucks County Association.

Irwin G. Myers and Harvey G. Hockman of Chalfont, purchased a six-months-old bull calf as a future herdsire. He is a son of Prince Riverside Hartog Ormsby and his dam was one of the best individuals in the hospital herd. She has given 100 lb. milk a day for twenty-six days, producing 106 lb. her best day.

DRINK ONE COW'S MILK

At a banquet of the Washtenaw County Holstein Breeders held recently at Saline, Mich., the seventy diners were served milk from one cow. This cow was Houwtje Maid Korndyke Segis, owned by W. L. Rundell of Saline who donated the milk. The Maid has in eleven months produced nearly 22,000 lb. milk, 842 lb. fat.

After a musical program Secretary W. L. Spaulding read his report and the treasurer's report was read by A. A. Snyder. Carlos Beckington, a member of the Boys' Club, told of his trip to the National Dairy Show at Milwaukee.

The picture "Jonathan Barr's Conversion" was shown. Officers were elected as follows: President, William Austin, Saline; Vice-president, Glenn Bird; secretary, Walter Spaulding; treasurer, Frank Geiger; directors, W. I. Rundell and R. B. Waltrous, Chelsea.

MICHIGAN TOUR PLANNED

The Huron County Holstein Breeders Association planned a tour in which they will visit some of the leading Holstein dairies of the state at their meeting held at Bad Axe, Mich., March 19th. The following officers were elected: President, Frank Bensinger, Ubly; Vice-President, Howard Nugent, Bingham township; Secretary-Treasurer, Thomas Amos, Verona township.

AGRICULTURAL AND INDUSTRIAL CONFERENCE

At Cleveland, Ohio, on April 21st, agricultural leaders from the New England States, New York, Pennsylvania, Ohio, Michigan, Indiana, Illinois and Wisconsin will meet representatives of a number of important manufacturers' organizations of the same states in a conference, the keynote of which is a "Better Understanding Between Industry and Agriculture."

This is the third of a series of conferences along the same lines. The first was held at Atlantic City last November at the time of the annual session of The National Grange, and the second was held in New York City in the same month at the time of the annual meeting of the National Founders Association.

This conference is to be followed by others. One special line of work which will be taken up at this time will be perfecting arrangements for the exchange of speakers at state meetings, farmers to speak at state manufacturers group sessions, and manufacturer leaders at state granges and state farm bureau meetings. Agriculture and Industry are interdependent for continued prosperity and the leaders of each believe that a better understanding of problems affecting both will result in mutual confidence and welfare.

BREEDERS TO SEE GOOD HERD

On Saturday afternoon, April 11, at the Springfield State Hospital, Sykesville, Maryland, there will be a meeting of the Maryland Holstein Breeders Association of which F. G. Farr, livestock superintendent at the Hospital, is secretary. The Hospital herd was founded a year or two ago by the purchase of a number of closely related animals. Good judgment was used in selection and under Mr. Farr's care a splendid showing has been made in dairy work. The Hospital herd is enrolled in cow testing association work and some remarkable records have been made. Cattle from this herd have been exhibited at a number of fairs and have won many prizes.

ORGANIZE UNDER LOCAL PLAN

The De Pere Local of the Brown County Holstein Breeders' Association was organized at a meeting held in the City Hall at De Pere, Wis., on March 14. The dues were set at \$1.00 and \$2.00. The following officers were elected: Isadore Vercauteren, president; John Coenen, vice-president; James Dillon, secretary-treasurer. Fifteen breeders joined the club. This gives the breeders in the De Pere territory the honor of being the first unit in the county under the new plan. Meetings are to be held at the call of the president.

An agent was trying to sell an ex-soldier a book entitled "A Half Hour With Insects" by a noted entomologist. The dough boy did not say much for awhile but finally drawled, "I have spent many a whole night with them. I do not think your book would interest me; I am certain the insects did not."

YOUR ATTENTION IS CALLED to this Accredited Herd in which there has never been a case of Abortion.

REASONABLE PRICES ON YOUNG STOCK

HARRY C. REYNOLDS

SCRANTON

PENNSYLVANIA

AGRICULTURAL PRODUCTS ADD TO NATION'S WEALTH

The combined value of crop and livestock production in the United States last year was \$12,404,000,000 which was fifty-six million dollars more than in 1923 when the total value was \$12,348,000,000, according to estimates by the United States Department of Agriculture.

The higher figures for last year are due to the increased value of crops over the preceding year, inasmuch as the value of livestock production shows a decline.

Crop production had a farm value of \$11,404,000,000 compared with \$10,401,000,000 in 1923, but of this value some \$4,951,000,000 worth of crops were fed to livestock whereas in 1923 the value of crops fed to livestock was \$4,286,000,000. While it has never been the custom, the value of the crops fed to livestock should be deducted from the combined value of crops and livestock produced as the crops fed are used as "raw material" in manufacturing livestock, the goods "marketed."

Livestock and livestock products are given a farm value of \$5,951,000,000 compared with \$6,233,000,000 the preceding year, nearly all animal products having decreased in value.

Weighted prices have been used in estimating the value of nearly every crop and animal product, so that the figures are more nearly representative of the prices that farmers received than in previous years when the figures were based mostly on December 1 prices. The department points out also that the gross value of either crops or animal products last year was exceeded only in the years 1917 to 1920 inclusive.

A decrease of \$66,000,000 in the farm value of dairy products produced in 1924 as compared with 1923 is shown in the estimates which place the 1924 valuation at \$2,586,148,000 compared with \$2,652,419,000 in 1923.

The decrease is attributed to lower prices for all farm dairy products except buttermilk, whey, and skim milk.

Whole milk sold and consumed on farms last year was valued at \$1,714,000,000 compared with \$1,750,000,000 in 1923; butterfat \$394,000,000 compared with \$415,000,000 and butter made on farms \$237,000,000 compared with \$246,000,000.

The average of prices received by farmers for milk sold for all purposes was 5.225 cents a quart in 1924; 5.547 cents in 1923, and 4.73 cents in 1922.

The value of the cereal crops in 1924 was \$5,220,000,000 or 45.8 per cent of the total of all crops, as compared with \$4,138,000,000 in 1923 or 39.8 per cent of the value of all crops in that year. Every cereal crop increased in value last year.

The value of the corn crop last year is placed at \$2,890,000,000 as compared with \$2,538,000,000 in 1923; wheat \$1,131,000,000 compared with \$743,000,000 and oats \$799,000,000 compared with \$554,000,000.

The cotton crop, including lint and seed, is valued at \$1,701,000,000 last year compared with \$1,657,000,000 in 1923. This increased value was due to larger production inasmuch as the average price per pound of cotton lint was lower than for the preceding year.

Hay and forage crops are given a value of \$1,733,000,000 compared with \$1,619,000,000 in 1923; the fruit crops \$626,000,000 compared with \$642,000,000; vegetables, \$1,018,000,000 compared with 1,169,000,000.

SHOW HERD LOST MONEY

The Black Hawk County Holstein herd won a number of prizes at the fairs last fall but the expenses of exhibiting were greater than the receipts and as a result the association not only used up the money in its treasury but incurred a debt of \$220. The breeders of the county have been asked to make up the amount and a number have signed for amounts varying from \$5 to \$25 and it is expected that the entire amount will be wiped out at an early date.

DAIRYMEN'S LEAGUE GENERAL MEETING

The annual meeting of the Dairymen's League Coöperative Association, Inc., will be held in New York City, June 18. The management report that there is a growing sentiment in favor of holding the annual meeting at different points conveniently located throughout League territory, but as there

is usually a large attendance, suitable places for the convention are limited to large cities in which there are auditoriums capable of seating 2,000 to 2,500 people.

Since 1921 the annual meetings have been held at Utica, N. Y., in the State Armory. Previous to that time the meetings of the old Dairymen's League were held in Jersey City.

As usual there will be speakers of outstanding reputation in addition to the usual routine program. A large number of members as well as delegates are expected to attend the coming meeting and it is planned to give them an opportunity to look over the general offices of their association and to see for themselves something about the great market where a large proportion of their product is consumed.

DEATH OF C. F. GILES

C. F. Giles, of Apalachin, New York, died March 30th. Mr. Giles has been in poor health for some time but has apparently been better for the last year. The cause of his death was heart trouble and hardening of the arteries.

Sixty-four years ago Mr. Giles was born on the farm on

THE LATE C. F. GILES

which he spent most of his life. When he was eighteen he married and took over the management of the farm. He was a noted orchardist and marketed his farm products in the neighboring city of Owego. He had been engaged in the Holstein business about nineteen years, building his herd from a pair of twin heifers purchased as calves. He joined the National Association in 1912.

Mr. Giles was a man of varied business interests. He was highly regarded in his own community, had been justice of the peace for twenty-eight years and president of the local school board for twenty years. He was a firm believer in purebred stock and exhibited for a number of years at the fair at Athens, Pa. During the past few years he has been interested in the raising of silver black foxes.

A detailed story of Mr. Giles and his many activities appeared in the March 22d issue of the BREEDER AND DAIRYMAN. He will be greatly missed in his community, in which he was an influential figure.

DIAMOND IS PRESIDENT

On February 28, about fifty members and guests attended a banquet of the Montgomery County Holstein Association held at Dixie Tavern, Rockville, Maryland.

Preceding the banquet, the members elected John B. Diamond Jr., of Gaithersburg, president. The other officers are: Emory H. Ricketts, vice-president; W. W. Petersen, secretary-treasurer; directors, Doctor Thomas A. Ladson, McKendree Walker, James D. King, William H. McCeney, Harry Frailey and W. C. Snarr.

SOUTHWEST AMERICAN LIVESTOCK EXPOSITION

Breaking all records for total attendance, the 1925 Southwest American Livestock Exposition closed its doors March 7. The attendance at this year's exposition is almost double that of last year. More than 2,000 purebred animals valued at over a million dollars were exhibited; 2,000 farm club boys were present during the week says J. J. Gibson, vice-president of the Exposition.

The Holsteins were judged by H. H. Kildee of Ames, Ia. and the exhibitors were H. H. Clark, James Payne & Son, Weatherford; J. R. Hardin, Pawhuska; P. H. Atlee and B. F. Kiles, Oklahoma City, Okla. and F. E. Prince of Pittsburg, Texas.

The awards were: Aged bull: 1st, Hardin on Champion Echo Sylvia Pontiac 3d; 2d, Clark on Johnny Smoker.

Bull, two years and under three: 1st, Prince on Castine Sir Johanna Nig Ormsby; 2d, Payne & Son on Prince Korndyke Segis Bonheur.

Junior yearling bull: 1st, Prince on Princeland De Kol Butter Boy.

Senior bull calf: 1st, Harlin on J. Bar Champion Echo; 2d, Prince on Princeland Nig Ormsby.

Aged cow: 1st, Prince on Aaggie De Kol Cadillac; 2d, Clark on Carmen Mercedes.

Cow, two years and under three: 1st, Prince on Vale Segis Peach Lyons; 2d, Clark on Molly May Mercedes.

Senior yearling heifer: 1st, Harlin on Hengerveld Matador Lass; 2d, Kiles on Corona Colantha Cornucopia.

Junior yearling heifer: 1st, Harlin on M B B White Johanna; 2d, Prince on Princedale Coronis Echo.

Senior heifer calf: Harlin on J. Bar Genevieve Lady, 2d, Prince on Prince Doris Colantha Job.

Aged herd: 1st, Harlin; 2d, Clark.

Young herd: 1st, Payne & Son.

Calf herd: 1st, Harlin; 2d, Clark.

Get of sire: 1st, Clark; 2d, Payne & Son.

Produce of dam: 1st, Clark and 2d, Payne & Son.

LOWER THIS TAX

Dr. E. M. Gress, State Botanist, figures that Pennsylvania farmers suffer an annual loss of \$264 for each acre of tillable land they work. There are about 200,000 farmers in the state and the average loss from this cause is \$120. To cut down this tax Dr. Gress advises five practices:

1. Sow only good clean seed.
2. Practice clean cultivation.
3. Rotate crop.
4. Be vigilant and persistent in exterminating weeds before they become abundant not only in the field but in waste places and along fences.
5. Do not permit weeds to go to seed.

DAIRYMEN'S LEAGUE PRIZE COMPETITION

G. W. Slocum, president of the Dairymen's League Coöperative Association, Inc., has given \$100 as prizes in an essay contest. The subject is "How the Dairymen's League Has Helped the Dairy Farmer." The competition is open to senior students in high schools in New York and adjoining states. The essays are to be not less than 1,000 words and not more than 1,500 words and must be received at the office of the *Dairymen's League News*, 120 West 42d St., New York City, not later than June 1st. A committee of competent judges will announce the prize winners in time for the results to be communicated to the high schools concerned, prior to commencement, so that, if it is thought desirable, prize-winning essays may be read on the commencement stage.

Where more than one student in the same school wishes to try for a prize, the principal is asked to select the two best essays and forward them to the *News* office.

THE DAIRY INDUSTRY

Butter production in the United States increased nearly 35,000,000 lb. during the first nine months of 1924 when production reached 1,045,260,000 lb. as compared with 1,010,754,000 lb. during the corresponding period in 1923, according to reports compiled by the United States Department of Agriculture.

The ice cream industry was affected by the cool weather most of the year. Production for the nine months period was 152,277,000 gallons as compared with 156,305,000 gallons in 1923.

Production of cheese was 312,596,000 lb. as compared with 314,358,000 lb. in 1923.

Production of condensed and evaporated milk reached 1,413,570,000 lb. during the nine months' period in 1924 as compared with 1,433,398,000 lb. in 1923.

SWINE PRODUCTION BULLETIN

Farmer's Bulletin 1437, is on Swine Production and should be in every livestock farmer's library. Practically every part of the United States is suitable for hog growing. The *bulletin* contains information on the care and management of hogs together with a few pages on common diseases of hogs and their treatment. It recommends the use of purebred animals when founding the herd and advises the beginner to start with a few animals and grow into the business. *Farmer's Bulletin* No. 1437, can be obtained free from the United States Department of Agriculture, Washington, D. C.

May—"Would you wear a rented bathing suit?"

J. R. FROST

Munnsville, New York

The entire Brown family was attacked by ptomaine poisoning. The family doctor was called, and as soon as emergency treatment had been administered he tried to find the source of the trouble.

"Did you-all eat something that had been left standing in tin?" he asked.

Mr. Brown thought hard for a moment. "By gosh, doc," he cried, "that's just what we did. We had a picnic yesterday, and we left the lunch in the Ford all morning."

BONNYMEADS SALE BIG SUCCESS

Holstein enthusiasts from southern and central Pennsylvania as well as from Maryland and North Carolina attended the Bonnymeads sale held at Harrisburg, Pa., March 25th. It was the unanimous opinion that this was the best sale held for years in southern Pennsylvania.

It is more than ten years since A. R. O. work stopped at Bonnymeads owing to the prevalence of foot and mouth disease in the immediate vicinity, and as the oldest

HOLSTEIN ENTHUSIASTS

S. T. Witmer, Union Deposit; W. A. Withers, Elizabethtown; C. R. Neff, Harrisburg.

cow offered was ten years old and the next oldest was seven years old, the only official records were away back in the pedigrees. The cattle sold for dairy purposes, and the fact that they had made good in dairy work made them desirable.

The marked success of the sale may be attributed to the fact that the buyers had every confidence that no animals offered would be bid in; that the cattle had not been forced in any way but had been handled as a purely commercial dairy proposition and that they were not fitted for sale but were sold in their everyday condition. The only animals owned by Bonnymeads not offered for sale were a few young heifer calves which were retained to grow up. As there were thirty-one females under two years old sold it can be seen there was no abortion in this herd and the large number of young animals naturally created confidence in this respect.

The sale was outdoors. Manager Billett had erected the solidest sale ring we have ever seen. The weatherman gave one of the best days of the spring and the sale had been well advertised. The arrangements seemed perfect.

There were 99 animals offered, 97 females and the two herd bulls. Twenty-six of the animals were born in 1922 and 26 in 1923 so that practically all the animals had not yet reached their maximum producing capacity. The sixty-six females, two-years-old or more, averaged \$222.95, the thirty-one head under two-years-old averaged \$114.35; and the entire ninety-nine head averaged \$187.22, the sale total being \$18,535.

Ten animals brought \$300 or more; forty-two \$200 or more. The top price was \$375 obtained for the last female sold, Bonnymeads Koningin, a four-year-old that was just fresh. She was by Bonnymeads Paul Hartog and had a herd record of

10,795 lb. milk in her lactation period of less than a year. She was purchased by F. S. Heilman of Cleona, Pa., and he considered that he got a bargain. Three different cows brought \$360. G. C. Krout of Glen Rock, Pa., paid \$360 for Bonnymeads Lilith Nevada, just over three years old, with a herd record of 11,274 lb. milk. Mr. Krout paid the same price for Bonnymeads Pricemore Colantha 2d, just five years old with a record of 10,650 lb. milk. These were the second and third animals brought into the ring. All records were made on twice a day milking as the Bonnymeads herd has been handled this way for the past ten years. Mr. Krout took several other high-priced animals. J. F. Wineman of Youngwood, Pa., gave \$360 for the five-year-old, Bonnymeads Lady Jarie De Kol. Mr. Wineman took a very nice bunch back to Youngwood with him.

H. L. Brake of Rocky Mount, N. C., took back with him a number of heifers and it is believed that he traveled the greatest number of miles to attend this sale. Mr. Brake is a cautious buyer and obtained some good animals, particularly Bonnymeads Queen Artis 2d, for which he paid \$295.

FROM FAR AND NEAR

H. L. Brake of Little Rock Dairy, Rocky Mount, N. C., and Editor Truckell, of Harrisburg, Pa., at the Bonnymeads sale.

Over forty head went to Westmoreland County, Pa., J. H. Silvis of Greensburg, alone taking thirteen head for \$2,540. J. H. Seanor of New Alexandria, Pa., and his son, W. T., picked a number of good ones as did J. L. Wolff of Greensburg.

F. Sidney Hammond of Libertytown, Md., also obtained a number, and used good judgment in his selections.

The auctioneers were Col. J. C. Hess of Hershey, Pa., and Col. Glenn R. Mead of East Aurora, N. Y. Col. Mead officiated Monday at the Bert Spencer sale at Dalton, which was also successful and made many friends by his effective work. This

is the first time "Glenn" has sold in this part of the country but it will not be the last judging from the number of cattlemen that congratulated him on his work and told him he would get their future business. The pedigrees were explained by S. R. Miller and his son Will, of Chambersburg.

Besides the buyers mentioned above, animals were sold to J. H. Harvit, E. B. Mitchell, S. R. Baker, H. B. Herman, James G. Hatz, Wm. D. Lenker, Harrisburg; Will H. Miller, Albert F. Kost, Abram N. Lehman, Paul N. Lehman, Carlisle; Elmer E. Zimmerman, Camp Hill; Sylvanus Stoltfus, Elverson; S. E. Raudabaugh & Son, S. W. Zeigler, Mechanicsburg; Roy C. Gates, Tyrone; Jacob M. O. Keefe, Glen Rock; S. A. Kirkpatrick, New Cumberland; D. M. Rooser, Berwick; and John H. Bennetch, Sheridan, Pa.; L. C. Powell, Woodsboro; Saul E. Horst, Hagerstown, Maryland.

Munnsville,

New York

The entire Brown family was attacked by ptomaine poisoning. The family doctor was called, and as soon as emergency treatment had been administered he tried to find the source of the trouble.

"Did you all eat something that had been left standing in tin?" he asked.

Mr. Brown thought hard for a moment. "By gosh, doc," he cried, "that's just what we did. We had a picnic yesterday, and we left the lunch in the Ford all morning."

BONNYMEADS SALE BIG SUCCESS

Holstein enthusiasts from southern and central Pennsylvania as well as from Maryland and North Carolina attended the Bonnymeads sale held at Harrisburg, Pa., March 25th. It was the unanimous opinion that this was the best sale held for years in southern Pennsylvania.

It is more than ten years since A. R. O. work stopped at Bonnymeads owing to the prevalence of foot and mouth disease in the immediate vicinity, and as the oldest

HOLSTEIN ENTHUSIASTS

S. T. Witmer, Union Deposit; W. A. Withers, Elizabethtown; C. R. Neff, Harrisburg.

cow offered was ten years old and the next oldest was seven years old, the only official records were away back in the pedigrees. The cattle sold for dairy purposes, and the fact that they had made good in dairy work made them desirable.

The marked success of the sale may be attributed to the fact that the buyers had every confidence that no animals offered would be bid in; that the cattle had not been forced in any way but had been handled as a purely commercial dairy proposition and that they were not fitted for sale but were sold in their everyday condition. The only animals owned by Bonnymeads not offered for sale were a few young heifer calves which were retained to grow up. As there were thirty-one females under two years old sold it can be seen there was no abortion in this herd and the large number of young animals naturally created confidence in this respect.

The sale was outdoors. Manager Billett had erected the solidest sale ring we have ever seen. The weatherman gave one of the best days of the spring and the sale had been well advertised. The arrangements seemed perfect.

There were 99 animals offered, 97 females and the two herd bulls. Twenty-six of the animals were born in 1922 and 26 in 1923 so that practically all the animals had not yet reached their maximum producing capacity. The sixty-six females, two-years-old or more, averaged \$222.95, the thirty-one head under two-years-old averaged \$114.35; and the entire ninety-nine head averaged \$187.22, the sale total being \$18,535.

Ten animals brought \$300 or more; forty-two \$200 or more. The top price was \$375 obtained for the last female sold, Bonnymeads Koningin, a four-year-old that was just fresh. She was by Bonnymeads Paul Hartog and had a herd record of

10,795 lb. milk in her lactation period of less than a year. She was purchased by F. S. Heilman of Cleona, Pa., and he considered that he got a bargain. Three different cows brought \$360. G. C. Krout of Glen Rock, Pa., paid \$360 for Bonnymeads Lilit Nevada, just over three years old, with a herd record of 11,274 lb. milk. Mr. Krout paid the same price for Bonnymeads Pricemore Colantha 2d, just five years old with a record of 10,650 lb. milk. These were the second and third animals brought into the ring. All records were made on twice a day milking as the Bonnymeads herd has been handled this way for the past ten years. Mr. Krout took several other high-priced animals. J. F. Wineman of Youngwood, Pa., gave \$360 for the five-year-old, Bonnymeads Lady Jarie De Kol. Mr. Wineman took a very nice bunch back to Youngwood with him.

H. L. Brake of Rocky Mount, N. C., took back with him a number of heifers and it is believed that he traveled the greatest number of miles to attend this sale. Mr. Brake is a cautious buyer and obtained some good animals, particularly Bonnymeads Queen Artis 2d, for which he paid \$295.

FROM FAR AND NEAR

H. L. Brake of Little Rock Dairy, Rocky Mount, N. C., and Editor Truckell, of Harrisburg, Pa., at the Bonnymeads sale.

Over forty head went to Westmoreland County, Pa., J. H. Silvis of Greensburg, alone taking thirteen head for \$2,540. J. H. Seanor of New Alexandria, Pa., and his son, W. T., picked a number of good ones as did J. L. Wolff of Greensburg.

F. Sidney Hammond of Libertytown, Md., also obtained a number, and used good judgment in his selections.

The auctioneers were Col. J. C. Hess of Hershey, Pa., and Col. Glenn R. Mead of East Aurora, N. Y. Col. Mead officiated Monday at the Bert Spencer sale at Dalton, which was also successful and made many friends by his effective work. This

is the first time "Glenn" has sold in this part of the country but it will not be the last judging from the number of cattlemen that congratulated him on his work and told him he would get their future business. The pedigrees were explained by S. R. Miller and his son Will, of Chambersburg.

Besides the buyers mentioned above, animals were sold to J. H. Harvit, E. B. Mitchell, S. R. Baker, H. B. Herman, James G. Hatz, Wm. D. Lenker, Harrisburg; Will H. Miller, Albert F. Kost, Abram N. Lehman, Paul N. Lehman, Carlisle; Elmer E. Zimmerman, Camp Hill; Sylvanus Stoltzfus, Elverson; S. E. Raudabaugh & Son, S. W. Zeigler, Mechanicsburg; Roy C. Gates, Tyrone; Jacob M. O. Keefe, Glen Rock; S. A. Kirkpatrick, New Cumberland; D. M. Rooser, Berwick; and John H. Bennetch, Sheridan, Pa.; L. C. Powell, Woodsboro; Saul E. Horst, Hagerstown, Maryland.

PUBLIC SALE ANNOUNCEMENTS AND REPORTS (Continued from page 229.)

MILKERS AVERAGE \$275 AT BRUBAKER SALE

Although there were only seventeen animals in the Hayfield Herd which was dispersed on the Jacob Brubaker Farm near Myerstown, Pa., March 18th, the splendid average of \$192.29 was realized, the sale total being \$3,269. The five bulls averaged \$131.40, three of them being under six months old. The twelve females averaged \$217.66. The seven animals in milk made the splendid average of just over \$275.

The herd was accredited, the animals were well grown and in good condition, the cows had a widespread reputation for producing ability and the lesson was again taught that high-class stock are in demand and bring good prices.

The highest price was \$454, which Dr. Malcolm Z. Gearhart of Reading, Pa., paid for Highland Percy Jane Denver, a cow that was producing around 100 lb. milk a day at the time of the sale. Dr. Gearhart also bought the herdsire, Brookside Waldorf Victoria Duke, paying \$200 for him. He obtained Lady De Kol Burke Fayne Segis, a cow now four years old, weighing around 1,700 lb. with a seven-day record of 24.67 lb. butter made as a junior three-year-old, paying \$330 for her.

Hayfield Highland Waldorf Denver just thirteen months old, a son of Brookside Waldorf Victoria Duke and Highland Percy Jane Denver, went to E. M. Gingrich, Jr., Myerstown, for \$245. The Tresslers Orphans' Home at Loysville, Pa., had to pay \$301 for Mutual Pride Sadie Vale, a four-year-old heifer that as a two-year-old made 24 lb. butter in a week. A two-year-old daughter of this cow went to Dr. Gearhart for \$276.

The pedigrees were explained by S. R. Miller of Chambersburg, Pa. Besides the transactions noted above, animals were secured by E. Martin, Ephrata; Jonas W. Eberts, Andreas; David G. Stoltfus, Bird-in-Hand; E. D. Frey, Lehighton; Frank Krider and Levi Brubaker, Myerstown, Pa.; and Little Rock Dairy, Rocky Mount, N. C.

BIG CROWD ATTENDS WILSON SALE

A big crowd attended the dispersal sale of the Sunny Brook Herd which was held on the farm of the owner, George C. Wilson, near Tyrone, Pa., March 26th. Superintendent, W. W. Seeds, had the cattle in fine shape and they brought very satisfactory prices, the average for the twenty-five being \$153, the sale total being \$3,825. The three bulls averaged \$126.66, the thirteen females over two years old averaged \$194.23 and the nine heifers averaged \$102.22, three yearling heifers bringing \$200 each.

The top price was \$300 which Harvey Goughnour of Johnstown, paid for the two-year-old Aaggie Pontiac De Kol Pietje, a daughter of King Pietje Aaggie Pontiac. She was of nice size and will freshen in the spring by the herdsire Lola Cybele Pontiac Homestead. Mr. Goughnour secured Aaggie De Kol Mechthilde Pontiac, a five-year-old daughter of King Pietje Aaggie Pontiac for \$275. He obtained the two-year-old heifer May Walker Segis Count for \$215. Her sire was by King Segis Pontiac Count from the United States champion for year butter production, May Walker Ollie Homestead. Mr. Goughnour also took several other good ones.

Another buyer that secured several was H. M. Smith of Bellefonte, Pa., who paid \$210 for Bonnie Bess Pontiac Champion, a four-year-old daughter of Far Oaks Sir Ormsby Champion and \$205 for the nine-year-old Bertha De Kol Hartog Boon.

The herdsire Lola Cybele Pontiac Homestead, a son of the 30-lb. cow, Cybele Walker Ramoua Fayne, went to Harspter & Rupert, Tyrone, Pa., for \$230. Mr. S. R. Miller of Chambersburg, read the pedigrees. Among the buyers were A. Engleman, Carl States, D. B. Kloss, Tyrone; T. R. Auker, Mifflintown; Allen Harter, Bellefonte; Guy M. Neff, Alexandria; and C. F. Evers, Royer, Pa.

SPENCER COWS SELL WELL

The fully accredited herd of G. A. Spencer was sold at Waverly, Pa., March 23d. There was a good attendance and very satisfactory prices. The herd was young, eighteen of the females being under two years old. There were thirty-eight animals in the sale, one a little bull calf which was struck off for \$30 and the entire thirty-eight averaged \$120.13. The twenty animals over two-years-old averaged \$161.75, the sale total being \$4,565. The Spencer herd was locally noted for producing ability.

Three different cows each brought \$300 or more, the top price being \$305 paid for Johanna Wynola Pietje, a daughter of King Pontiac Alcartra Pietje, struck off to C. J. Spencer of Waverly. Dr. C. E. Thomson of Clarks Summit paid \$300 for Lola Veeman Wynola, a daughter of Sir Veeman Lola Hengerveld from Johanna Wynola Pietje and C. J. Spencer paid the same amount for Johanna Wynola Pietje 3d, her full sister, just a year younger. Johanna Wynola Pietje is now eight years old. This cow and her two daughters brought \$905.

C. P. Davidson paid \$250 for Iduna Veeman, a daughter of Sir Veeman Lola Hengerveld from a granddaughter of Inka Hengerveld Johanna Lad and Pietje Pender.

The auctioneer was Glenn R. Mead of East Aurora, N. Y. Besides the transactions noted above animals were purchased by Maurice LaBar, C. M. Pallman, A. J. Miller, Clarks Summit; F. W. Smith, Dalton; F. I. Linen, Waverly; R. M. Hopper, R. S. Gow, L. W. Moyle, W. G. Spencer, Harry Delevan, D. M. Rosser, Berwick; S. C. Stone and T. M. Kresge, Falls.

WOODS' SALE

On March 12, on the W. A. Woods Farm near Huntsdale, Pa., was held a sale of nearly all of the Woods Holsteins, to which Ivo V. Otto of Carlisle and H. E. Robertson of York each consigned seven head of young stock.

The sale total was \$3,867.50 and as there were twenty-eight head sold, fourteen from the Woods herd and seven from each from the Otto and Robertson herds, the sale average was \$138.17.

The top price was \$395 for which W. H. Schaeffer of Huntsdale obtained Ormsby May Aaggie, a handsome three-year-old daughter of King Ormsby Abbekerk Helena, the Woods' herdsire. The Tressler Orphan's Home at Loysville, Pa., took three head for \$665 and obtained some good animals. Harvey Seltzer of Palmyra, took several including Allamuchy Johanna Lotta for \$327.50. Fred Lehman of Carlisle, secured four head paying \$207.50 for Ormsby Helena Allamuchy, a daughter of King Ormsby Abbekerk Helena. H. N. Bernheisel of Green Park, paid \$180 for King Ormsby Lucinda Abbekerk, a very nice bull just a year old by King Ormsby Abbekerk Helena from a record daughter of King of the Ormsbys.

In addition to his cattle, Mr. Woods sold a pair of three-year-old mules for \$400. He refused \$600 for a pair of unbroken mule colts and realized good prices for his Poland China hogs.

The auctioneer was George Fry with S. R. Miller of Chambersburg and A. A. Raudabaugh of New Kingston in charge of the pedigree work.

ACCREDITED GRADE HOLSTEIN SALE

An accredited herd of grade Holsteins owned by F. G. Kiefer of Clinton, Wis., recently averaged \$136 when sold at public auction. There were sixteen animals sold and the two high cows each brought \$155. Mr. Kiefer is not only a believer in tuberculin testing but is also a believer in cow testing association work and told the records his cows had made in their general dairy work. The price realized was said by the auctioneer Henry Wieland, Jr., who is president of the Rock County Farm Bureau, to be unequalled in Wisconsin for a number of years at a farm auction. Mr. Kiefer has acquired a small farm near Clinton, has purchased four registered three-year-old Holsteins as foundation stock and says that in a few years he will have one of the best herds of purebreds in Rock County.

INDIANA HERD DISPERSAL

The herd of Cox and Foust was dispersed at public auction February 24th on the Cox Farm near Elwood, Ind. There were forty-seven animals in the sale of which nineteen were under two years old, a number were calves born this year. The average for the entire number was \$67.15, the total being \$3,156. None of the animals had official records. The top price, \$146, was obtained for the herdsire Creator Pontiac Korndyke, a two-year-old sired by a son of Creator, from a great-granddaughter of Maplecrest Pontiac Burton. The second highest price was \$140 for Elroma Clothilde Pontiac, a four-year-old cow just about ready to freshen. She was a daughter of Hoosier Friend Pontiac and was bred to Creator Pontiac Korndyke. The next price was \$137.50 for Elroma Mulvie Segis, a four-year-old granddaughter of King Belle Segis and Hoosier Friend Pontiac.

Colonel W. A. Miller was auctioneer, the sale was managed by F. G. Johnston, veteran sale manager of Columbus, Ohio.

The readers of the HOLSTEIN BREEDER AND DAIRYMAN are dairying with Holstein cattle. They are just the men you wish to attract to your sale.

Cow Testing Association Reports

TESTING IN VIRGINIA

By L. P. EMMERICK

During the month of February there were sixteen active Virginia Cow Testing Associations. The reports from fifteen of these associations showed 276 herds and 7,176 cows on test. Of this total 524 cows produced over 40 lb. butterfat, and 141 over 50 lb. butterfat.

The high cow for the month was a purebred Holstein owned by F. A. Lewis of Manassas, Va., a member of the Prince William Cow Testing Association. Her record was 1,753 lb. milk, and 85.8 lb. butterfat. Of the ten high cows for the month, seven were grade or purebred Holsteins, two were purebred Guernseys and one was a grade Jersey.

The average production of all cows including 1,161 dry cows, was 519 lb. milk and 21.0 lb. butterfat.

During the month 88 cows were sold as unprofitable. Two purebred cows and four purebred bulls were purchased.

BLACK AND WHITES LEAD

Nine of the eleven highest producers enrolled in the Montour Valley Testing Association during February were black and whites, the leading six being registered Holsteins as were the eighth and ninth while a registered Holstein and grade tied for tenth place.

The leader was owned by Scott Bros. of Carnegie, Pa., with 67.25 lb. butterfat, 1,462 lb. milk; in second place is a two-year-old heifer owned by A. B. Craig of Sewickley, with 62.72 lb. butterfat, 1,960 lb. milk. Craig's purebreds are fifth and sixth in the list, while third and fourth places were taken by purebreds owned by Allegheny County Home. Scott Brothers herd consisted of three purebred and six

grade Holsteins and averaged 985 lb. milk, 36.75 lb. fat, leading in each division.

During February twenty-five herds containing 349 cows in milk were tested of which thirty-eight produced over 40 lb. fat and fifty-six over 1,000 lb. milk reports tester L. M. Stark.

SOUTH DAKOTA TESTING

A purebred Holstein owned by the Sioux Falls Penitentiary led the cows enrolled during February in South Dakota cow testing work. She is credited with 1904 lb. milk, 79.97 lb. fat. The Penitentiary herd consisting of 25 purebreds averaged 1,229.4 lb. milk, 44.68 lb. fat, while their average test was 3.62%. Their fat average is the second highest reported being exceeded only by five purebred Holsteins owned by E. H. Baldwin, with 45.17 lb. A grade Holstein herd was third, and fourth place was taken by 18 purebred Holsteins owned by Frank Johnson of Hetland with 41.53 lb.

During the month 2,360 cows were tested and averaged 643 lb. milk, 24.9 lb. butterfat. There were 212 herds tested and of this number 85 averaged 24 or more pounds butterfat per cow. It is reported that 28 cows were butchered because they were unprofitable.

MISSOURI COLLEGE HERD

The entire Holstein herd at the Missouri College of Agriculture averaged 17,026 lb. milk, 692 lb. butter in a year, reports A. C. Ragsdale, head of the Dairy Department. This showing was made despite the fact that 45% of the herd were two-year-olds at the time. Eleven daughters of the present herdsire King Fayne Ormsby, have completed records as two-year-olds that average 15,420 lb. milk, 645 lb. butter.

ILLINOIS TESTING

The W. T. Rawleigh herd located near Freeport led the Illinois Cow Testing Association for February work by averaging 60.1 lb. fat, 1,739 lb. milk. Third place is taken by a herd of ten purebreds owned by Fred Beckman of Deerfield with an average of 47.2 lb. fat, 1,431 lb. milk.

A purebred Brown Swiss led the state by producing 85.1 lb. fat, 2,299 lb. milk. Second place is taken by a purebred Holstein with 83 lb. fat, 2,307 lb. milk, she is owned by Nicholside Farm. Of the ten highest cows five are purebred Holsteins and two are grades. Production is reported by 23 associations of which nine are headed by purebred Holsteins and three by grades.

GOOD HOLSTEINS IN LINN

A purebred Holstein owned by the Hillcrest Dairy at Marion, Iowa, made the highest profit, \$33.92 in the Linn cow testing association No. 1 during February. The high herd consisted of eight purebred and grade Holsteins owned by Smith Brothers of Springfield, and they averaged 46 lb. butterfat, the high cow producing 66.2 lb. There were 273 cows on test for the month and their average production was 630 lb. fat, 26.2 lb. butterfat. All the herds in this association are headed by purebred bulls.

WANTED—Purebred cows, milking heavily now or due to freshen in fall. Must be good individuals and from an Accredited herd or herd under State and Federal Supervision. Address, T. W., c/o Holstein Breeder and Dairyman, Harrisburg, Pa.

Black Creek New York

WISCONSIN TESTING IN FEBRUARY

Two hundred and eighty cows were tested during February in the Cedarburg-Grafton Testing Association reports Gust Wild, official tester. Henrietta Champion Netherlands, a registered Holstein owned by Wm. Wegner produced 1,798 lb. milk, 79.1 lb. butterfat leading the association for the third time in the first three months of her lactation period.

The leading herd consisted of eight grade Holsteins, their average being 1,434 lb. milk, 50.9 lb. fat. The average production for the twenty-five herds tested was 886 lb. milk, 32.9 lb. fat.

Marian Girl, a purebred Holstein owned by Schurz Bros. of Bridgeport, Wis., was the leader of the 324 cows tested in the Prairie du Chien Association. She is credited with 1,929 lb. milk, 69.4 lb. butterfat. Fourteen purebred and grade Holsteins owned by Graul Bros. of Wauzeka, carried off the high herd honors, their average being 1,174 lb. milk, 40.80 lb. fat.

Thirty herds containing 516 cows enrolled in the LaGrange Testing Association during February, reports Clarence Bothe, tester. The leading herd owned by R. Watson, consisted of eighteen black and whites and their average was 937 lb. milk, 34.8 lb. fat. A grade Holstein owned by Chas. Marsh was high individual, having 61.7 lb. fat from 1,436 lb. milk.

BULL TOOK NO CHANCES

Frank Gillis of Glenwood, Wis., is interested in having the animals in his county tuberculin tested under the area plan but is meeting with considerable trouble. Some months ago he was instrumental in having petitions circulated but owing to some technicality, the movement was temporarily abandoned. Later new petitions were circulated and Mr. Gillis had a petition all signed up ready to mail. He hung his coat near the stall in which his big Holstein sire was kept and then went to work choring. The bull reached the coat, chewed it badly and possibly swallowed the petition as no trace could be found of it. Now Mr. Gillis is wondering if there could be any reason why the bull did not want the tuberculin test applied.

FOUR CLEAN TESTS FOR WITTER HERD

All the cattle in Allegany County, New York, have been tuberculin tested, the area being cleaned up about the first of the year. Over 4,000 herds underwent the test and, in several townships, there were hardly any reactors.

Among the herds tested was that of Mrs. Mary F. Witter & Son of Cuba. This herd was tested the first day of the year and the entire thirty-five head passed clean, making the fourth successive clean test of the Witter herd. The Witters have received their seal for their third accredited herd certificate.

The Witter herd has been established

nearly twenty-three years and has always been run from the dairy standpoint. Animals from this herd have gone into other hands and have made good both in official test and in general dairy work. In too many instances when a man establishes a purebred herd and achieves a reputation for high-class stock, the herd is dispersed at his death and it is pleasing to find a case where the work of an enterprising pioneer is carried on by his family who are following the plans and practices of the former head of the family.

HOLSTEIN BULL CALF AT \$50
Colantha Johanna Lad and King Korndyke Sadie Vale 40 lb. breeding.

The lucky purchaser must be prompt—

Satisfaction guaranteed. Herd Accredited.

F. C. BIGGS,

Trumansburg, New York.

OUR BIG BLACK COW

Notice her topline, depth of body, length, shape of udder and general dairy quality.

She and her stablemates are bred to **KING HENGVEELD LEFA JOH** a son of King Joh from a 32 lb. daughter of Dutchland Colantha Sir Inka.

Herd Accredited — Never a Reactor.
Quality High Prices Low.

COLANTHA**

Another big producing member of our ACCREDITED Herd. We offer sons and daughters of such cows sired by

**KING ECHO SYLVIA COLANTHA
SPOFFORD**

whose dam produced 30.55 lb. butter, 700.9 lb. milk in 7 days. His sire is one of the best sons of Champion Echo Sylvia Pontiac.

High Class Stock at Low Prices
AMSDEN BROTHERS
Cuba, New York

**CREAMELLE KORNDYKE
KONIGEN**

our senior herdsire, is a show bull of superior excellence. Study his type and conformation.

His daughters inherit his desirable characteristics, are producers and are bred to KING ORMSBY ENDERCAMP—ho by King of the Ormsbys from a 904 lb. year record daughter of Judge Segis.

Willow Brook Herd is ACCREDITED.

A. L. BOWELL & SON
Thompson Penna.

A FLORIDA COLLEGE HERD

The purebred Holstein herd owned by the Florida State College for Women at Tallahassee, Fla., has recently received an addition of six registered Holstein cows presented by the well-known sportsman, Harry Payne Whitney, who owns a large estate in Leon County.

The college herd has started in 1917 with twenty head. It now contains sixty cows as well as forty heifers, of varying ages.

The college farm contains about 240 acres. No appropriations have been made for the college farm except for the land, all the buildings have been erected and all stock bought from the farm proceeds. Besides the cattle there are 150 Poland China hogs and between 800 and 900 White Leghorns. J. G. Kellum, business manager of the college, gives a general supervision to the work which is carried on under farm foreman, J. P. Love.

Fresh vegetables and meats for the college dining room come from the farm where the hogs are killed and the meat placed in the college cold storage plant. There were 15,000 lb. fresh pork placed there in the past winter and is used at the rate of between 300 and 400 lb. weekly.

The college exhibited Poland China hogs at the Jacksonville Fair and won quite a number of prizes. Some of these hogs have since been purchased by county agents for boys' club work. Last year the flock of White Leghorns was started and now several hundred eggs right from the college's own poultry are furnished weekly for the students.

**NEW INTERSTATE SHIPMENT
REGULATIONS**

New regulations governing the interstate movement of livestock have been issued by the United States Department of Agriculture to take effect May 1, 1925. The principal changes in the regulations are in the form of additional precautions against cattle ticks and the disease spread by it. One section prohibits the interstate shipment of pine straw, grass, or similar litter that is tick infested or exposed to tick infestation, or the use of such material for packing or as car bedding for commodities or livestock to be shipped interstate.

Dipping stations are necessary at which cattle of a quarantined area may be inspected, dipped and certified for interstate movement. Such dipping stations are required to have a properly equipped dipping vat, non-infectious pens, paved or floored alleys, chutes and pens; and a roofed or covered section of sufficient size to protect dipped animals from rain and hot sun.

There was a sweet young lady

Who owned a motor car—

She drove it fast, she drove it slow,

She drove it near and far.

One day she drove it on a track,

The train came with a roar,

There was a sweet young lady, but

There isn't any more.

COLANTHA MAUDE DE KOL

634.6 lb. milk, 30.46 lb. butter in 7 days, 98 lb. milk in a day as a senior three-year-old.

Bred, raised and tested in SYLVDALE Herd. We now offer calves, either sex, of May Echo Sylvia blood. This is YOUR opportunity to secure animals of this great producing strain from an Accredited Herd.

GLENN L. WARNER

from an Accredited Herd which is headed by

**Berylwood Prince Aaggie
Chicago**

whose dam and sire's dam have year records averaging 1,224 lb. butter, 26,978 lb. milk or 102 lb. butter, 2,248 lb. milk monthly.

L. L. ALLIS

Bradford Co., Rummerfield, Pa.

YOU NEED A SON OF

**SUSQUEHANNA JUDGE SEGIS
LEORALINE**

whose sire and dam are both from cows that made over 31 lb. butter in 7-day official test.

The blood of several of the breed's greatest sires runs in his veins.

Our cows are producers and select individuals.

This Herd is Accredited.

MURRAY A. MILLER

Sunny Lawn Stock Farm,
—Milton, R. D. 3, Pa.—
The oldest Herd in Northumberland Co.

**BACKED BY THE WORLD'S
RECORD**

Rolo Pontiac Fayne is the name of the three-year-old bull heading the high class herd of Holsteins owned by Charles Wertheimer of Frederick, Maryland. Although not in show condition, Rolo was placed second in his class at the Frederick Fair last fall competing against older bulls at least one of which had had an extensive show career. Those who have seen this bull since that time claim that he has greatly improved and that he will be a hard bull to defeat next fall.

Rolo Pontiac Fayne is a son of Rolo Mercena De Kol, the cow credited with

ROLO PONTIAC FAYNE

The highest record bull in the world owned by Charles Wertheimer, Frederick, Md.

making the largest seven-day record ever reported. To her credit in the Canadian Association's test books, she has records of 738.9 lb. milk and 51.93 lb. butter in seven days, 2,930.6 lb. milk and 201.17 lb. butter in thirty days, 5,699.7 lb. milk and 342.58 lb. butter in sixty days. She is a daughter of Sir Rolo Banks Mercena and her dam, Flora De Kol Pietertje has no less than seven daughters with official records, five over 20 lb. butter in seven days.

The sire of Mr. Wertheimer's herd bull is King Pontiac Hengerveld Fayne, a son of King of the Pontiacs from Segis Hengerveld Fayne Johanna, 593.7 lb. milk, 34.33 lb. butter in a week and 20,316.1 lb. milk, 1,129.37 lb. butter in 365 days. This cow is a daughter of Segis Fayne Johanna and on the authority of ex-president Aitken himself, we can state that at one time it was seriously considered using pictures and models of this cow as the official "TRUE TYPE."

PENNSYLVANIA COW IN COLORADO

In 1916 a consignment sale was held at Towanda, Pa., in which a number of Pennsylvania raised heifers were sold to go to Colorado. One of these heifers was Sally Clothilde Netherland 2d, a daughter of King Pontiac Konigen 6th and Sally Clothilde Netherland. She was bred by R. B. Kerrick of Towanda and went for a low price.

Sally became a member of the herd owned by J. H. Barnard and when that herd was sold she with four other Pennsylvania animals joined the purebred Holstein herd owned by the Colorado School for the Deaf and Blind at Colorado Springs. Last year as a seven-year-old cow she was put in official test in which she made 627 lb. milk, 36.08 lb. butter in a week. This year she recently closed another seven-day record in which she

**The Importance of the Right
Grain Ration!**

In the Bonnymeads Herd Sale, held at Harrisburg, March 25, 99 animals, ranging from little calves to a ten-year-old cow, averaged at public auction \$187.22.

The 66 animals two-years-old or more averaged \$222.95.

Not one animal in the sale had an official record.

Only TWO were from record dams.

Only FIVE had TWO record granddams.

TWENTY-ONE had one record granddam.

SEVENTY-THREE had neither tested dam nor tested granddams.

As the highest price was \$375, you can see the general high average of the prices realized, and the quality of stock offered.

Last year the entire milking dairy of 60, one-third of which were two-year-old heifers, averaged around 11,000 lb. milk in their general dairy work.

THEIR PRINCIPAL GRAIN RATION WAS

UNION

**THE FIRST
COMMERCIAL
DAIRY FEED
MADE**

GRAINS

**THE BEST
DAIRY FEED
ON THE MARKET
TODAY**

To UNION GRAINS is attributed much of the credit for the splendid production of the BONNYMEADS DAIRY and for the general condition and fine appearance of the BONNYMEADS animals on sale day, which caused the buyers present to pay satisfactory prices for them.

The Ubiko Milling Co.,

Charles R. Neff, Harrisburg, Pa., Penn'a Representative

made 37.05 lb. butter, 631 lb. milk. Only twice in the state has this record been excelled by two cows, now dead, developed by Dr. Hubert Work, now Secretary of the Interior, then a resident of Pueblo.

The output of the school dairy is used entirely by the school inmates and officials. The present superintendent is Thomas S. McAloney.

The herdsire is Columbine Ascalon Changeling, a bull whose progeny carried off most of the prizes at the last Central Colorado Fair.

A BUSINESS FARMER

Harvey L. Seltzer is a business farmer of Palmyra, Pa., who owns nineteen head of purebred Holsteins to which he added several in the dispersal of the W. A. Woods herd. One of the animals he owns is Allamuchy Johanna Lotta, a four-year-old daughter of King of the Johanna Lads from a daughter of Korn-

dyke Abbekerk. He also owns Tranquility Ormsby Aaggie Lass, a granddaughter of King of the Ormsbys and Belmont Paul Clothilde, a cow that made 33.28 lb. butter, 717.8 lb. milk in a week. Another animal in the Seltzer herd is King Piebe of York Veeman Eva, a daughter of King Piebe of York from Hill Pine Veeman Eva, she by King Korndyke Wayne Veeman from a daughter of King Pontiac Pleione.

Mr. Seltzer owns three farms just outside the town of Palmyra. Like most farmers in that section of the country he grows tobacco and fattens steers and in March, sold a bunch of steers to the packing firm of Swift & Company for the attractive price of \$13.75 per 100 lb.

A prominent medical man says he would like to take the corsets off every young woman in America. Ambitious, isn't he?

The Breeder and Dairyman Exchange

Copy must reach us by the 1st or 15th of each month to appear in the current issue.

Advertisements for this department set up without display type or illustration, accepted at the rate of five cents per word, one insertion, minimum of twenty words. Three insertions, ten cents per word. Every word or abbreviation in name and address must be counted as a word.

In all cases, cash must accompany order. Other rates on application.

IDEAL FARM NEWS

On the tenth day of January in the
herd of Cecil L. A. Resseguie, of Kings-
ley, Pennsylvania, his great cow, Pietje
Alcartra Fayne, dropped a big strong
bull calf, a full brother to his herdsire,
Ideal King Creamelle.

This sire is called in Northern Penn-
sylvania, "the Bull with an Ideal Dam."
His dam, Pietje Alcartra Fayne is a
show cow as well as a great producer.
She has an official seven-day butter re-
cord of 30.03 lb. with 707.7 lb. milk, and
she is credited with the production of 104
lb. milk in a day. She is the highest re-
cord daughter of King Pontiac Alcartra
Pietje, regarded as being the most fa-
mous Holstein sire ever in Northern
Pennsylvania.

Mr. Resseguie calls his establishment
Ideal Farm, and considers Pietje Alcar-
tra Fayne as near ideal as it is practically
possible to get when individuality, milk
flow, butter production, fat percentage,
reproduction and breeding are all con-
sidered.

Pietje Alcartra Fayne has several
daughters. Her youngest daughter
freshened the third of last November
with a nice bull calf and is still milking
around 60 lb. a day and this is her first
lactation period. She is a handsome
heifer, light in color and when she was
fresh her udder measured 80 inches in
circumference. A little later we expect
to show our readers how she looks, but
the first pictures were spoiled, not how-
ever, from any fault of the subject.

WHY THE ANTI-MILKERS?

Why do men of every ilk seem to hate
like sin to milk? "Don't mind chopping
feed," they'll say, "don't mind pitching
heavy hay; don't mind working with a
rake or a hoe of any make, don't mind
sowing turnip seeds or destroying noxious
weeds; don't mind driving balky colts,
tinkering with nails and bolts; don't
mind rolling out at dawn just to clip
and rake the lawn; don't mind handling
threshing rigs, feeding calves or squeal-
ing pigs; will do anything I see, anything
you ask of me, except, except, just one
thing now,—I detest to milk a cow!
Never was much good at that; cows drop
off in butterfat just as soon as I begin,
always do, as sure as sin! Sorry, boss,
that this is so; thought it best to let
you know!" Thus each man I seek to
hire drums upon his ancient lyre, thus he
sings his ancient song, repeats it as he
goes along! I've no faith, I'll say I've
not, with such silly tommy-rot; I grow
weary of such tunes; men like that are
full of prunes! I have farmed for years
and years, do each job as it appears, and
don't hate to milk a bit; in fact, I'm
rather fond of it! There's no reason
for a man built on sanely, normal plan
to repeat this silly wail, slander on the
stool and pail! It's a habit, that it is,—
just like some folks' rheumatiz!

Music teacher: "What is your idea of
harmony?"

Smart student: "A freckle-faced girl
with a polka-dot dress leading a giraffe."

OFFICES: EVANGELICAL BUILDING
BOX 110, HARRISBURG, PA.

AMATEUR PICTURE CONTEST

To the Breeders and Dairyman:

Send us pictures of your good Holsteins. We are offering One Hundred One
Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for
the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as
follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our
readers the kind of cattle you own and breed. You are just as likely to receive the
Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at
least one of the prizes.

Only pictures of mature cows will be accepted. The name and address of the
sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the
animal. Group pictures should be accompanied with a letter, telling something about
the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of
which must be of a single animal and the other a group of animals. All Prize Pic-
tures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate
in this contest. If you are not a subscriber send in your subscription with the pic-
tures. Join the Contest and win a prize.

The Holstein Breeder and Dairyman

Vol. IV

HARRISBURG, PA., APRIL 22, 1925

No. 8

The Dewitt Griffing Herd

ONE of the best little accredited herds in Susquehanna County is that owned by M. De Witt Griffing, Heart Lake, Pa. The Griffing herd contains about thirty head and has been headed by a number of good bulls. It was started in 1917 by the purchase of a cow from Will Sterling, a well-known Pennsylvania Holstein breeder. This cow had lots of capacity and in testing association work made 13,000 lb. milk in less than a year. So pleased was Mr. Griffing with his purchase that several years later he increased his herd by the purchase from Mr. Sterling, of a number of heifer calves which are now nice young cows.

One of these calves, Segis Sunnymede Albina as a five-year-old is giving from 60 to 70 lb. milk daily on two milkings a day. When she was three years old she was enrolled in the local cow testing association and in 190 days produced 8,820 lb. milk, 309.4 lb. fat, certainly a very creditable record. She and at least two other members of this herd are daughters of K. P. J. A. Albina. His dam, Arcady Segis Albina Cornucopia, is a daughter of the century sire, Pietertje Hengerveld Segis, with a seven day record of 518.1 lb. milk, 23.34 lb. butter and a 30 day record of 2,029.7 lb. milk, 93.79 lb. butter. His sire is a son of King Pontiac Jewel, who was by the King of the Pontiacs from a 30 lb. daughter of Hengerveld De Kol with a year record of 992.11 lb.

One of the oldest cows, Queen Amleto Beauty Pietje, is from a record daughter of Pietje Pender and was by Sir Pontiac Artis Climax, who has a number of good daughters in northern Pennsylvania and who was by Sir Korndyke Pontiac Artis from a daughter of Sir Veeman Hengerveld.

In this herd there are several daughters of Crown King Pontiac Maida, whose dam made a 23.78 lb. butter

GRAND CHAMPION SEGIS 2D
The head of the herd.

record as a four-year-old averaging over 70 lb. milk a day which his sire, King Pontiac Polkadot, was by King of the Pontiacs from Alcartra Pontiac Ormsby 2d.

The first bull to head the Griffing herd was Clothilde Pontiac Leila. He was by the well-known Spring Farm King Pontiac and was from Leila De Kol Clothilde 2d, 25.09 lb. butter, 520.5 lb. milk in a week as a three-year-old and 26.86 lb. butter,

560.3 lb. milk in seven days as a four-year-old.

Two sons of Dutchland Creamelle Korndyke Lad were used in this herd. Dutchland Creamelle Konigen Segis was from King Segis Pontiac Konigen Clara, a daughter of King Segis Pontiac Konigen with a seven day record made as a four-year-old of 582.8 lb. milk, 31.19 lb. butter. Dutchland Creamelle Segis Konigen was from Segis Pontiac Dewdrop, another daughter of King Segis Pontiac Konigen with records made as a three-year-old of 36.77 lb. butter, 560.3 lb. milk in a week, 858.43 lb. butter, 18,155.5 lb. milk in ten months.

Dutchland Konigen Burke was also used. His sire was King Segis Pontiac Konigen and his dam has an official record of 489.1 lb. milk, 23.37 lb. butter and was also closely related to a number of large producers.

The present head of the herd is Grand Champion Segis 2d, owned jointly by Mr. Griffing and Mack Brothers of Montrose. This bull is a very fine individual, much better than his picture indicates. He is also a splendid sire both of good individuals and big producers. Last year the champion herd exhibited at Montrose, where the Susquehanna County Fair is held, consisted of his daughters and his offspring are always in demand. He is backed by famous sires and large record cows. His sire, Grand Champion Segis, was a famous show bull and was by King Segis Champion from Maid of Salem Center De Kol, 30.17 lb. butter, 678.5 lb. milk. His dam, Bell Segis Champion, was a

THE KIND WE LIKE

TENDING TO BUSINESS

VIGOR AND CONSTITUTION

noted show animal and, as a four-year-old, was credited with 37.15 lb. butter, 523.6 lb. milk in a week, 123 lb. butter, 2,294 lb. milk in thirty days. Her dam was a 26.77 lb. cow and her sire, King Segis Champion, was from the 36 lb. show cow, Aaggie Pauline Sarcastic, and was by a son of the former world champion, Pontiac Clothilde De Kol 2d.

The three nearest dams of Grand Champion Segis 2d have seven day records that average 31.36 lb. butter.

SNAPPED IN THE GRIFFING PASTURE
The quality of the cattle is apparent at a glance.

His six nearest dams average 32.07 lb. and his seven nearest dams have records averaging 32.8 lb.

Some of the younger members of the herd are by King Valdessa Pontiac Perfection, a very handsome bull that spent most of his lifetime in this vicinity. He was the son of King Valdessa Pontiac and Sweet Lady Pontiac, 556.1 lb. milk, 27.21 lb. butter in seven days. The daughters of this bull show great promise.

The Griffing herd is home bred and home raised and only three of the animals at present in the herd were not dropped on the premises. The herd contains three pairs of full sisters and a number of the animals are very closely related, consequently you might expect to find a uniformity of type and conformation and you would not be disappointed. Mr. Griffing is a capital

YOUNG STOCK ON THE GRIFFING FARM

judge as well as a high class dairyman. He considers his herd the tools with which he works and, like all high class workmen, endeavors to have the best tools obtainable and to take care of them and to keep them in the best of condition. The animals in this herd would please the most critical judge no matter whether he looked for condition or individuality.

The herd has been enrolled in cow testing association work whenever one was operating in that locality and

has always made a good showing both for production and profit.

The farm on which this herd is kept is known as the old Griffing homestead. At one time the present owner's grandfather lived on the farm and so it has been in the family for many years. The farm is in a good state of cultivation and is well adapted to the dairy business. The land is stony and contains 160 acres of which less than one-half are tillable.

De Witt Griffing is a progressive farmer. This is shown not only by dairying with purebred Holsteins but is also demonstrated by the fact that this herd is accredited. The cattle owners of Susquehanna County are endeavoring to have the whole county made a modified, accredited area and Mr. Griffing is one of the leaders in the campaign to induce his neighbors to sign petitions to have their herds tested. As Susquehanna County contains more Holstein herds than any other county in Pennsylvania, and as the herds of this county are noted for both production and individuality, it can be seen that this means much to the Holstein Industry of the Keystone State.

Wages and the Butter Demand

BEFORE the Dairy Club in Chicago, April 16th, Dr. C. W. Larson, chief of the Dairy Bureau delivered an address in which he pointed out an apparent correlation between the butter consumption and labor employment. During the months of July, August and September last year there was a marked falling off in butter consumption probably caused by a very marked decline in employment and rate of wages in some of the major American industries. A summary of the employment and rates of wages paid in the principal industries including the iron and steel industry, automobiles, textiles, leather products, electrical manufactures and some others which are now available show a decline in the volume of employment of about 20% for those months over the same months the preceding year. It is a remarkable coincidence that this decline in volume of employment is just about the same as the decline in the butter prices for the same period, and was coincident with the accumulation of the largest storage stock of butter ever accumulated in this country.

Dr. Larson's figures are based upon nearly complete production reports, complete reports on storage stocks, on imports and exports, so that there is little possibility of questioning his figures. There are students of the dairy business who believe that the demand for butter is almost entirely controlled by the ability of the American public to buy. When butter is high, consumption is cut down, and the demand for oleo increases. When butter is low in price the American housewife purchases it in preference to oleo. A study of the butter and oleo trade over a series of years indicates this very strongly. It is also very likely that when the housewife has more money to spend she believes she can afford more butter.

All records for bad luck were broken in the herd of a Canadian breeder when he got one heifer in 125 calves, all sired by the same bull.

Brownwood—Home of Utility Holsteins

BBROWNWOOD is one of the leading Holstein establishments in northeastern Ohio. It is located at North Bloomfield, Trumbull County about sixteen miles north of Warren. The Brownwood Herd consists entirely of purebred Holsteins and their product is marketed as certified milk in the cities of Warren, Ohio, and Pittsburgh, Pa.

In 1811, Ephraim Brown, great-grandfather of the present owner, moved from Westmoreland, N. H., and purchased the entire township of Bloomfield from the Connecticut Land Company, obtaining a tract five miles square. Mr. Brown was instrumental in getting some of his friends to join him in the new country and sold portions of his holdings to them. At present the property includes 350 acres of land which has always been owned by the family and an additional tract of 277 acres located about one mile from the main farm which, after a number of years ownership by outside interests, has been re-purchased by Mr. Brown.

At first Ephraim Brown, his wife and children lived in a log cabin. Their house was ready for occupancy in 1816 and the original house forms the front of the present house showing that it was well built and well designed.

The present owner, Alexander C. Brown is president of the Brown-Hoist Machinery Co., of Cleveland and has many other business interests. He inherited the farm from his great aunt, Miss Anne Brown, the last surviving daughter of the original settler. At the time he took possession in 1914, there was a herd of graded Holstein cattle which has been gradually converted into a purebred herd of excellent quality.

It is interesting to note that registered cattle have been kept on this farm for more than fifty years for

record books of the establishment show that there was a large herd of full blood Durhams on the farm in 1874 and surplus purebred stock was sold for several years. The old records were kept in detail and show that at that time the manager was a high-class, progressive farmer.

When the present owner assumed control and particularly after Superintendent F. M. Mack became connected with the establishment the dairy business was developed. The herd was put under state and federal supervision with such success that in four successive yearly tests the herd has been given a clean bill of health.

For a time official testing was practiced and a number of creditable short time and long time records made but it was soon apparent that record making and the production of certified milk did not go well together and record making was dropped.

With a healthy herd of Holsteins kept scrupulously clean and with efficient management and capable help, it became easy to produce milk of such high quality that it was in demand. Strict sanitation was practiced in the barns and milk room. After the milking utensils were used, they are placed in an oven and sterilized under steam pressure. Prompt cooling of milk has much to do with the making of a high-class product and the Brownwood certified milk is cooled, bottled, sealed and packed in ice within five minutes after each cow is milked.

As Brownwood has been run from a dairy angle and as a breeding establishment, only a few surplus females have been sold and none purchased excepting when it was necessary to keep up the milk supply so that an account of the breeding of the herdsires used would show the strains of breeding found in the herd pedigrees. The three principal sires used were Forest City Sir Fayne, Utilitor, and King Valdessa Pontiac Gem.

Forest City Sir Fayne was by Maplecree High-lawn Cleveland from Segis Fayne Princess, 24.16 lb. butter, 607 lb. milk in a week, 1,055.03 lb. butter, 27,656.9 lb. milk in a year. Her dam is a tested daughter of King Segis Pontiac while her sire, Sir Fayne Concordia has a number of good record daughters and is full brother to Grace Fayne 2d's Homestead, 35.55 lb. butter in a

All records for bad luck were broken in the herd of a Canadian breeder when he got one heifer in 125 calves, all sired by the same bull.

Brownwood—Home of Utility Holsteins

BBROWNWOOD is one of the leading Holstein establishments in northeastern Ohio. It is located at North Bloomfield, Trumbull County about sixteen miles north of Warren. The Brownwood Herd consists entirely of purebred Holsteins and their product is marketed as certified milk in the cities of Warren, Ohio, and Pittsburgh, Pa.

In 1811, Ephraim Brown, great-grandfather of the present owner, moved from Westmoreland, N. H., and purchased the entire township of Bloomfield from the Connecticut Land Company, obtaining a tract five miles square. Mr.

Brown was instrumental in getting some of his friends to join him in the new country and sold portions of his holdings to them. At present the property includes 350 acres of land which has always been owned by the family and an additional tract of 277 acres located about one mile from the main farm which, after a number of years ownership by outside interests, has been re-purchased by Mr. Brown.

At first Ephraim Brown, his wife and children lived in a log cabin. Their house was ready for occupancy in 1816 and the original house forms the front of the present house showing that it was well built and well designed.

The present owner, Alexander C. Brown is president of the Brown-Hoist Machinery Co., of Cleveland and has many other business interests. He inherited the farm from his great aunt, Miss Anne Brown, the last surviving daughter of the original settler. At the time he took possession in 1914, there was a herd of graded Holstein cattle which has been gradually converted into a purebred herd of excellent quality.

It is interesting to note that registered cattle have been kept on this farm for more than fifty years for

record books of the establishment show that there was a large herd of full blood Durhams on the farm in 1874 and surplus purebred stock was sold for several years. The old records were kept in detail and show that at that time the manager was a high-class, progressive farmer.

When the present owner assumed control and particularly after Superintendent F. M. Mack became connected with the establishment the dairy business was developed. The herd was put under state and federal supervision with such success that in four successive yearly tests the herd has been given a clean bill of health.

For a time official testing was practiced and a number of creditable short time and long time records made but it was soon apparent that record making and the production of certified milk did not go well together and record making was dropped.

With a healthy herd of Holsteins kept scrupulously clean and with efficient management and capable help, it became easy to produce milk of such high quality that it was in demand. Strict sanitation was practiced in the barns and milk room. After the milking utensils were used, they are placed in an oven and sterilized under steam pressure. Prompt cooling of milk has much to do with the making of a high-class product and the Brownwood certified milk is cooled, bottled, sealed and packed in ice within five minutes after each cow is milked.

As Brownwood has been run from a dairy angle and as a breeding establishment, only a few surplus females have been sold and none purchased excepting when it was necessary to keep up the milk supply so that an account of the breeding of the herdsires used would show the strains of breeding found in the herd pedigrees. The three principal sires used were Forest City Sir Payne, Utilitor, and King Valdessa Pontiac Gem.

Forest City Sir Payne was by Maplecrest High-lawn Cleveland from Segis Fayne Princess, 24.16 lb. butter, 607 lb. milk in a week, 1,055.03 lb. butter, 27,656.9 lb. milk in a year. Her dam is a tested daughter of King Segis Pontiac while her sire, Sir Fayne Concordia has a number of good record daughters and is full brother to Grace Fayne 2d's Homestead, 35.55 lb. butter in a

Center: The light, airy, sanitary barn interior.
Bottom: Washing the cows before milking.

week, worlds' record when made. Maplecrest High-lawn Cleveland is by Friend Hengerveld De Kol Butter Boy from Burton High-lawn 2d's Hartog, the first cow in Ohio to make a 30-lb. official seven-day butter record.

Utilitor is a son of Meadow Holm Peep Hartog and Caddy Mutual De Kol, 31.16 lb. butter, 620.9 lb. milk in seven days, 128 lb. butter, 2,698.6 lb. milk in thirty days. Tested for the full year she is credited with 1,127.61 lb. butter, 24,564.8 lb. milk. She is from a 20-lb. cow and was sired by a son of De Kol 2d's Mutual Paul the youngest son of the famous old foundation cow, De Kol 2d.

Meadow Holm Peep Hartog has a number of good record daughters. He was by Maple Crest Pontiac Hartog, a son of Pontiac Aaggie Korndyke and the 30-lb. cow Burton High-lawn 2d's Hartog.

The dam of Meadow Holm Peep Hartog is Early Dawn Peep 2d, 33.52 lb. butter, 634.1 lb. milk in a week, 1,287.72 lb. butter, 26,204 lb. milk in a year. She is full sister to Aaggie Wayne Peep, 34.59 lb. butter in seven days, 1,250.35 lb. butter, 27,762.5 lb. milk in a year.

The dam and sire's dam of Utilitor have year records that average 1,207.66 lb. butter and seven-day records that average 32.24 lb.

King Valdessa Pontiac Gem is a son of King Valdessa Pontiac and Pabst Cynthia, 38.311 lb. butter in seven days, 16,188.2 lb. milk, 764.03 lb. butter in ten months. She was by King Pontiac Champion and from Pabst Colanthus Terzool, 672.7 lb. milk, 29.61 lb. butter in seven days, 20,558.8 lb. milk, 818.83 lb. butter in a year. The work of the daughters of King Valdessa Pontiac is too well known to need mention at this time and, as everyone knows, he was by King Valdessa from the 40-lb. heifer and show cow Mabel Segis Korndyke.

Superintendent Mack tells a story of a former member of the herd which in itself illustrates how the herd was built up and how it has been managed.

In the fall of 1917, fire destroyed the barn of Leon Peck, a good dairyman of West Farmington, Ohio. In consequence Mr. Peck called a sudden sale to dispose of his Holstein herd. At that sale Brownwood purchased three close-up heifers, one of which was Cornucopia Paul Beets, No. 319983.

In her new home she dropped a heifer calf, January 11, 1918, and put in official test, made a small official record. Continued on test for 305 days she was credited with 475.4 lb. butter, 12,356.3 lb. milk. Most of the time she was milked three times a day. As a three-year-old she was milked by machine as it was almost impossible to obtain dairy help in this section of the country under post-war conditions and she did not do very well. However, when she freshened in September, 1921, conditions had changed and with new help she was put in a year test and finished with 25,988.9 lb. milk, 1,002.49 lb. butter. She developed cystic ovaries and after being kept in the milking herd for another two years during which time she produced about 25,000 lb. milk, was sold to the butcher, almost exactly seven years from the day she was purchased.

In these seven years she produced around 100,000 lb. milk and three heifer calves. The first one, Brownwood Paul De Kol, which she was carrying when pur-

chased, developed into a show cow and a big producer and was sold to a New Jersey breeder. The second, Brownwood Paul Beets sired by Forest City Sir Fayne, was sold at the Cleveland National Sale and has since made a very large record while the third, Brownwood Paul Beets Fayne, full sister to the second will be sold in the coming sale together with some granddaughters of her mother.

Cornucopia Paul Beets, in milk and progeny, produced more than fifty-five times her cost. Mr. Mack says she is typical of the opportunities that will be offered in the sale to be held on the farm on May 5th in which there will be practically the cream of the herd. This sale is occasioned by the leasing of one of the farms. It is simply a reduction sale as the entire herd is now too large to be kept at the home establishment. This event offers an opportunity to all interested in marketing Holstein milk at the highest figure to see an up-to-date, high-class breeding establishment which has successfully marketed its product in two different cities in the form of certified milk, to see many animals closely related to those it is proposed to sell at auction and to study the animals under the conditions and environment to which they are accustomed.

American Scientists to Investigate Foot-and-Mouth in Europe

WHEN foot and mouth trouble was raging in California, there was a demand that government scientists investigate the disease and, if possible find some method of curing it. The authorities at Washington believe it is better to keep this trouble out of the country than attempt to control it after it is in, and all suggestions of cooperation were then refused. But pathologists will be sent to Europe to study this cattle trouble which has attacked herds and flocks in this country at intervals over a period of forty years. The 68th Congress by the Second Deficiency Act provided a sum of \$75,000 for this purpose.

Dr. P. K. Olitzsky of the Rockefeller Institute for Medical Research, Dr. Jacob Traum of the University of California and Dr. Harry W. Schoening of the Pathological Division, Bureau of Animal Industry, are the three men selected. They will go first to Berlin where it has been reported that the organism which causes foot and mouth disease has been discovered. It is probable that they will then go to Budapest, Hungary, and to Alfort, France, to make studies of the disease and of the methods used by scientists in these research institutions. Their final headquarters will depend upon the character of the work being done at these three laboratories. The American scientists will collaborate with foreign scientists who are working on the same or similar problems.

"When young, untried stock is sold, the breeder should keep in touch with the purchaser so that if the stock does not turn out as it should through no fault of the purchaser, the breeder can make the deal right. It pays directly and indirectly, aside from the fact that it is the fair way to do."

"Preach individuals first and pedigrees second."

A Live Wire Tester

THE President of the Pennsylvania Testers' Association is A. A. Raudabaugh, of New Kingston, the tester for the Cumberland County Cow Testing Association. He comes from a family of Holstein breeders and dairymen, is a Holstein enthusiast himself, is always on hand at any Holstein gathering in his county, and his services as pedigree reader are in great demand at local sales where the farm herd contains a number of purebreds.

Mr. Raudabaugh has been in charge of the Cumberland County Testing Association ever since it was

A. A. RAUDABAUGH,
President Pennsylvania Testers' Association.

started in 1919. The first year the average production of the cows enrolled was 7,325 lb. milk and 244.6 lb. butterfat. Last year the average was 9,779 lb. milk, 348.4 lb. butterfat, or an increase of 2,454 lb. milk, 103.8 lb. fat. This increase was brought about by culling the poor producers and by feeding a better balanced ration to the remaining animals following the counsel of Mr. Raudabaugh, who has practical as well as theoretical knowledge of dairy work and cattle breeding.

The News in Brief

PRINTERS' labor troubles interfered with the issuing of London weekly periodicals so the *Agricultural Gazette* instead of its issue of March 27 sent out a two page multigraphed letter giving in brief the news of the week. From this we note that Dr. Shaw's foot and mouth remedy is to be officially tested by government representatives and a cattle testing station is being prepared.

The British Friesian cow, Findlay Clara 2d, has set up a new British milk record by the production of 36,110 lb. in 365 days, an average of more than 98 lb. daily. In her previous lactation she was credited with 34,490 lb. milk, 1,371 lb. butter in 365 days. Clara is owned by George Findlay, Glasslaw, Stonehaven, Scotland.

The Essex Farmers Union is establishing milk depots with small factories at a number of places in that country.

A shipment of 108 Guernsey cows and heifers have left the Island for Massachusetts. The valuation is given as \$40,000.

Two Friesian auction sales are reported. At Reading, central England, fifty-four head averaged \$194, while at Perth, northern Scotland, twenty-three head averaged \$192. It is interesting to note how closely these figures approximate.

The Farmers' Union in the West Riding of Yorkshire have fixed their price for summer milk at 36c per gallon.

Considerable information on prices of grain, cattle and agricultural products is given as well as other news. Our English contemporary is to be congratulated on its enterprise in getting the news to its subscribers.

Your Help Requested

A STATISTICAL study of prices on farm products and the things farmers buy over a long period of years is being made by Charles F. Saile of the Department of Agriculture, Washington, D. C. Private accounts of farm sales and purchases, files of old county newspapers, farm magazines and the records and books of old time county merchants, grain and live stock buyers furnish information of this character and anyone having old diaries or records of this kind are asked to communicate with Mr. Saile. It is intended to develop index numbers and charts on the long time trend of prices of things farmers sell and farmers buy and these will be studied by the department, as it is believed that the long time trend of prices forecast what prices will be in the future. Whatever the value of the predictions will be, a study of a nation-wide trend of prices over a long period of time is sure to be interesting and instructive. The department will welcome help in getting the information and many remarkable stories are bound to be unearthed.

About sixty-two per cent of purebred livestock is marketed directly for meat purposes.

Sensational Sale Reported

JUST as this issue of the BREEDER AND DAIRYMAN was going to press, the following telegram was received from E. H. Agee, Secretary of the Southern California Livestock Breeders' Association:

"LOS ANGELES, CALIFORNIA.

"We are pleased to announce the sale of Prince Aaggie of Berylwood, the highest record butter bull in the world, by Berylwood Stock Farms to Billwhack Ranch, August A. Rubel, proprietor, Santa Paula, California, for one hundred ten thousand dollars. Mr. J. W. Snodgrass, manager of Berylwood, completed the sale on April 15th.

"SOUTHERN CALIFORNIA LIVESTOCK

BREEDERS' ASSOCIATION,

"E. H. AGEE, Secretary.

This communication is of special interest to Pennsylvanians, as Prince Aaggie of Berylwood is the sire of

Retrenchments in Extension Department

THE SERVICES OF ALLEN N. CRISSEY, STANLEY COMBS, W. E. MEYER AND E. G. HORST DISPENSED WITH.

ALL NEWSPAPER ADVERTISEMENTS BY THE ASSOCIATION TO BE DISCONTINUED.

THE HOLSTEIN BREEDER AND DAIRYMAN has continuously advocated discontinuing wasteful and unnecessary expenditure of the breeders' money to carry on so-called extension work.

Unnecessary and inefficient extension work has cost the Holstein breeders over one-half million dollars in the past few years, and during this time the price and demand for Holstein cattle and the amount of business which the Holstein-Friesian Association transacted has steadily decreased.

The members and breeders generally resent being unnecessarily taxed through increased fees to carry on political extension work of the character pursued during the past few years. They will demand that further retrenchments be made and the services of other unnecessary workers be dispensed with.

Retrenchments in the Extension Department is the first move towards restoring the Association to its former position where it and the industry can enjoy prosperity. After the "mess" in the Extension Department has been cleaned out and the place "scrubbed up" it will then be necessary to reduce fees, dispense with the services of the ten unnecessary directors and adopt a business form of government in order to place its "house" in order.

Sometimes an old bachelor wishes he had married before he was old enough to have enough sense not to do it.

THE PRACTICAL DAIRYMAN

BUILDING CALF PENS

Economical commercial dairying demands that the dairy calves be raised by hand rather than by nursing their mother. This fact makes it necessary to provide a place to keep the young calves while being fed milk. The essentials for such quarters are: (1) that they can be easily cleaned; (2) provided with an abundance of sunlight; (3) properly drained, so as to prevent any surface water from entering, or from becoming damp from any cause; and (4) an arrangement which will permit the feeding and care of the calves with the least amount of labor in quarters that give the calves enough room.

Calves raised on skimmilk in practically every case develop the habit of sucking one another's ears, navels, and udders immediately after being fed milk. This habit often results in the udders being misshapen, or entirely blind in one or more quarters, when the heifer comes in milk. If this habit was limited to the period just after feeding milk, the difficulty could be overcome by keeping the calves in stanchions for 30 minutes or more after each feeding; but during the day, when the young calves become hungry, they will start sucking again.

To prevent this trouble each calf should have a small pen of its own. This is not as hard to provide as might seem. A long pen six or seven feet wide can be divided into pens by placing gates across at proper distances, depending on the number of calves on hand and the space available. To make it easy to get the calves in and out of the pens and to clean the pens, these gates may be fitted with a cord in the center which passes over a small pulley overhead, and with a weight attached on the other end and heavy enough to balance the gate. This will allow the gate to be raised out of the way when not needed. The gate should be fitted into grooves at each end formed by using a 2x4-inch upright and 1x3-inch slats nailed on each side to form the slot. Such an arrangement is inexpensive and makes a safe and convenient pen for young calves.

SILAGE FOR SUMMER FEEDING

Most dairy farmers appreciate the value of the silo for providing a palatable, succulent ration in convenient form for feeding during the winter months. However, it is just as important to provide this succulent during the summer months when permanent pastures are short on account of drought, insect damage, or insufficient acreage for the number of cattle kept. During this period of the year when pastures are cut short and some other succulence is provided, the milk flow is invariably decreased, and it becomes practically impossible by liberal feeding later on in the lactation period to increase the production to where it would have been had these short pastures been supplemented by some additional succulent feed. Summer silage provides succulence, during these periods, in the most convenient and reliable form and is usually a cheaper method than the use of soiling crops since it requires less labor during the busy cropping season.—Clemson College Bulletin.

FEED DOPE

The New York State News Letter issued under date of March 25th reports a continued sag in feed prices. Nine of the common feeds show an average drop of \$2.31 a ton. Barley, gluten feed and cottonseed show a slight raise.

The only suggested change in the grain mixture is the substitution of hominy for barley because it is cheaper and just as good. An 18% protein mixture recommended is 200 lb. standard middlings, 200 lb. wheat bran, 100 lb. hominy, 200 lb. oil meal and 300 lb. gluten feed. This mixture is designed for feeding with mixed hay and silage or roots at the rate of one pound to three or four pounds milk. If good clover or alfalfa is on hand they recommend increasing the hominy 100 lb. and reducing the gluten feed an equal amount. If only

alfalfa is on hand they recommend increasing the hominy 100 lb. hominy, 200 lb. oil meal, 200 gluten feed, 100 cottonseed and feed in the usual manner.

It is figured that 80% of the New York farms purchase feed and the average annual expenditure for this purpose is about \$550. To cut this bill, clover and alfalfa should be fed and this means sow more, apply more lime and treat with the proper legume inoculation. This is the time to take the first steps.

SALTING DAIRY CATTLE

The dairy cow requires a certain amount of salt in order to digest her feed properly and to thrive. The amount required will vary to some extent with the size of the cow, the amount of concentrates consumed, and whether she is on green feed. She should have all the salt needed, but should not be forced to consume more than she wants. It is the best practice to have salt before the cows at all times in order that they may consume what is required. Most cows require approximately an ounce of salt per day. Some of this may be fed with the grain in order that each cow will get her portion. In addition to this, boxes of salt or salt bricks should be placed in the yard or pasture to which they may have free access.

J. P. LAMASTER.

CARE OF THE DAIRY CALF

It requires both protein and mineral matter, as well as carbohydrates, for the proper growth and development of the dairy heifer. After the calf is three months old there is no better roughage than some of the legume hays.

A mixture of equal parts of corn, oats, bran, and linseed oil-meal, with the addition of two pounds of the hundred to mineral matter in the shape of wood ashes, steamed bone meal, or fish meal, makes one of the best rations I know of for growing heifers. For the young calf the corn need not be ground; if good legume hay is used the corn can be doubled.

There is no time in the life of an animal when good feeding brings larger returns for money invested, than when that animal is young. It should be the aim of every dairyman to so feed his heifers that they will be kept growing steadily from calfhood until they become mothers.

MARYLAND NEWS LETTER.

The longer the time elapsing between feeding and milking, the less pronounced will be the undesirable flavors and odors resulting from the feeds.

NOT ABOUT COWS

SPRING—JUST SPRING

The annual miracle of Spring is here. Dull indeed must that mortal be whose pulse does not quicken, whose whole being does not respond to this most beautiful season of the year. Just to look outdoors at the bright sunshine brings a lightening of the heart, and an involuntary smile to the face. Just to be able to discard the incumbering wraps of the winter, and to walk out smartly and safely after all these months of gingerly picking one's way over the icy paths brings a lightness of spirit that does more good than pills and powders. What visions of summer pleasures are conjured up, what plans are made for the improvement of self and property. Hope and anticipation are at their busiest. The gardens and lawns must be cleaned up, the porches prepared for those summer days when every one will live outdoors as much as possible, and the houses must be renovated by paper, paint and water. All Nature decks herself out in bright new clothes and the ladies—God bless 'em—follow her example, and even the men become interested in the latest in haberdashery. With so much brightness and beauty on every hand, with joyful hope in the very air one breathes, how can anyone be discontented or unhappy? Of course, there will be troubles, real troubles, they are common to Spring as to every season of the year, and must be borne with as much fortitude as can be mustered. But there are so many fancied ills in life, figments of the imagination, which take much of the joy out of life. Spring is here—the birds are singing, the flowers are blooming—this is April, the sun is shining, why be gloomy and sad? There is happiness, happiness, happiness everywhere. Take your share.

STORE ROOM JUNK

When the time for spring housecleaning comes, the usual place to begin is the store room, so that it may be ready to receive the winter clothing which must be stored away for the summer. And what a place the average store room or attic is, usually cluttered up with all sorts of useless junk, disabled furniture and out-grown or worn out clothing, stuff that is kept year after year because of the thrifty idea that some day it may be of use. Spring and fall it is taken out, brushed or dusted and put back again to calmly await the next house cleaning. Wouldn't this be a good time to make one strong, firm resolution, to take each article one by one, and decide its fate once and for all? Consider how many years it has been saved, yet no use found for it, and determine definitely whether there is a possibility of its being of any use to anyone. If the decision is against it, burn it up. Many, many times the moths that have finally destroyed good clothing have been hatched in odd remnants of wool goods, kept when no longer useful. No one has any objection to the little keepsakes of sentiment, the tiny shoe or stocking or the first pair of gloves. Most of us would not part with such for any amount of money. But that is entirely different from the mass of stuff for keeping which one has neither sentiment or reason. One housekeeper has a mania for keeping boxes of all sorts and description, from tiny jeweler's boxes to large packing cases, with the idea that some time they will be useful. About one-half of one per cent will probably be used, the rest merely clutter up an otherwise orderly store room. This spring some of those boxes are going to make a bonfire! Such a resolution applied to most of the stuff stored away will go far to taking away some of the terrors of housecleaning.

AN OUTDOOR DINING ROOM

An outdoor dining room will add much to the pleasure of family life in the summer time, and take much from the labor of the housewife. Any side or back porch may be screened for this purpose, and need not be very large, as only the table and chairs will be needed. A board over the top of the railing makes a convenient shelf for plants and flowers, or a shelf

may be fastened to the side of the house. Of course, it should open off the kitchen for the convenience of serving meals. If there is room, the refrigerator should be placed in it, as that would mean the saving of steps. It is lots of fun to sit and eat and watch the garden grow, and makes a continual picnic of meals all summer long. Quick growing vines will afford such shade or privacy as is needed. If there is no porch on your house which may be so used, be sure to build one this spring and you will find the expense amply justified.

FORGET-ME-NOTS AND MINT

A wet shady spot that cannot be used for anything else may be made both useful and ornamental by having spearmint and forget-me-nots planted in it. Both these do well in such a place, and will spread until they cover as large a space as one wishes. The flowers may be picked from June to late September, and the mint used all the season, besides what is dried for winter use.

PLAIN SALADS FOR FARM FOLKS

In no line of cookery, are there so many tempting discoveries and delicious combinations that are found in the Salad. The housewife can make a salad so dainty and charming, and arrange it so prettily, that it is usually the most attractive feature of the dinner or luncheon.

But it takes precious time in the ever busy farm kitchen to prepare these, dainty and elaborate fruit salads are the right thing for teas and parties, and occasionally for other special functions, but farmers need something more substantial on their "bill of fare," particularly during the cold weather and too, the housewife likes something more easily prepared.

Here are a few good salads that are not difficult to prepare and that also contain ingredients that nearly every farmer's wife will have on hand.

HAM SALAD

Cut cold boiled ham in small pieces add to this half the quantity of cold diced potatoes and as much chopped celery as ham. Mix with mayonnaise and serve on lettuce.

MACARONI SALAD

Two cups of boiled macaroni one-eighth of a small cabbage shredded, one-half onion chopped fine. Mix well with salad dressing.

LOG CABIN SALAD

This is just as pretty as it is good, and company will be sure to like it. Just bananas halved lengthwise, then rolled in chopped nut meats (any kind). Pile banana slices log cabin style on individual plates, with a good salad dressing in the middle.

VEGETABLE SALAD

One cupful diced carrots, one cupful diced beet pickles, one cupful diced string beans (canned), one cup of peas, (canned). Mix with salad dressing and serve on lettuce.

EGG SALAD

One dozen boiled eggs, sliced and one cup of chopped sour cucumber pickles, mix with plenty of dressing.

SALMON SALAD

To one can of salmon broken up add one cup of chopped celery, one small onion chopped fine, and enough mustard to mix well. Season with salt and pepper.

POTATO SALAD

A quantity diced cold boiled potatoes, one large onion chopped in fine pieces, one cup chopped cucumber pickles, three boiled eggs chopped. Mix with plenty of salad dressing, decorate with parsley and cover the top with slices of cold boiled eggs.

SURE TO PLEASE

Equal parts of shredded cabbage and chopped apple mixed with a good salad dressing, makes a pleasing combination.

APPLE AND CELERY SALAD

Two cups of chopped apple (tart), one cup of chopped celery one-half cup of nut meats. Mix well with dressing. This is especially delicious, and goes well with a heavy dinner.

SALAD DRESSING

One teaspoon sugar, one teaspoon butter, one teaspoon flour, one heaping teaspoon dry mustard. Mix dry ingredients together, then blend until smooth with the butter, add two or three eggs, and one cup of milk, beat together until smooth. Pour this mixture into one cup of vinegar which is boiling, stirring rapidly until thick. This will keep two weeks in a cool place, and is suitable for any of these salads.

WHAT TO DO ON STORMY DAYS

When the days are bright and sunny and the children can play out doors then happiness reigns supreme. Even when the temperature hovers near the zero mark, the little folks can be out in the middle of the day, busy with their outdoor games and the countless attractions outside, coming in with rosy cheeks, bright eyes, and happy minds.

But when the cold, rainy days of early spring arrive, and they are confined to the house, it is a difficult task to keep happy, smiling faces when mother gives out the verdict, "no playing outside to-day."

If the mother is overtired and nervous, her mood will be reflected in her children's actions, and thus the entire day may be spent in fretting and quarreling. It is better on these stormy days not to be very particular about the appearance of the house, especially these rooms where the children will play, and leave the tasks that require a lot of attention until some day when there will be fewer interruptions.

Keeping the children busy is really the main secret in having them happy. A healthy, normal child will get restless and peevish unless the mind and body are busy.

Begin the day right by having them do some of the light household tasks they have learned, and perhaps teaching them something new that they have wanted to try their hands at in the house. After the little tasks are done then comes the real business of the day, playing.

Those who do not have a room in their home that can be especially given over to the children and their toys are at a disadvantage. But in this case they should provide a cupboard or corner in the kitchen or living room where toys may be kept when not in use.

Let me say right here that it is the wise mother who will teach her children to pick up their playthings themselves at the close of day. Once they have learned this habit it becomes a part of the day's program.

When there are several children in the family there is not much difficulty in providing amusement. There are always the "make believe" games of school, dressing up for parties, hide the thimble, hide and seek, pussy wants a corner, drop the handkerchief, and quieter games of checkers, dominoes, etc. But when there is only one child who continually wails, "What can I do next?" and "Nobody plays with me," then the mother really must exercise her ingenuity in thinking up amusements.

It is the wise mother who will keep some toys in reserve to be brought forth later in the day. A bathtub partially filled with water, makes an excellent pond on which to sail toy boats and the little fishes and swans that can be bought at any ten cent store. A kiddie car is lots of fun, especially if it has a small wagon fastened behind to serve as a trailer. A child seldom tires of blocks, or cutting out paper dolls, or a box of different colored crayons with which to paint the pictures in old magazines and catalogs. A bag of buttons of various styles to be sorted and strung on thread will amuse a small child. A soap bubble pipe is loads of fun. Little girls will play a long time with dolls to be dressed and undressed, and taken for buggy rides about the house and on the porches. "Miss five-year-old" will get enjoyment out of a piece of calico, trying to cut out and fashion a dress for a doll. Let her exercise her own ingenuity, the piece of cloth if completely wasted is worth the quiet happy hours involved. If a boy's amusement is considered, a set of carpenter tools afford lots of pleasure for sunny. A large box of sand on the porch will furnish amusement for hours. A set of small dishes and a tiny table calls for a doll's teaparty, with sandwiches and milk for the little mother which makes the affair quite "grown up."

The day will be gone before any one has thought of fretting and probably indications prophesy a clear sky for to-morrow, for after all these are April days and only April showers, and who can blame the kiddies for preferring to play outdoors, remember that April is here!

Listen, a bluebird is carolling near,
Low and sweet is the song he sings,
As he sits in the sunshine with folded wings,
And looks from the warm blue sky, that downward leans,
To the earth below that is growing green.

A modern young flapper was Min,
Who tried every stunt to get thin.
In her zest to reduce
She sipped lemon juice
Till she slipped thru the straw and fell in.

All the world's a stage, but it's largely up to us whether the performances are comedy or tragedy.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

A Profitable Business—
Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

week, worlds' record when made. Maplecree High-lawn Cleveland is by Friend Hengerveld De Kol But-ter Boy from Burton High-lawn 2d's Hartog, the first cow in Ohio to make a 30-lb. official seven-day butter record.

Utilitor is a son of Meadow Holm Peep Hartog and Caddy Mutual De Kol, 31.16 lb. butter, 620.9 lb. milk in seven days, 128 lb. butter, 2,698.6 lb. milk in thirty days. Tested for the full year she is credited with 1,127.61 lb. butter, 24,564.8 lb. milk. She is from a 20-lb. cow and was sired by a son of De Kol 2d's Mutual Paul the youngest son of the famous old foundation cow, De Kol 2d.

Meadow Holm Peep Hartog has a number of good record daughters. He was by Maple Crest Pontiac Hartog, a son of Pontiac Aaggie Korndyke and the 30-lb. cow Burton High-lawn 2d's Hartog.

The dam of Meadow Holm Peep Hartog is Early Dawn Peep 2d, 33.52 lb. butter, 634.1 lb. milk in a week, 1,287.72 lb. butter, 26,204 lb. milk in a year. She is full sister to Aaggie Wayne Peep, 34.59 lb. butter in seven days, 1,250.35 lb. butter, 27,762.5 lb. milk in a year.

The dam and sire's dam of Utilitor have year records that average 1,207.66 lb. butter and seven-day records that average 32.24 lb.

King Valdessa Pontiac Gem is a son of King Valdessa Pontiac and Pabst Cynthia, 38.311 lb. butter in seven days, 16,188.2 lb. milk, 764.03 lb. butter in ten months. She was by King Pontiac Champion and from Pabst Colanthus Terzool, 672.7 lb. milk, 29.61 lb. butter in seven days, 20,558.8 lb. milk, 818.83 lb. butter in a year. The work of the daughters of King Valdessa Pontiac is too well known to need mention at this time and, as everyone knows, he was by King Valdessa from the 40-lb. heifer and show cow Mabel Segis Korndyke.

Superintendent Mack tells a story of a former member of the herd which in itself illustrates how the herd was built up and how it has been managed.

In the fall of 1917, fire destroyed the barn of Leon Peck, a good dairyman of West Farmington, Ohio. In consequence Mr. Peck called a sudden sale to dispose of his Holstein herd. At that sale Brownwood purchased three close-up heifers, one of which was Cornucopia Paul Beets, No. 319983.

In her new home she dropped a heifer calf, January 11, 1918, and put in official test, made a small official record. Continued on test for 305 days she was credited with 475.4 lb. butter, 12,356.3 lb. milk. Most of the time she was milked three times a day. As a three-year-old she was milked by machine as it was almost impossible to obtain dairy help in this section of the country under post-war conditions and she did not do very well. However, when she freshened in September, 1921, conditions had changed and with new help she was put in a year test and finished with 25,988.9 lb. milk, 1,002.49 lb. butter. She developed cystic ovaries and after being kept in the milking herd for another two years during which time she produced about 25,000 lb. milk, was sold to the butcher, almost exactly seven years from the day she was purchased.

In these seven years she produced around 100,000 lb. milk and three heifer calves. The first one, Brownwood Paul De Kol, which she was carrying when pur-

chased, developed into a show cow and a big producer and was sold to a New Jersey breeder. The second, Brownwood Paul Beets sired by Forest City Sir Fayne, was sold at the Cleveland National Sale and has since made a very large record while the third, Brownwood Paul Beets Fayne, full sister to the second will be sold in the coming sale together with some granddaughters of her mother.

Cornucopia Paul Beets, in milk and progeny, produced more than fifty-five times her cost. Mr. Mack says she is typical of the opportunities that will be offered in the sale to be held on the farm on May 5th in which there will be practically the cream of the herd. This sale is occasioned by the leasing of one of the farms. It is simply a reduction sale as the entire herd is now too large to be kept at the home establishment. This event offers an opportunity to all interested in marketing Holstein milk at the highest figure to see an up-to-date, high-class breeding establishment which has successfully marketed its product in two different cities in the form of certified milk, to see many animals closely related to those it is proposed to sell at auction and to study the animals under the conditions and environment to which they are accustomed.

American Scientists to Investigate Foot-and-Mouth in Europe

WHEN foot and mouth trouble was raging in California, there was a demand that government scientists investigate the disease and, if possible find some method of curing it. The authorities at Washington believe it is better to keep this trouble out of the country than attempt to control it after it is in, and all suggestions of coöperation were then refused. But pathologists will be sent to Europe to study this cattle trouble which has attacked herds and flocks in this country at intervals over a period of forty years. The 68th Congress by the Second Deficiency Act provided a sum of \$75,000 for this purpose.

Dr. P. K. Olitzsky of the Rockefeller Institute for Medical Research, Dr. Jacob Traum of the University of California and Dr. Harry W. Schoening of the Pathological Division, Bureau of Animal Industry, are the three men selected. They will go first to Berlin where it has been reported that the organism which causes foot and mouth disease has been discovered. It is probable that they will then go to Budapest, Hungary, and to Alfort, France, to make studies of the disease and of the methods used by scientists in these research institutions. Their final headquarters will depend upon the character of the work being done at these three laboratories. The American scientists will collaborate with foreign scientists who are working on the same or similar problems.

"When young, untried stock is sold, the breeder should keep in touch with the purchaser so that if the stock does not turn out as it should through no fault of the purchaser, the breeder can make the deal right. It pays directly and indirectly, aside from the fact that it is the fair way to do."

"Preach individuals first and pedigrees second."

A Live Wire Tester

THE President of the Pennsylvania Testers' Association is A. A. Raudabaugh, of New Kingstons, the tester for the Cumberland County Cow Testing Association. He comes from a family of Holstein breeders and dairymen, is a Holstein enthusiast himself, is always on hand at any Holstein gathering in his county, and his services as pedigree reader are in great demand at local sales where the farm herd contains a number of purebreds.

Mr. Raudabaugh has been in charge of the Cumberland County Testing Association ever since it was

A. A. RAUDABAUGH,
President Pennsylvania Testers' Association.

started in 1919. The first year the average production of the cows enrolled was 7,325 lb. milk and 244.6 lb. butterfat. Last year the average was 9,779 lb. milk, 348.4 lb. butterfat, or an increase of 2,454 lb. milk, 103.8 lb. fat. This increase was brought about by culling the poor producers and by feeding a better balanced ration to the remaining animals following the counsel of Mr. Raudabaugh, who has practical as well as theoretical knowledge of dairy work and cattle breeding.

The News in Brief

PRINTERS' labor troubles interfered with the issuing of London weekly periodicals so the *Agricultural Gazette* instead of its issue of March 27 sent out a two page multigraphed letter giving in brief the news of the week. From this we note that Dr. Shaw's foot and mouth remedy is to be officially tested by government representatives and a cattle testing station is being prepared.

The British Friesian cow, Findlay Clara 2d, has set up a new British milk record by the production of 36,110 lb. in 365 days, an average of more than 98 lb. daily. In her previous lactation she was credited with 34,490 lb. milk, 1,371 lb. butter in 365 days. Clara is owned by George Findlay, Glasslaw, Stonehaven, Scotland.

The Essex Farmers Union is establishing milk depots with small factories at a number of places in that country.

A shipment of 108 Guernsey cows and heifers have left the Island for Massachusetts. The valuation is given as \$40,000.

Two Friesian auction sales are reported. At Reading, central England, fifty-four head averaged \$194, while at Perth, northern Scotland, twenty-three head averaged \$192. It is interesting to note how closely these figures approximate.

The Farmers' Union in the West Riding of Yorkshire have fixed their price for summer milk at 36c per gallon.

Considerable information on prices of grain, cattle and agricultural products is given as well as other news. Our English contemporary is to be congratulated on its enterprise in getting the news to its subscribers.

Your Help Requested

A STATISTICAL study of prices on farm products and the things farmers buy over a long period of years is being made by Charles F. Saile of the Department of Agriculture, Washington, D. C. Private accounts of farm sales and purchases, files of old county newspapers, farm magazines and the records and books of old time county merchants, grain and live stock buyers furnish information of this character and anyone having old diaries or records of this kind are asked to communicate with Mr. Saile. It is intended to develop index numbers and charts on the long time trend of prices of things farmers sell and farmers buy and these will be studied by the department, as it is believed that the long time trend of prices forecast what prices will be in the future. Whatever the value of the predictions will be, a study of a nation-wide trend of prices over a long period of time is sure to be interesting and instructive. The department will welcome help in getting the information and many remarkable stories are bound to be unearthed.

About sixty-two per cent of purebred livestock is marketed directly for meat purposes.

Sensational Sale Reported

JUST as this issue of the BREEDER AND DAIRYMAN was going to press, the following telegram was received from E. H. Agee, Secretary of the Southern California Livestock Breeders' Association:

"LOS ANGELES, CALIFORNIA.

"We are pleased to announce the sale of Prince Aaggie of Berylwood, the highest record butter bull in the world, by Berylwood Stock Farms to Billwhack Ranch, August A. Rubel, proprietor, Santa Paula, California, for one hundred ten thousand dollars. Mr. J. W. Snodgrass, manager of Berylwood, completed the sale on April 15th.

"SOUTHERN CALIFORNIA LIVESTOCK BREEDERS' ASSOCIATION,
"E. H. AGE, Secretary.

This communication is of special interest to Pennsylvanians, as Prince Aaggie of Berylwood is the sire of

PRINCE AAGGIE OF BERYLWOOD

Retrenchments in Extension Department

THE SERVICES OF ALLEN N. CRISSEY, STANLEY COMBS, W. E. MEYER AND E. G. HORST DISPENSED WITH.

ALL NEWSPAPER ADVERTISEMENTS BY THE ASSOCIATION TO BE DISCONTINUED.

THE HOLSTEIN BREEDER AND DAIRYMAN has continuously advocated discontinuing wasteful and unnecessary expenditure of the breeders' money to carry on so-called extension work. Unnecessary and inefficient extension work has cost the Holstein breeders over one-half million dollars in the past few years, and during this time the price and demand for Holstein cattle and the amount of business which the Holstein-Friesian Association transacted has steadily decreased.

The members and breeders generally resent being unnecessarily taxed through increased fees to carry on political extension work of the character pursued during the past few years. They will demand that further retrenchments be made and the services of other unnecessary workers be dispensed with.

Retrenchments in the Extension Department is the first move towards restoring the Association to its former position where it and the industry can enjoy prosperity. After the "mess" in the Extension Department has been cleaned out and the place "scrubbed up" it will then be necessary to reduce fees, dispense with the services of the ten unnecessary directors and adopt a business form of government in order to place its "house" in order.

Sometimes an old bachelor wishes he had married before he was old enough to have enough sense not to do it.

KING PIETJE AAGGIE PONTIAC

my senior herdsire, is by the great King Pontiac Alcartra Pietje from a 31.78 lb. cow whose dam made 25.31 lb. butter in a week and was from a 31 lb. daughter of a 34-lb. cow.

Then my herd is under State and Federal Supervision and has always been handled from the standpoint of profitable dairy production.

Let me sell you some choice heifer calves.

ROYAL JOHANNA KORNDYKE
whose daughters are making splendid records in C. T. A. work. He was by Colantha Johanna Lad 8th and from a 24-lb. two-year-old that made 602.8 lb. milk in 7 days; her dam a 30-lb. cow.

Our cows are producers and choice individuals. Our herd is Accredited and has never housed a re-actor.

ROY W. CHAMBERLAIN
Allegany Co., Canadea, N. Y.

THE PRACTICAL DAIRYMAN

BUILDING CALF PENS

Economical commercial dairying demands that the dairy calves be raised by hand rather than by nursing their mother. This fact makes it necessary to provide a place to keep the young calves while being fed milk. The essentials for such quarters are: (1) that they can be easily cleaned; (2) provided with an abundance of sunlight; (3) properly drained, so as to prevent any surface water from entering, or from becoming damp from any cause; and (4) an arrangement which will permit the feeding and care of the calves with the least amount of labor in quarters that give the calves enough room.

Calves raised on skim milk in practically every case develop the habit of sucking one another's ears, navels, and udders immediately after being fed milk. This habit often results in the udders being misshapen, or entirely blind in one or more quarters, when the heifer comes in milk. If this habit was limited to the period just after feeding milk, the difficulty could be overcome by keeping the calves in stanchions for 30 minutes or more after each feeding; but during the day, when the young calves become hungry, they will start sucking again.

To prevent this trouble each calf should have a small pen of its own. This is not as hard to provide as might seem. A long pen six or seven feet wide can be divided into pens by placing gates across at proper distances, depending on the number of calves on hand and the space available. To make it easy to get the calves in and out of the pens and to clean the pens, these gates may be fitted with a cord in the center which passes over a small pulley overhead, and with a weight attached on the other end and heavy enough to balance the gate. This will allow the gate to be raised out of the way when not needed. The gate should be fitted into grooves at each end formed by using a 2x4-inch upright and 1x3-inch slats nailed on each side to form the slot. Such an arrangement is inexpensive and makes a safe and convenient pen for young calves.

SILAGE FOR SUMMER FEEDING

Most dairy farmers appreciate the value of the silo for providing a palatable, succulent ration in convenient form for feeding during the winter months. However, it is just as important to provide this succulent during the summer months when permanent pastures are short on account of drought, insect damage, or insufficient acreage for the number of cattle kept. During this period of the year when pastures are cut short and some other succulence is provided, the milk flow is invariably decreased, and it becomes practically impossible by liberal feeding later on in the lactation period to increase the production to where it would have been had these short pastures been supplemented by some additional succulent feed. Summer silage provides succulence, during these periods, in the most convenient and reliable form and is usually a cheaper method than the use of soiling crops since it requires less labor during the busy cropping season.—Clemson College Bulletin.

FEED DOPE

The New York State News Letter issued under date of March 25th reports a continued sag in feed prices. Nine of the common feeds show an average drop of \$2.31 a ton. Barley, gluten feed and cottonseed show a slight raise.

The only suggested change in the grain mixture is the substitution of hominy for barley because it is cheaper and just as good. An 18% protein mixture recommended is 200 lb. standard middlings, 200 lb. wheat bran, 100 lb. hominy, 200 lb. oil meal and 300 lb. gluten feed. This mixture is designed for feeding with mixed hay and silage or roots at the rate of one pound to three or four pounds milk. If good clover or alfalfa is on hand they recommend increasing the hominy 100 lb. and reducing the gluten feed an equal amount. If only

alfalfa is on hand they recommend increasing the hominy 100 lb. hominy, 200 lb. oil meal, 200 gluten feed, 100 cottonseed and feed in the usual manner.

It is figured that 80% of the New York farms purchase feed and the average annual expenditure for this purpose is about \$550. To cut this bill, clover and alfalfa should be fed and this means sow more, apply more lime and treat with the proper legume inoculation. This is the time to take the first steps.

SALTING DAIRY CATTLE

The dairy cow requires a certain amount of salt in order to digest her feed properly and to thrive. The amount required will vary to some extent with the size of the cow, the amount of concentrates consumed, and whether she is on green feed. She should have all the salt needed, but should not be forced to consume more than she wants. It is the best practice to have salt before the cows at all times in order that they may consume what is required. Most cows require approximately an ounce of salt per day. Some of this may be fed with the grain in order that each cow will get her portion. In addition to this, boxes of salt or salt bricks should be placed in the yard or pasture to which they may have free access.

J. P. LAMASTER.

CARE OF THE DAIRY CALF

It requires both protein and mineral matter, as well as carbohydrates, for the proper growth and development of the dairy heifer. After the calf is three months old there is no better roughage than some of the legume hays.

A mixture of equal parts of corn, oats, bran, and linseed oil-meal, with the addition of two pounds of the hundred to mineral matter in the shape of wood ashes, steamed bone meal, or fish meal, makes one of the best rations I know of for growing heifers. For the young calf the corn need not be ground; if good legume hay is used the corn can be doubled.

There is no time in the life of an animal when good feeding brings larger returns for money invested, than when that animal is young. It should be the aim of every dairyman to so feed his heifers that they will be kept growing steadily from calfhood until they become mothers.

MARYLAND NEWS LETTER.

The longer the time elapsing between feeding and milking, the less pronounced will be the undesirable flavors and odors resulting from the feeds.

NOT ABOUT COWS

SPRING—JUST SPRING

The annual miracle of Spring is here. Dull indeed must that mortal be whose pulse does not quicken, whose whole being does not respond to this most beautiful season of the year. Just to look outdoors at the bright sunshine brings a lightening of the heart, and an involuntary smile to the face. Just to be able to discard the incumbering wraps of the winter, and to walk out smartly and safely after all these months of gingerly picking one's way over the icy paths brings a lightness of spirit that does more good than pills and powders. What visions of summer pleasures are conjured up, what plans are made for the improvement of self and property. Hope and anticipation are at their busiest. The gardens and lawns must be cleaned up, the porches prepared for those summer days when every one will live outdoors as much as possible, and the houses must be renovated by paper, paint and water. All Nature decks herself out in bright new clothes and the ladies—God bless 'em—follow her example, and even the men become interested in the latest in haberdashery. With so much brightness and beauty on every hand, with joyful hope in the very air one breathes, how can anyone be discontented or unhappy? Of course, there will be troubles, real troubles, they are common to Spring as to every season of the year, and must be borne with as much fortitude as can be mustered. But there are so many fancied ills in life, figments of the imagination, which take much of the joy out of life. Spring is here—the birds are singing, the flowers are blooming—this is April, the sun is shining, why be gloomy and sad? There is happiness, happiness, happiness everywhere. Take your share.

STORE ROOM JUNK

When the time for spring housecleaning comes, the usual place to begin is the store room, so that it may be ready to receive the winter clothing which must be stored away for the summer. And what a place the average store room or attic is, usually cluttered up with all sorts of useless junk, disabled furniture and out-grown or worn out clothing, stuff that is kept year after year because of the thrifty idea that some day it may be of use. Spring and fall it is taken out, brushed or dusted and put back again to calmly await the next house cleaning. Wouldn't this be a good time to make one strong, firm resolution, to take each article one by one, and decide its fate once and for all? Consider how many years it has been saved, yet no use found for it, and determine definitely whether there is a possibility of its being of any use to anyone. If the decision is against it, burn it up. Many, many times the moths that have finally destroyed good clothing have been hatched in odd remnants of wool goods, kept when no longer useful. No one has any objection to the little keepsakes of sentiment, the tiny shoe or stocking or the first pair of gloves. Most of us would not part with such for any amount of money. But that is entirely different from the mass of stuff for keeping which one has neither sentiment or reason. One housekeeper has a mania for keeping boxes of all sorts and description, from tiny jeweler's boxes to large packing cases, with the idea that some time they will be useful. About one-half of one per cent will probably be used, the rest merely clutter up an otherwise orderly store room. This spring some of those boxes are going to make a bonfire! Such a resolution applied to most of the stuff stored away will go far to taking away some of the terrors of housecleaning.

AN OUTDOOR DINING ROOM

An outdoor dining room will add much to the pleasure of family life in the summer time, and take much from the labor of the housewife. Any side or back porch may be screened for this purpose, and need not be very large, as only the table and chairs will be needed. A board over the top of the railing makes a convenient shelf for plants and flowers, or a shelf

may be fastened to the side of the house. Of course, it should open off the kitchen for the convenience of serving meals. If there is room, the refrigerator should be placed in it, as that would mean the saving of steps. It is lots of fun to sit and eat and watch the garden grow, and makes a continual picnic of meals all summer long. Quick growing vines will afford such shade or privacy as is needed. If there is no porch on your house which may be so used, be sure to build one this spring and you will find the expense amply justified.

FORGET-ME-NOTS AND MINT

A wet shady spot that cannot be used for anything else may be made both useful and ornamental by having spearmint and forget-me-nots planted in it. Both these do well in such a place, and will spread until they cover as large a space as one wishes. The flowers may be picked from June to late September, and the mint used all the season, besides what is dried for winter use.

PLAIN SALADS FOR FARM FOLKS

In no line of cookery, are there so many tempting discoveries and delicious combinations that are found in the Salad. The housewife can make a salad so dainty and charming, and arrange it so prettily, that it is usually the most attractive feature of the dinner or luncheon.

But it takes precious time in the ever busy farm kitchen to prepare these, dainty and elaborate fruit salads are the right thing for teas and parties, and occasionally for other special functions, but farmers need something more substantial on their "bill of fare," particularly during the cold weather and too, the housewife likes something more easily prepared.

Here are a few good salads that are not difficult to prepare and that also contain ingredients that nearly every farmer's wife will have on hand.

HAM SALAD

Cut cold boiled ham in small pieces add to this half the quantity of cold diced potatoes and as much chopped celery as ham. Mix with mayonnaise and serve on lettuce.

MACARONI SALAD

Two cups of boiled macaroni one-eighth of a small cabbage shredded, one-half onion chopped fine. Mix well with salad dressing.

LOG CABIN SALAD

This is just as pretty as it is good, and company will be sure to like it. Just bananas halved lengthwise, then rolled in chopped nut meats (any kind). Pile banana slices log cabin style on individual plates, with a good salad dressing in the middle.

VEGETABLE SALAD

One cupful diced carrots, one cupful diced beet pickles, one cupful diced string beans (canned), one cup of peas, (canned). Mix with salad dressing and serve on lettuce.

EGG SALAD

One dozen boiled eggs, sliced and one cup of chopped sour cucumber pickles, mix with plenty of dressing.

SALMON SALAD

To one can of salmon broken up add one cup of chopped celery, one small onion chopped fine, and enough mustard to mix well. Season with salt and pepper.

POTATO SALAD

A quantity diced cold boiled potatoes, one large onion chopped in fine pieces, one cup chopped cucumber pickles, three boiled eggs chopped. Mix with plenty of salad dressing, decorate with parsley and cover the top with slices of cold boiled eggs.

SURE TO PLEASE

Equal parts of shredded cabbage and chopped apple mixed with a good salad dressing, makes a pleasing combination.

APPLE AND CELERY SALAD

Two cups of chopped apple (tart), one cup of chopped celery one-half cup of nut meats. Mix well with dressing. This is especially delicious, and goes well with a heavy dinner.

SALAD DRESSING

One teaspoon sugar, one teaspoon butter, one teaspoon flour, one heaping teaspoon dry mustard. Mix dry ingredients together, then blend until smooth with the butter, add two or three eggs, and one cup of milk, beat together until smooth. Pour this mixture into one cup of vinegar which is boiling, stirring rapidly until thick. This will keep two weeks in a cool place, and is suitable for any of these salads.

WHAT TO DO ON STORMY DAYS

When the days are bright and sunny and the children can play out doors then happiness reigns supreme. Even when the temperature hovers near the zero mark, the little folks can be out in the middle of the day, busy with their outdoor games and the countless attractions outside, coming in with rosy cheeks, bright eyes, and happy minds.

But when the cold, rainy days of early spring arrive, and they are confined to the house, it is a difficult task to keep happy, smiling faces when mother gives out the verdict, "no playing outside to-day."

If the mother is overtired and nervous, her mood will be reflected in her children's actions, and thus the entire day may be spent in fretting and quarreling. It is better on these stormy days not to be very particular about the appearance of the house, especially these rooms where the children will play, and leave the tasks that require a lot of attention until some day when there will be fewer interruptions.

Keeping the children busy is really the main secret in having them happy. A healthy, normal child will get restless and peevish unless the mind and body are busy.

Begin the day right by having them do some of the light household tasks they have learned, and perhaps teaching them something new that they have wanted to try their hands at in the house. After the little tasks are done then comes the real business of the day, playing.

Those who do not have a room in their home that can be especially given over to the children and their toys are at a disadvantage. But in this case they should provide a cupboard or corner in the kitchen or living room where toys may be kept when not in use.

Let me say right here that it is the wise mother who will teach her children to pick up their playthings themselves at the close of day. Once they have learned this habit it becomes a part of the day's program.

When there are several children in the family there is not much difficulty in providing amusement. There are always the "make believe" games of school, dressing up for parties, hide the thimble, hide and seek, pussy wants a corner, drop the handkerchief, and quieter games of checkers, dominoes, etc. But when there is only one child who continually wails, "What can I do next?" and "Nobody plays with me," then the mother really must exercise her ingenuity in thinking up amusements.

It is the wise mother who will keep some toys in reserve to be brought forth later in the day. A bathtub partially filled with water, makes an excellent pond on which to sail toy boats and the little fishes and swans that can be bought at any ten cent store. A kiddie car is lots of fun, especially if it has a small wagon fastened behind to serve as a trailer. A child seldom tires of blocks, or cutting out paper dolls, or a box of different colored crayons with which to paint the pictures in old magazines and catalogs. A bag of buttons of various styles to be sorted and strung on thread will amuse a small child. A soap bubble pipe is loads of fun. Little girls will play a long time with dolls to be dressed and undressed, and taken for buggy rides about the house and on the porches. "Miss five-year-old" will get enjoyment out of a piece of calico, trying to cut out and fashion a dress for a doll. Let her exercise her own ingenuity, the piece of cloth if completely wasted is worth the quiet happy hours involved. If a boy's amusement is considered, a set of carpenter tools afford lots of pleasure for some. A large box of sand on the porch will furnish amusement for hours. A set of small dishes and a tiny table calls for a doll's teaparty, with sandwiches and milk for the little mother which makes the affair quite "grown up."

The day will be gone before any one has thought of fretting and probably indications prophesy a clear sky for to-morrow, for after all these are April days and only April showers, and who can blame the kiddies for preferring to play outdoors, remember that April is here!

Listen, a bluebird, is carolling near,
Low and sweet is the song he sings,
As he sits in the sunshine with folded wings,
And looks from the warm blue sky, that downward leans,
To the earth below that is growing green.

A modern young flapper was Min,
Who tried every stunt to get thin.
In her zest to reduce
She sipped lemon juice
Till she slipped thru the straw and fell in.

All the world's a stage, but it's largely up to us whether the performances are comedy or tragedy.

A Ton and a Half of Pork from One Litter in 180 Days Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—
Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

APRIL 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

A Vote that Don't Count

MANY letters are being received in this office from members of the Holstein-Friesian Association living in different States, asking advice and suggestions as to how they should vote in order to bring about a restoration of the Holstein-Friesian Association. There seems to be a widespread desire on the part of the members generally to stop extravagance and mismanagement but they are at a loss to know how best to accomplish their wishes after having been denied the privilege of a direct vote on Association matters.

THE HOLSTEIN BREEDER AND DAIRYMAN is not in a position to state what delegates, if elected to attend the Convention, will be willing to take a firm stand against Extravagance and Mismanagement.

In a former issue of our publication we made it very plain that the only way a Delegate or Political Form of Government can be properly administered is through two opposing political parties. If the breeders generally had an organization in the field working for their interests, the same as the State-Paid-Secretaries are working for the interests of the political management, then the organization representing the breeders' interests could have formulated a slate in each State comprised of men of known integrity who the breeders could vote for and send to the Convention to protect their rights and interests.

No doubt there is a goodly number of present nominees, who, if elected, would be willing to attend the Convention and be identified with the movement to bring about the restoration of the Association to the members but we venture to say that the majority of the delegates who have been nominated and are up for election have been selected by the State-Paid-Secretaries and are known to be in favor of the present political management. Under the present conditions it does not make much difference which way the small breeders and dairymen vote, "Ring Rule" is going to predominate.

"Undesirable Members"

AT it again. A certain publication that has become notorious as an organ to promote speculation in the purebred Holstein cattle industry and seemingly has adopted a policy of being in favor of everything that is against the breeders and dairymen and against everything that is in favor of the breeders and dairymen, now comes out in one of its recent issues, in an editorial attack contending that certain members of The Holstein-Friesian Association are "UNDESIRABLE MEMBERS" because these members are actively engaged in the fight to restore their rights and interests and place the Association in a position where it will not be used to promote speculation.

The editorial attack features the activities of Mr. Greenleaf S. Van Gorder.

Mr. Van Gorder needs no introduction to the members of the Holstein-Friesian Fraternity. The grand effort which he has put forth in the interests of the breeders and dairymen to check extravagance and stop further exploitation of the Holstein-Friesian Association is familiar to every member and reader of our publication. Possibly no one individual deserves more credit or is held in greater esteem by the breeders and dairymen everywhere than is MR. GREENLEAF S. VAN GORDER. Yet the "World" infers in an editorial that he is an "UNDESIRABLE MEMBER."

If fighting for one's rights, for Honesty and for Justice makes a member "UNDESIRABLE" then surely Mr. Van Gorder should be proud of the name.

Mr. Van Gorder's first efforts to stop extravagance and protect the breeders' funds was when he quietly served the following notice on the President and Directors of The Holstein-Friesian Association:

"To the President and Directors of the Holstein-Friesian Association of America."

"As a member of the Association and also on behalf of other members, I hereby request and demand that such officer and directors cause an action to be brought in a Court of competent jurisdiction in the name of the Association and in its behalf against D. D. Aitken and James A. Reynolds and the other directors to compel the repayment into the treasury of the Association of twelve thousand (\$12,000.00) dollars, unlawfully paid said Aitken as salary, as President, for the year ending June 1, 1920, and twelve thousand (\$12,000.00) dollars unlawfully paid said Aitken as "Director of Extensions" for the year ending June 1, 1921 and against James A. Reynolds for the repayment into the treasury of the Association of the twenty-five hundred (\$2500.00) dollars unlawfully paid him "for services rendered" for the year ending June 1, 1920; also for any sums paid to him for on account of similar reasons for the year ending June 1, 1921.

DATED, MAY 24, 1921.

G. S. VAN GORDER,
Pike, Wyoming County, New York.

As we understand it, this notice was served upon the President and the Directors of the Association and if they failed to act, which they did, it cleared the way

and removed any technical objections that would prevent Mr. Van Gorder or any other member bringing action against the individual Directors to compel them as individuals to restore this money to the Association's treasury.

Mr. Greenleaf S. Van Gorder has acted as Attorney, representing Mr. Stevenson and the other breeders who have signed with him in the Equity Proceeding that is now pending before the court. Every act of Mr. Van Gorder's has been an effort to check extravagance and prevent Law and By-Law Violation in the administration of the Association's affairs and to restore to the members their right to a direct voice in electing officers, fixing the By-Laws and formulating the policies of the Association.

Because of his efforts to protect the rights and interests of the majority of the members of the Holstein-Friesian Association, *The Holstein-Friesian World*, which represents the speculators' interests, refers to him as an "UNDESIRABLE MEMBER."

We are not fearful that the Board of Directors of the Holstein-Friesian Association are considering seriously the expelling of any member or members because of their activities to protect their rights. Such a move on the part of the Directors would only be plunging them and the Association into further litigation. For surely such men as Mr. Van Gorder and Mr. Stevenson would not sit idly by and countenance any such procedure.

Again, such a procedure would not be necessary on the part of the Directors as the Special Meeting at St. Paul, when the Delegate Form of Government was adopted, disfranchised and expelled from the Association all members in so far as their direct voice in the Association's management was concerned.

The World, which represents the "POLITICAL DEALING ELEMENT," infers that "Mr. Van Gorder, Mr. Stevenson and the breeders generally would appear in a much more savory light if they took steps to place the issues which they have raised squarely before the members in annual Convention."

Their suggestion would be the proper and right thing to do if there was an "annual Convention of members" but the members are no longer permitted to meet in annual Convention to transact business. The Delegate System did away with the "annual Convention of members" and created the "annual assembly of delegates."

The legality of the Delegate System itself is one of the questions raised in the proceedings now pending in the court. The delegates could not sit in judgment in their own case.

Therefore, the only proper tribunal to decide the questions at issue is the Court. That is what the Court is for—to protect one's rights and administer justice and that is why the members have appealed to it after they had been deprived of their right to hold an annual Convention of members where they were free to express their wishes, fix fees and direct their own affairs.

At the last annual Convention of members by the largest vote ever cast at any annual Convention the transfer fee was reduced to fifty cents; The efforts of the Political Group, that gained control at the Philadelphia Meeting, to get further control of the Association by being granted the privilege of Altering, Amending

or Repealing the By-Laws from time to time as they saw fit, were defeated.

The President's and the Directors' conduct in office was disapproved by the members when they refused to pass a resolution endorsing such conduct. They stopped the payment of a \$12,000.00 salary to the President. Everything was done at this Convention that could be done to check extravagance, mismanagement and to place the Association's affairs on a sound business basis.

The element that came into control at the Philadelphia Convention fought against the breeders' wishes.

They wanted the high transfer fee retained.

They wanted to gain control of the Association by having the members grant them (The Board of Directors) the power to Alter, Amend or Repeal the By-Laws from time to time as they saw fit.

They wanted to make the \$12,000.00 salaried President, the Chief Executive Officer. In fact, they wanted to continue the extravagant policies which they had been pursuing during the previous two years and were defeated by the largest vote ever cast at any annual Convention.

To accomplish their ends against the wishes of the members, a Special Meeting was called at which the members were deprived of their direct voice in the Association's management and a Political Form of Government was adopted.

At the next annual meeting, after the management had shorn the members of a direct voice in the Association, the transfer fee was boosted to \$1.50.

Many of the Directors, whose conduct in office failed to meet the endorsement of the members at the Syracuse Convention, were continued in office and extravagance has prevailed as never before.

We will allow our readers to judge as to what class of members in the Holstein-Friesian Association are "UNDESIRABLE"—that element that is in favor of high fees and "Ring Rule" or the men who are fighting that right and justice may prevail and that each and every member may have just as much right as any other member in fixing fees, choosing officers and formulating By-Laws.

The Equity Proceeding now pending before the court, we believe, will eventually result in restoring to the members their rights and if any officer be guilty of misconduct in office that officer must face the charge before the bar of justice.

Ring Rule or Membership Rights

THE National Stockman and Farmer in an editorial in their April 11th edition goes on record as favoring the Delegate or Representative Government for purebred Registry Associations.

There is little ground for the Editor to take such a stand unless he favors "Ring Rule" in preference to a Business Form of Government for surely the Delegate or Representative Form of Government is no more applicable to an organization such as the Holstein-Friesian Association or the Aberdeen Angus Association than it would be for Banking Institutions, Railroads or other Commercial Organizations or *The Stockman and Farmer Publishing Company*. When the Editor brings about the adoption of a Delegate or Rep-

representative Form of Government in the management of *The Stockman and Farmer Publishing Company* then we might take his editorial seriously.

The Delegate or Representative Form of Government in its true sense is only applicable when two or more organizations wish to join in carrying out certain projects.

A good example of a Representative Form of Government properly applied is in Religious, Missionary, Charitable or Fraternal organizations where local units join in carrying out State, National or International projects. The local Churches, Sunday Schools, Missionary Societies, Charitable or Fraternal organizations conduct their Government by a direct voting system or Business Plan. It is only when they wish to unite with other similar organizations that the Delegate or Representative Form of Government is adopted and then it only applies to State and National Organizations.

The Holstein-Friesian Association of America, The Aberdeen Angus Association or other purebred Registry Associations are not made up of separate organizations or units. They are rather complete organizations in themselves. Therefore, the Delegate or Representative Form of Government does not apply. The Business Form of Government that is used in Banking Institutions and Commercial Organizations is more simple and efficient and provides a means whereby each member can vote direct or by proxy on all matters pertaining to the organization and that, we believe, is the way things should be.

The Delegate or Representative Form of Government can only be properly administered through two opposing political parties. In a small organization such as the Holstein-Friesian Association with a few thousand members, the financial burden necessary to perpetuate two opposing political parties would be an unwarranted expense. The expense of supporting the one party now in power has so increased the Association's operating expenses that they have exceeded its income by over \$90,000.00 in the past two years.

The Political or Representative Form of Government, as it is being administered in the Holstein-Friesian Association, is a "MADE-TO-ORDER SORT OF AFFAIR," designed, we believe, to relieve the Association of its handsome surplus and milk the membership through increased fees without providing any means of protection to the members.

The Constitution of Pennsylvania and, we believe, the same is true of other States, can not be changed unless the matter is submitted to a direct vote of the people. The members of the Holstein-Friesian Association are deprived of a direct vote in any matters pertaining to the Association's management, Constitution or By-Laws. The Constitution can be Altered or Amended by the delegates and one of their first acts when the Delegate System was put into operation was to amend the Association's Constitution by boosting the transfer fee three times what it previously had been.

The direct or proxy vote is the only Form of Government that will protect the rights and interests of each member and stockholder alike.

THE HOLSTEIN BREEDER AND DAIRYMAN contends that every member of a Registry Association should have a direct voice in choosing officers, formulating By-

Laws and directing the policies of the Association. We are opposed to "Ring" or "Political Rule" in any form.

A Desirable Member

MR. G. S. VAN GORDER of New York is very alert to protect the rights of the members of The Holstein-Friesian Association and breeders of Holstein-Friesian cattle.

It recently came to our notice that Mr. Van Gorder was instrumental in causing a bill to be introduced into the New York State Legislature, which, if passed, would have prevented the Board of Directors of the Holstein-Friesian Association from holding meetings at random all over the country.

The Holstein-Friesian Association in recent years has become a football to be dragged and kicked about the country and has been used as a side-show and a drawing card at cattle sales.

We have repeatedly called our readers' attention to the fact that the Board of Directors have seemingly adopted a policy of calling Directors' Meetings at any time and in any part of the country where sales and shows and agricultural expositions are being held and by pursuing such a policy have provided the officers and Board of Directors and a multitude of Committee men an opportunity to participate in these events and have their expenses paid out of the Association's funds.

We are not aware that there has been a Directors' meeting or a Committee meeting called at Philadelphia in connection with the so-called National Consignment Sale advertised to be held in that community around May 1st but as five of the officers are listed among the consignors to this sale, we wonder just what kind of a Committee Meeting or Board Meeting will be called at that time to take care of the personal expenses of those who are in close touch with the Association's management, and who might want to attend the Sale.

Mr. Van Gorder should be commended for his good intentions in trying to get a bill through the Legislature that would stop all such procedure.

"Our Amateur Picture Contest"

IN OUR April 8th issue and again in this issue we are outlining our \$101.00 Cash Premium Offer for the best amateur pictures of Holstein cattle sent to us during the Contest.

We have felt that the public generally failed to realize that the best specimens of the Holstein breed and in the largest numbers are to be found in the herds of the plain breeders and dairymen who are dependent on the returns from their dairies for a livelihood. It is in the hands of this class of breeders that the breed was established and it is in their hands that it is being preserved and further perfected.

In the early history of Holsteins in America, the Importers, Breeders and Dealers were relied upon to furnish seed stock. Now with nearly a million and a half registered Holsteins, ninety or ninety-five per cent of which are owned by Breeders and Dairymen, who occupy the center of the stage as the source for the best

breeding stock, the importer has gone out of business. The Dealer has gradually assumed the rôle of a "gyp." The Breeders and Dairymen are coming to their own.

The master breeders in any line of improved livestock have come from the ranks of those, who, through necessity, have maintained a close relation with their livestock and, because of their close association with their animals, they have become masters in the art of culling, selecting and mating.

In our travels it has been our experience many times that the breeders who have the best cattle are the least heard of in the press. Since our publication was established we have made it a practice to feature the work that is being accomplished by the breeders and dairymen. We have obtained wonderful results by printing well illustrated stories of their breeding operations. Small breeders, who previously were only known locally, and oftentimes the good work which they were doing was little appreciated, are now favorably known nationally among the subscribers and readers of our publication. Such publicity has helped them personally and it has helped to extend and build up the Holstein industry generally.

We want the public to know about the best herds of Holstein cattle in every community and we want the breeders generally to know about the work which you and other breeders are doing. An exchange of ideas is helpful and instructive and one of the best ways to convey ideas or impressions is through good pictures.

We cannot visit all the good working dairy herds of purebred Holstein cattle, take photographs and gather data for publication in our paper, but if you and other breeders will send us pictures of your best cattle and some facts regarding your breeding operations, we can carry your message to our readers in every state and territory in the Union and several foreign countries. It will help you and at the same time help others. Therefore, to stimulate interest among the herd owners, their good wives and children in sending photographs, we are paying \$101.00 in prizes in "OUR AMATEUR PICTURE CONTEST."

If you have not already entered "THE AMATEUR PICTURE CONTEST" by sending pictures of your animals, DO NOT DELAY—attend to the matter at once. Our first photographs in the Contest began coming in the second day after our April 8th issue went into the mails.

In case you have no pictures available, get busy with the camera at once, take an assortment and send us two of the best ones.

Abscess of the Udder

ABCESS is one of the possible results of infectious mammitis, and is due to infection of the organ by pus-producing germs. The abscess may work toward the surface of the udder, where it can be assisted to a head and lanced by the veterinarian, or it may be ruptured internally and discharge its creamy, liquid pus through the teat. In the event of both external and internal rupturing of an abscess of the udder, there is danger of establishing a milk fistula.

Treatment.—The abscess may be hastened to a head by hot fomentations or poultices. It is then ready to be opened and drained. The aftertreatment usually consists of simple cleanliness in the general care of the animal and the dressing of the part twice daily with a watery solution containing 5 per cent each of glycerin and phenol.—*Farmers' Bulletin 1422.*

The annual meeting and banquet of the Pittsburgh District Dairy Council will be held at the Fort Pitt Hotel, Pittsburgh, Friday, April 24th, at 7 p. m. The principal speakers will be Sally Lucas Jean and L. J. Taber. Mr. Taber, who is Master of the National Grange, will speak on "Dairy Progress and Civilization."

Purebreds are much more profitable to raise than scrubs, and somewhat more so than grades, the degree depending on the proportion of pure blood the grades possess.

A Co-operative Poland China Swine Journal, Owned by the Breeders; Upward of 400 Poland China Breeders now own this Swine and Farm Journal devoted to the interest of pure bred stock. Every Breeder of Poland China Hogs Should become a member of this Co-operative Journal.

CLUB ACTIVITIES

MARYLAND BREEDERS HAVE BIG MEETING

Members of the Maryland Holstein-Friesian Breeders Association with friends to the number of two hundred met at the Springfield State Hospital, Sykesville, April 11th and after inspecting the hospital herd which now numbers 104 head, the new piggery, and the 35 white leghorns they sat down to a four course dinner furnished by the Honorable John M. Dennis, and served by the hospital nurses.

After dinner, President John M. Dennis, Jr., called the gathering to order. Dr. J. Clement Clark welcomed the breeders and explained the necessity of plenty of Holstein raw milk at an institution of this kind.

Dr. Patterson, of the Maryland Experiment Station, Senator Wade H. D. Warfield, of Sykesville, and Mr. R. L. Forrest of the Java Farms, Annapolis, said a few words; then Professor J. A. Gambrell discussed the subjects so often emphasized by him, (better cows, better cared for in Maryland). The optimistic side of the dairy situation was then discussed by Mr. De Los James, of the Bureau of Markets, Washington, D. C. Dr. Thomas B. Symons impressed the audience with the magnitude of Dr. Clark's work in building up an institution of this kind, and also the inspiration which the average farmer could derive from looking at a herd of cattle less than three years old which were individually bought at prices well within the average farmer's means. Allen N. Crissey urged the breeders to support calf club work for which Maryland is already noted.

A committee made up of Hon. John M. Dennis, Sr., John Grau, Hydes, and A. G. Ensor, Forrest Hill, nominated new officers for the coming year with the unanimous election of Charles Wertheimer, president, and Norman W. Petersen, Germantown, secretary.

This is the largest dairy meeting ever held in Maryland or the District of Columbia.

DAIRY ORGANIZATIONS HOLD BANQUET

About 130 dairymen and friends attended the banquet held March 31st at the Dry Milk Plant, Columbus, Wis., given jointly by the Columbia County Holstein Breeders' Association and the Columbia County Cow Testing Association.

A very interesting program was staged. Arthur Weiner spoke briefly on the development of 30-lb. cows. George Goodwin, county cow tester, gave the history of C. T. A. work and other items of interest. Dr. Caldwell spoke on the food value of milk and gave some information about vitamins. Prof. F. B. Morrison of the Wisconsin College of Agriculture spoke on mineral feeds and said that properly balanced rations of which leguminous feeds formed a large part necessarily do not need the addition of any other mineral except salt with perhaps a small amount of ground limestone to each 100 lb. grain.

MARYLAND FAIR ENCOURAGES JUNIORS

For several years good prizes have been given in the cattle department at the Maryland State Fair and the Fair Board have been very generous in their appropriations for junior work. It will be remembered that two successive years, teams of boys winning the judging competition at the Maryland State Fair have successfully competed in international judging contests. For the 1925 fair there has been appropriated the sum of \$1,720 which will be spent under the direction of the head of the cattle department and the University of Maryland. The sum of \$200 will be given in prizes in judging contests open to juniors. A further sum of \$300 is given for the expense of sending the winning team to the National Dairy Show, which this year will be held at Indianapolis. In addition \$720 will be offered in the calf club classes for the exhibition of animals owned by juniors and a further sum of \$500 for the transportation of animals entered, making up the sum of \$1,720.

For the junior swine department the sum of \$399 has been

appropriated—\$133 for each of the big breeds exhibited. The fair management does not pay freight on the pigs exhibited, nor do they pay the expenses of the club leaders. All pigs shown in the club classes are eligible to be shown in the open classes.

The Maryland State Fair and Agricultural Society of Baltimore County is certainly generously minded in its efforts to encourage and educate young farmers.

The sum of \$8,480 was appropriated to be equally divided for premiums among the four great dairy breeds exhibited, Holsteins, Guernseys, Jerseys and Ayrshires, in the general or open classes. For premiums in the swine department \$5,029 was set aside. The Maryland State Fair will be held at Timonium the week of September 7-12 inclusive.

AIM FOR HEALTH IMPROVEMENT

On March 1 a total of 29,697 herds of cattle in Pennsylvania were awaiting the first tuberculin test according to a statement issued by the Bureau of Animal Industry. On that date, 240,536 cattle in 27,267 herds were under supervision for the prevention and eradication of bovine tuberculosis. It is estimated that more cattle are now awaiting the first test than have been under supervision on the accredited plan since this plan was started in April, 1918.

From April 1, 1918 to March 1, 1925, a period of seven years less one month, a total of 19,364 reactors to the tuberculin test were disclosed under the accredited plan and were eliminated from the herds of the State.

County wide tuberculin tests have been conducted on all cattle in Mercer, Crawford and Jefferson Counties and work on a similar basis has also been conducted in 48 townships of 10 other counties. Altogether 136 townships in 13 counties have been given the area test.

HESS HEADS OSWEGO CLUB

Harold Hess of Phoenix, was elected president of the Oswego County Holstein-Friesian Club at its annual meeting March 30th at Oswego, N. Y. The other officers elected were: Walter Rappeleye, Oswego, vice-president; R. Austin Bac'us, Mexico, secretary-treasurer; Henry Bradford, Central Square and Lawrence Hollis, Lodi, executive committee.

Leon H. Westfall, Pulaski, the county junior project leader, explained the county calf project. Farm Bureau Agent Fred B. Morris reported that a bull survey recently made through the schools of the county showed that of the 375 herds on which returns were made, 152 were headed by purebred bulls and 223 by grades. He recommended that a purebred sire campaign make up part of the club's 1925 program.

IN ST. LAWRENCE COUNTY

Roy Badger of De Peyster was elected president of the St. Lawrence County Holstein-Friesian Club at the annual meeting held at Ogdensburg, N. Y., April 2d. The other officers were: R. M. Thompson, Heuvelton, vice-president; W. A. Laidlaw, Hammond, secretary and treasurer. Benjamin Steele of De Peyster was elected director for a term of three years.

A membership committee was elected also a committee to select the county herd to be exhibited at the New York State Fair next fall. The members and their friends banqueted before holding the business meeting.

BLACK HAWK STARTS AGAIN

The Black Hawk County Holstein Breeders Association was reorganized at a meeting held at Waterloo, Iowa, March 28th. Thomas Hansen, Cedar Falls, was elected president; Russell Sage of Bennington, vice-president; and A. A. Burger, Cedar Falls, secretary-treasurer. The association will pay off the debts of the old association and already has more than enough funds in sight. Program for future work will be submitted at the next meeting.

A TRIBUTE TO A HOLSTEIN DAIRYMAN

In a recent issue of the *Dairymen's Price Reporter*, the organ of the co-operative dairymen of the Pittsburgh region, there is a story on "Jim" Paxton entitled "Pennsylvania's Leading Holstein Exhibitor in 1924." The following paragraphs are excerpts from the article which was written by Editor Harry I. Berlovich.

"Comparing the dairy business of to-day with that of twenty years ago, from the standpoint of the farmer, is as comparing a 'tin lizzie' with a Rolls Royce, with the present day likened unto the Rolls Royce, according to James M. Paxton, Houston, Pa.

"And 'Jim' Paxton knows. Not from what he has heard but from what he has experienced. He knows what it means to sell milk for nine cents a gallon and pay two cents a gallon for transportation. He knows what it is to sell milk and then wait for sixty days after it was sold to find out what it was to bring him.

"He knows the fights and troubles the farmers had to go through before they were given any recognition by the dealers over this territory. He can recall first-hand the famous 'Milk

KING ECHO SYLVIA ALCARTRA LAD

Winner of three grand-championships and four first prizes during the 1924 show season. Owned by James M. Paxton, Houston, Pa.

Strike' of 1907 and looks back with considerable pleasure when he thinks of how roseate the bed of the dairyman is to-day.

"Jim' Paxton was president of the old Tri-State Milk Producers' Association, which was one of the farmers' attempts to gain recognition before the organization of the Dairymen's Co-operative Sales Company. He now is president of the Charters local, one of the most solid and loyal units of the entire chain.

"He is a natural farmers' leader—a splendid gentleman and a dairy farmer of the very first rank. During the show season of 1924 Mr. Paxton earned the title of Pennsylvania's champion Holstein-Friesian exhibitor. His show herd of 14 head, during the season which just closed, in the face of the most stiff competition in years garnered 37 blue ribbons for first place, 30 second place honors, 11 third place positions, four ribbons for winning fourth place and one for having a fifth place winner. In addition to this he won eight grand championships, six championships, four Pennsylvania State Holstein Association ribbons and one bronze medal from the Holstein-Friesian Association of America for winning the Exhibitor's Herd prize at Ebensburg, Pa., exposition.

"The record made by Mr. Paxton's herd during 1924 was the finest he ever enjoyed and the shows he entered in were of the most stiff in his entire career. The first show he entered was the Washington County Fair at Washington, Pa., where the Paxton stock romped home with the lion's share of the prizes. "At the West Virginia State Fair and the Delaware State Fair, the next two shows entered, the Paxton cavalcade duplicated their Washington triumphs with the exception of King Alcartra Lyons Abbekerk, his fine bull calf who scored money at the Delaware show, this being the only spot where he was placed down.

"From Delaware they trekked their way back to Reading, Pa., where the kingpins of the Pennsylvania Holstein breeders had gathered for the Reading District Fair. All breeders who

opposed Paxton at this spot now appreciate the kind of stock he is raising, for he again took the major prizes. The remaining two fairs were at Ebensburg, and Burgettstown, Pa., where two district fairs were held.

"King Echo Sylvia Alcartra Lad, the big senior herdsire at the Paxton farm, showing as a three-year-old, won four first place ribbons at Washington, Wheeling, Reading and Burgettstown, and two second place titles in addition to being crowned senior and grand champion on three different occasions.

"It was his son, King Alcartra Lyons Abbekerk that gave him the strongest competition for grand championship honors, for he was first prize winner on five different occasions and junior champion on almost as many times.

"Dasie Dalzell Mercedes Belle 4th, the grand matron of Mr. Paxton's herd, was one of the sensations of the season. Dasie Dalzell won five first place ribbons and five grand championships, being placed in second place only at Reading, below a cow that she had defeated before and after that exposition.

"As further proof of the type of cattle that Paxton breeds, he brought out Lyons Abbekerk 3d, the dam of his prize winning bull calf, and she won first place in all shows where they had a three-year-old class. Another animal that Paxton is proud of is Cassie Inka De Kol, a mighty fine cow who did not win a first place, but also did not fail to place in the money in all shows entered.

"I have been connected with the cattle show ring ever since I was 12 years old and never before have I enjoyed such success or met with such keen competition," explained Mr. Paxton. "There is a thrill about the show ring that I enjoy to the greatest extent. I love to get out and see what the other breeders have—I enjoy the fellowship of the stockman who follows the show circuits."

"Mr. Paxton is not the sort of exhibitor that refrains from doing the real work on the trip. He travels right with his cattle along with his hired man and wouldn't miss the opportunity of getting out in his overalls and doing the work right alongside his men. He states that when the time comes when he can't do this, take his turn at the harder work, that he will discontinue showing.

"This spirit exhibited by Mr. Paxton has a wonderful effect on his hired men—they realize in Mr. Paxton they have an employer who is willing to carry his end of the load and as a result jump into their labors with a vim and interest that is too often lacking in our hired men's makeup.

"The fact that one hired man stayed with Mr. Paxton four years, working on his farm and when he got married sent his brother on the job is recommendation enough as to the character of the gentleman. Incidentally this younger brother has now been with Mr. Paxton for three and one-half years. This is a record few employers can point to.

"It is a pleasure to be in the milk business now," stated Mr. Paxton while ruminating over the times that were. "The days we had to ship our milk and take a chance on getting anything out of it at all—lose our cans and say nothing of our tests—are things gone by and we thank ourselves that we have such an organization as the Dairymen's Co-operative Sales Company, which has eliminated most of our troubles. The only way to keep this condition is to keep our members loyal. I believe that if more of the members had gone through what we old timers did, they would entertain a much more wholesome respect for their organization and its officials.

"We dairy farmers must learn to recognize ourselves as business men and our farms as our place of business. We must check up on our loose ends if we expect to progress. I have little sympathy for the farmer who does not know what his cows are doing or which are making him money and which are not. We have a cow testing association in our section that I would hate to see fall under. It has jacked the most of us farmers up by our bootstraps and set us working and thinking.

"My advice to any one going into the dairy business in this section is to watch your production methods—produce clean milk—be proud of the position you hold or get out of the business. Don't demand a premium for producing clean milk, but be ashamed of yourself if you do anything else. Be a loyal member of a co-operative marketing association and

get some good cows that you know are earning their keep. If you don't know which cows pay their way, test them and check up on yourself.

"The Paxton herd numbers between 35 and 40, all of the finest type. Mr. Paxton lives on a 170 acre farm, with his son and daughter-in-law. They have a good farm and dairying has made it a good farm. Mr. Paxton is a good farmer, a leader and a business man."

At its recent meeting in Harrisburg, Mr. Paxton was re-elected for a term of two years as director of the Pennsylvania Federation of Holstein-Friesian Clubs, the state organization of the black-and-white breeders.

THE DAIRY COW AS A FEED MARKET

By L. P. EMMERICK

Most dairymen realize that there is a difference in the returns they get from feed fed high and low producing cows, but very few realize how big that difference really is and so continue to keep low producing or boarder cows at a financial loss to themselves and to the general detriment of the dairy business. To get some actual figures on the difference the writer took the 1923 records of one Virginia Cow Testing Association in which there were over 400 cows with full year records and grouped them according to butterfat production. To the average returns received for the milk in each group was added the value of the manure and of a one-day-old grade calf. From this amount was subtracted the labor and overhead charges, and the result was taken to be the amount received for the feed consumed. Then it was figured out what returns were received for each of the different feed items in each of the different groups.

Cows whose average production was less than 150 lb. of butterfat returned only 92c a month for pasture, \$2.22 a ton for silage, \$8.32 a ton for hay, and \$21.70 a ton for grain. It is needless to say such cows were kept at a loss and did not pay market prices for their feed.

Cows from 150-200 lb. of butterfat returned \$2.10 a month for pasture, \$5.28 a ton for silage, \$20.34 a ton for hay, and \$48.94 a ton for grain, or just about paid market prices for their feed.

Cows from 300-350 lb. of butterfat,—production which every dairy herd should and could maintain with proper breeding, feeding and weeding,—showed a return of \$3.27 a month for pasture, \$8.76 a ton for silage, \$33.10 a ton for hay, and \$92.42 a ton for grain. Cows in this group show themselves to be a very profitable market for feed. Cows in the higher producing groups showed considerable higher returns.

If a farmer had hay in his barn to sell and he had three buyers come and bid on it, the first one offered him eight dollars a ton, the second twenty dollars a ton, and the third thirty-

three dollars a ton, it is needless to ask who would get the hay. He would sell that hay to the buyer who had bid thirty-three dollars a ton, and the bidders that only offered eight and twenty dollars a ton would not get a pound of it. He would say that it would be foolish for him to sell hay for eight dollars a ton when he could get thirty-three dollars a ton for the same hay from another buyer, and of course he would be right.

If that farmer was a dairy farmer his buyers could be his cows, and from the figures given above some cows would be paying him eight dollars a ton for hay, some twenty dollars a ton, and perhaps only a few thirty-three dollars a ton. Should he not refuse to sell hay to a cow for eight dollars a ton as he would refuse to sell for that price to a hay buyer?

The case is even worse when it comes to grain. In the class under 150 lb. of butterfat the returns per ton of grain was \$21.70. Most of this grain had to be purchased and actually cost \$49.00 a ton. It takes an extraordinary man to buy material at \$49.00 a ton and sell it for \$21.70 and still stay in business, but this is just what some of us are trying to do, and when we find it cannot be done, say the dairy business is at fault and unprofitable.

On the other hand the cows in the class from 300 to 350 lb. of butterfat returned \$92.42 a ton for grain and, as the average cost of this grain was \$52.74, it can be seen that a good profit was made on the purchase.

If you are a member of a Cow Testing Association study over your herd book, and if you have any of these low producers get rid of them for whatever you can get for them. If you are not a member of a Cow Testing Association, if it is at all possible join or have one organized in your section, or in some way find out the low producer and get rid of her because you cannot sell feed to her at anything but a loss. As a market for feed, the high producing dairy cow is sure profit and quick pay, while the low producing dairy cow is uncertain, unprofitable and slow pay.

PLAN DRIVE IN BLUE EARTH COUNTY

It was decided to admit business men to special membership in the Blue Earth County Holstein Breeders Association at their annual meeting held at Mankato, Minn., March 15th. A membership drive will be started.

H. E. Brush, of Amboy, was re-elected president; S. D. Whiting, Mankato, vice-president and H. L. Sohre, of Good Thunder, secretary-treasurer.

"You naughty child, where have you been?" demanded a mother of her hopeful. "I believe you have been fighting again with John next door. Just look at your clothes! I'll have to buy you a new suit."

"Don't scold me, ma," responded the youngster. "You ought to see Johnny. His mother'll have to buy a new boy."

Cow Testing Association Reports

HOLSTEINS TAKE HONORS

A Holstein cow owned by G. M. Seitz, of Woodville, California led the Tulare County Testing Association for March by producing 90.2 lb. butterfat. A black and white cow owned by Allison and Storm, of Tulare, was second with 2,381 lb. milk, 82.1 lb. fat, while Holstein cows were fourth and fifth. In the small herds M. G. Black, of Packwood, led, his 13 Holsteins averaging 40.3 lb. fat. J. R. Smith, of Tipton, owned 26 Holsteins that averaged 38.4 lb. while 85 Holsteins owned by the Chicago Ranch averaged 35.3 lb. There was a big increase in the average production. Additional green feed made available by plentiful rains, balanced rations and an increased feeding of silage and grain are given by County Dairy Commissioner H. E. Martin as primary causes for the increase.

THE CUMBERLAND COUNTY ASSOCIATION

Purebred Holsteins occupied the ten highest positions in the Cumberland County Cow Testing Association for the month ending April 15th. Margaret owned by I. V. Otto, of Carlisle, led with 86.8 lb. fat, 2,018 lb. milk. Pansy owned by Paul C. Gible, of Mechanicsburg, was second with 84.2 lb. fat, 1,959 lb. milk and Jewel owned by W. I. Sheaffer, of Huntsdale, is third with 81 lb. fat, 1,883 lb. milk. It is interesting to know that the three leaders each averaged 4.3% as did Bell, the cow in fifth place, owned by A. N. Lehman, of Carlisle. She was credited with 73.7 lb. fat, 1,713 lb. milk. The cow in fourth place was owned by George L. Snyder of Carlisle and is credited with 79.9 lb.

fat, 2,160 lb. milk. W. W. Pepper owns Sadie which stood sixth with 69.1 lb. fat, 1,773 lb. milk. The Otto herd had three in the list of ten highest, Paul Gible had two and so did Lehman.

During the month 222 cows in milk were tested in 25 herds. Of this number 81 exceeded 40 lb. fat, 42 produced over 50 lb. and 71 cows exceeded 1,200 lb. milk. The high quality of the herds composing the Cumberland County Association may be gauged from the following table which shows the herd averages for the month:

Owner	Cows	Milk	Fat
George L. Snyder ...	5	1800	59.1
Paul C. Gible ...	8	1472	51.3
Raymond Shugart ...	6	1240	46.7
W. W. Pepper ...	10	1283	45.5
Ivo V. Otto ...	19	1272	43.9
J. L. Boshore ...	10	1282	42.3
A. N. Lehman ...	8	1158	42.0
W. I. Sheaffer ...	10	1076	40.3
J. H. Lear ...	13	1167	40.0

Mr. A. A. Raudabaugh, who is in charge of this association says that six herds were tubercular tested during the month making a total of 11 tested or nearly half of the 25. They are driving for 100%.

The tester had the management of seven cattle sales during the month of March, assisted nine members to purchase additional producers and gave some special service to five other dairymen not in the association. He also attended three meetings and took in one auto tour. One of the meetings was a re-organization of the County Holstein Association of which he was elected secretary. In addition he did some testing for four dairymen selling at retail, a total of 243 composite samples. Mr. Raudabaugh says:

"Facts taken from the *Testers Monthly News* edited by C. R. Gearhart of Pennsylvania State College show that the Cumberland County Association has had the highest ten cow average for butterfat every month since October, 1924, also the highest percentage of cows tested, producing 1,000 lb. milk, 1,200 lb. milk, 40 lb. fat and 50 lb. fat. But for high individuals as to milk or fat our name only appeared once in this period of time.

"This might indicate to a certain extent that we are feeding for records but such is not the case. The nine herds mentioned are being fed on the average of 1 lb. grain to 3 and 4 lb. milk and in a few cases even 1 lb. to 4.5 lb. milk.

"Continually watching the man, his cows, his methods, his feed pile, and not being afraid to make suggestions helps all concerned to get real value out of C. T. A. work."

MAKING A BIG SHOWING

Johan Pietertje Lass, owned by L. J. Moreland, enrolled in the Kalamazoo Testing Association, has produced since December 15th last, 6,927.7 lb. milk, 249.7 lb. fat. Her milk sold at the average price of \$2.50 per hundred pounds was valued at \$178.09. Her feed cost during the test period \$32.40. For the month ending January 15th, she produced 2,278.5 lb. milk, 82.2 lb. fat, in the next month 2,030 lb. milk, 71.05 lb. fat and for the month ending March 15th, her production was 2,253.7 lb. milk, 83.39 lb. fat.

REGISTERED HOLSTEIN BULLS.—Two months to two years. Sire over 1,000 lb. Prices and terms best ever. W. A. BEACH, Mankato, Minn.

SPECIAL

We offer TWO Bull calves born March 1st. Both are from cows that produced over 22 lb. butter, 500 lb. milk in 7 days as three-year-old heifers. Both are by our high class herdsire. Also have other choice calves—male and female—from good producing dams.

This herd has been established 22 years and is on the ACCREDITED list.

MRS. MARY F. WITTER & SON

Allegany Co., Cuba, N. Y.

Berylwood Prince Aaggie Chicago

Is siring splendid youngsters.

He is by California's best bred herdsire and greatest show bull.

The dams are producers and backed by many records.

Let me sell you a nice young bull, or else some good females bred to our herdsire. Remember our herd is ACCREDITED.

L. L. ALLIS
Rummerfield, Pennsylvania.

Choice Young Cows

Good Size, Type and Producing Capacity

YEARLING HEIFERS AND HEIFER CALVES

King Reliance Lockhart Veeman heads this herd. His dam holds the world's record in the Dairyman's Division with her record of 882.10 lb. butter, 15,837.7 lb. milk made as a senior four-year-old. She is also a New York State Fair prize winner.

Herd under State and Federal Supervision—Last test clean

DAN E. ANDERSON
R. D. 3. Norwich, N. Y.

NETHERLAND FLOSSIE JEWEL

In 365 days she produced 12,371 lb. milk, 486.8 lb. butter, finishing record the day she was 18 years old. This is the world's record for age.

An offering of a few young bulls. Prices range from \$50 to \$300.

They are backed by producers, many with large records and are backed by the best blood of the breed.

Never any T. B. or Abortion in the herd.

DAVID FALCONER
Scottville, Michigan

Quality Holsteins

Quality means Type, Size, Individuality and Ability to return a substantial profit over cost of feed and labor.

That's our kind.

Let us sell YOU a few.

J. H. SILVIS & SONS
Greensburg Penna.

SENSATION CLOTHILDE TEHEE

His sire's dam produced 30,024 lb. milk, 1,250 lb. butter in a year; his own dam, 21,968 lb. milk, 945 lb. butter as a three-year-old; their average is 25,996.5 lb. milk, 1,097.97 lb. butter.

All the cattle in this county have been twice tuberculin tested. At the recent test 99.2% passed clean. This herd is ACCREDITED.

Can spare a few good ones.

Last Call For

W. H. Wertz Complete Dispersal Sale at Camp Hill, Pa., on April 30.

Brownwood Farms Reduction Sale at North Bloomfield, Ohio, on May 5.

WERTZ WILL QUIT FARMING

Two perfectly good reasons cause W. H. Wertz, of Camp Hill, Pa., to disperse his high class Holstein herd. One of these is the state of his health, for Mr. Wertz has been under the Doctor's care and unable to work for nearly a year. The other is that his farm is being cut up into building lots of which a number have already been sold. Consequently on Thursday, April 30th, the Wertz herd together with the horses, mules, and farm implements will be sold at public auction.

The Wertz herd has already received considerable attention through the press. In January, 1924, Lady Piebe Colantha Pontiac, a member of this herd, while enrolled in the Cumberland County Cow Testing Association produced 2,430 lb. milk and was the highest producer that month of any cow enrolled in C. T. A. work in the Keystone State. Her photograph was used by state authorities and by a number of farm papers to show what could be done by a good cow given good care and feed in a farmer's herd. Lady Piebe Colantha Pontiac will be in the sale.

There are few daughters of King of the Pontiacs in Farmers' herds. Nearly all those still living are owned by big breeders, but Mr. Wertz has one in K. P. Iva De Kol Pontiac Veeman, now just past seven years old. She is a large, light colored cow, evidently of great capacity and is a real good individual. She has a herd record of producing 90 lb. milk in a day and she has another record of producing four calves in a period of fourteen months, twins on two separate occasions. All four calves are living; in fact, three of them are at present in the herd, and like their dam, will be offered on the last day of this month. Iva, as she is called, does not get all her royal breeding from her sire's side. Her dam is a tested daughter of Iva De Kol 3d, 30.60 lb. butter in a week, 806.27 lb. butter in a year, who in turn was from a 30 lb. cow that produced 705 lb. milk in a week. Her sire is by King of the Pontiacs from a good daughter of Hengerveld De Kol. Iva also traces through her sire's dam to Sir Korndyke Pontiac Artis and Sir Veeman Hengerveld.

Dutch Corner Fayne Lyons is by Governor Walker Lyons from a 21-lb. two-year-old daughter of Segis Lyons. At four years and twelve days old, she made an official record of 510.6 lb. milk, 20.50 lb. butter. In C. T. A. work she produced 20,042 lb. milk in a year.

In the herd there are granddaughters of Korndyke Abbekerk and others of Homestead, Clyde and Johanna strains. The young stock are well grown and in splendid condition.

The senior herdsire is King Ormsby Nell Viola, just four years old. He is light colored and straight, a very handsome fellow. His sire, King Ormsby Abbekerk Helena, is said to be the handsomest son of King of the Ormsbys and the Wertz bull is very much like his sire. He has a full sister, Ormsby Nell Viola, with a 24.57 lb. record made as a junior four-year-old while as a junior two-year-old she is credited with 20.75 lb. butter in seven days, 14,630 lb. milk, 635.30 lb. butter in 301 days.

The dam of the Wertz herdsire is a tested granddaughter of Paul Calamo Korndyke, the famous show bull formerly owned by R. E. Haeger, of Algonquin, Ill.

The Wertz herd is under state and federal supervision, passed clean at its last test and the animals will be sold subject to the standard 60-day retest.

All the farm implements will be offered together with the horses, mules and, as the sale bills say, other things too numerous to mention. The auctioneer will be Col. George Deitch of Carlisle. A. A. Raudabaugh, tester of the local cow testing association and president of the Pennsylvania Cow Testers' Association, will handle the pedigree work.

The Wertz farm is on the Gettysburg Highway, four miles from Market Square, Harrisburg. The farm house and farm buildings are of a quality seldom seen in this section of the country and as a National and State highway runs right through the farm, it is expected that many Holstein enthusiasts will attend this sale.

AT THE JACOB WARREN DISPERSAL

Under the management of F. G. Johnston, veteran sale manager of Columbus, Ohio, the purebred herd of Holsteins owned by Jacob Warren of Alliance, Ohio, was sold on April 7th. The thirty-nine head brought \$3,424, an average of \$87.80. No printed catalogs were used for this sale, typewritten pedigrees being used by Mr. Johnson and handed to the purchaser after the auction closed.

One bull, fourteen months old, brought \$132.50, five bull calves born this year averaged exactly \$35. Of the females two were cows with damaged udders. Mr. Johnson presents the following interesting classification of prices obtained for the females.

3 head, born in 1915, sold for	\$273.00
2 head born in 1916, sold for	270.00
1 head, born in 1918, sold for	195.00
1 head, born in 1919, sold for	112.50
3 head, born in 1921 sold for	512.50
6 head, born in 1922, sold for	819.50
7 head, born in 1923, sold for	620.00
4 head, born in 1924, sold for	167.50
6 head, born in 1925, sold for	146.50

SPARTA SALES

Chas. Van der Schaaf of Sparta, consigned two cows to the Holstein consignment sale held at Sparta, Wis., March 25th. One brought \$182.50 and the other \$175. A cow consigned by Barber & Chapman of Tomah brought \$165 and one consigned by Theo Schlaver brought \$162.50. The buyers of these four cows were from Boyden, Iowa. Iowa buyers took twenty-three head, while thirteen or fourteen head went to Illinois.

The purebreds of all ages averaged just over \$87 and the grades just over \$77.

The Morse herd containing fifty-four head of purebred Holsteins was dispersed on the next afternoon and brought around \$3,600. Fred J. Nicholson of Angelo bought the top cow for \$165. Eight head went to Illinois buyers, the rest remaining in the vicinity of Sparta.

BIG TURN OUT AT SALE

An average of \$140 was obtained at the annual Crawford County Holstein Breeders sale held at Prairie du Chien, Wis. A crowd of 300 attended, many from out of the state. The sale was said to be the largest ever held in the county.

AND ON THE ACCREDITED LIST

PASTURE CORNER ON MERRYALL FARMS

These cows and others in the herd have semi-official records, made under farmer conditions that range up to 20,500 lb. milk and from 600 lb. to over 800 butter. They are bred to bulls with 30 lb. blood in every line of their pedigrees. Segis Pieterje Prospect breeding. Prices reasonable. Quality high.

THE RISE OF PEDER PEDERSEN

In April 1890 Peder Pedersen, a Danish farmer, landed in this country with \$2.65 of which he says \$2.00 was stolen from him the first night. Mr. Pedersen soon found employment on a farm and in a short time made his way out to Iowa and settled near Cedar Falls. Finally he started in the dairy business and headed his herd with a purebred bull. Finally he picked up a purebred cow and then a couple of registered heifers replacing the last grade in 1919. That year the cow testing association records showed the average profit of the cows in the dairy to be \$22.23. In the past five years Mr. Pedersen and his sons have so improved their herds that the animals average a hundred dollar profit, and last year one of his cows made 1,171 lb. butterfat and over 29,000 lb. milk.

Of his first herd Mr. Pedersen recently said, "My first cows were a mixture of every breed of cattle known, and, I used to think, had a little billy goat blood thrown in for good measure."

UNIVERSITY FORMS BREEDING CIRCUIT

Dairymen of three stations of the University of Minnesota have organized a Holstein breeding circuit upon suggestion of Dr. C. H. Eckles, chief of the division of dairy husbandry. University Farm and the outlying stations at Crookston and Morris make up the circuit.

"One of our objects in organizing," says Dr. Eckles, "is to reduce the university's investment in bulls while at the same time getting better sires. Eventually we hope to form breeding circuits for other cattle breeds and possibly for other kinds of farm animals."

To fill out the complement of Holstein bulls the university has purchased a four-year-old for the station at Crookston. This bull was sired by King Segis Pontiac Count and as a two-year-old was placed third at the 1923 National Dairy Show. His dam, a daughter of Piebe

Laura Ollie Homestead King, has a national reputation as a producer and show ring winner. More than twenty of his daughters were inspected by the university dairymen before he was purchased.

A young bull used at the Crookston station the last two and a half years has been placed at the head of the University Farm Holstein herd. He is a grandson of Sir Pietertje Ormsby Mercedes. His dam is Mamsell Johanna, world champion four-year-old cow, who produced 1,317 pounds of butter from 31,515 pounds of milk in a year.

The third bull constituting the circuit has been transferred from University Farm to the Morris station. This bull is a son of Piebe Laura Ollie Homestead King and a three-fourths brother to the American butter champion, May Walker Ollie Homestead, with 1,523 pounds of butter to her credit in a single year.

THE START OF THE SCHAEFER HERDS

Henry Schaefer was born and raised in Germany came to this country and settled near Appleton, Wisconsin. There he kept cattle of shorthorn type, raised grain and fattened cattle for market. But he often spoke of the cows he had seen in Holland and coming from Holland, and told his boys he would like such cattle in this country. When his boys grew to manhood one of them became an attorney in Milwaukee and another went to visit him. The older boy, Henry told his brother that he had seen the kind of cattle his father had so often described and took him to the herd of Rust Brothers at West Allis. There William Schaefer bought two calves, a male and female, and shipped them back to the old homestead. This was in 1890. This laid the foundation of two herds, one owned by George R. Schaefer of Greenville and the other by R. J. Schaefer of Clayton.

George Schaefer now has 50 animals.

His present herdsire is from a daughter of Sir Johanna Piebe, a former head of the Schaefer herds whose daughters made remarkable records. Years after the Schaefer had owned this bull, Government officials came from Washington to the Schaefer farms to look up the records of his offspring and took back with them a carload of his daughters and granddaughters. However, George Schaefer has not been making official records for a number of years but has devoted more of his attention to the production of good individuals believing that type and production are very closely allied.

IT'S HUNT AND CHAFFEE NOW

Mark Hunt, prominent Holstein breeder, formerly of White Sulphur Springs, Montana, has associated himself with S. E. Chaffee, of Chaffee, Wash., and has acquired an interest in the Chaffee herd.

The herdsires are Chief of the Ormsbys, by King of the Ormsbys from a world's record daughter of Ormsby Korndyke Lad, and Marathon Bess Burke, formerly at the head of the herd owned by John Erickson of Waupaca, Wis. Marathon's daughters in milk averaged \$1,170 at the Erickson sale last June and the heifers averaged over \$700. Chaffee & Hunt have a large number of type young cows with records up to nearly 30 lb. and, with these two richly bred Ormsby bulls, will materially influence Holstein history in the West.

He was bent on ending his life. Sadly he walked down to the lake front pier. Taking off his hat and coat, he carefully laid them on the dock and prepared to take the fatal plunge. Just then his eye caught the following admonition on a nearby billboard:

"You can do it better with gas!"

The would-be suicide stopped, picked up his hat and coat and went back up town.

SYKES HERD RECORDS

Under the care of Superintendent F. G. Farr, the cows in the Springfield Hospital, Sykesville, Maryland, are making a great showing in their everyday work, while a number of good official records are reported. Kate Segis Burke Pontiac, a junior four-year-old, made 578.5 lb. milk, 31.15 lb. butter in seven days and Belle Segis Burke Lockhart another junior four-year-old, made 468.2 lb. milk, 24.19 lb. butter. Each of these cows averaged above 4% fat for the week.

Five junior two-year-olds were tested. Spring Syke Canary made 429.4 lb. milk, 24.06 lb. butter; Spring Syke Carnation made 423.9 lb. milk, 22.08 lb. butter; Spring Syke Aaggie, 426.6 lb. milk, 19.37 lb. butter; Spring Syke Ormsby Rekamooie made 398.9 lb. milk, 15.98 lb. butter and Spring Syke Pontiac Perfection 335 lb. milk, 14.56 lb. butter. Spring Syke Canary averaged 4.4%, Carnation, 4.1%, Aaggie, 3.6%, Rekamooie, 3.2%, and Pontiac Perfection 3.47% fat.

REASON FOR PRIDE

For the third time during the present year Pride, a purebred Holstein owned by Ed. Hansel, of Colesburg, Iowa, led the Colesburg-Two-County Cow Testing Association by producing 2,279 lb. milk and 73.4 lb. butterfat during March. During February she produced 2,304 lb. milk, 70.9 lb. butterfat.

During March 226 cows in 26 herds were tested and they averaged 843 lb. milk, 31.8 lb. fat. There were 53 cows that made over 40 lb. and 17 about 50 lb.

A NICE AVERAGE

Fourteen Holsteins owned by J. F. Harlan, of Somerset, Ohio, averaged 11,362 lb. milk, 406.8 lb. fat in a year while enrolled in the Licking County Cow Testing Association. Their feed cost per 100 lb. milk was \$1.16 and for each dollar expended for feed purposes Mr. Harlan received \$1.93.

LADY'S COW LEADS ASSOCIATION

Mrs. Adeline Tessene a member of the Whitewater, Wis., Cow Testing Association is the owner of Betsy, a grade Holstein cow that headed the association last year. During the year 411 cows were tested for a period of nine months or more. Mrs. Tessene and her two boys do most of the farm work.

Betsy of Lawndale Farm at the age of five gave 13,548 pounds milk and 492.1 pounds butterfat. Her product sold for \$229.95; her feed bill was \$76.57 and she returned a profit of \$153.38. At the age of six she made 10,013 pounds milk and 416.4 pounds butterfat selling for \$235.53 on a feed bill of \$81.17, returning a profit of \$154.36. At seven years her record was 11,776 pounds milk and 505.9 pounds butterfat, sold for \$287.27 on a feed bill of \$78.77, returning a profit of \$208.50. Betsy returned a profit in three years of \$516.24.

Betsy was milked twice daily and fed no grain on pasturing until freshening. She consumed during her year in association work 1924, 4,590 pounds silage, 2,260 pounds alfalfa hay, 1,181 pounds corn fodder, and 2,235 pounds of a mixture of two parts each of corn and cob meal, ground oats, bran and one part oil meal and was on pasture 135 days.

REGISTERED HOLSTEIN BULL CALVES.—Four to sixteen months of age, sired by 31-lb. double grandson of Colantha Johanna Lad and out of heavy producers with short- and long-time records. Good individuals, well-marked and well-grown. Clean herd. For particulars, address C. M. RICE, East Bridgewater, Mass.

Mr. Youngblood—Miss Gloria, if I should kiss you would you call your father?

Miss Gloria—Yes, but he's not at home.

VIRGINIA GRADES PRODUCE

From Manassas, Virginia, comes the news that the herd of 26 purebred and grade Holsteins owned by W. T. Thomasson was high herd for March in the Prince William County C. T. A., with an average 1065 lb. of milk and 40.6 lb. of butterfat. Seven other herds in the association averaged over 30 lb. of butterfat per cow.

C. C. Lynn's herd of 24 purebred and grade Holsteins held high milk average with 1079 lb. per cow.

Number 9, a grade Holstein in the herd of J. J. Conner was high individual with a milk production of 1942 lb. and 95.1 lb. of butterfat. She freshened February 25th.

W. T. Thomasson's fourteen-year-old grade Holstein, Niece No. 1, which freshened December 27th, was second high cow with 1799 lb. of milk and 74.7 lb. of butterfat.

Jewell, a grade Holstein owned by J. N. House made 1454 lb. of milk with a record of 74.6 lb. of butterfat.

There are 505 cows in the association of which 51 were dry. The average milk production for all the cows in the association was 718 lb.; butterfat, 25.1 lb. No less than 54 cows made over 40 lb. of butterfat, 19 made over 50 lb. and 6 exceeded 60 lb., while 49 cows were sold because of being unprofitable.

STATE OWNED

The five-year-old purebred Holstein, Beauty Girl Gerben Re-Becky, Number 470406 is officially credited with producing 28,750.8 lb. milk and fat equivalent to 1,256.53 lb. butter in a year. She has a number of large records made in previous lactation periods, was bred and is now owned in the herd of the University of Nebraska Substation, located at North Platte, Nebraska.

Attorney—And where did you see him milking the cow?

Witness—A little past the center, sir.

VIRGINIA COW TESTERS EFFICIENCY CONTEST

By L. P. EMMERICK

During the past year the Virginia Dairy Extension Department conducted a Cow Association Testers Efficiency Contest. This was financed by the Virginia State Bankers Association. The purpose of the contest was to stimulate greater interest on the part of Cow Testers in their work, to give greater recognition and a reward for efficient service, and to encourage the keeping of more accurate records. Each month a prize of ten dollars was given the tester securing the most number of points for the month. At the end of the year three cash prizes of \$100.00, \$50.00, and \$25.00 were given to the three testers securing the largest number of credits.

The first prize of \$100.00 was won by Mr. Sterling Simpson, the tester for the Henrico County Association with a total of 2,367 credits. The second prize of \$50.00 was awarded to Mr. C. E. Snell, the tester for the Fairfax County, No. 1 Association, who had a total of 2,042 credits. The third prize of \$25.00 went to T. T. Curtis, the tester for the Prince William County Association, who had a total of 1,648 credits.

Besides carrying off the top honors and prize for the year, Mr. Simpson was the winner of five of the monthly prizes of ten dollars each. Mr. J. B. Fink, the tester for the Orange County Association was the winner of two monthly prizes. One monthly prize went to the testers of each of the following associations: Fairfax, No. 1, Prince William, Rockingham, Southside and Loudoun.

This contest proved to be such an important factor in improving the quality and usefulness of the Cow Testing Association work in the state during the year that a similar contest is being conducted this year with slightly modified rules and regulations.

ONGLEY'S HERD PRODUCES

The registered Holstein herd owned by Merle Ongley, of Centerville, Pa., made a good showing during February in the Titusville Testing Association. This herd furnished the leader, a purebred Holstein credited with 72.3 lb. butterfat. She produced 1,764 lb. milk with an average test of 4.1%. This herd furnished the cows standing sixth and ninth on the list. The former is credited with 52.1 lb. fat, 1,336 lb. milk, with an average test of 3.9% and the other with 48.5 lb. fat, 1,565 lb. milk.

Harry Wood, tester of this association reports that 287 cows came under his supervision of which 29 exceeded 40 lb. butterfat and 33 produced over 1,000 lb. milk during the month. The Ongley herd had three in the honor list which also contained particulars of the production of a purebred Holstein owned by Maple Grove Stock Farm at Centerville, 50.8 lb. fat, 1,145 lb. milk, and two registered Holsteins owned by Will Hasbrouck, of Titusville, with 61.8 lb. fat, 2,020 lb. milk, and 60.57 lb. fat, 1,893 lb. milk.

COLONEL JOH LYONS

Susquehanna Co.

IN MIFFLIN COUNTY

A registered Holstein is owned by A. C. Yoder, led the Mifflin County Testing Association during March by the production of 62.6 lb. fat, 2,158 lb. milk. A registered Jersey, owned by E. J. Harshbarger, was second with 60 lb. A grade Holstein of the R. N. McCollough herd was third and a registered Holstein of the McClay and Peachy herd was fourth with 52.7 lb. fat. The Harshbarger herd led for high average with 34.9 lb. fat.

During March twenty-eight herds containing 273 cows in milk were tested of which thirty-one cows made over 40 lb. fat and seventeen exceeded 1,200 lb. milk. Eleven cows were sold, eight because of unprofitability. Two purebred Holstein bulls were purchased by members of the association.

S. Rupert Harshbarger, of McVeytown, Pa., tester of this association, reports that one township in his district is already signed up 90% for an area tuberculin test and that cattle owners in other townships are engaged in circulating and signing petitions for similar work.

FINSTER HAS GOOD COWS

Roy N. Finster, of Eldora, Iowa, had the high herd in the Hardin County Testing Association which closed its third years work, February 28th. This herd of purebreds averaged 13,957 lb. milk, 500.4 lb. fat, the average feed cost was \$93.41 and their average profit over cost of feed was \$100.61.

The biggest producer was Korndyke Jewel Tirania, of the Finster herd with 20,968 lb. milk, 740.8 fat. She returned a net profit over cost of feed of \$178.67. It is interesting to know that the high two-year old was sired by one of her sons. This heifer produced 487.6 lb. fat.

MILKED THREE TIMES DAILY

The leader of the 353 cows tested in the Denmark, Wisconsin Testing Association during March, was a registered Holstein, owned by Harry Hansen, of Denmark. She is credited with 2,147 lb. milk, 81.6 lb. fat on three milkings a day. Mr. Hansen had ten cows on the honor list.

The leading herd consisted of thirteen registered Holsteins their average being 1,388 lb. milk, 44.1 lb. fat on three milkings a day. It was owned by Lawrence J. Larsen, also of Denmark.

HIGH HERD AND COW

A herd of purebred Holsteins owned by C. E. Warford and Son, of Maple Park, Illinois, led the Kane County No. 2 dairy herd improvement association by averaging 12,226 lb. milk, 415 lb. butterfat during the past year. The high cow made 15,082 lb. milk, 540 lb. fat.

"There are two sides to every question," proclaimed the sage.

"Yes," said the fool, "and there are two sides to a sheet of flypaper, but it makes a mighty big difference to the fly which side he chooses."

NEWS FROM MAPLE GROVE

Frank Jones, manager of the Maple Grove Stock Farm reports the sale of six yearling heifers and a young bull to R. W. Agan, of Rensselaer County, New York. Maple Grove Stock Farm is located at Centerville, Crawford County, Pa., and Maple Grove Herd has been accredited a number of years. Because of this fact and also because the herd is noted for production there seems to be a good demand for its surplus stock. Many of the animals are of Glista blood as two sons of Glista cows were obtained from the Cornell University herd and their daughters and granddaughters constitute the younger members of the herd. As many of our readers are aware, all the cattle in Crawford County were recently tuberculin tested for the second time and passed 99.2% clean, a remarkable showing.

BUYING STOCK HERE

W. J. Murphy, publisher of the *Minneapolis Tribune* now has around 100 head of Holsteins on his farm in Wilkin County, Minn. This includes about 30 purebreds.

Wilkin County farmers have been buying purebred animals of several breeds lately. Mangskau Bros. of Breckenridge bought a Holstein bull. J. Riser of Nashua also bought a Holstein bull while C. Y. Austin and Mr. Mace, also of Nashua bought another young Holstein sire in partnership. Sneider Bros. of Tintah, purchased a bull. Dan F. Willard, of Kent bought seven purebred Holstein cows and Jake Casper of the same town, purchased six. Quite a number of dairymen have added grade Holsteins to their herds.

BOUGHT ENTIRE HERD

Five purebred herds are enrolled in the Tama County Cow Testing Association, the latest addition being L. E. Brown, of Toledo, Iowa, who has just purchased a purebred Holstein herd. One of his cows has a record of producing 333.75 lb. butter in a year as a two-year-old, while another is credited with 465 lb. butter as a mature cow. The high herd for January consisted of Holsteins owned by Robert Mitchell, with an average of 44.4 lb. fat; the high cow produced 58.4 lb. fat and was owned by J. E. Raudabaugh.

The negro minister was trying to impress his hearers with the shame and remorse felt by the prodigal son, and with his desire to cast away his wicked doings:

"Dis young man got to thinking about his meanness and his misery, and he tuk off his coat and frowed it away. And den he tuk off his vest and frowed dat away. And den he tuk off his shirt and frowed dat away too. And den he come to hisself."

Getting business is like courting a girl—you must offer the right kind of goods and keep on calling.

ACCREDITED BUT LOW PRICED

The accredited Holstein herd owned by Amsden Brothers, of Cuba, New York, has an enviable reputation for both individuality and production. Some of the older cows are daughters of Dutchland Sir Hengerveld Colantha, a son of Colantha Johanna Lad from a daughter of Pietertje Hengerveld's Count DeKol. In this issue the Amsden Brothers are advertising a young bull calf from Amsden Hartog Colantha, a cow that, in twice a

AMSDEN HARTOG COLANTHA
Milked twice a day she produces 75 lb. daily. Owned by Amsden Brothers, Cuba, New York.

day milking, has produced 75 lb. of milk daily. As her picture indicates she is a large, light-colored cow, straight on the back, and is evidently a big producer. One of her sisters in yearly test produced 21,142 lb. milk, 1,084.36 lb. butter.

The sire of the calf the Amsdens offer is King Echo Sylvia Colantha Spofford. His dam as a five year old produced 647.6 lb. milk, 29.99 lb. butter in a week and then, exactly a year later made 700.0 lb. milk, 30.55 lb. butter in seven days. The sire of this young bull is Sir Champion Sylvia, he by Champion Echo Sylvia Pontiac from a 30 lb. daughter of the twice 37 lb. cow, Belle Model Johanna 2d. The seven nearest dams of Sir Champion Sylvia have records that average 35.43 lb. butter.

The young bull calf is described as being light in color and a very nice individual in every way. All registry and transfer papers will be furnished and the price \$40.00 crated is certainly very low for an animal of his breeding and quality. Amsden Brothers report that they also have some other nice bull calves on hand and are making very low prices in order to move them promptly.

SOUTH DAKOTA TESTING

A purebred Holstein owned by Crothers & Son, of Badger, headed the South Dakota Testing Associations in March by producing 100.60 lb. fat. A purebred Holstein owned by Guy McKibben, of Webster, was second with 75.85 lb. fat, 2,107.2 lb. milk. A grade owned by Roy Spurling was third with 70.23 lb. fat and another purebred owned by Rohdo & Rogness was fourth with 66.95 lb. fat, 1,674 lb. milk.

Holstein herds also obtained the first four places, the leaders owned by E. H. Baldwin, of Clark, averaging 49.01 lb. fat, 1,539.1 lb. milk. In the nine associations there were 2,487 cows tested and they averaged 688.8 lb. milk, 26.21 lb. butterfat.

PRICED LOW

VIRGINIA TECH DAIRY CLUB
HOLDS JUDGING CONTEST

The Virginia Tech Dairy Club, a students' organization at the Virginia Polytechnic Institute, held its Annual Dairy Stock Judging Contest March 27, assisted by members of the Dairy Husbandry Department.

The contest was superintended by J. W. Garrett, President of the club; R. L. Torreyson, and B. F. Stakes, all three of whom were members of the college judging team at the last National Dairy Show.

The contestants judged two rings each of Jersey, Guernsey and Holstein-Friesian cattle with the following result: S. O. Sullivan, Jr., 1st (score 839 points); D. E. Rook, 2d (score 777 points); Geo. Chlinger, 3d (score 775 points); S. J. Dawson, 4th, (score 771 points); E. S. Harrison, 5th, (score 768 points); G. Bowman, 6th, (score 767 points); B. M. Arrington, 7th, (score 766 points); F. H. Jackson, 8th, (score 757 points). The highest possible score was 900 points.

These eight men will be trained by the instructors of the Dairy Husbandry Department of this college during the spring and summer, and from them will be selected a team to represent the college and state at the National Dairy Judging Contest to be held during the National Dairy Exposition at Indianapolis, Indiana next October.

This contest is only one of the activities made possible by the Dairy Club at this college. It has been successful in conducting Dairy Cattle Show Ring Exhibitions, extensive exhibitions of dairy products and machinery in conjunction with other agricultural clubs of the college; it has worked with the Virginia State Dairymen's Association in helping conduct their conventions; it is interested in the present state campaign to increase the consumption of dairy products; and at the completion of each college year it publishes an annual in which it includes all the club activities for the past year.

The club expresses its desire to hear from any other college in the country having clubs of this nature or from those planning to organize such a club. Annuals will also be sent to anyone upon application, and the officers will be pleased to give any information requested.

HOLSTEIN BULL CALF AT \$50
Colantha Johanna Lad and King Korndyke Sadie Vale 40 lb. breeding.

The lucky purchaser must be prompt—

Satisfaction guaranteed. Herd Accredited.

F. C. BIGGS,

Trumansburg, New York.

A southern colored woman calls her little boy "Prescription."
"What an odd name," someone said to her. "Why do you call him that?"
"Ah calls him dat, becuz Ah has such hahd wuk gettin' him filled."

HOLSTEIN HERD DISPERSAL

Two things—my ill health and because my farm is being sold for building lots—will cause me to sell my Holstein Herd on

THURSDAY APRIL 30, 1925

My cattle are large and big producers and include

LADY PIEBE COLANTHA PONTIAC

She led all cows enrolled in Pennsylvania C. T. A. work in January, 1924, by producing 2,430 lb. under general dairy conditions. Also a daughter of King of the Pontiacs, that has a herd record of 90 lb. milk a day. In 14 months she dropped us four calves. Three of her sons are in the sale.

DUTCH CORNER FAYNE LYONS

A 20 lb. four-year-old with a C. T. A. record of 20,042 lb. milk in a year.

The senior herdsire is KING ORMSBY NELL VIOLA by one of the best sons of King of the Ormsbys from a record granddaughter of the noted show bull Paul Calamo Korndyke.

Herd is under State and Federal Supervision and has passed a CLEAN Test. Animals are sold subject to the Standard 60 day Retest Privilege.

All the cattle, horses, mules and farm implements will be sold. This is a complete dispersal sale.

W. H. WERTZ

PENNSYLVANIA

CAMP HILL

Four Miles from Harrisburg on the Gettysburg Highway

HE LIKES CHICKENS—SHE,
STOCK

Mr. and Mrs. Emil Schuman of Middleton, Wisconsin have a herd of good cattle and also a big flock of purebred White Rocks. Recently Mr. Schuman was congratulated on the appearance of a pen of excellent Holstein heifer calves. When asked how he cared for the animals he said that he knew very little about them as Mrs. Schuman was the calf feeder. A few years ago they changed duties, Mr. Schuman taking charge of the poultry and his wife the young calves. This novel arrangement worked out to the satisfaction of all concerned.

Mrs. Schuman says she feeds the calves a ration composed of forty pounds of ground oats, forty pounds of bran, ten pounds of oil meal, ten pounds of corn and one pound of salt. The amount they get of this ration depends upon their size and appetite. Some whole milk is fed and they have all the fresh water they care to drink.

GOOD IDAHO HERD

In 1912 H. J. Wartchow of Idaho Falls, purchased three registered Holstein heifers, at least one of which is still a member of the herd. Last November and December the Wartchow herd consisting of eight milkers, four of which were first calf heifers, averaged 1,580 lb. milk, 48.4 lb. fat. Princess, one of the foundation animals, now thirteen years old, produced 1,807 lb. milk, 58 lb. fat in December. The Wartchow Herd led the Bonneville County association and was second highest in the State of Idaho for the month.

Mr. Wartchow now has about twenty head of purebreds and has sold a number. His cows are given the best of care, and milked three times a day.

"Pa," said little Robert, "a man's wife is his better half, isn't she?"

His Father—"We are told so, my son." Little Robert—"Then if a man marries twice there isn't anything left of him, is there?"

The Breeder and Dairyman Exchange

Copy must reach us by the 1st or 15th of each month to appear in the current issue.

Advertisements for this department set up without display type or illustration, accepted at the rate of five cents per word, one insertion, minimum of twenty words. Three insertions, ten cents per word. Every word or abbreviation in name and address must be counted as a word.

In all cases, cash must accompany order. Other rates on application.

Statement of the ownership, management, etc.,
required by the Act of Congress of August
24, 1912, of THE HOLSTEIN BREEDER AND
DAIRYMAN, published semi-monthly at Harris-
burg, Pennsylvania, April 1, 1925.

STATE OF PENNSYLVANIA, COUNTY OF DAUPHIN.

Before me, a Notary Public in and for the
state and county aforesaid, personally appeared
G. H. TRUCKELL, who, having been duly
sworn according to law, deposes and says that
he is the Editor of THE HOLSTEIN BREEDER
AND DAIRYMAN, and that the following is, to
the best of his knowledge and belief, a true
statement of the ownership, management, (and
if a daily paper, the circulation) etc., of the
aforesaid publication for the date shown in the
above caption, required by the Act of August
24, 1912, embodied in section 443, Postal Laws
and Regulations, printed on the reverse side of
this form, to wit:

1. That the names and addresses of the pub-
lisher, editor, managing editor, and business
manager are:

Publisher, THE BENN-CHESTER PUBLISHING
COMPANY, Harrisburg, Pa.

Editor: G. H. TRUCKELL.

Managing Editor, not any.

Business Manager, E. M. SNYDER, Lemoyne,
Pa.

2. That the owners are: (Give names and
addresses of individual owners; or, if a cor-
poration, give its name and the names and
addresses of stockholders owning or holding
1 per cent or more of the total amount of
stock).

OWNER: THE BENN-CHESTER PUBLISHING
COMPANY.

STOCKHOLDERS OF THE BENN-CHESTER PUB-
LISHING COMPANY are:

EUGENE B. BENNETT, New Haven, Con-
necticut.

G. H. Truckell, Harrisburg, Pa.

HOWARD C. REYNOLDS, Harrisburg, Pa.

J. H. Campbell, Harrisburg, Pa.

3. That the known bondholders, mortgagees,
and other security holders owning or holding
1 per cent or more of total amount of bonds,
mortgages, or other securities are: (If there
are none, so state.) There are no bonds,
mortgages, or other securities outstanding
against THE BENN-CHESTER PUBLISHING COM-
PANY.

4. That the two paragraphs next above,
giving the names of the owners, stockholders
and security holders, if any, contain not only
the list of stockholders and security holders as
they appear on the books of the company, but
also, in cases where the stockholder or security
holder appears upon the books of the company
as trustee or in any other fiduciary relation,
the name of the person or corporation for whom
such trustee is acting, is given; also that the
said two paragraphs contain statements em-
bracing affiant's full knowledge and belief as
to the circumstances and conditions under
which stockholders and security holders who
do not appear upon the books of the company
as trustees, hold stock and securities in a
capacity other than that of a bona-fide owner;
and this affiant has no reason to believe that
any other person, association or corporation has
any interest direct or indirect in the said stock,
bonds or other securities than as so stated by
him.

SWORN TO AND SUBSCRIBED BEFORE ME,
this 31st day of March, 1925.

G. H. TRUCKELL,
Editor.
[SEAL] RAE FREIBERGER, NOTARY PUBLIC.
My commission expires March 6, 1927.

HOW MANY LAPS?

A maid entered a suburban bus,
And grasped a leather strap,
And every time they hit a hole
She sat in a different lap.
The holes grew deeper, the jerking worse,
Till at last she gasped with a smile,
"Will someone kindly tell me, please,
How many laps to a mile?"

Pat (on shipboard)—"And what are
yez goin' ter do whin yez git to Amer-
ica?"

Mike—"Take up land."

Pat—"Indade, an' 'ow much?"

Mike—"Oh, a shovelful at a toime."

THE KIND WE RAISE

They are bred to
MODEL DARIUS KING SEGIS

son of the famous Clara Clothilde
Lyons, 639.8 lb. milk in 7 days, 20-
771.2 lb. milk, 723.4 lb. butter in 10
months as a senior two-year-old.

OFFICES: EVANGELICAL BUILDING
BOX 110, HARRISBURG, PA.

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One
Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for
the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as
follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00
One Hundred One Dollars in all	\$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our
readers the kind of cattle you own and breed. You are just as likely to receive the
Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at
least one of the prizes.

Only pictures of mature cows will be accepted. The name and address of the
sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the
animal. Group pictures should be accompanied with a letter, telling something about
the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of
which must be of a single animal and the other a group of animals. All Prize Pic-
tures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate
in this contest. If you are not a subscriber send in your subscription with the pic-
tures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

One of Trumbull County's Highest Producing Holstein Herds

TUESDAY, MAY 5, 1925, at 11 A.M.

Having leased one of our farms, we are forced to sell 40 head, among which are 20 fresh cows, 7 yearlings and 10 calves. Nine of these females are closely related to a 25-lb. three-year-old. Two are daughters of a 1,000-lb. bull, nine are by a 1,200-lb. bull and seven by a 38-lb. son of King Valdessa Pontiac.

The dams represent famous blood lines--- King Segis, King of the Pontiacs, King Ona, FINDERNE PRIDE FAYNE, etc., etc., and have records up to 1,035 lb. butter and 26,000 lb. milk.

The average production of this herd for 1924 per milking cow, based on sales only, with no allowance for shrinkage or calf feeding--milking only twice daily--was 10,700 lb. milk averaging 3.7 per cent. fat by semi-weekly test in a Pittsburgh laboratory.

Health of herd is assured by regular inspection by Federal inspector, not only for T. B. but also for other infectious diseases. In the last four annual tests there have been NO reactors.

Brownwood farms are 16 miles north of Warren with bus service through to Ashtabula. Our station is Lockwood, on the Pennsylvania Railroad.

Sylvdale Farm

An Accredited, Purebred Holstein Dairy Establishment

SYLVDALE FARM is the name of a purebred Holstein breeding establishment situated along the shores of Cuba Lake, Allegany County, New York. It is the home of Glenn L. Warner, enterprising young Holstein breeder and farmer.

Many years ago the father of Glenn L. Warner purchased this farm and after he had paid for it, bought an adjoining farm, paid for that, and then bought a third so that he finally owned

three adjoining farms on the same road. Glenn L. Warner was born in 1891 in the house in which he now lives. When he was nineteen, he married and the young couple started for themselves on the old homestead, the senior Mr. and Mrs. Warner with a younger son moving to the next farm. Glenn Warner rented the farm from his father paying money rent for three years, and then he purchased the 147 acres and began to pay for them. When the senior Mr. Warner saw that his son and daughter-in-law were going to make good, he cancelled the rest of the indebtedness and presented the young couple with a deed to the farm, believing that they would appreciate the gift more while they were young than they would to wait until after he was dead, an example which could be followed with advantage by other fathers of young farmers.

In the fall of 1911, when he was only twenty years old, Glenn Warner purchased his first purebred Holsteins, obtaining two heifers, one a spring calf and the other about eighteen months old at time of purchase.

They were full sisters with only ten months and three days difference in their ages, daughters of Keller Butter Boy De Kol and Rose Maud De Kol. One of the heifers was Rose Maud De Kol 2d and the other was Maud Butter Boy De Kol. Rose Maud De Kol 2d, the older one, freshened the following spring dropping a nice heifer by Colantha Johanna Lad 8th, then in the herd of Elmer Blossom, who lived in sight of Sylvdale Farm. Mr.

HAROLD GLENN WARNER
His favorite beverage is Holstein milk

Warner had the privilege of breeding his stock to Colantha Johanna Lad 8th for about three years. Naturally he obtained some wonderful stock for this bull sired some of the greatest producers ever developed in southwestern New York.

The younger one of the original heifers freshened in the spring of 1913 with a heifer calf by "Colantha 8th." The oldest daughter of "Colantha 8th" was named Rose Maud Colantha, the

second one dropped in the Warner herd was given the name of Colantha Maud De Kol. When she was three years old, Rose Maud Colantha was given an official record of 611 lb. milk and over 23 lb. butter in seven days. The next winter both heifers were again tested. Rose Maud Colantha as a senior four-year-old, produced 654 lb. milk, 27.46 lb. butter in seven days and Colantha Maud De Kol was given an official record of 634.6 lb. milk, 30.46 lb. butter as a senior three-year-old, becoming the youngest thirty-pound cow in Allegany County and winning some prize money from the National Association. One heifer produced 99 lb. milk her best day and the other produced 98 lb. They were of splendid type and beautiful young cows and were later sold to R. E. Chapin & Son, of Batavia, N. Y., for \$1,500. It is said that Colantha Maud became Mr. Chapin's pet show cow. She was exhibited at several fairs and won a number of prizes.

To use on the daughters of Colantha Johanna Lad 8th, Mr. Warner purchased a half interest in King Maxie De Kol Segis. This bull was a full brother to

the noted Fancher Farm Maxie, whose record of 46.84 lb. butter, made as a four-year-old, was world's record in class at time of making and is the highest seven-day record now recorded in the Blue Book. King Maxie De Kol Segis was sired by King Aaggie Segis, by King Segis from a former world record daughter of Paul Beets De Kol. "King Maxie" was a very nicely built bull. He was used in the Warner herd

Sylvdale Farm

An Accredited, Purebred Holstein Dairy Establishment

SYLVDALE FARM is the name of a purebred Holstein breeding establishment situated along the shores of Cuba Lake, Allegany County, New York. It is the home of Glenn L. Warner, enterprising young Holstein breeder and farmer.

Many years ago the father of Glenn L. Warner purchased this farm and after he had paid for it, bought an adjoining farm, paid for that, and then bought a third so that he finally owned

three adjoining farms on the same road. Glenn L. Warner was born in 1891 in the house in which he now lives. When he was nineteen, he married and the young couple started for themselves on the old homestead, the senior Mr. and Mrs. Warner with a younger son moving to the next farm. Glenn Warner rented the farm from his father paying money rent for three years, and then he purchased the 147 acres and began to pay for them. When the senior Mr. Warner saw that his son and daughter-in-law were going to make good, he cancelled the rest of the indebtedness and presented the young couple with a deed to the farm, believing that they would appreciate the gift more while they were young than they would to wait until after he was dead, an example which could be followed with advantage by other fathers of young farmers.

In the fall of 1911, when he was only twenty years old, Glenn Warner purchased his first purebred Holsteins, obtaining two heifers, one a spring calf and the other about eighteen months old at time of purchase.

They were full sisters with only ten months and three days difference in their ages, daughters of Keller Butter Boy De Kol and Rose Maud De Kol. One of the heifers was Rose Maud De Kol 2d and the other was Maud Butter Boy De Kol. Rose Maud De Kol 2d, the older one, freshened the following spring dropping a nice heifer by Colantha Johanna Lad 8th, then in the herd of Elmer Blossom, who lived in sight of Sylvdale Farm. Mr.

HAROLD GLENN WARNER
His favorite beverage is Holstein milk

Warner had the privilege of breeding his stock to Colantha Johanna Lad 8th for about three years. Naturally he obtained some wonderful stock for this bull sired some of the greatest producers ever developed in southwestern New York.

The younger one of the original heifers freshened in the spring of 1913 with a heifer calf by "Colantha 8th." The oldest daughter of "Colantha 8th" was named Rose Maud Colantha, the

second one dropped in the Warner herd was given the name of Colantha Maud De Kol. When she was three years old, Rose Maud Colantha was given an official record of 611 lb. milk and over 23 lb. butter in seven days. The next winter both heifers were again tested. Rose Maud Colantha as a senior four-year-old, produced 654 lb. milk, 27.46 lb. butter in seven days and Colantha Maud De Kol was given an official record of 634.6 lb. milk, 30.46 lb. butter as a senior three-year-old, becoming the youngest thirty-pound cow in Allegany County and winning some prize money from the National Association. One heifer produced 99 lb. milk her best day and the other produced 98 lb. They were of splendid type and beautiful young cows and were later sold to R. E. Chapin & Son, of Batavia, N. Y., for \$1,500. It is said that Colantha Maud became Mr. Chapin's pet show cow. She was exhibited at several fairs and won a number of prizes.

To use on the daughters of Colantha Johanna Lad 8th, Mr. Warner purchased a half interest in King Maxie De Kol Segis. This bull was a full brother to

the noted Fancher Farm Maxie, whose record of 46.84 lb. butter, made as a four-year-old, was world's record in class at time of making and is the highest seven-day record now recorded in the Blue Book. King Maxie De Kol Segis was sired by King Aaggie Segis, by King Segis from a former world record daughter of Paul Beets De Kol. "King Maxie" was a very nicely built bull. He was used in the Warner herd

IRENE AND JUNE WARNER

INTENTIONAL SECOND EXPOSURE

until he was four years old and was then sold to head a Holstein herd in New Jersey. His daughters are scattered all over the United States. Some of them have very creditable records; several over 30 lb. and one is in year test and expected to make more than 27,000 lb. milk, 1,200 lb. butter. The records made by the daughters of "King Maxie" in the Warner herd were made just under plain farm conditions as the only help Mr. Warner had at that time was his wife who did what she could around the barn as well as attending to her household duties. Despite the fact that they had little preliminary fitting the daughters of "King Maxie" averaged 3.7% fat in their official work.

About four weeks ago Mr. Warner went to Canada and after examination of the Hardy herd, selected Sir Champion Sylvia for a herdsire and named his establish-

SIR CHAMPION SYLVIA
Head of the Sylvdale Herd

ment Sylvdale Farm. This bull's pedigree shows a combination of great records. His sire, Champion Echo Sylvia Pontiac is esteemed as one of the greatest Holstein sires ever developed. He was from May Echo Sylvia, 41 lb. butter in seven days, 1,005.8 lb. milk in a week. There was only one May Echo Sylvia and her performances are too well known to repeat here. She was by Inka Sylvia Beets Posch from May Echo Verbelle. May Echo Verbelle has a seven-day record of 28.89 lb. made as a ten-year-old and as an eight-year-old is credited with producing 702 lb. milk in seven days. Her dam, May Echo, has a seven-day record of 31.34 lb. butter and a year record of 1,042.05 lb. butter.

"Champ" was sired by Spring Farm Pontiac Cornucopia, whose dam, K. P. Pontiac Lass, was the first cow to make 44 lb. butter in seven-day test.

Sir Champion Sylvia was from Belle Model Champion Sylvia, 30.29 lb. butter, 550.2 lb. milk. She was by Champion Echo Sylvia Pontiac and from Belle Model Johanna 2d, a cow that two different years produced over 37 lb. butter in seven-day test. The three

nearest dams of Sir Champion Sylvia have seven-day records that average 36.21 lb. butter and his seven nearest dams average 35.43 lb.; in fact, there is almost no end to the record combinations that can be figured in his pedigree.

Sir Champion Sylvia has as yet but few tested daughters and they are junior two-year-olds that have made around 18 lb. butter and 400 lb. milk in a week. These daughters are consistent milkers with beautiful udders while the bull himself is of show quality as are his sons and daughters. "Sir Champion" has around sixty-five daughters as cows in other herds have been bred to him. Mr. Warner says sons of this bull and any daughters that are in the market are always picked up young.

Sylvdale Herd consists of 30 to 40 animals of all ages. There are about twenty milking cows, nearly all with good A. R. O. records, three being above 30 lb. in seven days, one having 34.89 lb. butter, 673 lb. milk and another averaging over 100 lb. milk a day for the week.

In regard to sires, Mr. Warner says, "I have always tried to select good sires of popular breeding and the breeding of the three sires I have used make, I believe, as fine a combination of blood lines as can be found in any herd." There are several members of this herd that deserve special mention. Sadie Butter Girl Spofford is one of the handsomest cows in the herd. Tested as a five-year-old, she made 647.6 lb. milk, 29.99 lb. butter in seven days and then, freshening exactly a year later, she produced 700.7 lb. milk, 30.54 lb. butter in seven days. Elnora King Pontiac Von Hengerveld is a thirteen-year-old cow. The picture we display was taken when she was twelve years old. Tested as a four-year-old she made 673.1 lb. milk, 34.89 lb. butter in seven days and 125.43 lb. butter in 30 days, averaging 90 lb. milk a day. Her best day's production was 102 lb. Her sire was by King of the Pontiacs from a daughter of Hengerveld De Kol and her dam, Elnora Pontiac 2d, has an official record of 578.7 lb. milk, 25.52 lb. butter. The picture shown of the older cow was taken when she was fourteen years old and there are few fourteen-year-old cows that show more type and quality.

As mentioned above Mr. Warner sold the first two purebred heifers he bred and raised. One of them went on and made quite a reputation as a show cow.

Cattaraugus Flora Colantha, another former member of the herd, was sold to Harry Yates who exhibited her at the New York State Fair where she won second prize in the aged cow class and was a member of the

first prize exhibitor's herd and of the prize winning group of four best dairy cows. A recent official bulletin, issued by Superintendent Gardner credits her with making a seven-day record as a five-year-old of 653.5 lb. milk, 33.56 lb. butter.

The Warner family consists of Glenn L., his wife, a daughter, June, now eleven years old, and a son, Harold Glenn, about eighteen months old, a healthy little fellow full of mischief. There are only four now in the family as the Warners had the misfortune to lose, about a year ago, their eldest daughter, Irene Lucille, from pneumonia.

During the year, many visitors look over the Sylvdale Herd, attracted to the neighborhood by the proximity of Cuba Lake. The state road from North Cuba

A PAIR OF SYLVDALE MATRONS

at present ends by the farm. To help advertise his business, Mr. Warner displays an attractive sign in his door yard showing a painting of the herdsire, Sir Champion Sylvia, and has received many favorable comments on his enterprise in thus calling attention to the individuality of his herdsire.

Sylvdale Herd is accredited. Mr. Warner was one of the leaders in the campaign to have all the cattle in Allegany County tuberculin tested under the area plan. This county is noted for the excellence of its dairy stock and is likely to have, in the near future, as equally a good reputation for the health of the stock as on April 1 of this year more than a third of the cattle in the county were accredited while 89.2% of the herds tested and 85.5% of the cattle tested since the campaign started were fully accredited or had passed one clean test.

Aiming to Control Bovine Tuberculosis

THE rapidity with which the cattle herds in any one county can be "cleaned up" is being exemplified in Allegany County, New York. Previous to the year 1923, only a few of the more prominent cattle breeders in this county had ever had their cattle tested. That year former Farm Bureau Manager Raymond and some of the leading farmers of the county started a campaign to have all the cattle in the county tested under the accredited plan and their arguments were so convincing that a large majority of the cattle owners signed the petition. Early the following year testing began and before the end of the year all the cattle in twelve different townships had been given

their initial test despite the fact that the indemnity fund became exhausted. From that time on there has been steady progress.

On April 1, 1925, there had been tested in Allegany County a total of 4,634 herds containing 57,181 cattle. Eighty-nine and two-tenths per cent of the herds were either on the accredited list or had passed one clean test. More than a third of the cattle in the county were accredited and practically a third of the herds. The majority of the herds tested during 1923 in the first twelve townships were accredited during 1924.

On December 1, 1924, the state authorities quarantined the entire county against the introduction of cattle that had not passed a satisfactory tuberculin test. It is very easy to see that it will not be long before Allegany County becomes a modified accredited area.

Much credit for the good work done in this county is due to owners of purebred herds who have not only paved the way by having their own herds tested but have been influential in having their neighbors sign the petitions and carry on the work. Former Farm Bureau Manager Raymond and the present County Agent Leon H. Claus have worked hard and faithfully to eradicate tuberculosis from the herds of Allegany County and to them, too, considerable credit should be given.

Venezuelan President Buys Holstein

GENERAL JUAN VICENTE GOMEZ, president of the republic of Venezuela, South America, has purchased a Holstein bull calf from the Daweswood Farm, Newark, Ohio. This calf left Newark, April 20 in care of H. W. Jones, manager of Daweswood Farm. The pair were scheduled to leave New York April 22 on the steamship Carabobo. Their destination is Maracay, Venezuela. Mr. Jones will return late in May.

General Gomez has a large ranch on which he keeps about 30,000 head of cattle and has selected this young bull as a dairy herdsire.

The calf, named Daweswood Sir Creator Pontiac, was sired by a son of Creator from one of the best daughters of King Pontiac Champion. The dam of the calf is Como Lily Pontiac De Kol with year records of 964 lb. butter, 21,419 lb. milk. She was originally raised by Alex Wilson, a dairy farmer who lives a little way north of Newark.

The transaction is of international interest, not only because the animal goes to a foreign country but also because it indicates that President Gomez, despite the exacting duties of his position, finds time to interest himself in agricultural pursuits and is a believer in improving his cattle by means of a purebred sire. Holstein breeders everywhere will welcome his Excellency to our ranks.

One Southern state, North Carolina, has more counties free from tuberculosis than has all the rest of the states in the Union put together.

Purebred meat animals cost slightly less than scrubs to raise to maturity; purebred dairy cattle cost slightly more.

A Herdsire Exchange

JAMES R. THOMAS of Meadville and Luther G. Conroe of Cambridge Springs are two Pennsylvania Holstein owners who had headed their herds with good bulls. Each of these bulls sired promising offspring and both of them were high class individuals. Mr. Thomas and Mr. Conroe were well acquainted with each others herds and decided to exchange herd bulls, thus saving two good sires for further usefulness.

Clothilde Pontiac Mead was formerly owned by Mr. Conroe and is now at the head of the Thomas herd. He is nearly all white with scattered black spots, and is very straight on the back, a rangy, dairy type bull. His sire, King Mead Netherland Pontiac is a grandson of Spring Farm King Pontiac 6th, from a granddaughter of Walker Korndyke Segis. The dam, Bessie Beauty Clothilde, is of producing strains well known in western Pennsylvania and was a very handsome individual and a big producer.

Terracelawn Hengerveld Jewel, formerly owned by Mr. Thomas, now heads the Conroe herd. He is a son of Pietertje Hengerveld Segis and his dam Terracelawn Blanche Jewel has a record of producing 423.3 lb. milk, 25.26 lb. butter in seven days. Her sire, King Pontiac Jewel, is a son of King of the Pontiacs from a 30 lb.

A PLEASING GROUP
Owned by James R. Thomas, Meadville, Pa.

daughter of Hengerveld DeKol and her dam Blanche Lyons 4th is a 30 lb. daughter of the famous foundation cow Blanche Lyons.

Mr. Conroe is a business man of Cambridge Springs and makes concrete and cement mixers. He has a herd of fifty head of which more than half are purebreds. He is going to build a dairy barn and plans to do some test work, will make long time records, believing that they more nearly show the real producing capacity of the animals. For a junior sire Mr. Conroe has a very handsome bull calf, largely white in color which he secured from the Carnation Farms. He has a good man in charge of his establishment and we expect that this herd will have considerable influence on the Holstein industry of Crawford County. It is already locally noted for the large quantity of milk produced.

Mr. Thomas is a farmer and dairyman. He has been on his present farm for about fifteen years and has been breeding purebred Holsteins practically all the time. He has between fifty and sixty head of purebred Holsteins and his oldest cow was nine years old at the time of our visit. Only a few of the milkers had had their second calf so that the Thomas herd is still growing.

Mr. Thomas prides himself on owning cattle with straight rumps and cows that do not go dry. His animals are large and evidently producers and their individuality would attract attention anywhere.

The Thomas herd was started by the purchase of a cow from a Pennsylvania breeder named Bert Custard. The price was \$150. A number of sales have been made, twenty head being disposed of in one bunch. The herd is under State and Federal supervision, and has a good record for health. In this connection it must be remembered that all the cattle in Crawford County have been tuberculin tested and the last time 99.2% passed a perfect test, a showing that few other counties in the United States can equal.

In this herd there are a number of good animals but we need only mention a few. Mr. Thomas is very proud of his oldest cow, Ruth, now nine years old, which he raised. After being in milk eight months, this cow was milking around 40 lb. daily. Another cow, Kind Boon Daisy, has given 102½ lb. milk in a day and has an official record of 661.4 lb. milk, 25.15 lb. butter. She has three daughters in the herd as well as several granddaughters.

This herd shows the influence of a former herdsire, Vinita King Pontiac Segis, a son of King Pontiac Mahomet from Vinita Anna Segis, 616.3 lb. milk, 26.47 lb. butter in seven days; 22,756.2 lb. milk, 989.72 lb. butter in a year. She was a granddaughter of King Segis from Anna De Kol, a record cow with five tested daughters.

The Thomas farm consists of 185 acres, wooded hill pasture and flat meadow land. On this farm 80 head have been carried and there was sufficient feed to take care of them. The farm is on a concrete road running from Erie and Buffalo to Oil City and Pittsburgh and is a very sightly place. The dairy barn is large and well equipped, is 106 ft. long, by 50 ft. wide and the silo is 32 ft. high and 18 ft. wide.

One of the things that attracts special attention is the concrete reservoir which has been built on the hillside. This has the capacity of 175 barrels, is about 13 ft. across and 12 ft. deep. The bottom of the reservoir is seven feet below the ground. The water is piped to the buildings and the elevation is such that the pressure will throw water about twice the height of the house. Mr. Thomas informed us that the cost of building this reservoir was around \$1,000 in addition to his own labor and that of his farm help in slack times, but he considers the money well invested, as it gives fire protection and also water in the buildings whenever needed.

Mr. Thomas is a farmer and dairyman and prides himself upon efficiency in his business. His crops show that he is a good farmer, the condition of his cattle show that he is a high class dairyman and cattle breeder. He is also quite a horseman and is very proud of his handsome driving mare, a natural pacer. Mr. Thomas, however, recognizes that the automobile has largely taken the place that used to be occupied by the horse. In his barn we saw a new Dodge truck with sides wired so that he could carry calves and small animals, another evidence of business efficiency.

Mexican Purebred Sire Campaign

LARGELY through educational methods similar to those used in the United States, the Republic of Mexico is planning to improve its livestock. The Mexican activities will center on the use of purebred sires for all classes of domestic animals, the purchase of improved breeding stock, and the establishment of a roll of honor composed of persons participating in the work.

Full-page announcements in several popular magazines have already heralded the inauguration of the work known, in Mexico, as the "Campaign against scrub breeding animals and in favor of registered ones." The literature, which is published in Spanish, points out that improved breeding will result in larger milk production from dairy cows, heavier carcasses of meat animals and more serviceable horses, mules and oxen for work purposes.

The work will be supervised by technical experts of the Mexican Bureau of Agriculture and Livestock. The improvement is of special interest to livestock owners of the United States as the Mexicans will probably obtain most of their purebred sires, especially of the dairy breeds, from this nation.

The First Importer of the Breed

CREDIT for bringing the first Holstein-Friesian cow to America is awarded by investigators to Joachim Pietersen Kuyter, who was a prominent resident of New Amsterdam before the British seized the city in 1664 and renamed it New York in honor of the Duke of York, afterwards James II, who was then the chief admiral of the British navy.

When Kuyter came to America in the middle of the seventeenth century, he brought at least one cow with him and some of the latest agricultural implements. Kuyter didn't have much time to spread the gospel of better farming, because the Indians put an end to his life in 1654.

His farm lay along the Harlem River, and he grazed his pioneer Holstein cow about where is now the junction of East 120th Street and Third Avenue. Kuyter Park there is named in his honor, a distinction given him, not as a farmer or as the first importer of purebred Holsteins into this country, but because he was the first commander of the Dutch city's militia forces.

A Hustling Tester

FOR six years Nander Nelson worked as a cow testing association tester in Wisconsin. He started work April 2, 1917, and for two years tested in the New Holstein Association, then tested in the Wausau Association for two years, finishing out with twenty months in the Farmington Association. Mr. Nelson had never attended high school. Several men with whom he became associated in his work urged him to enter the full agricultural course at the University of Wisconsin. He studied for a month before the summer session opened at the University, then studied six weeks at that and in the seven weeks between the close of the summer session and the beginning of the regular University year, studied high school textbooks.

Then when the University opened he took the entrance examinations and was successful in earning nine credit units, fifteen being required. He was admitted to the College of Agriculture as an adult special student and took regular freshman work, finishing the first year as the second highest freshman in the College of Agriculture with an average standing of 91.3, his roommate being first with an average of 91.8.

The following summer (1924) he worked for the Soils Department and studied in his spare time. On February 5th. of this year, he earned his fifteenth and last University entrance unit. He is now taking regular second semester sophomore work; in both semesters this year has earned one extra credit, his average grade for the first semester of the present college year being 92.8. If Mr. Nelson keeps up his present pace he is evidently destined to go a long way.

Now Time to Buy Farm Land

"FARM lands at present are lower in price than they are likely to be for the next fifty years," is the opinion of Dr. Robert S. Shaw, dean of Agriculture at the Michigan Agricultural College.

Speaking at a gathering of Holstein breeders recently, Dean Shaw said he had advised the State Board of Agriculture to buy all the land it would need in the next half century, pointing out that it was likely to rise in price and the Board had taken his advice, had purchased some land and had leased several farms with the option of purchasing at present prices.

The Dean said that the agricultural industry is just beginning to emerge from the chaos caused by war conditions during which the farmers were urged to produce to the limit. The falling off from a consuming standpoint was responsible for a sudden drop in prices and farm products sold below the cost of production, consequently the price of farm land rapidly dropped and is believed now to be at its lowest point.

Will Be of Interest

Late in April the long promised million dollar libel suit brought by Aaron Sapiro against Henry Ford was started. If the case comes to trial, the testimony will be interesting to both friends and enemies of agricultural cooperative organizations as men prominent in organizing and managing such associations will be called to the witness stand.

HEADQUARTERS FOR YOUNG STOCK

Every animal in this herd with the exception of the sire at its head, was raised here.

EARLY RISE HERD is under State and Federal Supervision.

Show Bulls as Herdsires

TWO splendid show bulls in succession have headed the Holstein herd owned by the Rowley Brothers of Cuba, New York. The Rowley establishment is located three miles from the village of Cuba, Allegany County. The Rowleys own between 700 and 800 acres but the farm they operate contains only 350 acres. The herd consists of one hundred and fifty head of which seventy-two are grades so that more than one-half of the animals are purebred Holsteins.

The Rowleys have been breeding purebred Holsteins for twenty-two years and a number of good bulls have headed their herd but it is with the latest pair that we are most concerned. The present herd sire is Clothilde Dutchland Colantha, a six-year-old bull of medium size, nicely marked, a little more white than black. He is a natural show bull and it is no trouble at all to get him to pose for the camera. When

ELLSWORTH ROWLEY AND CLOTHILDE DUTCHLAND COLANTHA
as you see them on the farm near Cuba, New York.

you see him you will at once be attracted by his appearance of quality, his straight back, well carried head and general appearance. His head is fine, his horns drooping, his neck well arched, his rump straight and square and his feet and legs set well under him. He is one of the nicest handlers we ever had the privilege of examining, his hair being soft and silky and his hide remarkably pliable and mellow. This bull has had some experience in the show ring for as a three-year-old he was exhibited at the New York State Fair and passed to the head of his class. The young stock in the Rowley herd show lots of promise and have remarkably straight backs and square rumps.

Clothilde Dutchland Colantha is a son of Frieda Korndyke Clothilde 2d and Dutchland Colantha Mona Lad. Frieda, as a junior three-year-old, made a seven day record of 392.5 lb. milk, 18.21 lb. butter. Her dam, a 21 lb. cow that averaged better than 77 lb. milk a day during the week of her test, was by Sir Pontiac Korndyke Clothilde. Frieda was by Allenvail Topsy De Kol Son, a grandson of the famous old foundation cow, Segis Inka, one of the greatest cows of her day and also granddam of King Segis.

Dutchland Colantha Mona Lad was by Colantha Johanna Lad from Mona Pauline De Kol, 21.54 lb. butter in a week. He has thirty or more tested daughters including a 30 lb. cow and two over 28 lb., while several of his daughters have nice long-time records.

The Clothilde bull is being used on the daughters of Butter Boy Korndyke Johanna who now heads the Susquehanna Herd, owned by Judge C. R. Savidge, Sumbury, Pa. The Butter Boy bull is by Colantha Johanna Lad 8th from May Butter Girl De Kol, 690.8 lb. milk, 30.02 lb. butter in seven days, 25,594.2 lb. milk, 1,097.53 lb. butter in a year. This bull has four full sisters. Although two were tested as senior two-year-olds and two as junior four-year-olds, the seven day records of the quartet average 565.92 lb. milk, 25.96 lb. butter. One of his full sisters is Butter Girl Johanna 588.4 lb. milk, 32.55 lb. butter in a week; another is Butter Girl May Johanna 659.8 lb. milk, 26.63 lb. butter in seven days; 22,823.8 lb. milk, 955.47 lb. butter in 365 days, both animals tested as junior four-year-olds. They have a number of other large records at different ages. Butter Girl Johanna Korndyke is another full sister with 602.8 lb. butter, 24.23 lb. butter in seven days as a senior two-year-old and the younger full sister has a seven day official record of 20.44 lb. butter, with an average of practically 60 lb. milk a day made as a two-year-old.

BUTTER BOY KORNDYKE JOHANNA
former herdsire of the Rowley establishment. Now heading Judge Savidge's high class herd.

Butter Boy Korndyke Johanna is a deep bodied, straight backed handsome bull and has won a number of prizes in the show ring. For two successive years he has carried off the grand championship at the Milton Fair, the chief agricultural event of Northumberland County. He is siring good offspring in the Susquehanna Herd and he has left behind him a large number of splendid daughters in the Rowley herd.

There are two Rowley brothers on the farm but Ellsworth Rowley looks after the bulls. When quite a small boy, fifty-nine years ago, he was brought to his present home by his parents and has made this his home ever since, while his younger brother was born in the house in which he now resides. The Rowleys are good farmers and raise an abundance of feed for their stock. They are also good caretakers and liberally feed the stuff they raise to their animals. The consequence is that not only do the cattle look well but also respond at the pail. The herd has a splendid reputation for health as well as individuality and production and is on the accredited list.

The Junior Breeder and Dairyman

A Worthwhile Prize

John Liska, a student in the Wisconsin Rapids High School won a \$4,000 prize for an essay of seven hundred words. This is the H. S. Firestone Four Years University Scholarship offered for the best essay written by high school students on "The Relation of Improved Highways to Home Life." More than 200,000 essays were written by competing students and it is said that every state in the Union was represented. The judges were a prominent educator, a distinguished editor and a high government official.

John Liska is a son of a Wisconsin farmer. From personal experience and observation, he wrote an epic of a country crossroads describing the affluence of those who live on one and the disadvantages of those who live on the other. He depicts the influence on home life following road development and drew a parallel of conditions existing on another road which was unimproved.

A Boy Cow Handler

Golden Girl Korndyke, No. 616502, produced 100 lb. milk in 24 hours on March 27, and during the week of March 20-27 produced 691 lb.

In July, 1921, Alex Brokaw brought seven purebred Holstein calves to Changewater, New Jersey, for members of the newly-organized Changewater calf club. Selwyn Morgan was one of the members and in the drawing received Clothilde Princess Edgewood then six months old. He took good care of the heifer and she freshened in April, 1923, and in the time intervening until January 5, 1924, produced about 8500 lb. milk. Selwyn was unfortunate to lose this heifer when his father's herd was tuberculin tested. In March of that year he visited Allamuchy Farms and paid a good

price for Golden Girl Korndyke. He milked this cow three times a day for 2½ months during which time she produced 5,160 lb. milk and made a profit above feed cost of \$86.98. The heifer was milked for nine months during which time she produced 12,336 lb. milk and made a profit of \$194.95.

Golden Girl Korndyke freshened again on February 11th of this year with a nice bull calf. Her young owner wanted to get her to produce 100 lb. in a day so milked her four times daily and fed her regularly. For a grain ration he mixed 5 lb. ground oats, 20 lb. corn and cob meal and 6 lb. oil meal and he gave her daily 60 lb. of corn silage and 10 lb. of medium mixed hay. This cow is not in the official test but the boy just set out to make this pet produce 100 lb. milk in a day and did it.

Follows Brother's Example

Harvey B. Searles of Schooley's Mountain, Delaware, is a brother to William Searles. William is engaged in calf club work and has been very successful, so Harvey wanted to follow his brother's example. Harvey purchased a purebred Holstein heifer calf from L. F. Castle of Long Valley, Delaware. The calf is only three months old but is of good type and from a family of good producers. The animal was purchased under the Frelinghuysen Loan which gives him two years to pay for the animal.

About ninety-six per cent of persons who give the use of purebred sires a fair trial stick to the general principle of using them for all classes of stock.

Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world?—Abraham Lincoln.

A Ton and a Half of Pork from One Litter in 180 Days Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

NOT ABOUT COWS

THOSE MEALS

What shall I have for dinner?
What shall I have for tea?
An omelet, a chop or two
Or a savory fricassee?
Dear! How I wish that Nature
When she made her mighty plan
Hadn't given the task to woman
To care for hungry man!

One might easily parody Tennyson and sing "Seasons may come and seasons go, but meals go on forever." Or even take liberties with Solomon, the Wise and say "Of the getting of many meals there is no end, and washing dishes is a weariness to the flesh." Three times a day, meals for the family must be planned, prepared and served. Is it any wonder that women eagerly seize new suggestions regarding what we serve and how? And the enlightened wife and mother of today considers not only quality and quantity but food values according to age and occupation. She knows that the man who works in an office should not be fed like the man who works in a lumber camp, and she shudders at the thought of the food given babies and children a generation ago. The study of the chemistry of food has taken away much of the drudgery that always seemed to surround the casual cooking of three meals a day, and has given a dignity to otherwise menial labor. Nevertheless, always to be ready to meet the needs of a hungry family taxes the ingenuity of most of us at times.

SOME HOUSECLEANING HELPS

To remove grease marks from wall paper, apply a paste of pipeclay and water, allow it to remain for about twenty-four hours. Brush off gently, being careful not to scrape the paper.

Tapestry furniture that is badly soiled should be cleaned as well as possible with a brush or vacuum cleaner, then sponge thoroughly with a cloth wrung out of water to which a little ammonia has been added. Change the water and the cloth as often as they get soiled. It is surprising how much better the furniture will look.

Carpets in rooms that are seldom used are easy prey for moths. Sprinkling salt around the edges and well under the carpet will prevent their ravages. Even though not used, such rooms should be open to the light all the time and to the air as much as possible.

Willow or bamboo furniture may be cleaned by washing in weak warm suds, then dried quickly in the sun. Even if it is to be stained, it pays to wash it first. Bamboo furniture should be rubbed frequently with a mixture of linseed oil and turpentine, followed by a brisk polishing with soft rags. This will prevent it cracking from excessive dryness. It should also be kept away from the fire as much as possible.

TO CLEAN SILVERWARE

Put a tablespoon of saleratus into a gallon of water in an aluminum kettle, bring to a boil and place the silver in it, leaving it for a couple of minutes. Then wash in soapy water to which a little ammonia has been added, rub dry, and it will have a splendid polish. While this answers very well for the once-a-week cleaning, it is a good idea to polish with some good powder once in a while.

When leather furniture has to be cleaned, wipe it off with a cloth dampened in water and a very mild soap. When dry rub in a little vaseline, allowing it to remain on over night, then polish with a cheese cloth duster. This treatment will keep the leather from cracking. Spots of oil or grease which may have gotten on leather furniture can often be removed by using a paste of fuller's earth and water. This should be

spread over the spot and left until perfectly dry, when it may be removed with a stiff brush.

Blankets that have been washed and dried should be well beaten before they are laid away for the summer. This makes the wool light and soft, giving the blankets a new and fluffy appearance.

For cleaning windows by far the easiest and most successful way is to use a chamois skin and plenty of tepid water. This will leave no streaks nor lint and gives a good polish. A quicker way is to use a rubber scraper made for the purpose. This removes the water and dirt and just a quick polish with a soft rag will finish the job. Using the scraper with a long handle saves the climbing on chairs or step ladders.

CANARIES FOR PLEASURE AND PROFIT

Historians tell us that canaries became household pets in the sixteenth century. The little green and yellow fellows were brought to Europe from the Canary Islands and took readily to captivity, being raised in large numbers throughout the continent.

Germany has the credit of being the first country to take up the business of breeding canaries, and to-day hundreds of songsters are being shipped to this country from the Hartz Mountains, where the peasants get much pleasure and also profit from the business.

There are different classes of canaries, but the most common in the United States are the Hartz Mountain or German Roller, the St. Andreasberg, and the Campanini, the latter being considered the best song canary and consequently very high priced.

To the woman who wishes to earn some pin money, the raising of canaries offers a very interesting and pleasant occupation; that is, if she is inclined to love and understand pets, for a canary certainly demands a certain amount of loving attention if it does well. One large advantage is the small amount of capital to be invested, also it does not require so much time to care for several cages of birds but what any housewife will consider a pleasant recreation from other irksome tasks.

The necessary investment depends on the breed of canary. The males will cost anywhere from three dollars to twenty-five, a hen canary can be purchased for as low a sum as one dollar. If one can spare the money it is better to buy a good male, one that has different notes in his voice and trills. It is wise to purchase a "singer" that is green in color and bright yellow females. This combination should produce some very pretty young birds.

If unable to secure breeding birds in the neighborhood of your home or in your home town, the nearest city will certainly have several bird stores.

The cages should be roomy and comfortable and preferably of metal, as they will be easier to keep sanitary. Provide a cage for each bird until they have become acquainted in their new home and the mating season arrives. Each cage should have its own glass drinking cup, seed dish, and wooden perches. These perches should be a little larger in circumference than a pencil, and perfectly smooth. If they are small the birds cannot grip them well, which causes much discomfort to the little pets. They enjoy plenty of perches and a swing. One can supply a variety of perches if the cages are not well equipped.

Canaries need attention and if they do not get it, will not sing or thrive. They are easily tamed and will sing nearly all the year if they have careful diet and good care. They should not be fed extras, such as sugar, hemp, pieces of cake, candy or other sweets. If fed improperly, the bird may get fat and lazy and lose its ambition to sing.

The cage must be kept absolutely sanitary. Give fresh water each day, also fresh grit and charcoal on the cage floor each day, with plenty of seed in the feed dish. Canary seed with a mixture of other small seeds which can usually be

obtained at a druggists is best. They will enjoy a teaspoonful of wild grass seed twice a week, and it will liven them up. Fresh lettuce, celery, apple and anything they like of that order should be kept before them, as they need the tonic of fresh food. Most important of all, see that your canary has plenty of grit and charcoal. Canaries, as well as chickens, must have something sharp in their crops to grind their food and, if they are not allowed this, they will soon die from indigestion.

Canaries also enjoy a bath each morning and will splash and spatter the water in all directions. The water should be lukewarm, given in shallow dishes and in a real warm room.

In mating birds, it is better if both are at least a year old. The male bird should be placed in the cage first, then the female a few days later. The birds may, and probably will, quarrel when just placed together in the cage. In most cases they will not quarrel enough to injure themselves. They will undoubtedly mate for the first hatch in early spring and will continue to breed well into the summer or longer, bringing out three and even more hatches. Soon after they have mated, they will commence to build their nest. A good way to assist them in their "home-building" is to prepare a little nest in a small, round, pasteboard box, pad it with cotton then cover it firmly with soft wool sewed on. If it is not, they will pick it entirely to pieces. Fasten this up in a corner of the cage (it should be about two inches in depth) and they will pick and work and adjust the nest to their own satisfaction and will line the nest if little bits of cloth, cotton batten, etc., are placed in the cage.

In a few days there will be a tiny egg in the nest and each day another, until there are from three to five eggs laid. The period of incubation is thirteen days, usually the first egg laid is not fertile. As soon as the tiny birds hatch the task of feeding them begins. The parents will attend to this, and should be fed stimulating, nourishing food at this trying time, in order to satisfy the hourly appetites of the fledglings and keep the mother bird strong. To begin with, they should have one fresh, hardboiled egg each day. Peel off the shell, cut in halves and they will eat what they desire. They should also have fresh bread and besides this, the other foods mentioned before will be sufficient. The mother bird moistens the food with her saliva until it is in the proper condition to be dropped into her babies' mouths. The young birds, as a rule, are not able to feed themselves until the thirtieth day. As soon as they can feed themselves they should be taken from their parents and placed in a separate cage, where they require the same food and attention as the old birds have been given. The feeding of hard boiled eggs is especially beneficial for them and one will be surprised at the number they consume. The males can be distinguished from the females by their brighter gloss and larger size. In about two months they will commence to warble a little.

There is one precaution to keep in mind when caring for canaries, be sure they are kept free from lice; keep the cages and perches sanitary, and dust the birds with lice powder.

APPLES FOR HEALTH

Most of us are familiar with that old saying, "An apple a day keeps the doctor away," which perhaps is rather far reaching in its thought, but nevertheless apples should be a very important part of our fruit diet and especially so at this time of the year, when we have eaten of heavier foods throughout the winter months, and need a lighter diet.

The majority of cellars in farm homes contain plenty of apples, which, as the warm days advance, will not keep any length of time and it seems too bad they should waste.

Apples do not appear so tempting to the country housewife as they do to those living in towns and cities, or in those parts of the United States where apples do not grow at all, and can only be bought at fancy prices. People living in the southwestern states are paying ten cents per pound for them, and not very choice fruit either. Bear this in mind when you think that desserts and dishes made from this old-fashioned fruit are not a luxury.

In the springtime, the shelves in the preserve closet are apt to appear quite empty, due to the fact that through the long winter the housewife is obliged to draw heavily upon her

supplies in this line for desserts, other things not always being available.

Two delicious preserves that will fill up these vacancies are apple jam, and apple conserve. Apple jam is made as follows: Pare and cut rather tart apples in quite thick slices, then to each pound of fruit, add one pound of brown sugar, (a little less will do) then to each five pounds of this mixture add one half pound of ginger root, the juice from four lemons, also the yellow rind grated and one ounce of cloves. Allow this to stand in an agate kettle over night, then cook to the right consistency.

For apple conserve, use six pounds of fruit, cutting in medium sized pieces. Add four pounds of granulated sugar and one pound of seedless raisins, juice of one orange and one lemon, also grated rind of each, then cook until thick. Pour in glasses, covering with parowax.

Apple frosting brings a change when the family is tired of all the cakes that mother bakes. Add one small cup of grated apple and one cup pulverized sugar to the white of one egg, then beat until stiff, flavor with a little orange extract.

A few raisins added to an apple pie makes a welcome change, or some cheese grated over the top crust will bring a rapturous expression on the face of the "head of the house." Which brings that other old saying to our minds, "that the way to a man's heart is through his stomach," and if a "frilly" apple pie accomplishes the result so much the better.

Just plain old-fashioned apple sauce can be glorified by adding a dash of cinnamon and nutmeg or a little orange and lemon extract; using brown sugar, one half with the granulated brings a welcome change.

Just try apple dumplings made after the following recipe. They will be a favorite with the family ever afterwards. Put one and a half cups sugar and two cups of water in a baking dish on the stove to boil. Then for the dough, use one and a half cups flour sifted with one teaspoon baking powder and a little salt. Rub in one tablespoon lard, mix with milk so it can be rolled out. Take a piece of the dough and shape around an apple which has been pared, cored and halved. Pinch dough together at top of apple and roll in flour, then bake in the syrup about one half hour, till nicely browned. This will make about four dumplings, increase according to size of the family.

By taking extra pains, every day materials may be "dolled up" so they do not appear ordinary. After all the appeal of food is partly in the eye. Let us resolve to use more apples while they last.

THE BIRD AND THE SONG

A little bird sat on the limb of a tree

Saying, "Get it, go get it, go get it!"

As cheerful a bird as a birdie could be,

With his: "Get it, go get it, go get it!"

His manner was glad and his notes clear and firm,

And he said: "In the world there is many a worm,

But don't fuss and complain and don't wiggle and squirm,

Just get it, go get it, go get it!"

"In the world," said the bird, "there is much that is glad

If you'll get it, go get it, go get it.

And if in the search you find something that's sad,

Forget it, forget it, forget it!

The world will be sad and the day will be blue

If you wait for its blessings to come right to you,

So if you want joy there is one thing to do,

Just get it, go get it, go get it!

"Don't think fate is bitter—if you want your share,

Just get it, go get it, go get it.

The chance is right good it is just over there,

So get it, go get it, go get it.

I just want to say that the chances are slim

To get what you wish if you stay on a limb,

You have to keep moving to keep in the swim,

So get it, go get it, go get it."—James W. Foley.

It is better to be disappointed in love than to be disappointed in marriage.

The Holstein Breeder and Dairyman

Copy for the publication should be received not later than the 12th or 27th of each month preceding date of issue.

MAY 8, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

A Unique Proposition

WHEN the delegates meet at the Grand Rapids Convention, they will have a proposition laid before them that is, we believe, unique in breed history. At a meeting of the Rhode Island Holstein-Friesian Association held at Providence April 24, it was voted to ask the National Association to exempt Rhode Island breeders from payment of extra registration fees for calves registered after their dams and sires have been proven in a herd testing plan which is advocated by the Rhode Island State College authorities and has been adopted by some of the members of the state association.

A similar herd testing plan has recently been adopted by the Rhode Island Ayrshire Club. Under it, a record is kept of the production of every milker. This plan is favored by the National Ayrshire Association and has its advocates among other breeds. Professors Howland Burdick and John E. Ladd explained this plan to the Rhode Island Holstein breeders recently and met with a very favorable reception. The minimum requirement for production for two-year-old heifers is 7,500 lb. milk, three-year-old heifers, 8,500 and animals four-years-old or over 10,000 lb. milk in a year.

It is never safe to predict but in view of the fact that several members of the Extension Service have been laid off temporarily or permanently because of lack of funds derived from the transfer fee, we expect the request of the Rhode Island State Holstein Club will be either pigeon holed or laid on the table with very little discussion of its merits.

A Lack of Confidence

A BREED publication that represents the group that has taken over the management of the Holstein-Friesian Association, comes out in a long editorial, lamenting the fact that the Association's receipts have fallen off to such an extent that it is necessary to make retrenchments in the so-called Extension Department.

The members of the Holstein-Friesian Association,

at the last annual convention in which they were given a right to vote, which was held at Syracuse in June, 1921, voiced their disapproval by the largest vote ever cast at any annual Convention, of the extravagant manner in which the association was being managed, reduced the transfer fee to fifty cents and did all they could towards placing the association in a position where it could pursue safe and sane policies.

The breeders of Holstein cattle generally realize that the Dairy Extension Departments of the States and Federal Government are promoting legitimate dairy Extension Work and that they, as breeders, are not called upon to contribute financially to support this work or to employ a force to duplicate or compete with the workers employed by the State and Federal authorities.

The breeders realize that the greatest good they can do towards promoting dairy extension work and helping to improve the livestock generally is by breeding good cattle, growing them well, maintaining them free from disease and coöperating with the State and Federal authorities in carrying out their projects in the local communities.

It was apparent to the members at the Syracuse Convention that the management, which assumed control at the Philadelphia Convention, were trying to promote the speculative side of the purebred Holstein cattle industry and build up a political machine to maintain themselves in power at the expense of an increased transfer fee and under the guise of doing Extension work. The members at the Syracuse Convention, by their votes, called a halt, reduced the transfer fee to fifty cents and made it plain that they were not in favor of the Extension policies proposed by the management.

Notwithstanding the expression of the members' wishes, through their vote, the management determined to go on with their program, called a Special Meeting before the next annual convention and at this meeting the members were deprived of their right to a direct vote. At the next meeting following the reduction in transfer fees to the members, the management were successful in boosting the transfer fee to \$1.50 and have continued their Extension policy of promoting the speculative side of the purebred dairy cattle industry, not only levying an increased tax on the breeders through the transfer, but have taken large sums of money from the Reserve Fund and have continued the Extension program according to the wishes and dictates of the management but against the wishes of the members as expressed at the last annual convention where they had the privilege of voting.

The breeders of Holstein cattle represent a class of intelligent men who resent the efforts of the management to deprive them of their right to a direct vote in managing their own Association and, after depriving them of such right, increase the fees and pursue a policy against which the breeders had voiced their vote of disapproval. Being deprived of their direct vote, the breeders are voicing their disapproval through a refusal to patronize the Association and thus be compelled to pay tribute to a movement that they do not approve of and, which experience has proven, is working to their detriment and to the detriment of the industry.

The report of the secretary's office shows that dur-

ing the first three months of 1925, there has been a falling off in the number of registration certificates issued from the number issued during the same three months of the previous year of over three thousand. During this same time there has been a decrease in the number of transfer certificates issued of over twenty-five hundred. During the three months, January, February and March, 1925, there has been a decrease of registration certificates issued of 3,204 and a decrease in the number of transfer certificates issued of 2,508.

FIVE YEARS ACHIEVEMENTS OF AN ACTIVE AND AGGRESSIVE MANAGEMENT

In reviewing the history of the management that came into control of the Association at the Philadelphia Meeting, we find the following achievements have been accomplished:

First, the members have been deprived of a direct voice in the Association's management.

Second, the transfer fee has been increased from twenty-five cents to \$1.50.

Third, the Association's earning capacity has been decreased from a profit of over \$60,000.00 in 1919, on a twenty-five cent transfer fee, to a loss of over \$90,000.00 for the past two years on a \$1.50 transfer fee.

Fourth, the Association's operating expenses have increased from \$256,811.37 in 1919, before the present management came into control, to \$586,736.22 for the year ending December 31, 1923.

Fifth, there has been a decrease in the number of members joining the Association of from 3,198 in 1919 to 1,491 in 1924.

Sixth, there has been a decrease in the number of registration certificates issued of from 114,503 in 1919 to 110,910 in 1924.

Seventh, there has been a decrease in the number of transfer certificates issued of from 97,392 in 1919 to 87,535 in 1924.

This can be taken as an indication of a lack of confidence of the breeders of Holstein cattle in the present control of the Association, and the unfavorable influence the kind of work which the Extension Department is doing, exerts on the Holstein industry generally.

A Registry Association, such as the Holstein-Friesian Association of America should continue to record an increased amount of business in order to keep abreast with the natural increase of the breed.

If the number of registration certificates issued one year after another does not increase, it means that the breed is not multiplying, which we know is not true, or else the owners are not registering their increase. If there is not an increase in the number of transfer certificates issued each year, it means that there is little demand for the cattle and the breeders are not disposing of their increase, or they are selling them without the necessary registration papers.

The records of the Holstein-Friesian Association show that the Association is not keeping up with the

natural increase of the breed but is recording a decreased number of registrations and issuing less transfer certificates than it did six years ago.

The breeders generally now realize that the deplorable situation in which the Association and the Holstein-Friesian industry finds itself is due largely to the manner in which the Association has been conducted.

The responsibilities of properly administering the affairs of the Holstein-Friesian Association is first vested in its members. The members constitute the various units that compose the Association. If there were no members there would be no Association.

The Association is composed of members who, having joined together for the purpose of carrying out certain projects, naturally retain certain rights in the organization. They should retain the right to formulate the policies and By-Laws of the Association, fix the fees and elect officers and have a direct voice in doing all these things.

The officers, when elected, are assigned to perform certain duties and in the Holstein-Friesian Association it is the duty of the secretary to look after the matter of issuing registration and transfer certificates to preserve the purity of the blood of the breed.

It is the duty of the Superintendent of the Advanced Registry to look after the matter of appointing supervisors and finally pass upon the accuracy and integrity of the records. He is clothed with the authority to accept or refuse records and his decision shall be final. The Superintendent of Advanced Registry is further empowered to publish the Blue Books and issue Advanced Registry certificates over the Association's seal.

Through the Constitution and By-Laws certain duties are delegated to the president, vice-president, treasurer and the board of directors.

It was never intended in the Holstein-Friesian Association that its Board of Directors should dominate the affairs of the Association and assume the authority delegated to other officers or retained by the members themselves.

During the first thirty-four years of the history of the Holstein-Friesian Association it grew from a very small beginning until it became the largest and most prosperous Association of its kind in America. During these thirty-four years each officer faithfully and efficiently administered the affairs of the Association in the office that was entrusted to him. Each member retained his right and equity in the Association. Each officer performed his duty and there was no attempt made by any officer or group of officers to set up a dictatorship in the Association and rob the members or other officers of their rights or exploit the Association's resources or the Industry.

In June 1919 a certain group came into control of the Board of Directors and this group has been characterized by a greed for power and their tenure in office has been marked by a series of attempts to dominate the Association's affairs.

This group on assuming office appointed one of their number to a position similar to General Manager and paid him a salary of \$12,000.00 a year.

They further tried to disfranchise the members by asking for the privilege of Altering, Amending or Repealing the By-Laws.

Failing to be granted this privilege they called a special meeting and were successful in disfranchising the members by depriving them of a direct voice in electing officers, formulating By-Laws and directing the policies of the Association.

At the Kansas City Meeting in June, 1922, they caused to be passed a By-Law amendment that deprived the members of their right to elect the superintendent of advanced registry, a secretary and a treasurer and placed the appointment of these officers in the hands of the Board of Directors.

By resorting to law and by-law violations and using methods that have been questioned in the court, the group that gained control of the Board of Directors at Philadelphia in June, 1919, have been able to retain office and keep in control of the Association.

The affairs of the Holstein-Friesian Association are going wrong as the records of receipts and expenditures and the falling off in the association's business show. Not only has the association been managed in such a way that the fees and expenditures have been increased and the business which it transacted has decreased but it is beset with lawsuits from within and without.

Several actions are now pending in the Court brought by members to protect and restore their rights, no doubt damage suits will be brought against the association to collect damages sufficient to wipe out the association's total assets unless the Directors can be held financially responsible.

The black-and-white cow, amidst all the commotion within the association, goes right along in her quiet way chewing her cud, producing and reproducing.

If preserving the blood of the breed is an asset to the dairymen and to the future dairy interests then surely the time is not far distant when the dairymen should organize to maintain a Herd Register to preserve the purity of the blood of the breed, provide this service to its members at cost and thus free the dairy interests from any obligation of paying tribute to speculators, who, it would appear, have changed what was once a Registry Association into an organization to collect money to promote speculation.

The Foreign Butter Markets

SIBERIAN butter is again coming into European markets and unless something unforeseen happens in the political world, an increased supply from that source is expected. Figures now available show that during the year ending September 30, 1924, the butter export of Russia amounted to \$10,815,000 which was about one-fourth of the value of the pre-war exports from that country.

Germany, since the beginning of last year, has afforded a market that strengthened the price of all dairy products in the world market. Production in that country is gradually increasing and it is not expected that Germany will import as much butter during the present year as she did last year.

Drought in the Argentine during the season of normally heaviest production has caused the exports to fall off there. During January and February of this year, the total exports, eleven million pounds, were only 65% of the total of a year ago.

Imports of butter into the United Kingdom from Argentina during the first three months of 1925 were only 80% of a year ago but were still equal to the corresponding period of 1923.

The Australians and New Zealanders are still showing how they can export their surplus of butter and cheese in a favorable season but as the record production in the southern hemisphere begins its seasonal decline, the older dairy countries attract more attention.

Grass is normally earlier in much of Western Europe than in the dairy sections of the United States and this is reflected in a reduction in milk prices which was effective in London on April 3, and in Berlin on April 19. The margin of Danish butter over other butter in London which has been apparent since the German demand was renewed, is now smaller. The price of best Danish butter in London and 92 score in New York show that all during April, for the first time since last July, Danish prices are substantially below New York prices.

More Legal Expenses

ONE more law suit is added to the long list in which the Holstein-Friesian Association and its directors are engaged. C. M. Long came from Missouri to be field secretary of the Illinois State Association and then part of his time was taken by the extension service. Finally Mr. Long secured a position with the Blue Valley Creamery Company, and severed his connection with the Holstein-Friesian industry. He and the officials of the Illinois State Association disagreed over accounts and Mr. Long was unable to collect what he claims was coming to him. Under the action taken by the delegates at Kansas City, fifty cents of the fee paid on each transfer applied for by Illinois owners or purebred Holstein-Friesians is turned over to the Illinois State Association. Recently, Mr. Long, in the Municipal Court at Chicago, attempted to attach the funds which, according to his statement, are sent by the treasurer to the Extension office and then sent on to the various state associations whose field secretaries are satisfactory to Mr. Koenig and the Extension Committee.

College Graduates on Farms

PRESIDENT R. A. PIERSON, of the State College of Agriculture, Ames, Iowa, recently gave his idea of how many farmers should be college graduates. "There should be as many college graduates in a given number of farmers having a given capital as are found in a similar group of business men having approximately the same total capital. Certainly there should be at least as many well educated farmers in an average agricultural community as the number of well educated doctors, lawyers, storekeepers, insurance agents, and others who are dealing constantly with the farmers."

He that uses many words for the explaining of any subject does, like the cuttlefish, hide himself for the most part in his own ink.

THE PRACTICAL DAIRYMAN

RAISING DAIRY CALVES

Dairymen who market their product as fluid milk, experience considerable trouble raising calves. No patented calf meals or so-called milk substitutes seem to be able to take the place of milk itself. The best results in dairy calf raising are attained when the calf is started on whole milk, which is gradually supplemented by skim milk. At various experiment stations trained investigators have endeavored to find a satisfactory substitute for milk with results not always satisfactory.

The length of time the calf should be left with its mother will depend upon the condition of the calf and the mother at time of calving. In general, the calf should be left with its mother for one to three days after birth so that it may receive the colostrum or "first milk." Colostrum possesses certain properties which stimulate the action of the digestive tract and furnishes a temporary immunity to various common calf diseases.

After the calf has been removed from its mother, it should be put in a pen by itself and taught to drink milk from a pail. The milk should be fed at a temperature of about 95 F. or blood warm. From six to twelve pounds of whole milk daily should be fed, depending upon the size and vigor of the animal. Feed regularly and in small quantities and do not overfeed. Milk very rich in butterfat should be diluted with water. During the first week or ten days feed three times daily; afterward two feedings daily will be sufficient. Strict cleanliness and regularity are essential. The change from whole milk to skim milk or other feeds fed in liquid form should be made gradually.

Calves should be taught to eat grain as early as possible. After two weeks a little grain put in the calf's mouth after it has had its milk will give it a liking for grain and it will soon learn to eat from the feed box. Cracked corn, crushed oats, or a mixture of the two are preferred. A little later a mixture of four parts cornmeal, one part wheat bran, and one part oilmeal can be fed. Feed all the grain and hay the animal will eat during the first three or four months. The hay should be good quality—alfalfa or clover. Most breeders prefer clover.

If the calves are healthy, they may be weaned when about ten weeks old. To raise a calf to this age, about 200 lb. whole milk and 600 lb. skim milk will be required, besides the hay and grain.

Weaning should be a gradual process. Gradually decrease the quantity of milk fed. Calves should not be turned to pasture until they are at least six months old, as pasture grass is too bulky for the small stomach of the young calf. Although grain should form a large part of the calf's feed until it is six months, it should not be allowed to eat too much grain in proportion to roughage.

Fresh, cool water should be available, especially at feeding time. Keep the animals in clean, well-lighted and well-bedded stalls in the barn where they are protected against the intense heat of the sun and are not tormented by flies.

POINTS IN SELECTING A BREED

In Farmers' Bulletin 1443 just issued from the Federal Department of Agriculture the chief factors to be thought of in selecting a dairy breed are enumerated. The Department believes that the three chief points to be considered are: 1. The breed that predominates in the locality where the new herd is to be located; 2. Personal preference; and 3. Market requirements for the product.

While the dairyman just starting out with purebreds may feel that since his neighbors have one breed of cattle, he should get another breed so as to have a monopoly in the business of selling breeding stock, he must not overlook the fact that there is no question of the monopoly but there may be no business to monopolize. An isolated small breeder has difficulty in disposing of his stock to advantage while a district

in which there are a large number of herds of the same breed attracts buyers in search of animals of that breed. Then in a breed neighborhood, there is the opportunity to exchange bulls or to own good bulls coöperatively; to take advantage of breed sales of surplus stock; and the advantage of bringing the community together in other endeavors which usually result where there is but one breed.

Personal preference for any particular breed should be given the right of way when there is no other breed already established in that district provided, however, that just as good animals are available in the preferred breed as in some other breed. A man will do the best with a breed he likes.

Market requirements for the product should not be over-emphasized, for the reason that these requirements may fluctuate from one year to another, and obviously, the dairyman cannot change breeds with every change of market requirements.

One point should always be kept in mind—there are good cows and poor cows in all breeds, and, other things being equal, the breeder or dairyman who gets good individuals to begin with will have a good chance for success, no matter what breed he selects.

LIME AND INOCULATION NEEDED

The old recommendation still holds that lime, inoculation, and manure make alfalfa doubly sure. It is a waste of time and money to attempt to grow alfalfa on sour soil that needs three or four tons of lime an acre. This is the place to raise alsike and timothy, if lime cannot be used.

The most prosperous agricultural communities to-day are those in which the dairy cow is the foundation of agriculture.

TYPE, HEALTH AND PRODUCTION

Cows in this herd, enrolled in C. T. A. work, have produced over 12,000 lb. milk in a year with ordinary care and feed.

State and Federally approved veterinarians vouch for their health.

Their type you can see for yourselves.

This herd is headed by

KING ORMSBY ENDERCAMP

he by King of the Ormsbys from a 904 year record daughter of Judge Segis.

Let us sell you some choice calves.

CLUB ACTIVITIES

COUNTY ASSOCIATION FORMED IN VERMONT

The Addison County Holstein-Friesian Breeders Association was formed April 11th, when a group of twenty owners of black and white cattle met at Middleburg, Vt., in the Farm Bureau office.

The officers elected were: President, Myron A. Johnson, Weybridge; vice president, T. W. Macauley, Shoreham; secretary and treasurer, Floyd C. Keesee, Middlebury. A constitution and by-laws were adopted. The executive committee is composed of the officers and the following directors, W. C. Hack, Orwell, F. M. Merrill, New Haven; William Noonan of Panton; H. C. Johnson of Weybridge; J. A. Philips of Cornwall and Edgar Marsceilles of New Haven.

The members voted to make an Addison County exhibit of Holstein cattle at the fair next fall and a committee was appointed to have charge of the selection. All the Holstein cattle in the county will be listed. It is planned to hold a summer field meeting and a committee to have charge of that meeting was appointed by President Johnson.

MAY HAVE STARTED SOMETHING

Every member of the fourth Indiana County Holstein Bull Association has Holstein cows and has had his herd tested for both tuberculosis and abortion. On Friday, March 13th, a representative from each block, County Agent John Warner and S. J. Brownell of State College went to Ohio in search of bulls. The three dairymen were C. S. Gerhard of Blairsville, C. H. McCall of Indiana and H. O. Kimmel of Shelocta.

Three bulls were finally purchased from the Pinery Farms at Mentor, Ohio. Two were sired by King Pietertje Jewel Kordyke, the noted show bull and herdsire at Pinery Farms

The Kind We Raise

Cows of this size, type and evident producing capacity, bred and raised on this farm, are mated with

MODEL DARIUS KING SEGIS

whose dam produced 639.8 lb. milk in a week, averaged 79.8 lb. milk a day for three months and produced 2,771.2 lb. milk, 732.4 lb. butter in 10 months all as a two-year-old heifer.

This herd is Accredited.

Stock for sale at reasonable prices

FRED B. KEENEY,

Wyoming Co.

Laceyville, Pa.

and the other was sired by Double Ona. On the dam's side of the pedigrees there is a long list of high records. The bulls were purchased with a guarantee that they would pass a satisfactory tuberculin test and the abortion test. The herds of the association members have been under the accredited herd plan for some time. This is said to be the first bull association that ever required its bulls to pass an abortion test.

PITTSBURGH DISTRICT DAIRY COUNCIL

At the Fort Pitt Hotel, Pittsburgh, Pa., April 24, was held the annual meeting and banquet of the Pittsburgh District Dairy Council. The attendance exceeded that of previous meetings. Secretary Quackenbush reported that last year was the most successful in the history of the organization.

E. M. Bailey of Pittsburgh was toastmaster. C. W. Mason of Wheeling, W. Va., said that the consumption of milk had increased in Wheeling and the Dairy Council is helping increase consumption and improve quality. Miss Sally Lucas Jean, formerly director of Child Health Service, traced the health education movement from its start in 1918 and told how the Dairy Council had helped. L. J. Taber, Master of the National Grange spoke on Dairy Progress and Civilization.

Officers were elected as follows: E. M. Bailey, Pittsburgh, president; Mrs. J. C. Heckman, Pittsburgh, first vice-president; John L. Wise, Harmony, Pa., second vice-president; Bruce H. Rodenheiser, Pittsburgh, treasurer; and E. R. Quackenbush, Pittsburgh, secretary.

BIG RECORDS

Superintendent Gardner recently announced two sensational records. Chimaum Gerben No. 673495, freshening as a senior three-year-old, is credited with 24,697.8 lb. milk, and fat equivalent to 990.82 lb. butter in 305 days, making a new high record in the senior three-year-old class. She was bred by Mr. A. C. Mills, Ferry, Washington, and is now owned by the Western State Hospital, Ft. Steilacoom, Wash.

Bella Veeman Segis Matador No. 503906, a daughter of Segis Walker Matador is credited with producing 643.3 lb. milk and fat equivalent to 454.41 lb. butter in seven days in the Carnation herd. She was bred by A. H. Burns of Gresham, Oregon. For the amount of fat represented, this cow's milk must have tested 5.65%.

NEW JERSEY ACTIVITIES

On April 2d, the Warren County Holstein Friesian Association held their annual meeting in Belvidere, New Jersey. The officers elected were: Frank Gastner of Stewartville, president; George Edgar of Belvidere, vice president; and Edward Dundas of Phillipsburg, secretary and treasurer. Activities for the coming year were planned.

E. J. Perry, extension dairy specialist, outlined a purebred bull campaign while William Roll of Anderson led a discussion of the subject of extending the annual calf club show and bull sale to include other farm organizations. Committees were appointed to have charge of each of these enterprises.

AGEE TO RETIRE

Alva Agee has been Secretary of Agriculture for the State of New Jersey for the past nine years. The doctors have ordered him a change of climate and he has tendered his resignation to take effect July 1. To succeed him the State Board of Agriculture has chosen William B. Duryee.

"That last time I was in camp," said Private Jimson, "the temperature on three successive nights dropped to zero." "That's nothin'," said an old soldier; "that's nothing." "What's nothing?" asked Jimson, indignantly. "Zero!" replied the old soldier, as he made for the door.

MANUFACTURED MILK MARKETS

April showed no unusual developments in the concentrated milk market. While the total stocks in the manufacturers' hands on the first of the month showed an increase over March 1st, they were almost twenty million pounds less than the amount on April 1st, of last year and were well below the five year average of 141,920,000 lb. We shall soon be in the season of flush production and no speculative buying is taking place.

March exports amounted to a little more than nine million pounds, some three million pounds less than for March, 1924. For the three months of the present calendar year, combined exports of condensed and evaporated milk total 29,404,000 lb. In 1924 the total was 67,163,000 lb.

The export demand for powdered milk continues to be greater than it was a year ago, about 73,000 lb. more being exported during March of this year than in March 1924. More than a million pounds were exported during the first three calendar months of the present year while the exports for the first three months of 1924 were less than three-fourths of a million pounds.

The butter exports for March of this year totaled 621,521 lb. while the imports were 1,937,638 lb. The exports for March 1924, were 484,430 lb. and the imports over three million pounds.

The imports of manufactured milk, condensed, evaporated and powdered, totaled over 800,000 lb. while a year ago the amount imported was well over one and a quarter million pounds.

THE FOREIGN DAIRY MARKETS

A year ago dairying promised such a volume of production that it appeared to spell disaster to the industry but world consumption increased in much greater proportion than prices have been lowered. Depression in the price of butter has been most apparent in the United States and here consumption has been vastly stimulated.

Germany continues to grow in importance as a market for foreign butter and February markets increased nearly three million pounds over the January amount and there was imported about the same as in October, 1924, the record postwar month. Germany took a little more than one-fifth as much as the February importations into the United Kingdom.

Australia and New Zealand are entirely responsible for a total increase of 37% over a year ago in the shipments of butter to the United Kingdom during February. From Australia alone twenty-three million pounds were imported against less than six million last February, while from New Zealand, imports increased from seventeen million to twenty-three million pounds. Besides supplying just two-thirds of the British imports in that month, colonial butter especially of the unsalted make, is being shipped, in quantities that attract considerable attention, to Continental markets to compete there at comparatively low prices with Danish and Dutch butter in Germany, Belgium, France and Switzerland. There are still large quantities of Colonial butter afloat, but it appears that the peak of arrivals must have been reached toward the end of February. Fair quantities are reported as stored in preference to forcing sales at present comparative prices. In the matter of cheese, New Zealand supplies now dominate the British market, as is usual at this season, and show generally some decline from last year.

Argentine butter is still in short supply on the British markets, due to the prolongation of the conditions of serious drought until well into the season of normally heaviest production. There is at present, however, no lack of moisture in the dairying areas of Argentina.

Belgium is affording a market for some Argentine butter but more especially for the Danish and Dutch product. The Irish Free State is contributing no surplus just now, but on the other hand is importing butter.

The foreign trade of the United States in dairy products during February was practically balanced as between exports and imports when calculated on the basis of milk equivalent.

Feeding succulent feeds before milking is likely to impart an undesirable flavor and odor to the milk.

LEAGUE RECOMMENDS MAY PRICES

Present basic prices for fluid milk and cream will be continued during May by the directors of the Dairymen's League Cooperative Association Inc. Slight reductions were made in the price for milk used in the manufacture of evaporated and condensed whole milk, milk chocolate and whole milk powder while an increase of 10 cents per 100 lb. was recommended in the price of milk used in the manufacture of certain kinds of hard cheese. The price for milk sold in fluid form is \$2.80 per 100 lb.

The official report says that more than 1,500 new contracts have been accepted since February 1st, and that shipments of fluid milk and cream into New York City from League plants are approximately 5,000 cans higher per day than a year ago.

The annual meeting of the League members will be held at the Hotel Pennsylvania, New York City on June 18. This was decided at the monthly session of the directors and county presidents held in New York recently.

DON'T OVERPASTURE BLUE GRASS

Blue Grass hardly has a fair show in furnishing a supply of pasturage for the summer season if it is eaten down close to the ground by heavy spring grazing. Heavy grazing not only reduces the carrying capacity of pastures, but it brings a most serious pasture shortage during the dry time of the year (July and August) when pastures are most particularly needed. Where a patch of sweet clover is used for a pasture, the heavy load of early spring grazing is taken care of so that not only does sweet clover furnish grazing throughout the year, but it also provides for a much better use of our permanent blue grass pastures. It helps to prevent the over-grazing in the spring that helps make our blue grass pastures so barren during the dry time of the year.—*Wisconsin News Letter*.

Feeding succulent feeds immediately after milking has little or no detrimental effect upon the flavor and odor of milk obtained at the subsequent milking.

OUR JUNIOR HERD SIRE

He is by the great sire, King Hengerveld Hartje and from Fawn Beauty De Kol, a cow that averaged in this herd over 90 lb. milk a day for two weeks. Her individuality, like that of her son's will please you.

Cows in this herd make a splendid showing in C.T.A. work.

The herd is under State and Federal Supervision and passed the last test CLEAN.

Will sell Cows, Heifers or Calves. Our stock will please.

Nicholson, R. D.

Susquehanna Co., Pa.

Cow Testing Association Reports

ILLINOIS TESTING

Fed a ration of corn silage, alfalfa and clover hay, corn, oats, oil meal and cottonseed meal, a registered Holstein owned by Walter Taylor of Hanna City, Ill., has produced 6,695 lb. milk, 216.2 lb. fat in ninety days while enrolled in the 500 lb. butterfat cow club. Her ration is one of the most practical for use in Illinois dairy herds. During the ninety days she consumed 3,476 lb. silage, 434 lb. clover hay, 708 lb. alfalfa hay, 1,093 lb. corn, 497 lb. oats, 79 lb. oil meal, and 169 lb. cottonseed meal.

The owners of cows entered in the 500 lb. butterfat club are all members of the Illinois Dairy Herd Improvement Associations.

During March, the first and second positions in the test work were occupied by purebred Holsteins owned by Wardland Dairy. The leader is credited with 2,815 lb. milk, 118.6 lb. fat and her stablemate with 2,288 lb. milk, 100.6 lb. fat. Purebreds owned by Rock River Farms stand second and third with 94 lb. fat and 93.9 lb. fat respectively. Both were milked four times daily.

First position for herds is held by the establishment of the W. T. Rawleigh Company, Freeport, their seventeen purebred Holsteins averaging 1,830 lb. milk, 62.9 lb. fat.

HOLSTEINS SHINE HERE

Twelve registered Holsteins owned by Wm. H. Landis, East Greenville, Pa., led the Montgomery County Testing Association for March for both milk and fat, averaging 1,343 lb. milk, 54.61 lb. fat. The A. K. Rothenberger herd consisting of ten Holsteins was second in each in-

stance with 1,170 lb. milk, 42.47 lb. fat, and the Ursinus College herd was third, their ten Holsteins averaging 1,103 lb. milk, 38.45 lb. fat.

A Landis cow stood first with 2,706 lb. milk, 86.59 lb. fat; a Rothenberger animal was second with 2,000 lb. milk, 66 lb. fat; a Ursinus College cow was third with 64.79 lb. fat.

The herd consisting of sixteen Holsteins owned by the Levi G. Schultz Estate stood in fourth place for both milk and fat and one of the cows is credited with 1,677 lb. milk, 62.05 lb. fat.

Carl A. Sager, tester in charge reports that 308 cows in twenty-six herds were tested during the month. Fifteen cows exceeded 50 lb. fat and thirty-five produced more than 1,200 lb. milk.

VIRGINIA COW TESTERS EFFICIENCY CONTEST

So successful was the 1924 Virginia Cow Testers Efficiency Contest that a similar contest under slightly revised rules is being staged during the current year. The contest is divided into two classes. Class one is based on monthly work and a cash prize of \$10 is awarded the cow tester who secures the greatest number of points each month. Class two is based on the whole year's work. In this the first prize is a gold medal, second prize a silver medal and third prize a bronze medal.

Points in class one are awarded for sending in monthly reports on time and for completeness of reports; while points are earned for each new member added to the association; for each tester's monthly conference with the local county agent; for each purebred female purchased by members; for each grade or

scrub bull replaced by a purebred; for each cow entered on official test and for each unprofitable cow sold for beef while added points will be given for news articles written by the tester for any newspaper, dairy, farm or breed paper. The points for scrub or grade bulls replaced by purebreds are not limited to association herds. The tester will receive credit for such action by any dairyman within the county if he can submit evidence to show that he was largely responsible for the replacement in the case of a non-member's herd.

In class two, in addition to the monthly credits, points are given for annual reports printed or mimeographed; for filling out individual cow record slips and herd summary sheets and for each cow producing enough to be entered in the Record of Performance. The Virginia State Bankers Association is financing the contest which is supervised by the Extension Office of the Virginia Polytechnic Institute Dairy Department at Blacksburg.

DUBBLES FIRST

The leading herd in the Wabasha-Olmstead Testing Association during March was composed of eighteen black and whites owned by John Dubbles of Elgin, Minn., their average being 1,098 lb. milk, 40.7 lb. butterfat.

There were 375 cows in 24 herds tested during the month with an average of 886 lb. milk, 26.7 lb. fat.

REGISTERED HOLSTEIN BULLS.—Two months to two years. Sire over 1,000 lb. Prices and terms best ever. W. A. BEACH, Mankato, Minn.

IN THE MONTOUR VALLEY

Registered Holsteins owned by A. B. Craig of Sewickley, Pa., stand first and second for butterfat production during March in the Montour Valley Cow Testing Association. Promise, a two-year-old, produced 69.95 lb. fat; May, a four-year-old made 65.86 lb. and her milk production of 2,353 lb. is the largest reported. A six-year-old registered Holstein, Empress, owned by the Allegheny County Home is third with 64.23 lb. fat. Craig cows occupy the first three places for milk production, May being first, Promise third with 1,841 lb. while between them is Konig with 1,891 lb. Konig's butterfat production, 60.51 lb. is fifth on the list. Chas. W. Scott is the owner of the registered Holstein, Fay, standing in ninth place with 55.15 lb. fat.

The Craig herd consisting of ten registered Holsteins stands first for milk with an average of 1,053 lb. and third for fat with 34.23 lb. A herd of nine animals consisting of eight registered and one grade Holstein owned by Dr. G. W. Ely, Montour Falls, is second for both milk and fat, being credited with 1,052 lb. and 36.30 lb. respectively.

L. M. Stark, tester of this association reports that during March 372 cows in twenty-five herds were tested of which sixty-eight cows produced over 40 lb. fat and twenty-six over 50 lb. while 51 exceeded 1,200 lb. milk.

HARPER HERD MAKES GOOD SHOWING

W. R. Hazel, tester in the South Kent County, Mich., Cow Testing Association, in his annual report states that W. R. Harper & Sons had the highest producing cows in two classes, namely under three and under four years old. Orlo Good owns the high butterfat producing cows in the under five years and mature age classes. W. R. Harper & Sons had the highest producing herd in the association in both butterfat and milk production.

In addition to the Harper herd the following members' herds averaged above 300 lb. butterfat production:

Otto Fisher, 6.4 PB. H.; Fred Kaechele, 7 Gr. J.; Joe Wenger, 9.3 Gr. & PB. H.; Ralph Sherk, 6 Gr. H.; Mrs. Cridler & Sons, 17.9 Gr. H.; Ernest Ruehs, 6.2 PB. G.; Orlo Good, 18.8 Gr. H.; Lewis Kaechele, 7.8 Gr. D.; Lee Croft, 8.7 Gr. H.; John Luncke, 8 Gr. G.

Nearly every member has alfalfa seeded on his farm and a small acreage of sweet clover is in use. This Association is continuing testing work for the third year.—*Dairy Extension Dept., Mich. Agr. College.*

A NICE GAIN

Two years ago the farmers of Codington County, South Dakota, organized the Watertown cow testing association. The first year the association average was 206.25 lb. butterfat while last year the average was 231.89 lb. fat. A. J. Brandriet owned the two highest producers both purebred Holsteins. One made 503.02 lb. butterfat, 12,508.7 lb. milk, with an average of 4.02%. The second cow made 13,673.2 lb. milk, 480.06 lb. butterfat. The Brandriet herd of 15 Holsteins averaged 8,663.5 lb. milk, 315.25 lb. fat and was in second place. The leading herd consisted of eight grade Holsteins owned by David Little and averaged 9,234.2 lb. milk, 345.30 lb. fat. The herd of M. J. Kingslein consisting of 12 purebred Holsteins averaged 8,312.1 lb. milk, 278.22 lb. fat.

WIN ALL HONORS

Purebred Holsteins carried off the honors in the Shiawassee County testing association for March. A purebred Holstein owned by C. B. Wilkinson of Perry, Michigan, produced 64.7 lb. butter, 1,701.9 lb. milk. The purebred Holstein herd owned by L. D. Boyd of Byron averaged 1,269.5 lb. milk, 43.4 lb. butterfat.

TESTING IN VIRGINIA

By L. P. EMMERICK

During the month of March there were sixteen active cow testing associations in Virginia. The sixteen associations reported 7,730 cows enrolled of which 1,043 were dry. Of this total 746 cows produced over 40 lb. butterfat, and 219 over 50 lb. There were 143 cows sold to the butcher as unprofitable. Seven purebred bulls and twelve purebred cows were purchased during the month.

The average production for all cows including those dry was 557 lb. milk, 22.7 lb. butterfat. The Chesterfield County Association had the highest average butterfat production, 413 cows in this association averaging 26.6 lb. butterfat from an average milk production of 637 lb. Prince William County Association had the highest average milk production, 505 cows in this association including those dry averaged 718 lb. milk, 26.1 lb. butterfat.

The high cow for the month was a seven-year-old grade Holstein, fresh February 25th, and owned by J. J. Conner of Manassas, a member of the Prince William County Association. Her production was 1,942 lb. milk, 95.1 lb. fat. The ten high cows showed an average production of 80 lb. butterfat. Nine were Holsteins and one was a Guernsey. Of the ten high herds, five were Holsteins, four were Guernseys and one a Jersey herd.

LEADS IN IOWA

Ten purebred and grade Holsteins owned by F. H. Schmadeke of Clarksville, Iowa, topped the Bremer County association No. 1 for the year recently ended by averaging 438.7 lb. butterfat, 12,336 lb. milk. A seven-year-old Holstein owned by F. A. Chester and Sons of Plainfield gave 14,005 lb. milk, 557 lb. butter in 11 months making a profit over cost of feed of \$149.07. The Chester herd was second with an average of 418.8 lb. fat.

GOOD STOCK

A registered Holstein owned by J. A. Patterson of Rohrsburg, Pa. produced 17,912 lb. milk, 614.7 lb. fat in the Columbia County Cow Testing Association last year, the largest record reported. In the entire association there were twenty-nine cows that produced over 400 lb. butterfat. The Holstein herds of J. A. Patterson, Clarence Reece, and Wm. J. Fairchild averaged over 300 lb. butterfat. There were twelve herds averaged over 300 lb. butterfat and everyone of these contained at least one cow that produced over 400 lb.

SCHOOL OWNS BEST HERD

A herd of nine purebred Holsteins owned by the Agricultural School at Menominee, Mich., led the South Menominee Cow Testing association with an average production of 1,104 lb. milk, 38 lb. butterfat. Ten of these cows each produced over 44 lb. fat in the month, two of them were purebred Holsteins and six grade Holsteins. H. T. Messenger had two in the list, a purebred being second with 1,582 lb. milk, 53.8 lb. fat and a grade being fourth with 1,373 lb. milk, 50.8 lb. fat.

AN IOWA HOMESTEAD

A purebred Holstein, Homestead, owned by the Alfagold Farm, Elkader, Iowa led the McGregory Cow Testing association during the month of March by producing 2,551 lb. milk, 84.2 lb. fat. The Alfagold herd consisting of 16 purebred Holsteins led for herd average with 1,410 lb. milk, 49.5 lb. fat. During February this herd averaged 1,244 lb. milk, 41.2 lb. fat. There were 371 cows in the association during March and they averaged 601 lb. milk, 25.3 lb. fat.

"The man who tells us of our faults is our best friend."

"Yes, but he won't be long!"

SUPPOSING

you had a bull with 21 sisters that had each made over 1,000 lb. butter in yearly test?

And that his dam produced 636.3 lb. milk, 35.14 lb. butter in seven days, and was dam of a 30 lb. cow with over 1,000 lb. butter in a year that in turn was dam of a 30 lb.—1,000 lb. four-year-old?

And your bull was by ORMSBY KORNDYKE LAD, was a fine individual and sired dandy stock? You'd think you had a REAL herd-sire.

Let us tell you about ours.

We offer his sons and some good heifers.

CHENEY BROTHERS & JONES

Randolph Virginia
This herd is ACCREDITED.

IN THE ALLEGAN ASSOCIATIONS

There were 252 cows tested during March in the North Allegan, Mich., Testing Association, their average production being 792 lb. milk, 29.7 lb. fat. Fifty-four cows made over 40 lb. fat, 17 over 50 lb., while 42 exceeded 1,250 lb. milk.

The leading individual was a grade Holstein owned by Bert TerHarr she being credited with 1,866 lb. milk, 70.9 lb. fat. A purebred Holstein owned by Mr. TerHarr led for milk production with 2,058 lb. milk, 61.7 lb. fat.

Twenty-eight herds containing 357 cows were tested in the East Allegan, Mich., Testing Association. Twenty-two cows produced more than 50 lb. butterfat and nine went over the 60 lb mark. There were 36 cows exceeding 1,250 lb. milk.

R. D. Brower of Hopkins had high herd for both milk and butterfat production, his purebred Holsteins averaging 1,412.2 lb. milk, 48.17 lb. butterfat. A purebred Holstein owned by William and Clayton Denning led the association for milk and butterfat by producing 2,170 lb. milk, 75.9 lb. fat.

BRANSON HAS GOOD CATTLE

Last year the second highest producing herd enrolled in cow testing association work in the state of Iowa was owned by Ralph Branson of West Branch. The herd is again enrolled in the local cow testing association and is making a very fine showing despite the fact that most of the milkers are two or three year old heifers. One of his cows, Cordova Wayne 2d, freshened last November and was producing at the rate of 70 lb. butter in a month during April.

Mr. Branson has been a Holstein breeder for more than a dozen years, although he has never had a very large herd. He markets the product of the herd in the form of sweet cream, delivering it twice a day and receives a premium of five cents a pound for butterfat over the price paid for sour cream.

WISCONSIN TESTING

Thirteen cows in this association produced more than 50 lb. fat in the month while fourteen herds had an average production of over 30 lb.

The herd of nine grade Holsteins, owned by A. L. Jaques led the Waupun-Ladoga Association with an average production of 1,263.4 lb. milk, 46.2 lb. fat.

Of the 370 cows tested in the Green Lake Association, 23 went over the 40 lb. mark during March. The leader was a registered Holstein owned by Shirley Kutchin of Green Lake. This animal is credited with 1,595 lb. milk, 60.6 lb. fat.

A registered black and white owned by F. L. Schultz & Sons was high cow, producing 1,739 lb. milk, 73 lb. fat. J. F. Braatz & Sons owned a registered Holstein in second place with 1,922 lb. milk, 67.3 lb. fat.

A registered Holstein, owned by Chas. DePouw, Oconto, led the Oconto Association for both milk and butterfat during March by the production of 2,167 lb. milk, 95.3 lb. fat. Mr. DePouw had four registered Holsteins that each produced more than 50 lb. butterfat.

F. C. Miller of West Salem, had the high herd during March in the West Salem-Bangor Association. This herd averaged 1,264 lb. milk, 42.7 lb. fat. A registered Holstein in this herd produced 1,863 lb. milk, 65.3 lb. fat.

An eight-year-old purebred Holstein belonging to W. J. Ward, Avalon, led the Clinton-Rock Association, being credited with 71.3 lb. fat from 1,745 lb. milk. Geo. McCartney had the high herd average, his twelve grade and purebred Holsteins averaging 35.3 lb. fat, 984 lb. milk.

"This is too deep for me," said the bug as it fell into the jar of milk.

Cuba, Allegany Co., New York

A SALE OF EIGHT

G. A. Saunier of Brink Haven, Ohio, recently sold eight cows to the superintendent of the Coshocton County Home, who purchased them to add to the Home herd at Coshocton, Ohio. These eight animals were young cows just coming into full production. We will mention the breeding of a few to show the lines of breeding represented. Hengerveld Nellie Bly Wayne is a five-year-old. Her sire is a son of Sir De Kol Artis Korndyke while her dam was by Hengerveld De Kol 3d, a noted show bull exhibited by George Carpenter of Wilkes-Barre, Pa., for several years. We do not know of any son of old Hengerveld De Kol that won so many prizes in the show ring.

Princess Undine Segis was by Prince Nudine De Kol Pontiac and her dam was by King Segis Pontiac Frindaella from a daughter of Paul Beets Walker. King Segis Pontiac Frindaella is by King Segis Pontiac from a daughter of King of the Pontiacs. Princess Undine Segis is just eight years old and is a big producer.

Blanche Korndyke De Kol Beets is a four-year-old. Her dam is a granddaughter of Wauseona Vale Korndyke while her sire, King De Kol Lulu Beets was by King Korndyke Lulu Pontiac from a 26-lb. three-year-old daughter of Fairview Pontiac Beets Korndyke, one of the greatest transmitting sires that ever lived in Ohio.

The Coshocton County Home has secured a number of fine animals whose pedigrees show blood lines noted for production. We believe they have made a wise selection.

FROM KANSAS TO NEBRASKA

E. N. Madsen of McDonald, Kansas, recently sold Wray Powell of Stratton, Nebraska, two good young cows. One, Long Beach Lilac De Kol Korndyke, is a six-year-old daughter of Long Beach Prince Weg, who was from a daughter of Traverse Dutch Weg and was sired by Long Beach De Kol Korndyke. This bull headed the herd of David Falconer

of Scottville, Mich., and has a creditable list of good record daughters. He was a son of Friend Hengerveld De Kol Butter Boy from Maple Crest Pontiac Spotted Annie, 30.86 lb. butter in seven days, 1,226.27 lb. butter in a year. She was a daughter of Pontiac Aaggie Korndyke from Spotted Ann Daughter, a 30 lb. cow with 1,088.75 lb. butter in a year.

Ona Hengerveld Pontiac is from a daughter of Long Beach Prince Weg and was sired by Prince Chief Pontiac De Kol whose pedigree shows a combination of producing strains noted for individuality as well as production.

NEW HERD IN WASHINGTON

C. O. Rhoades of Bay Center, Washington is building a herd of purebred Holsteins. Early last winter he purchased Steilacoom De Kol Sadie Vale for a herd sire, a bull bred in the Washington State Hospital herd. He was a son of Chimacum King Korndyke Sadie Vale and so related to many large producers.

Recently Mr. Rhoades purchased two heifers from P. A. Lee of Mount Vernon. One was Edgeway Lena De Kol Pontiac, a two-year-old daughter of Ensign De Kol Pontiac and Aaggie Cornucopia Lena, a cow with a 30-lb. seven-day butter record and nearly a thousand pounds in a year. Maldetta Bonnie Segis is just two years old. She is a daughter of Maldetta King and Bonnie King Segis with a record of 1,142 lb. butter in a year. She is bred to a bull whose dam also has a big year record.

INDIANA HOLSTEIN TRANSACTION

Lady Daisy Veeman 2d is the name of a two-year-old heifer recently sold by Charles Bohnke of Decatur, Indiana, to Albert Franz, Monroeville, Ind. With this young cow went her baby heifer calf. They were both good individuals and well bred. The dam of Lady Daisy was from a daughter of Minita Butter Boy and was sired by Sir Korndyke Daisy

Veeman, he by Sir Korndyke Pontiac Artis from a high record daughter of Sir Veeman Hengerveld. Lady Daisy Veeman 2d was sired by a son of Starr Pontiac Korndyke Butter Boy and Rest Easy Pontiac Burke, a tested daughter of Sir Urmagel Burke. Her pedigree traces to some of the greatest A. R. O. sires of the breed, bulls whose daughters and granddaughters have made tremendous records both in official test and in long time work.

CHAMPION GOES TO SANATORIUM

Bean & Allen of Presque Isle, Me., recently sold a very nice young bull, Champion Lyons Segis Alcartra, to head the herd owned by the Western Maine Sanatorium at Greenwood Mountain, Me. Champion was from Lyons Segis Korndyke Pietje, a daughter of Champion Korndyke Pietje from Lyons Segis Hengerveld, who was by Sir Lyons Segis from Belle Hengerveld Korndyke.

Sir Lyons Segis went to Canada and has about three dozen daughters tested in that country, of which at least two have made seven-day records above 30 lb. butter.

The sire of Champion Lyons Segis Alcartra is King Voran Pontiac, whose sire, King Pontiac Calamity Alcartra was sired by King Segis Pontiac Alcartra, whose dam as a two-year-old made a world's record in yearly work and then as a three-year-old made world's records for seven- and thirty-day butter production.

Last Call For

On May 12th and 13th, Consignment Sale at Earlville, New York. R. Austin Backus, Mexico, N. Y., Manager.

On May 21st, at the Fair Grounds, Frederick, Maryland, a consignment sale managed by the Frederick County Holstein-Friesian Breeders' Association.

COMING SALE AT EARLVILLE

In the Earlville sale pavilion on May 12-13, R. Austin Backus will hold a sale of 150 registered Holstein cattle. These cattle, which come from herds under state and federal supervision, will be sold with the privilege of a 60-day tuberculin retest. Complete information as to the offerings is not at hand as this article is being written but we understand that there are at least two fully accredited herds to be dispersed in this sale and that several other accredited herds have consigned. A large number of fresh cows and heavy springers have been selected to be sold.

Earlville is the center of one of the greatest Holstein breeding districts of New York State. There are a large number of Holstein breeding establishments located in this territory and they are owned by dairymen who believe that purebred Holstein-Friesian cattle are the greatest dairy animals as yet developed. These men sell the product of their herds as market milk and do not have the advantages of a special market and special prices. Consequently they have to have good cows in order to make a living for themselves and their families, and Madison and Chenango Counties have long been noted for the excellence of their Holstein herds.

Mr. Backus has compiled a folder descriptive of the offerings which he will mail on application but by far the best way is to attend the sale, look over the offerings, make your own selection and bid all you think they are worth to you.

Earlville is reached by the West Shore Railroad and the New York, Ontario and Western. Good roads run in all directions. This town is 60 miles from Binghamton, 25 miles from Utica, and 40 miles from Syracuse and so is within easy traveling distance of three large railroad centers.

OUT OF STATE BUYERS MAKE SALE

Buyers from Illinois and Indiana attended a purebred Holstein sale held at Eagle, Wisconsin, April 2d. Otto Jens of the Oatman Farms, Dundee, Illinois, bought 13 head while E. J. Alden, of Terre Haute, Indiana purchased 3 daughters of Creator for an average of \$315. Hal D. Wheaton of Powell, South Dakota brought 40 head of horses to sell at the pavilion, and purchased 8 young animals for just under \$1,000. Glen Householder of Madison, Wisconsin took 5 head for Wisconsin state institutions.

The top price of the sale was \$375 for a son of Canary Paul Oak Homestead, consigned by Gramling Brothers of Dousman, Wisconsin and purchased by Milbrant Brothers, of Evansville, Wisconsin. In all 68 animals were sold for over \$10,000.

THE SALE AT BRENTWOOD

At least sixteen different states besides the District of Columbia, Cuba, and Bolivia, South America, were represented in the list of buyers at the Brentwood Sale held April 30-May 1. Prices were regarded as fairly satisfactory although we believe that after the expenses of the consignors of some of the record animals have been paid, and the cost of making the records to say nothing of raising the animal, there will be very little left. As is usual with these large consignment sales some animals sold high. The top price, \$12,000, was obtained for Sir Inka May, the well-

known show bull consigned by the Minnesota Holstein Co. He was struck off to Carnation Farms. The Detroit Creamery Company bid \$4,000, the highest price for a female, for Bell Farm Hattie, 1,037 lb. butter in a year as a junior two-year-old, consigned by Bell Farm. A. J. King, of Kansas City, Mo., was a liberal buyer and was replenishing his show herd. He took Berylwood Prince Johanna Segis, a dark-colored, handsome bull, consigned by Berylwood Farms, for \$2,000. Sir Prilly Colantha Dairy Maid, consigned by Bridgford Company was struck off to Carnation for \$3,600. This is the youngest son of Adirondac Wietske Dairy Maid. Carnation Prospect Toreador, whose dam, Superintendent Gardner reports, has just made over 45 lb. butter in seven days, went for \$2,100 to the State Home and School at Redfield, S. D. Horatio Hathaway, of Dedham, Mass., bid last on Grahamholm Sir Colantha. This bull is coming five years old, has been used in the-Granhamholm herd and his dam has two different years made over 33,00 lb. milk in 365 days. The price was \$7,000.

Antonia Padeal, of Havana, Cuba, bought a number of animals and so did J. C. Patino, of Bolivia, South America.

At the show staged the afternoon previous to the sale, Sir Inka May was made grand champion bull and Hazelwood Bessie Pauline Heilo from the Hazelwood Farms was made grand champion female. During the sale Mr. Davidson purchased this cow for \$885.

MARYLAND BREEDERS' SALE

At Frederick, Maryland, on May 21, the Frederick County Holstein Breeders' Association plans a consignment sale. Mr. Charles Wertheimer, who is now president of the Maryland State Breeders' Association was for several years president of the Frederick County Club and he always said that they would not hold a consignment sale under club auspices unless the animals were worthy representatives of the breed. Under these circumstances lovers of black and whites may expect to see good animals offered at this event.

Mr. Wertheimer is sending a consignment from the Elmwood Dairy Farm. One of his cows, Beauty, produced 2,557 lb. milk, 104.8 lb. fat during March in the Frederick County Cow Testing Association, milked three times daily. She was in first place and a stablemate, Colantha, was second with 2,600 lb. milk, 101.4 lb. fat. The leader tested 4.1% and her stablemate tested 3.9% and both animals are included in the Wertheimer consignment to this sale.

We will mention in passing that sixteen members of the Elmwood Dairy averaged 985 lb. milk, 35.3 lb. fat during the month of March. At the head of the Elmwood herd is the bull, Rolo Pontiac Fayne, whose dam, Rolo Mercena De Kol, is credited with the production of 51.93 lb. butter in seven days and 201.17 lb. butter in thirty days, the highest records ever reported in official work.

BIG CROWD AT WERTZ SALE

Despite steady rain, a big crowd attended the W. H. Wertz dispersal sale held at Camp Hill, Pa., April 30. There were only six animals of milking age and these six averaged \$208. The top price was \$300 which N. S. Bordell of Millerstown, Pa., paid for Dutch Corner Fayne Lyons, a nine-year-old cow that had produced 20,043 lb. milk in a year in C. T. A. work. Clothilde Johanna Homestead with a 21-lb. record made as a four-year-old, went for \$240 to the same party. Jacob Peters of Lancaster, paid \$200 for Lady Piebe Colantha Pontiac a cow that averaged 81-lb. milk a day in January in C. T. A. work. Mr. Peters also purchased King Ormsby Nell Viola, a very handsome son of King Ormsby Abbekerk Helena, paying only \$130 for him. Young bull calves sold low. K. P. Iva De Kol Veeman, a daughter of King of the Pontiacs was expected to top the sale, but Mr. Peters obtained her for \$175. Buyers did not seem anxious to secure a cow that had the record of dropping four bull calves in fourteen months.

The auctioneer was George Deitch of Carlisle and the pedigrees were explained by A. A. Raudabaugh tester of the Cumberland County Testing Association.

Among the buyers were Morris Taylor, Carlisle; Rudy Piew, Lancaster; Elmer Zimmerman, Camp Hill; E. H. Hess, Grantham; and J. B. McCullough, Newville, Pa., and Charles Wertheimer, Frederick, Maryland.

SALE AT WEST SALEM

The Western Wisconsin Holstein breeders sale association held a sale at the West Salem sales pavilion April 8 and 9, which was well attended. The 160 animals sold were of good type and had been personally selected. On the first day the average was \$188.70, while the two top animals each brought \$395. Both were purchased by Ed Sipniewski of St. Mary, Michigan. One was Minnehaha Snowball Ormsby, a light colored, handsome, four-year-old heifer weighing 1,400 lb. J. D. McDonald formerly of West Salem and now of Danville, Ill., bought four animals on Wednesday paying over \$300 for each of them. Some of the best animals were purchased for the State School for the Blind and the Mendota State Hospital.

A girl who has reached sixteen and never been kissed will, in all probability, reach forty in the same condition.

California Exchange.—"John Horton, charged with vagrancy, was sentenced to ten days in the county jail."

ON THE HILLS

of Tioga County have been raised some of the best Holsteins that ever came from New York State—big healthy cows that yield large quantities of rich testing milk.

The following breeders of healthy Holsteins whose establishments are located near Owego and within easy driving distance of Elmira, Ithaca, Binghamton or Waverly can supply you with good cattle and invite inspection of their herds.

PRICED LOW

For Quick Sale!

Four Yearling Heifers well grown and well marked, daughters of **KING ARTIS WACONDA**, a grandson of King Korndyke Sadie Vale from a 30 lb. cow that made a World's Record in yearly work.

A three months old calf by the same bull.

All from heavy milking dams.

Also a yearling bull by **COLONEL JOH LYONS** from a daughter of King Hengerveld Hartje.

S. T. WITMER
UNION DEPOSIT, PENNA.
Herd Under State and Federal Supervision.

Cows in this Herd have produced more than 12,000 lb. milk in a year in C. T. A. work and make a good profit above feed cost.

We can show you a whole lot of first prize and championship ribbons won at local fairs.

This Herd is Accredited—has never housed a reactor.

Will price anything in the herd.

A. R. BUSH
Montrose, Pennsylvania.

MILLER BROTHERS SELL AGAIN

Miller Brothers of Clarks Summit, Pa., report recent sales of purebred Holsteins to W. S. Weidman of Bangor, Pa., and C. P. Davidson of Clarks Green, Pa. Mr. Weidman took three females and a choice bull calf sired by Count Lenox Posch. The dam of Count Lenox Posch is a good record daughter of the noted sire and show bull Count Paul C Posch while his sire, King Valdessa Lenox, was by King Valdessa Korndyke from Anna Lenox De Kol 2d, the famous record cow of the Yates herd. The females are Mapleway Eeke Hengerveld, Mapleway Dijkstra Artis, and Mapleway Amleto 2d and all are daughters of Sir Veeman Lola Hengerveld, who formerly headed the Mapleway herd. This bull is by Sir Veeman Hengerveld. His dam was a 23 lb. two-year-old daughter of King Korndyke Sadie Vale from a 31 lb. cow. Many of the young producers in the present Mapleway herd were sired by him.

Mr. Davidson obtained Mapleway Dijkstra Hengerveld Vale a daughter of King Sadie Vale Hengerveld Ormsby and Dijkstra Hengerveld Torret, whose dam Dijkstra Korndyke Torret 2d is sister to Dijkstra Korndyke Torret 3d, 35.18 lb. butter, 614.5 lb. milk in a year as a four-year-old and over 12,000 lb. milk in eight months as a junior two-year-old. King Sadie Vale Hengerveld Ormsby is by King Sadie Vale Hengerveld from S. V. H. Effie, a cow that two different years made over 28 lb. butter in a week and that tested as a five-year-old, is credited with 1,085.60 lb. butter and over 24,000 lb. milk in a year. The ten nearest dams of this bull have seven-day records that average 29.61 lb.

The Miller Brothers herd is accredited and is believed to be the oldest herd in the state of Pennsylvania. This means longest established. As a matter of fact the animals in the Miller herd are comparatively young and only one animal has reached twelve years old. The Miller herd is one of the few herds in the United States founded on stock imported directly from Holland for we find that in 1882 the father of the Miller Brothers was instrumental in obtaining cattle from the Kuperus, De Groot, Veeman and Stienstra herds. We understand that this herd has been owned by the same family for more than forty years. Some official records have been made and a number of prizes won in the show ring but the Miller Brothers are dairymen and have always managed their herd from the standpoint of everyday production and consequently their animals are big producers and earn a satisfactory profit over the cost of feed and care.

WINS HOLSTEIN CALF

At the fourth annual farm management institute held early in April at the North-eastern Minnesota experiment station a prize of a purebred Holstein calf was won by Charles Lundquist of Amity. More than a thousand farmers from St. Louis County attended the three day institute and there were at least 400 present at the meeting at which stock raising questions were discussed.

OUR KIND

This heifer was bred in our herd as was her dam and granddam.

Such heifers grow into producing cows that make good wherever they go.

L. N. MACK & SON and FLOYD E. MACK
Montrose, Pennsylvania

Herd under State and Federal Supervision. We have 120 head to select from.

40 Head for Sale

His offspring inherit his type and conformation.

His sire is by a son of Glista Coreva, 34 lb. butter in 7 days.

His dam has a dandy A. R. O. record and, as a two-year-old, produced over 10,000 lb. milk in C. T. A. work averaging 4.1% fat.

Will price anything we have.

MERLE W. ONGLEY
Centerville, R. D. 4, Crawford Co., Pa.

RECORD RELATIVES

In their systematic advertising in the BREEDER AND DAIRYMAN, Cheney Brothers and Jones of Randolph, Virginia have been featuring their herdsire, Ormsby Korndyke Hockster Lad, as having twenty sisters that have each made over 1,000 lb. butter in a year. He now has twenty-one. His sire Ormsby Korndyke Lad has twenty daughters that have exceeded a thousand pounds of butter in a yearly test. His dam, Shady Maple King Pontiac Hockster is also dam of Beaver Dam Hockster Pontiac, 1,014.7 lb. butter and over 20,000 lb. milk in a year as a four year old, who in turn is dam of O. K. L. Hockster Pontiac, just announced as making 1,022.91 lb. butter, 22.892 lb. milk in a year as a four year old. She is the twentieth daughter of Ormsby Korndyke Lad to reach a thousand pounds of butter in a year and so is related on both sides to the Virginia herdsire, the two animals having 75% the same blood lines. Shady Maple King Pontiac Hockster is credited with an official record of 35.14 lb. butter, 636.3 lb. milk in a week. She is dam of Beaver Dam Hockster Pontiac 30.10 lb. butter, 584.5 lb. milk in a week as a four year old, and she in turn is dam of O. K. L. Hockster Pontiac, 30.40 lb. butter, 577.5 lb. milk in seven days as a four year old.

The herd owned by Cheney Brothers and Jones has been federally accredited for a number of years. The state of Virginia was a leader in state wide tuberculosis eradication and the owners of Ormsby Korndyke Hockster Lad early recognized that animals could not improve a herd unless they were healthy and so were among the first in their state to test their herd under State and Federal supervision and were early placed on the accredited list.

A BLIND HOLSTEIN DAIRYMAN

O. H. Doerschlag owns a farm of 240 acres near Topeka, Kansas. Misfortune seemed to hover over the Doerschlag home for a number of years. First of all his wife became an invalid. Then a daughter was crippled and four years ago Mr. Doerschlag himself became blind, but he refused to give up his farm and to-day is a successful farmer.

Part of the credit is due to Jurl, his son, now fourteen years old who has become his father's eyes. Within the past four years a concrete floor has been put in the barn and the Holstein herd increased to fourteen cows which are milked twice a day. Fields of alfalfa and sweet clover have been sown and they furnish most of the food for the cows. Twenty-five acres of corn on this farm produced seventy-five bushel an acre last year.

In addition rows of trees have been planted around the house and along the driveways and these have added materially to the value of the farm home.

A man listening in on a radio heard it announced that the next number on the program would be "three o'clock in the morning," and he thought that would be too long to wait.

Seven Day Milk Records

Herd under State and Federal Supervision.

THE DEVELOPMENT OF A HOLSTEIN BREEDER

Lester B. Clark of Maywood, Missouri came into the limelight when one of his cows, Crescent Pontiac, produced 1,054.66 lb. butter, 23,419 lb. milk in a year. There is an interesting story connected with Mr. Clark's history as a Holstein breeder.

Mr. Clark's father was a hog feeder and grain grower but his son took to dairying and in 1915 purchased some grade Jersey cows. They did not suit him however, and he then bought some grade Holsteins and at the Missouri State Fair in 1916 purchased his first registered Holstein, a bull calf from the herd of S. C. Lindsey of Carthage. Later he purchased some purebred Holstein females and obtained two half sisters

CRESCENT PONTIAC
The cow that made Clark famous.

at the P. P. Lewis estate sale. One of these, Crescent Pontiac, freshened in December but was not placed in cow testing association work until the following June, during which she produced 69 lb. fat. She was kept on clover pasture and did not receive any grain. Her owner then thought he would make a good record with her but heavy grain feed gave her indigestion and her production during July and August was very light. In September however, she again made a big showing. She freshened again in December and completed her association year making 645 lb. butter and a profit of \$214 over cost of feed.

Crescent Pontiac and three of her stable mates will be exhibited at the Missouri State Fair this fall. The fact that she is the highest record cow in the state will make her a center of attraction.

SALES FROM MARTIN HERD

O. I. Martin of Cambridge Springs, Pa., has been selling a number of splendid young bulls to head herds composed of both purebred and grade Holsteins. W. M. Burge of Saegertown, Pa., secured King Hendrick Alcartra De Kol, a fine young bull born May 23, 1924. His dam, May Bell Hendrick De Kol, is one of the big producers in the Martin herd. She is a granddaughter of Sonata Beets De Kol and Prince Barrington De Kol so represents lines of breeding noted for production.

The sire of Mr. Burge's bull is King Tobe Alcartra De Kol formerly at the head of the Martin herd. He was a son of King Segis Pontiac Alcartra and his dam, Lady Tobe De Kol, was a former world champion senior three-year-old being credited with 36.59 lb. butter 631 lb. milk in a week and 141.24 lb. butter in

thirty days. She has a 30 lb. four-year-old daughter and was a daughter of Christmas Tobe 2d, 31.66 lb. butter in seven days as a ten-year-old cow.

The Martin herd contains a number of daughters of King Tobe Alcartra De Kol, none of which Mr. Martin informs us, will be offered for sale as he intends to develop his herd from them. To mate with them he purchased Grayview King Sylvia, a son of Sylvia Prilly Pontiac and Carnation King Ormsby Mercedes, he by Carnation King Sylvia, from Heilo Ormsby De Kol, a daughter of Sir Pietertje Ormsby Mercedes with 34.55 lb. butter in seven days and over 805 lb. butter and nearly 20,000 lb. milk in less than ten months.

GOOD TRIO CHANGES OWNERS

E. H. Gibson and A. H. Drexler of Santa Maria, California, owners of the Paramount Dairy have added to their herd two well bred Holstein-Friesian heifers. Burbank Pontiac Mooie Fayne is a granddaughter of Pontiac Korndyke, while the other young cow, Miss Arcadia Violeta Diegartje has produced 7,000 lb. milk in less than nine months in her first lactation period.

Messrs. Gibson and Drexler have purchased a bull calf whose dam produced 23,200 lb. milk, in a year as a four-year-old. He is a grandson of King Korndyke Pontiac 20th. The stock was purchased from the Price Ranch at Los Alamos.

Holstein Breeders' Consignment Sale

AT THE FAIR GROUNDS
Frederick, Maryland

Thursday, May 21, 1925

Starting at 10 A. M.

40--Purebred Holstein-Friesians--40

J. Homer Remsberg, Sec'y,
Middletown, Frederick County, Maryland

ELEVATING THE GRADE

On and after January 1, 1926, no commercial fertilizer can be sold in the state of Pennsylvania composed of two or more ingredients containing less than 14% of total plant food. The law further provides that no commercial fertilizer which contains less than one per cent of ammonia, one per cent of available phosphoric acid or one per cent of water soluble potash shall be sold.

The regulation became law on April 2 when Governor Pinchot affixed his signature to it. It aims to prevent the sale of low grade mixed fertilizer containing an unnecessarily large amount of filler.

MAPLE GROVE MAKES NICE SALE

R. W. Agan, of Hoosick, New York, is interested in purebred Holsteins and recently purchased six heifers and a young bull from Maple Grove Stock Farm, Centerville, Pa. Three states really entered into this transaction as at the time the sale was made, Mr. Agan was in St. Petersburg, Fla., and was not due to arrive in New York until after the middle of April when the shipment was made.

The young bull heading this purchase was born June, 1924. His sire is Clever Model Glista and his dam, Maple Grove Maggie Spofford. In cow testing association work Maggie made a very fine record of 13,114 lb. milk, 406.9 lb. butter-fat in 365 days.

Two of the heifers were sired by Clever Model Glista, a son of Model King Segis Koningen and Glista Coreva, 34.08 lb. butter in seven days 13,310.5 lb. milk, 607.93 lb. butter in 304 days. She has two daughters that have each produced over 30 lb. butter in a week and was one of the most noted members of the celebrated Glista family.

Two of the heifers are by Maple Grove Ybma Glista. His dam, Maple Grove Spofford Princess, in the Maple Grove herd, produced 641.3 lb. milk, 27 lb. butter in seven days under farmer conditions. She is believed to be the greatest cow ever in this herd and for that reason her son was kept as a herd sire. He was by Model Daniel Glista, whose dam, Glista Dinah, as an eleven-year-old cow, made 31.26 lb. butter in seven days and was a daughter of the 34 lb. cow, Glista Coreva.

Two of the heifers are by Maple Grove Fairview King Jupiter. His dam, Maple Grove Lady Fairview Spofford, in seven days made an official record of 461.5 lb. milk, 20.60 lb. butter. His sire, King Pontiac Jupiter, was by King of the Pontiacs from a good daughter of the famous Hengerveld De Kol.

Despite the press of farm work, some official records have recently been made at Maple Grove Stock Farm. Maple Grove Pontiac Glista Girl made 20.64 lb. butter, 451.2 lb. milk in seven days. This record, as well as those of the others tested with her, is not a true indication of capacity as they were out of silage and the cows did not get either clover or alfalfa with their grain ration. At least two of the cows tested at this time and

under these conditions were dams of heifers purchased by Mr. Agan. Five of the six heifers were from dams with official records.

Crawford County is evidently getting to be quite a territory from which those in search of Holsteins secure their stock. Perhaps the fact that this county is now practically a modified accredited area has something to do with this. To become a modified accredited area the cattle in a county have to show less than one-half of one per cent reactors in a countywide test. At its recent test Crawford County showed only eight-tenths of one per cent and the next test is expected to show even less. The Jones herd has been accredited for some time and consists entirely of purebred Holsteins and naturally there is surplus of high class young animals to sell at almost any time.

MOTHER AND DAUGHTER

The dairy professors at Purdue University are making much of the work of a cow and her daughter in the University herd. These animals are Colantha Paul Beets Bakker 232152 and the daughter is Purdue Segis Beets Colantha. The dam was born September 1913 and the daughter July 1919.

The dam, Colantha Paul Beets Bakker finished a record last year of 22,880 lb. milk and 670.6 lb. fat. This was not surprising as the year before she had produced 18,836 lb. milk and 584 lb. fat. During the last six years her production has been as follows:—

MILK	FAT
15,036 lb.	444.91 lb.
16,736 lb.	510.14 lb.
14,332 lb.	457.39 lb.
17,077 lb.	522.37 lb.
18,836 lb.	584.12 lb.
22,880 lb.	670.60 lb.
104,947 lb.	3,189.53 lb.

A production of 105,000 lb. or over 52 tons milk should put any cow on the retired list, yet, this cow is not retired, even though she is over eleven years old. After making her last record she dropped twin calves and is producing regularly so her total now is above 60 tons of milk. The production of this cow did not come entirely unexpected as her own dam gave in a year 17,146 lb. milk.

The daughter, Purdue Segis Beets Colantha, followed in the footsteps of her dam as soon as she started as a two-year-old. She produced at this age 14,928 lb. milk and 493 lb. fat. This was an increase of 55 per cent in milk and 57 per cent in fat over the production of her dam at the same age. As a three-year-old she finished a record of 20,038 lb. milk and 635 lb. fat. This was another increase over the production of her dam at a similar age, of 23 per cent in milk and 43 per cent in fat. She has again been started on test and is making a high production mark for her third year.

A teddy bear sat on the ice,

As cold as cold could be;

He soon got up and walked away—

"My tale is told," said he.

A Fine Pair

At a Bargain Price

Bull, born Nov. 4, 1924. Sire: Maple Grove Ybma Glista, our 27 lb. Glista bred herdsire. Dam: Maple Grove Mercedes Glorinda, 672.6 lb. milk, 25.18 lb. butter A. R. O. in our herd.

Heifer: born October 24, 1924. Sire: Clever Model Glista—from the 34-lb. cow Glista Coreva. Dam: Maple Grove Pontiac Belle, an A. R. O. daughter of King Pontiac Jupiter, he by King of the Pontiacs from a daughter of Hengerveld De Kol.

SOUTHERN HOLSTEIN SALES

Two good bulls were recently sold from the Bellwood Dairy and Stock Farm, a federally accredited Holstein breeding establishment located at Maryville, Tenn. One of these bulls was obtained by the Lincoln Memorial University at Harrogate, Tenn. This was King Winona Johanna, formerly the senior herdsire of the Bellwood herd. This bull, now five years old, is from Winona Belle De Kol Segis a daughter of Ypsiland King Segis De Kol from a cow of the Winona family. Members of this family have made a number of Tennessee state records. King Winona Johanna was sired by Napol Sir Piebe Johanna, a son of Napol Sir Keystone Beauty, whose dam was the famous Keystone Beauty Plum Johanna.

The younger bull sold from the Bellwood Farm was purchased by J. T. Christiansen of Miami, Fla. He is named Bellwood Hengerveld Johanna Lad and his dam as a three-year-old produced 20,670 lb. milk in a year becoming the Tennessee state champion over all ages and breeds. Bellwood farm is owned by J. L. Clark and is now under the management of Paul M. Reaves.

Mr. Reaves is studying agriculture at the University of Tennessee, specializing in dairying, and will get his degree in June. Maryville is twenty miles from the University, but during the past year Mr. Reaves has been rising at four o'clock, superintending and assisting in milking and then catching an early bus and showing up at the University in time for his classes.

Paul Reaves was reared on a general farm near Knoxville, Tennessee. He became interested in scientific farming early in life and was a member of corn, poultry and pig clubs organized in the Farragut community. In 1914 he produced 108 bu. corn on an acre making him the state champion corn club producer for the year. Later he attended the State University for two years, then dropped out and did cow testing work for two years. In the fall of 1923 he reentered the university to complete the course. Last summer he purchased a half interest in Bellwood farm and became its manager. He has found time to establish a regular milk route in the city of Maryville and has developed a special trade for Holstein milk.

WARREN MADE GOOD BUY

In 1920 Gordon T. Warren, of Dimondale, Mich., bought a registered Holstein cow for \$235. Since that time he has sold two of her offspring for \$425 and still owns her four-year-old daughter, two younger heifers and a son and a grandson of this animal. Mr. Warren recently sold four females including two three-year-olds, a two-year-old and an aged cow for \$1,000. The Beatrice Creamery Company recently purchased a calf from him for use in their calf club work.

He—"I have a cold in my head."
She—"Well, that's something."

AMATEUR PICTURE CONTEST

To the Breeders and Dairymen:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of mature cows will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.

No. 10

Dairy Day at Penn State

MAY 9 the third annual Penn State Dairy Exposition was held at State College under the auspices of the Dairy Husbandry Club. The events started at 10:30 A. M., in the stock judging pavilion where a dairy cattle judging contest was staged. The contestants had to pass on several rings of cattle, place them in order of merit, and give reasons. A clean milk production contest was also staged, the boys taking care of the animals and the milk produced being bottled and then judged at this time. The winners were announced at the banquet in the evening.

In the afternoon there was a fitting and showing contest. Each contestant had charge of an animal for about a month previous, their animals had been fitted by them and were now exhibited. First of all there were breed exhibits representative of the college herd. Robert W. Eno, one of the students, announced the name of each animal and told something of its breeding and performances.

One cow seemed out of place in the Holstein parade. She was lame and badly out of condition but Mr. Eno announced that was probably the last public appearance of the famous Lilith Gem Kolkluff. She was bred in the herd of Charles W. Newman of Wyalusing, Pa., who sold her to the state college authorities.

In the college herd she made the following records:

At 6 years	22,247.1 lb. milk	680 lb. fat
At 7 years	18,822.1 lb. milk	567 lb. fat
At 8 years	17,965.8 lb. milk	572 lb. fat
At 9 years	22,084.9 lb. milk	660 lb. fat
At 10 years	18,410.9 lb. milk	588 lb. fat
Total	99,590.8 lb. milk	3,067 lb. fat

There was no attempt to force this cow. These are simply records of her everyday production. In five successive lactation periods, breeding regularly, she averaged nearly 20,000 lb. milk annually and made fat equivalent to 775 lb. butter on the 80% basis.

Lilith's usefulness as a dairy cow is nearly ended. She will be slaughtered and her remains sent to the Smithsonian Institute where her skeleton will be assembled and used for classroom work. Thus this grand old cow will be useful in death as well as in life.

Then the students posed their animals. Holsteins were first; the judge being G. H. Truckell of Harrisburg, who awarded first prize in the aged cow class to R. G. Connelly who exhibited Central Pennsylvania Breeders Choice, first prize in the heifer class to D. S. Keller with Kimwar Pauline Burke and first prize for yearling bulls to M. A. Farrell with Pennstate Homestead Valdessa, the prizes in the female classes being subscriptions to *THE HOLSTEIN BREEDER AND DAIRYMAN* and in the bull class to *The Holstein-Friesian World*. The championship of the breed was awarded to Mr. Farrell who thus obtained a bronze medal presented by *THE HOLSTEIN BREEDER AND DAIRYMAN* and \$5.00 in gold donated by the Pennsylvania Federation of Holstein-Friesian Clubs.

J. S. Campbell, Jr., of Butler, Pa., awarded the Jersey championship to G. W. Huggler. M. T. Phillips of Pomeroy, Pa., designated J. S. Bryan as exhibitor of the champion Jersey and the Ayrshire judge gave the championship of that breed to R. B. Dickinson. Then the breed champions were shown together. The prize, a silver loving cup donated by the Dairy Hus-

THE HOLSTEIN BULL CLASS AT PENN STATE DAIRY DAY
Left to right: Pennstate Homestead and F. W. Morrow, Campdown, Pa., winners of second place; Pennstate Homestead Valdessa and M. A. Farrell, Waverly, Pa., first in class and Holstein champions; Pennstate Homestead Pontiac and F. W. Sheehan, Kennett Square, Pa., winners of third place.

Dairy Day at Penn State

MAY 9 the third annual Penn State Dairy Exposition was held at State College under the auspices of the Dairy Husbandry Club. The events started at 10:30 A. M., in the stock judging pavilion where a dairy cattle judging contest was staged. The contestants had to pass on several rings of cattle, place them in order of merit, and give reasons. A clean milk production contest was also staged, the boys taking care of the animals and the milk produced being bottled and then judged at this time. The winners were announced at the banquet in the evening.

In the afternoon there was a fitting and showing contest. Each contestant had charge of an animal for about a month previous, their animals had been fitted by them and were now exhibited. First of all there were breed exhibits representative of the college herd. Robert W. Eno, one of the students, announced the name of each animal and told something of its breeding and performances.

One cow seemed out of place in the Holstein parade. She was lame and badly out of condition but Mr. Eno announced that was probably the last public appearance of the famous Lilith Gem Kolkluff. She was bred in the herd of Charles W. Newman of Wyalusing, Pa., who sold her to the state college authorities.

In the college herd she made the following records:

At 6 years	22,247.1 lb. milk	680 lb. fat
At 7 years	18,882.1 lb. milk	567 lb. fat
At 8 years	17,965.8 lb. milk	572 lb. fat
At 9 years	22,084.9 lb. milk	660 lb. fat
At 10 years	18,410.9 lb. milk	588 lb. fat
Total	99,590.8 lb. milk	3,067 lb. fat

There was no attempt to force this cow. These are simply records of her everyday production. In five successive lactation periods, breeding regularly, she averaged nearly 20,000 lb. milk annually and made fat equivalent to 775 lb. butter on the 80% basis.

Lilith's usefulness as a dairy cow is nearly ended. She will be slaughtered and her remains sent to the Smithsonian Institute where her skeleton will be assembled and used for classroom work. Thus this grand old cow will be useful in death as well as in life.

Then the students posed their animals. Holsteins were first; the judge being G. H. Truckell of Harrisburg, who awarded first prize in the aged cow class to R. G. Connelly who exhibited Central Pennsylvania Breeders Choice, first prize in the heifer class to D. S. Keller with Kinnwar Pauline Burke and first prize for yearling bulls to M. A. Farrell with Pennstate Homestead Valdessa, the prizes in the female classes being subscriptions to *THE HOLSTEIN BREEDER AND DAIRYMAN* and in the bull class to *The Holstein-Friesian World*. The championship of the breed was awarded to Mr. Farrell who thus obtained a bronze medal presented by *THE HOLSTEIN BREEDER AND DAIRYMAN* and \$5.00 in gold donated by the Pennsylvania Federation of Holstein-Friesian Clubs.

J. S. Campbell, Jr., of Butler, Pa., awarded the Jersey championship to G. W. Huggler. M. T. Phillips of Pomeroy, Pa., designated J. S. Bryan as exhibitor of the champion Jersey and the Ayrshire judge gave the championship of that breed to R. B. Dickinson. Then the breed champions were shown together. The prize, a silver loving cup donated by the Dairy Hus-

THE HOLSTEIN BULL CLASS AT PENN STATE DAIRY DAY

Left to right: Pennstate Homestead and F. W. Morrow, Camptown, Pa., winners of second place; Pennstate Homestead Valdessa and M. A. Farrell, Waverly, Pa., first in class and Holstein champions; Pennstate Homestead Pontiac and F. W. Sheehan, Kennett Square, Pa., winners of third place.

bandry Club, was awarded to Mr. Huggler by the four judges.

The student's staged a mock sale, the auctioneer being E. M. Smith of Centre Hall, Pa., who left immediately after the sale closed to officiate at a real sale. The animals were led into the ring and struck off to the highest bidder. Each student had to hand in a slip telling his highest bid on each animal. This was compared with the official valuation of the animal and the prize awarded to the student coming nearest the official figures.

The visitors participated in an auction of dairy products. Five gallons of ice cream were first offered. The first bid was 25c and this rapidly mounted until Mr. Campbell bid \$7.10 and the cream was struck off to him. He ordered dishes passed around to the crowd, children first. In this auction the first bidder threw the amount of his bid into the ring then the other bidders threw in their "raise" and when the bidding ceased the last bidder took the goods and the seller took the money. This not only caused lots of amusement but also brought the Dairy Club good pay for the products as the 5 lb. of cheese brought \$7.50 and the 5 lb. package of butter sold for \$12.10. It was

the conscience of the auctioneer rather than the ceasing of bidding that caused the goods to be struck off.

In the evening a dairy banquet was held at the University Club. After the eats, Toastmaster Borland introduced the speakers. There were twelve on the program and in addition Mr. Campbell, the Jersey judge, and Dr. Thomas, president of the University, were called upon for a few words. Each speaker was limited to five minutes, the toastmaster ringing a big cow bell when the time had expired. Director Foust of the State Bureau of Foods and Chemistry spoke on the work of that department in "Clamping Down the Lid on Impure Dairy Products." H. D. Allebach, President of the Interstate Milk Producers Association, said that the milk business in Philadelphia was on the best basis it ever had been, that at the present time the supply was only about 2% more than the October production and that the question of surplus was not bothering producers or distributors.

R. W. Balderston, Secretary of the Philadelphia Interstate Dairy Council gave some reminiscences of his trip to Europe during war times studying dairying. He said that in fifteen years Danish dairymen had increased the average annual production of their cows from 6,100

lb. to 8,100 lb., the average test from 3.39% to 3.86% and the average fat production from 277 lb. to 414 lb.

Their records usually covered from five to seven years and they paid very little attention to production for one year only.

Other speakers were R. G. Bressler, Vice Dean of the School of Agriculture who is now taking some post graduate work at Columbia University; J. M. McKee, State Deputy Secretary of Agriculture; E. R. Quackenbush, Secretary of the Pittsburgh Dairy Council; W. F. Schrum, President of the State Jersey Breeders Association and his farm manager M. J. L. Wyke; Harry Berlovich, of Pittsburgh, editor of the *Dairyman's Price Reporter*, and Mr. Shickman of the Masonic Home, Elizabethtown.

The judges presented the prizes to the successful contestants of the day. Mr. R. B. Dickenson won the prize for the best Holstein milk with a score of 98.75 and Mr. W. F. Sheehan the first prize for milk of the other breeds, the championship prize going to Mr. Sheehan by a very close margin, the difference in figures being only fifteen one-hundredths of one percent. It was announced that J. V. McCahon of Bryn Mawr had won the dairy cattle judging contest with a score of 320.5 points and that G. M. Valsing of Bradford, had won the mock auction sale contest, his estimate of \$3,075 being just \$100 less than the pre-valuation decided upon by the committee. During the evening a quartette from the College Glee Club gave tuneful selections that were greatly appreciated and generously applauded.

The students who staged the day's events should be given great credit for the many features of the program and the way events were managed. At the banquet Professor Borland said that Dairy Day was purely a student's event and not a faculty occasion and that all the credit should go to the boys whose painstaking work made the event possible.

Noted Agriculture Scientist Pensioned

AN annuity of \$5,000 a year is to be given Dr. Charles E. Saunders, for many years Director of the Government Experimental Farm, by the Canadian government in recognition of his services in the interest of agriculture particularly in developing the variety of spring wheat known as Marquis.

In 1903 in a plot at the Central Experimental Farm, Ottawa, Dr. Saunders selected a wheat plant to which he gave the name of Marquis. The seed from which this was grown was the offspring of a cross between Red Fife, the male parent, and Hard Red Calcutta, the female parent. Red Fife excels in milling and baking qualities and Hard Red Calcutta is a very early variety. Marquis inherited these good qualities. It yields more heavily than Red Fife and other varieties grown at that time. Ninety percent of the spring wheat now grown in Canada is Marquis and so is sixty percent of the spring wheat grown in the United States. It is considered that, by his discovery of this wheat, Dr. Saunders has increased the wealth of Canada and the United States by many millions of dollars. The production of this variety in North America last year was nearly four hundred million bushels.

Reaching the Consumer With a First-Class Product

IF you should travel in the early morning through the streets of Allentown and Bethlehem, Pa., you would be apt to see one or more trucks loaded with milk or milk bottles and the drivers would stop at a large proportion of the houses and deliver bottles of Holstein milk. On each side of the trucks appears this legend "Saucona Farms Grade A Raw Milk" as the words "Herd under State and Federal Supervision."

The story of how the management of Saucona Farms

truck depreciation, etc., but also to place the entire establishment on a paying basis.

In our conversation with Mr. Boger he revealed the fact that the product of Saucona Farms, which is produced exclusively by purebred Holsteins, is sold in competition with milk produced by Channel Island purebreds and the Holstein milk has proven so satisfactory to the consumer that for every customer lost to competitors, three are gained.

After we saw how the milk was handled and looked over the creamery, we can readily understand why the Holstein product is favored by the residents of Allentown and Bethlehem. The big pasteurizer indicated that the milk bottles, pails, cans, etc., were rendered sterile and when we saw how copiously ice was used around the filled bottles and other containers, it was very easy to see why the product reached the consumer practically as free from contamination as when it came from the cow. The consumer found that Holstein milk agreed with the children and as the movement was backed by the Department of Health and the leading doctors of the two cities, the business has grown rapidly and the biggest problem at present is not to create a demand but to supply the demand already created.

The purebred Holstein herd at Saucona Farms contains eighty head. There are a number of animals in the Saucona herd that would attract your attention if you walked through the barn. One of these is Beauty Walker Zillah, exhibited at the Allentown Fair last fall, where she won first place in the aged cow class and carried off the grand championship. One of the ribbons she won was the special ribbon given by the Pennsylvania Federation of Holstein-Friesian Clubs for the best female exhibited at that event. An exhibit of purebreds from the Saucona Farms was made last fall at

THE INTERIOR OF THE DAIRY BARN

has developed its business in Holstein milk might well inspire owners and managers of other purebred breeding establishments located near small cities.

Saucona Farms are owned by F. A. Shick, controller of the Bethlehem Steel Company. Several years ago, Mr. Shick ran his farm as a source of relaxation from his business which, of course, is of national scope but, like other good business men, he could not see why a farm should not pay a profit. He put the problem up to several farm superintendents but they were unable to successfully cope with the question until he engaged his present manager, G. A. Boger.

When Mr. Boger came to the farm, three or four years ago, there were only about fifty quarts of grade A milk sold in the city of Bethlehem. The business has grown until from Saucona Farms alone there are 750 quarts delivered daily to residents of Bethlehem and Allentown while about an equal amount comes from other establishments. Grade A milk in these two cities is sold at 20 cents a quart or 12 cents a pint. There is a wide margin between these prices and the price of milk shipped by dairymen to New York City or made into butter or cheese at rural creameries and this margin is wide enough to not only defray the cost of delivery, the expense of icing,

this fair and carried off sixteen blue ribbons although the real purpose of the exhibit was to show the residents of Allentown the kind of cattle that produced the milk marketed from Saucona Farms. The exhibit paid not only in the number of prizes and amount of prize money won but also because of the increased demand for Holstein milk after the city residents saw these big black and white beauties.

Some of the younger members of the milking dairy were sired by Rag Apple Ormsby Johanna, a former herdsire. His dam is a 21-lb. three-year-old daughter of Colantha Johanna Lad from a 21-lb. four-year-old daughter of Dutchland Sir Pontiac Rag Apple and the famous Aaggie Cornucopia Pauline.

The sire of Rag Apple Aaggie Colantha Boy was from Rag Apple Aaggie Colantha 713.4 lb. milk, 41.27 lb. butter in seven days as a senior four-year-old. This cow is backed by a succession of large records; in fact, Rag Apple Ormsby Johanna numbers among his ancestors a number of former world champions.

Beaver Dam Korndyke Spofford, now six years old, is the senior herdsire. He is a son of Ormsby Korndyke Lad and Daffy De Kol Spofford 561 lb. milk, 30.25 lb. butter in seven days as a ten-year-old. This cow is of Hartshorn breeding and has four daughters that each produced over 20 lb. butter in seven days, including K. P. Daffy, 30.10 lb.

The junior herdsire, Pabst Creator Champion Elder, is just past two years of age and, like his older stablemate, is a very fine individual. His pedigree shows a combination of tremendous records. His sire is Creator, his dam, Pabst Champion Elder 2d, with official records made as a senior three-year-old of 497.4

BEAUTY WALKER ZILLAH

Grand champion at the 1924 Allentown Fair. The two little girls are Evelyn, aged 7 and Betty, aged 3, daughters of G. A. Boger, manager of Saucona Farms.

lb. milk, 29.95 lb. butter. She was tested for a year as a junior two-year-old and is credited with 19,425.1 lb. milk, 875.63 lb. butter. She is a daughter of Woodcrest Clyde while her dam with 29.97 lb. butter in a week as a four-year-old, was by King Pontiac Champion from Pabst Hengerveld Colanthus, 31.51 lb. butter in seven days, 1,054.15 lb. butter in a year. His dam and sire's dam have year butter records that average 1,083.28 lb. despite the fact that his dam was tested as a junior two-year-old. His seven nearest dams, those that appear on a four generation chart have seven day records that average 33.30 lb. butter.

When it was determined to produce a high class product, it was realized that such a product must sell at a higher price than the prospective customers were

then paying for the milk supplied to them. This demand had to be created. The medical and health authorities had for some time lamented that there was no local plant producing milk of high quality. The doctors were approached and at once endorsed the enterprise. The city newspapers approved of the enterprise and editorially recommended it, one of the editors saying that while it was not its practice to "gratuitously boost the sale of an article, that this was a case where a distinct and peculiar need is being met." The value of milk as a food was called to the attention of the readers and the importance of a product perfectly clean, both physically and bacteriologically was stressed. Under these circumstances the enterprise was launched and after Mr. Boger was put in charge, rapidly and successfully grew.

The Saucona Farms contain 215 acres and are named from the near-by village of Saucona. Some grain is

SAUCONA FARM BEAUTIES

purchased but most of the cattle feed is raised on the farms. Three thousand bushels of corn were grown last year as well as wheat and many tons of alfalfa. The buildings are all that might be expected at an establishment of this kind and the grounds as well as the interior of the barn is kept as clean and tidy as possible. Before Mr. Boger came here, the cattle had been purchased at various sales with no idea of securing a uniform type. After he came he made a change in this respect. One of the purchases he made was at Grove City where he secured two car loads among them Beauty Walker Zillah, the Allentown grand champion. He paid \$2,500 for this cow and three others, but did not invest anywhere nearly this amount of money in the other animals purchased.

A few words should be said about the man responsible for the development of this business. G. A. Boger graduated in 1915 from the Ohio State University. After graduation he was five years with the Nestles Food Company. Then for two years he was with the Dairyman's League as survey expert. At Saucona Farms he is able to put into effect the many practical things he learned while with the Nestles Company and his natural business ability does the rest. His family consists of his wife and two daughters, Evelyn and Betty, seven and three years old respectively. While two or three of the animals were being photographed, the little girls came to the dairy house for their evening milk and on their return were induced to pose for their photographs.

There are some defeats more triumphant than victories.—Montaigne.

NOT ABOUT COWS

Some Fads of Today

AT almost every missionary meeting, each speaker on the work in the different countries tells of the superstition prevailing there, in both religious and medical practice. In fact no real missionary program is complete without some mention of the vagaries and cruelties of pagan medicine, some of which make one shudder because of their inhumanity, and some make one smile such a very superior smile, because of the depths of ignorance revealed in those simple souls. How the women of China should be pitied for the still lingering practice of foot binding and the women of India for the unspeakable barbarities inflicted during child birth! All over the heathen world there still remain many ineffectual though harmless superstitions that show at once how simple such people are. The wearing of amulets, the beating of gongs, the ringing of bells are among some of the more harmless remedies for disease, while most of us would hate to try the boiled chips from a coffin, recommended as a cure for catarrh, or the seven bed bugs to be taken in barley water for the ague. One might even recoil from the use of a pomade of flies' heads as a hair restorer, much as one craves luxuriant locks. Reading such things fills us with a profound pity for those who resort to them, and a vast feeling of superiority in our own freedom from such foolish practices.

But recently, after hearing such things discussed, the perusal of a magazine, published in enlightened America for intelligent American readers and a glance at some of the advertisements contained therein gave cause for wonder, if, after all, we are so very much freer from the superstition at which we smile when displayed by the poor heathen. According to the advertisements in this one magazine alone, there is absolutely no need of any one's being content with the face and form Nature has wished upon her, for at a trivial cost one may be renovated and rejuvenated from head to foot.

BEGINNING AT THE TOP

Your gray hairs can be banished in fifteen minutes, warranted fast color and guaranteed not to soil the head. Have you straight, stringy hair—it may be exchanged for the most bewitching curls as permanent as a man's love, supplied by five different establishments. Your eyes may accentuate their lure instantly by the application of a liquid that makes the lashes seem long and curly. Are you dissatisfied with the shape of your nose? It may be remodeled, quickly and painlessly at one of several beauty institutions. Your lips may assume the ruddy hue of health by the use of a (whisper it) kissproof lipstick. What a relief to know that a rich round smudge will not be transferred to the er-er-well, wherever it is customary to plant one's tokens of affection. It seems incredible that there should be a wrinkle left in the world when there are

so many positive removers on the market. Faces restored while you wait—a matter of moments. Even deep furrows may be removed in time, and ordinary wrinkles succumb instantly to the application of some wonder of science in the form of clay, film or mask. All you have to do is to sign on the dotted line, then pay the postman some small sum and all this beauty is yours. Your moles may be banished by a painless, guaranteed, home treatment, and your freckles made to fade away like a late spring snow. Even dimples no longer need be beyond the reach of the less fortunate who lack the angel's touch, for a dimpler—yes, that is what it is called—may be purchased, mailed, in a plain package, and dimples scattered far and wide thereby increasing one's beauty and popularity.

STUBBY FINGERS

If you are afflicted with blunt and stubby fingers, betraying years of hard work on farm or in kitchen, you may easily acquire the slender tapering variety by the purchase of tapering machines which work instantly, almost over night—send no money—just pay the postman, etc., etc. Are you (ahem) knockneed or bowlegged, the remedy is within your grasp, just send for the pictures of men with and without the perfect leg forms and you will not hesitate one second. With the apparent revision of skirts upward, it may be that woman, lovely woman, will be compelled to invade what has hitherto been man's own private vanity. Are your ankles built on the Percheron plan, you may make them look thin while getting thin, may be admired by men and envied by women by merely buying the secret of acquiring the slender, curved ankle that all women desire and so few possess.

ARE YOU FAT?

No need of it whatever. From the pages of almost every magazine and daily newspaper the cures for it stare one in the face. In this one magazine alone, there are advertised no less than eight different ways for Helen of Avoirdupois to get rid of her excess baggage, and more than one advertisement of each method. It may be done on a gallop, the adipose tissue oozing away at the rate of eight pounds a week, or it may be done in more leisurely fashion. One may "do it to music" or by briskly rolling scientifically designed and prepared balls where they will do the most good. Slenderness may be dug out of a jar of cream, or may be attained by a simple bath in which some magic crystals have been dissolved. Fat, horrid disfiguring fat, may be washed away by more than one brand of reducing soap, or by the wearing of rubber garments, anywhere from the chin to the ankles. The easiest cure of all is by taking something or other in tablet form three times a day. One very mysterious advertisement does not reveal the nature of the cure, which does not "use dangerous drugs, exercises, diets, worthless creams or gar-

BEAUTY WALKER ZILLAH

Grand champion at the 1924 Allentown Fair. The two little girls are Evelyn, aged 7 and Betty, aged 3, daughters of G. A. Boger, manager of Saucona Farms.

lb. milk, 29.95 lb. butter. She was tested for a year as a junior two-year-old and is credited with 19,425.1 lb. milk, 875.63 lb. butter. She is a daughter of Woodcrest Clyde while her dam with 29.97 lb. butter in a week as a four-year-old, was by King Pontiac Champion from Pabst Hengerveld Colanthus, 31.51 lb. butter in seven days, 1,054.15 lb. butter in a year. His dam and sire's dam have year butter records that average 1,083.28 lb. despite the fact that his dam was tested as a junior two-year-old. His seven nearest dams, those that appear on a four generation chart have seven day records that average 33.30 lb. butter.

When it was determined to produce a high class product, it was realized that such a product must sell at a higher price than the prospective customers were

then paying for the milk supplied to them. This demand had to be created. The medical and health authorities had for some time lamented that there was no local plant producing milk of high quality. The doctors were approached and at once endorsed the enterprise. The city newspapers approved of the enterprise and editorially recommended it, one of the editors saying that while it was not its practice to "gratuitously boost the sale of an article, that this was a case where a distinct and peculiar need is being met." The value of milk as a food was called to the attention of the readers and the importance of a product perfectly clean, both physically and bacteriologically was stressed. Under these circumstances the enterprise was launched and after Mr. Boger was put in charge, rapidly and successfully grew.

The Saucona Farms contain 215 acres and are named from the near-by village of Saucona. Some grain is

SAUCONA FARM BEAUTIES

purchased but most of the cattle feed is raised on the farms. Three thousand bushels of corn were grown last year as well as wheat and many tons of alfalfa. The buildings are all that might be expected at an establishment of this kind and the grounds as well as the interior of the barn is kept as clean and tidy as possible. Before Mr. Boger came here, the cattle had been purchased at various sales with no idea of securing a uniform type. After he came he made a change in this respect. One of the purchases he made was at Grove City where he secured two car loads among them Beauty Walker Zillah, the Allentown grand champion. He paid \$2,500 for this cow and three others, but did not invest anywhere nearly this amount of money in the other animals purchased.

A few words should be said about the man responsible for the development of this business. G. A. Boger graduated in 1915 from the Ohio State University. After graduation he was five years with the Nestles Food Company. Then for two years he was with the Dairymen's League as survey expert. At Saucona Farms he is able to put into effect the many practical things he learned while with the Nestles Company and his natural business ability does the rest. His family consists of his wife and two daughters, Evelyn and Betty, seven and three years old respectively. While two or three of the animals were being photographed, the little girls came to the dairy house for their evening milk and on their return were induced to pose for their photographs.

There are some defeats more triumphant than victories.—*Montaigne*.

NOT ABOUT COWS

Some Fads of Today

AT almost every missionary meeting, each speaker on the work in the different countries tells of the superstition prevailing there, in both religious and medical practice. In fact no real missionary program is complete without some mention of the vagaries and cruelties of pagan medicine, some of which make one shudder because of their inhumanity, and some make one smile such a very superior smile, because of the depths of ignorance revealed in those simple souls. How the women of China should be pitied for the still lingering practice of foot binding and the women of India for the unspeakable barbarities inflicted during child birth! All over the heathen world there still remain many ineffectual though harmless superstitions that show at once how simple such people are. The wearing of amulets, the beating of gongs, the ringing of bells are among some of the more harmless remedies for disease, while most of us would hate to try the boiled chips from a coffin, recommended as a cure for catarrh, or the seven bed bugs to be taken in barley water for the ague. One might even recoil from the use of a pomade of flies' heads as a hair restorer, much as one craves luxuriant locks. Reading such things fills us with a profound pity for those who resort to them, and a vast feeling of superiority in our own freedom from such foolish practices.

But recently, after hearing such things discussed, the perusal of a magazine, published in enlightened America for intelligent American readers and a glance at some of the advertisements contained therein gave cause for wonder, if, after all, we are so very much freer from the superstition at which we smile when displayed by the poor heathen. According to the advertisements in this one magazine alone, there is absolutely no need of any one's being content with the face and form Nature has wished upon her, for at a trivial cost one may be renovated and rejuvenated from head to foot.

BEGINNING AT THE TOP

Your gray hairs can be banished in fifteen minutes, warranted fast color and guaranteed not to soil the head. Have you straight, stringy hair—it may be exchanged for the most bewitching curls as permanent as a man's love, supplied by five different establishments. Your eyes may accentuate their lure instantly by the application of a liquid that makes the lashes seem long and curly. Are you dissatisfied with the shape of your nose? It may be remodeled, quickly and painlessly at one of several beauty institutions. Your lips may assume the ruddy hue of health by the use of a (whisper it) kissproof lipstick. What a relief to know that a rich round smudge will not be transferred to the er-er-well, wherever it is customary to plant one's tokens of affection. It seems incredible that there should be a wrinkle left in the world when there are

so many positive removers on the market. Faces restored while you wait—a matter of moments. Even deep furrows may be removed in time, and ordinary wrinkles succumb instantly to the application of some wonder of science in the form of clay, film or mask. All you have to do is to sign on the dotted line, then pay the postman some small sum and all this beauty is yours. Your moles may be banished by a painless, guaranteed, home treatment, and your freckles made to fade away like a late spring snow. Even dimples no longer need be beyond the reach of the less fortunate who lack the angel's touch, for a dimpler—yes, that is what it is called—may be purchased, mailed, in a plain package, and dimples scattered far and wide thereby increasing one's beauty and popularity.

STUBBY FINGERS

If you are afflicted with blunt and stubby fingers, betraying years of hard work on farm or in kitchen, you may easily acquire the slender tapering variety by the purchase of tapering machines which work instantly, almost over night—send no money—just pay the postman, etc., etc. Are you (ahem) knockneed or bowlegged, the remedy is within your grasp, just send for the pictures of men with and without the perfect leg forms and you will not hesitate one second. With the apparent revision of skirts upward, it may be that woman, lovely women, will be compelled to invade what has hitherto been man's own private vanity. Are your ankles built on the Percheron plan, you may make them look thin while getting thin, may be admired by men and envied by women by merely buying the secret of acquiring the slender, curved ankle that all women desire and so few possess.

ARE YOU FAT?

No need of it whatever. From the pages of almost every magazine and daily newspaper the cures for it stare one in the face. In this one magazine alone, there are advertised no less than eight different ways for Helen of Avoirdupois to get rid of her excess baggage, and more than one advertisement of each method. It may be done on a gallop, the adipose tissue oozing away at the rate of eight pounds a week, or it may be done in more leisurely fashion. One may "do it to music" or by briskly rolling scientifically designed and prepared balls where they will do the most good. Slenderness may be dug out of a jar of cream, or may be attained by a simple bath in which some magic crystals have been dissolved. Fat, horrid disfiguring fat, may be washed away by more than one brand of reducing soap, or by the wearing of rubber garments, anywhere from the chin to the ankles. The easiest cure of all is by taking something or other in tablet form three times a day. One very mysterious advertisement does not reveal the nature of the cure, which does not "use dangerous drugs, exercises, diets, worthless creams or gar-

ments. Something entirely new and different." What can it be? One is greatly tempted to investigate, it sounds so very alluring. The pictures are there to show you that it works. It certainly is strange that, in spite of all this proffered help, one continues to see so many fat ones. A fortune awaits someone who will invent a cure for fat that may be thrown into reverse for the skinny ones of earth, who would seem to be in the minority, judging by the few remedies one sees advertised for under weight. These cures are offered to our skinny friends by those, who, in some odd fashion, have managed to corner the market on the coy and elusive vitamin. Even that old friend, the bust developer—or reducer, as the need may be—is still on the market, in spite of the tragic happening to the man, who, by mistake, used "developer" on his bald head instead of hair restorer.

SUCH ABSURDITIES

But the crowning absurdities in this magazine, published in enlightened America, were the advertisements of a "dictionary of advice on how to win and hold love"; of a ring, the wearing of which would bring luck in love as "amazing stories are being told of good luck in love by prominent wearers," and of a perfume, which "is so alluring that no one can resist the charm it gives you."

These require no comment. Yet there was a time when the farmer was held up to public ridicule as the original gold brick victim. Certainly the farmers' families are not among the purchasers of the foregoing nostrums, yet some one must buy them or the advertisements would not continue to appear. Some people should take a second thought before smiling at the superstitions of the heathen.

The Value of the Sexes

THOMAS JEFFERSON PUTNAM, who is connected with the Colorado Agriculture College and calls himself "Specialist in Rural Devilment," reports that his wife recently read to him the old scientific determination of the value of a man from a mineral standpoint. The scientists say that the ingredients of a man are:

- Fat enough for a bar of laundry soap.
- Iron enough for two nails.
- Sugar enough to fill a teacup.
- Lime enough to whitewash a chicken coop.
- Phosphorus for a box of matches.
- Potassium enough to explode a toy pistol.
- Sulphur enough to rid a dog of fleas.
- These ingredients would cost about eighty-nine cents at any corner drug store.
- Mrs. Putnam said so much about this that Thomas Jefferson couldn't sleep until he had figured out the value of a woman. Woman, he says, has been proved to contain:
- Starch enough to be stuck on herself.
- Brass enough to butt in anywhere.
- Gall enough to embitter the sweetest male disposition.
- Paint enough for an Arabian sunset.
- Powder enough to blow up a dreadnaught.

Perfume enough to gas a regiment.
All of which can be had in any department store for thirty-two cents.
He woke his wife to tell her this and the next morning, Thomas Jefferson got his own breakfast.

Veva Divan Again Honored

VEVA M. DIVAN of Browntown, Wis., the champion club girl of her state, has been selected to represent 4-H club work and supervise a booth at the Woman's World Congress in Chicago. These honors are a recognition of her standing as the champion girl club worker and leader in the United States.

An article telling of some of the many activities of Veva Divan appeared in the BREEDER AND DAIRYMAN, issue of January 8, 1925. This was written by our contributing editor, J. H. Lewis, who personally interviewed the young lady and obtained the material for the story.

At six fairs Miss Divan won 263 prize ribbons. A list of the exhibits she made would practically take a whole issue of our paper.

The writer of "Who's Who in America," says that 25.9 per cent of American notables were born on the farm; 24.5 per cent in villages and towns; 28.8 per cent in small cities; 20.6 in large cities and 4.1 per cent in suburbs.

The Kind We Raise

Cows of this size, type and evident producing capacity, bred and raised on this farm, are mated with

MODEL DARIUS KING SEGIS

whose dam produced 639.8 lb. milk in a week, averaged 79.8 lb. milk a day for three months and produced 2,771.2 lb. milk, 732.4 lb. butter in 10 months all as a two-year-old heifer.

This herd is Accredited.

PROPOSED BY-LAW AMENDMENTS

The following by-law amendments have been proposed in the form of resolutions and will be presented for the consideration of the delegates at the annual assembly to be held at Grand Rapids, Mich., Wednesday, June 3d. All members of the Association are cordially invited to attend this assembly but only delegates will be allowed to vote.

We are omitting the reports of the officials and committees as they are in pamphlet form and will be mailed to every member of the Association.

By H. H. Wing, Ithaca, N. Y.: "Resolved, That on and after January 1, 1926, The Holstein-Friesian Association of America will admit cows to Advanced Registration only on an official record of 7 days or a semi-official record of 305 days. Resolved, That no record of an animal on semi-official test will be received in which the animal has been milked more than three times a day after the 30th day after calving. Resolved, That the By-Laws and rules and classifications for Advanced Registry be amended to conform with these resolutions."

By Tom Pemberton, Greensboro, N. C.: "Resolved, That 50 per cent of all money appropriated for advertising be used in advertising Holstein milk in two leading medical journals."

By W. H. Mott, Herrington, Kans.: "Resolved, That the Board of Directors be empowered to provide housing facilities for the offices and records of the Association now being maintained in three separate cities in that many states in one centrally located easily accessible city."

By Tho. J. Owens, Kirkland, Wash.: "WHEREAS, The official market milk score card of the Bureau of Dairying of the U. S. Department of Agriculture, requires that market milk contain 4 per cent of butterfat for a perfect score, and WHEREAS, The average test of some 35,000 cows listed in the cow-testing associations in the Western Division of the United States has been found to be less than 3.5 per cent, and this is a fair average for the whole United States, and WHEREAS, A large number of cities in many different states, having found that this 4 per cent test requirement in the score card for a perfect score worked a great hardship and caused considerable loss on producers and legitimate dealers alike, the officers of the Division of Inspection of the Department of Health in those cities decided to discard the Bureau of Dairying Score Card, and in lieu of this, have been using a score card of their own giving a perfect score for 3.25 per cent, and in some instances, 3.6 per cent fat and 8.50 solids not fat in the milk, all the other ratings having been unchanged from the U. S. Card and have found that this is giving very great success, and WHEREAS, Nearly all states and cities require minimum test of only 3.25 per cent and 8.50 per cent of solids not fat, for market milk, and WHEREAS, The stability of the city milk production business is menaced by an extreme requirement of the 4 per cent test, and WHEREAS, It has been found that the great average volume of normal milk tests 3.5 per cent, Therefore, We, the Delegates to the Annual Convention of The Holstein-Friesian Association of America, in session at Grand Rapids, Michigan, this third day of June, 1925, do hereby respectfully present the above facts and petition the Chief of the Bureau of Dairying of the U. S. Department of Agriculture to change the perfect score requirements on the official score card from 4 per cent to 3.5 per cent, And, That a copy of this resolution be forwarded to the American Dairy Science Association for its consideration and recommendation to the Bureau of Dairying for the change above set forth."

By Franklin N. Strickland, Providence, R. I.: "Resolved, That the herd test plan started by the Rhode Island Holstein-Friesian Breeders' Association and the Rhode Island State College cooperating be recognized by The Holstein-Friesian Association of America. Resolved, That The Holstein-Friesian Association of America exempt members of the Rhode Island Holstein-Friesian Breeders' Association adopting this plan from the double registration fee now charged for delayed registration, since members of latter Association have voted not to sell any male or female to be registered, unless dam shall have produced the amount of milk specified for her age; and > 1 other animals shall not be registered until following minimum records have been made: two-year-old, 7,500 lb.; three-year-old, 8,500 lb.; four-year-old, 10,000 lb."

By H. W. Norton, Jr., Lansing, Mich.: To amend article IV, section 12, by adding: "(c) No animal shall be eligible for

registration that is over two years of age at the time the application for registration is made." (There is no By-Law covering the foregoing.)

By C. F. Bigler, Syracuse, N. Y.: To amend article III, section 9, to read as follows: "Immediately after the committee on elections has completed its canvass of votes for delegates, the secretary shall notify by telegram, confirmed by registered letter, each delegate in every district so elected of his election. Within five days after receipt of such notice by telegram each delegate shall return to the secretary at his office a written acceptance or declination to attend the annual meeting to which he has been elected as delegate. It shall be the duty of the secretary to ascertain from such returns if vacancies occur in any district and if so to fill same from delegates voted on by declaring elected the next lower in order of votes received until all vacancies are filled, same to be notified as in case of the regular elections. Should there be no other delegates properly nominated with whom to fill vacancies, the secretary shall notify the president of state associations in all organized states requiring him to designate remaining delegates in the order of number for such district. In unorganized states the secretary shall notify the chairman of the executive committee who shall have the power to name delegates to fill the vacancies in these districts. Requirements of eligibility of appointed delegates shall in all cases be the same as for those elected by ballot." Article III, Section 9, is: "At least thirty days prior to the annual convention or meeting, the president shall appoint a committee on elections consisting of three members, and shall advise said members of their appointment and of the duties of the committee. It shall be the duty of said committee to receive the official ballots from the Secretary in sealed envelopes, canvass the votes cast by such ballots, and to prepare a preliminary roll of the convention or meeting of this Association. The committee shall make a record of the vote cast for each candidate. Those receiving the highest number of votes in each district shall be declared elected. This committee shall submit a preliminary roll to the secretary at least eighteen days before the annual convention or meeting, and the secretary shall at once send notice of election to all those who appear upon such preliminary roll. Such notice shall be mailed at least fourteen days before the time named for the annual convention or meeting, and those delegates residing west of the Missouri River shall also be notified by wire."

By C. W. Newman, Culver, Ind.: To amend article II, section 1, by adding paragraph (d) as follows: "In the event of the death or resignation of a director, such vacancy shall remain until filled by election at a subsequent meeting of the duly chosen delegates of the Association, unless this vacancy shall destroy the quorum. In that event only, may the vacancy be filled by appointment by the board of directors. Such appointment shall hold only until the next meeting of the duly chosen delegates of the Association." Article II, section 1, paragraph (b), (relevant) is: "In the event of the death or resignation of the secretary, treasurer, superintendent of advanced registry, or other officer, committee member, inspector or judge, the board of directors shall fill such vacancies until the next general election."

PRODUCERS AND CHOICE INDIVIDUALS

Remember that this is an Accredited Herd; that the cattle of this entire county, when recently tuberculin tested, passed 99.2% Clean, and that this herd has always been headed by high class bulls.

Can spare a few good ones raised here.

L. S. BROWN

Saegerstown, R. D. 1,

Crawford Co., Pa.

By H. W. Allyn, Byron, Ill.: To amend article II, section 13, by striking out, beginning after the word "the" in the third line of said section the following: "unanimous vote of the directors present at any meeting," and substituting therefor the following: "majority vote of all the directors." This section would then read: "All funds hitherto set aside by the board of directors as 'reserve' shall not be drawn upon except by the majority vote of all the directors at any meeting of the board of directors of the Association, duly called and held." Article II, section 13, is: "All funds hitherto set aside by the board of directors as 'reserve' shall not be drawn upon except by the unanimous vote of the directors present at any meeting of the board of directors of the Association duly called and held."

By H. W. Allyn, Byron, Ill.: To amend article II, section 14, by changing the sentence beginning, "Members of such committee shall be entitled to reimbursement for traveling expenses," to read as follows: "Members of such committee shall be entitled to reimbursement for traveling expenses and other expenses incurred in the performance of their duties, and when such members are compensated for their services it shall be on a per diem basis, and they shall present detailed accounts thereof, bearing the approval of the chairman of the finance committee for payment thereof by the treasurer, which shall be reported in detail to the board of directors." This section would then read as follows: "All committees hitherto specified or special committees shall annually, or at the conclusion of their duties or when called upon to do so, report in writing and in full detail to the board of directors or executive committee any and all action taken in pursuance of their duties. Members of such committee shall be entitled to reimbursement for traveling expenses and other expenses incurred in the performance of their duties, and when such members are compensated for their services it shall be on a per diem basis, and they shall present detailed accounts thereof, bearing the approval of the chairman of the finance committee for payment thereof by the treasurer, which shall be reported in detail to the board of directors." Article II, section 14, is: "All committees hitherto specified or special committees shall annually, or at the conclusion of their duties, or when called upon to do so, report in writing and in full detail to the board of directors or executive committee any and all action taken in pursuance of their duties. Members of such committees shall be entitled to reimbursement for traveling and other expenses incurred in the performance of their duties and shall present detailed accounts thereof, bearing the approval of the chairman of the finance committee, for payment thereof by the treasurer, which shall be reported in detail to the board of directors."

By L. L. Oldham, Madison, Wis.: To amend article II, section 2, paragraph (a), to read as follows: "The board of directors, at its first meeting after the annual election, shall elect, by ballot, an executive committee of five. Said executive com-

mittee shall consist of four directors and the vice-president, who shall be the chairman. Said executive committee shall, during the recess of the board of directors, possess and exercise all the powers of the board of directors, and shall submit to the board at its first meeting a report in writing of any and all action taken. Article II, section 2, paragraph (a), is: "The board of directors, at its first meeting after the annual election, shall elect, by ballot, an executive committee consisting of five of its members. Said executive committee shall during the recess of the board of directors, possess and exercise all the powers of the board of directors, and shall submit to the board at its first meeting a report in writing of any and all action taken."

By L. L. Oldham, Madison, Wis.: To amend article II, section 15, to read as follows: "The president shall be the chief executive of this Association acting in the capacity of general manager. He shall sign all certificates of membership which may be issued. Such signatures may be affixed in printed facsimile." Article II, section 15, is: "The president shall sign all certificates of membership which may be issued. Such signatures may be affixed in printed facsimile."

By Jas. A. Reynolds, Cleveland, O.: To amend article IV, section 1, to read as follows: "The Association may publish the Holstein-Friesian Herd Book, the Advanced Register Year Book, and such other books, pamphlets and leaflets as may be desirable as often as circumstances may require, which shall be edited, compiled, and printed in such manner as the board of directors may prescribe." Article IV, section 1, is: "The Association shall publish the Holstein-Friesian Herd Book, the Advanced Register Year Book, and such other books, pamphlets and leaflets as may be desirable, as often as circumstances may require, which shall be edited, compiled and printed in such manner as the board of directors may prescribe."

By A. C. Oosterhuis, Oconomowoc, Wis.: To amend article IV, section 48, by adding: "The office of the secretary will refund 50 cents for the return of each registration certificate for cancellation. In the case of death of the animal the registration certificate, in order to obtain this refund, must be sent in within thirty days after the death of the animal." There is no By-Law covering the foregoing.

BUSINESS IS BUSINESS

Mr. Ikenstein was discovered in the meeting of the Ku Klux Klan, and a committee was appointed to wait upon him and find out why he was there.

"What is your name?" asked the spokesman.

"Ikenstein."

"What are you doing in a meeting of the Ku Klux Klan?"

"I just wanted to see the man who buys the white goods."

PRINCE AAGGIE OF BERYLWOOD

Reported sold for \$110,000. California's grand champion show bull and sire of show stock. Behind him is the highest yearly lacking known, his seven nearest dams average in yearly work 1,181.81 lb. butter.

He is the sire of our herd bull BERYLWOOD PRINCE AAGGIE CHICAGO who is siring splendid animals.

Our herd is ACCREDITED and we can supply your need of good cattle.

A Ton and a Half of Pork from One Litter in 180 Days

Produced by a Big Type Poland-China Sow

NATIONAL POLAND-CHINA JOURNAL, SHELBYVILLE, INDIANA

This Magazine

keeps you informed on all things of interest in Big Type Poland-Chinas. 50 cts. for 1 year; 3 years for \$1.00. National Record records your Poland-Chinas.

Life Membership \$10.00

No Dues. No Assessments. Saves half in recording fees.

A Profitable Business—

Combine the cow and sow products. By actual test Big Type Poland-Chinas produce more pork than any other breed of hogs.

The Holstein Breeder and Dairyman

Published in the interest of the breeder and dairyman everywhere.

G. H. TRUCKELL, Associate Editor
M. M. LEEDOM, Advertising Manager

Contributing Editors
EUGENE B. BENNETT HELEN C. NEWMAN
J. H. LEWIS

Published semi-monthly by the Benn-Chester Publishing Co., Inc.,
Evangelical Building, North Third Street, Harrisburg, Pennsylvania.
Subscription price for the United States, 75 cents per year,
(two years \$1) payable in advance.

Copy for the publication should be received not later than the 12th
or 27th of each month preceding date of issue.

MAY 22, 1925

The Holstein Breeder and Dairyman was established for the purpose of promoting the breeding of Holstein-Friesian cattle and to protect the interests of the men who breed purebred cattle, basing the value of the cattle on their ability to produce and reproduce.

The Suggested By-Law Amendments

IN reviewing the proposed Constitutional Amendments that are to be laid before the delegates for consideration at the Grand Rapids Assembly, June 3, we find that there is still a desire on the part of those representing the "Political Group" to further fortify their positions and carry out the projects which were undertaken by them and which were defeated by the votes of the members at the Syracuse Convention.

The resolution or By-Law amendment proposed by Director W. H. Mott, a promoter and manager of public sales, of Herington, Kansas, empowering the Board of Directors to provide housing facilities for the offices, etc., which is printed fully elsewhere in this issue, is similar to a resolution that was introduced at the St. Paul Meeting in June 1920 by Director James A. Reynolds, Farm Manager and Politician of Cleveland, Ohio.

The Reynolds resolution was rescinded by the members at the Syracuse Convention and the Mott resolution should be defeated.

The sentiment that is back of the movement to centralize the offices and locate them under one roof for economy's sake comes from the same source that is responsible for the uprooting of the Association and establishing innumerable expensive and unnecessary offices.

They have dragged the Extension Office out of Brattleboro, where it rightfully belongs, where the Secretary can supervise the work, where rents are cheap and living conditions reasonable, and have located it in the largest city in the central west where rents, help and other overhead charges are most expensive.

They have established the office of the Chairman of the Executive Committee and the office of the Treasurer at Cleveland, Ohio.

If the Mott resolution were to pass and the Association should build its own home office, what assurance have the members that its offices will be confined to

one building or one city or that other "Koenigs" and other "Jimmy Reynoldses" might not come along at some future date and want to locate the Extension office down in Texas and possibly the Treasurer's office in Utah?

The office of the Superintendent of Advanced Registry is well located, let it remain where it is. The Secretary's office is well located, let it remain where it is. Close up the Extension Department in Chicago, put the work where it rightfully belongs in charge of the Secretary and, as the Chairman of the Executive Committee is also acting as Treasurer of the Association and drawing a salary for both offices, let those offices be moved from Cleveland to Delavan, Wisconsin, or Brattleboro, Vermont, and let the Association go on as it formerly did.

It would seem that the resolutions or amendments proposed by Mr. H. W. Allyn, manager of Rock River Farms, Byron, Illinois, are prompted from a desire to provide more ways or easier ways of gaining access to the Association's treasury and Reserve Fund.

His first resolution, if passed, would give the Board of Directors the privilege of going into the Association's Reserve Fund by a majority vote. As the Constitution now stands, before they can touch one penny of the Association's Reserve Fund, every Director must vote in favor of such action.

If this resolution of Mr. Allyn's should become effective and if nine Directors were in favor of spending the Reserve Fund and seven were not, the wishes of the nine would prevail. Under the present Constitution, if fifteen of the Directors should want to spend the Reserve Fund and the breeders and dairy-men had one representative on the Board to protect their interests, the money could not be legally expended as it requires a unanimous vote of all the Directors before they can touch one penny of the Association's Reserve Fund. Every Director must vote in favor of such action and that is the way we think it should stand.

Mr. Allyn further proposes to amend Article II, Section 14, so that the Directors, Officers and various Committeemen will not only receive their traveling and other necessary expenses while attending meetings but will be paid for their services on a "per diem basis." This is only another move to drain the Association's treasury.

We believe that the resolution offered by Professor H. H. Wing of Ithaca, New York, should be passed.

The resolution offered by Tom Pemberton of Greensboro, N. C., "That 50 per cent of all money appropriated for advertising be used in advertising Holstein milk in two leading medical journals," we believe, should be defeated.

We do not know whether Mr. Pemberton is in the milk business and, therefore, interested in increasing his sales or whether he is soliciting advertisements for Medical Journals but it has been conclusively demonstrated that the matter of advertising milk is an individual project or a local project and should not be undertaken by a Registry Association.

As to the proposal of Mr. H. W. Norton, Jr., of Lansing, Michigan to debar from registration animals two years old or over, while it might be desirable to

register animals at an early date, we doubt if such a By-Law amendment would prove to be satisfactory or Constitutional.

The Bigler resolution is purely of a political nature and is unworthy of consideration. If the delegate form of government is so unpopular that the members will not bother to nominate or vote for delegates because they know the system is a farce why should they forfeit their rights to manage the association to the appointees of such a man as Mr. Bigler. When the system is so unpopular that it reaches that state, it is time to change the system and go back to a business form of government.

Mr. C. W. Newman of Culver, Indiana, seems to be the only member who has proposed a resolution or By-Law amendment, that has had in mind protecting the members' rights.

Mr. Newman's resolution proposes that vacancies, caused by death or resignation of Directors, should be filled by appointment by the Board of Directors only until the next delegate meeting when the delegates shall elect a Director to fill the unexpired term. If the members are not allowed to choose the Directors, the Delegates should be.

Mr. Newman's second resolution, allowing Directors to fill vacancies in offices, committees, etc., until the next delegate meeting is a commendable proposal but has no force as the officers are appointed by the Directors and are not elected by the delegates.

If the proposed amendment would repeal the power of the Directors to appoint officers and place this power in the hands of the delegates, it would be more in harmony with sound Government.

The suggestion of Mr. Oldham that the board of directors should elect an executive committee of five to consist of four directors and the vice president, who would be the chairman, is not a good one. The chairman of the executive committee should be a man of extensive knowledge and long experience and he should hold office for more than one year. As the vice presidents are elected for one year only, the proposed executive committee might have a new chief every year. At present the chairman of the executive committee is chosen from among the directors who hold office for four years. We see no reason for the proposed change.

The second proposal of Mr. Oldham that "the president should be chief executive of the association, acting in the capacity of general manager," is the same proposal that so aroused the members before the Syracuse meeting of 1921. In spite of the fact that the then president tried to railroad this resolution through, it aroused so much indignation that it was laid indefinitely on the table. Politicians who hold membership in the association have long had their eyes fixed on a position of this kind which would be expected to carry a large salary. If the general membership had the power to vote directly on this subject, we believe it would be snowed under by a big majority.

Jas. A. Reynolds of Cleveland, Ohio, proposes that instead of it being *mandatory* for the association to publish the herd books, blue books, and other literature, that it be *optional*.

Mr. A. C. Oosterhuis of Oconomowoc, Wisconsin,

proposes that fifty cents should be refunded to the owner when a registration certificate is cancelled on account of the death of an animal. Such a proposal would be a novel way of giving the breeders a little rebate on high fees but as all registered animals are mortal and, being mortal, eventually must die, the flood of registration papers going back to the Secretary's office, we believe, would be so great that the drain on the Association's resources, at least under the present management, would necessitate a further increase in fees.

Therefore, we would discourage the passing of Mr. Oosterhuis's resolution.

Has the Law of Right, Honesty and Justice Changed?—1884 vs. 1925

WE do not believe that the purebred Holstein now should be used as a "Poker Chip" in a gambling game. Neither do we believe a Registry Association should collect an increased registration or transfer fee and use the funds thus collected to promote Speculation or turn part of the money over to other organizations or other individuals for them to promote Speculation or Gambling.

A Registry Association should confine its activities to maintaining an accurate record to preserve the purity of the blood of the breed which it represents. It should not lend itself to exploiting the merits of the breed by Exaggeration or Misrepresentation and thus deceive or mislead prospective buyers.

The Holstein-Friesian Association, under its present management, has so changed its policies from what was originally intended by the early breeders that they would not recognize the child of their own creation.

In Volume 3 of the Dutch-Friesian Herd Book we find the *policies* of the Association clearly defined in the two following paragraphs:

"It is the policy of the Association to avoid giving countenance to exaggerated statements of the qualities and characteristics of this breed, and also to avoid giving special prominence to any particular breeder or breeders, or to any particular animal or animals."

"Every breed of cattle that lays any claim to public recognition as a dairy breed, has had its phenomenal cows with marvelous milk or butter records; every breed has also had its worthless cows, that may have come to public notice through reports of impartial experimenters. Manifestly it would be unjust to take the latter class as the true exponents of a breed. Equally improper would it be to seek to impress the public mind with the idea that such phenomenal cows are its true representatives. It is for the interest of the majority of the breeders of any valuable breed, as well as for the public interest, that data be given upon which a correct average production may be safely estimated, under the varying conditions of climate, care, and feed. Such records may not startle and attract, like those of phenomenal cows, yet they are the best foundation upon which a valuable reputation can be built."

To show to what extent *Special prominence* is given to *particular breeders and particular animals* and to *exaggerated statements*, all of which we believe are

just as Unfair, Unjust and Unethical in this day and age and always will be, as they were back in the year 1884, we are printing below information contained on a postcard, mailed from the Advanced Registry Office of the Holstein-Friesian Association at Delavan, Wis., May 5, 1925, which is only one of the many postcards that have been and are being mailed out by the Advanced Registry Department.

Delavan, Wis., May 5, 1925.

To All Interested:

I am advised through preliminary reports and by wire that the Holstein-Friesian cow Chimacum Gerben 673495 has shown a production of 653.6 lbs. milk containing 34.916 lbs. fat in seven consecutive days, with the test still in progress. She freshened at the age of 4 years, 9 months, 6 days; and this office last week announced this fine cow as having broken the senior three-year class record in the ten-months division by producing 24,697.8 lbs. milk containing 792.66 lbs. fat in 305 days and 26,200.6 lbs. milk containing 853.30 lbs. fat in 330 days. Her sire is Riverview Sir Felling 228546; and her dam is Riverview Ormsby Gerben 349330. She was bred by Mr. A. C. Mills, Ferry, Washington, and is now owned by the Western State Hospital, Fort Steilacoom, Washington. Chimacum Gerben was first tested at the age of 2-2-3, at which time she produced 437.3 lbs. milk containing 16.483 lbs. fat in seven days; while at her next freshening, at 3-7-25, she produced 602.7 lbs. milk containing 24.827 lbs. fat in seven days. The test which I am now reporting, showing 34.916 lbs. fat, has had the most careful supervision, the verification test being of four days in length and five different supervisors having part in the making of the record, Mr. R. C. Jones, Instructor in Dairying at the Oregon Agricultural College, having the cow personally in charge for 24 hours of the verification test. Computed on the 80 per cent basis, the equivalent butter claimed for Chimacum Gerben would amount to 43.645 lbs.

MALCOLM H. GARDNER, *Supt. A. R.*

We are not condemning the Holstein cow, whose record is described on the card sent out by the Advanced Registry Office; we are not condemning the man who bred the cow or owned the cow but we are condemning the System whereby the breeders and owners of Holstein-Friesian cattle everywhere are being taxed to give Special prominence to particular breeders and to particular animals and to the circulating of exaggerated statements regarding the Characteristics of the Breed.

The Rules, Regulations and Policies pursued by the Advanced Registry Department are in the hands of the Board of Directors.

The Board of Directors of the Holstein-Friesian Association is composed of sixteen members. Of the present Board one member and only one could be classed as a breeder and dairyman. Of the other fifteen directors, nine are breeding Holsteins as a pastime and a hobby or are not dependent upon the returns from their dairy for a livelihood. Three are herdsmen or have charge of herds where the making of records has been indulged in extensively; one is a Professional Politician, and two, Dealers and Sale Promoters.

The above makes it very plain to the breeders and dairymen that if they ever hope to place the Association back in a position where it can function as originally intended, be free from the tentacles of promoting Speculation, Deception, and Misrepresentation, the solution to the problem is to get Dairymen of the right sort to serve as Directors to assure that the Dairy interests and not the Speculative interests will be served by the Association.

Review of the Officers' Reports

IN reviewing the officers' reports for the fiscal year ending December 31, 1924, we are impressed with the fact that the Association is slipping backwards financially and otherwise.

We have in previous issues told of the great falling off in business transacted at the Secretary's office during the year 1924 as compared with previous years, and of the continuous decrease in number of registration and transfer certificates issued for the first three months of the present year, January, February and March.

In the Auditor's Report we find the Association's total income for the year was \$431,293.62. The Association's expenditures were \$463,011.11, the Association's operating expenses exceeding its income by \$31,717.49.

This item of \$31,717.49 does not comprise the Association's total loss for the year.

In the report of the Finance Committee we find that the net worth of the Association has been reduced by \$56,830.63.

Net loss of the Association for the year ending Dec. 31, 1923	\$60,819.55
Net loss of the Association for the year ending Dec. 31, 1924	56,830.63

Total net loss for the past two years \$117,650.18

The Secretary in his report lists certain disbursements necessary in carrying on the work of his office, including the Secretary's salary, the salary of the Administration Clerks, rent, light, heat and all the incidental expenses connected with the issuing of registration and transfer certificates, including the annual election expense, and the publishing and delivery of the Herd Books, which item alone amounted to over \$24,000.00.

The total of the items above referred to is \$175,523.88.

These figures provide the members and breeders of Holstein cattle with a little index into the cost of maintaining a Registry Association to preserve the purity of the blood of the breed. The other projects that have become fastened upon the Association and are continuously "sapping" its resources, we believe, ought to be and eventually will be placed on their own resources or discontinued.

Those members who want to advertise cattle and sell them at public auction should be compelled to pay their own expenses. Those breeders who want to advertise milk should pay the expenses of such a project, and the men who patronize the Advanced Registry Department should be compelled to pay for the services which they receive.

In the Auditor's Report we find an item of \$14,626.28 expended for legal expenses.

In the report of the Extension Department under "Cash Disbursements" we find an item of \$4,068.17 for legal expenses.

It would appear that it has cost the Association \$4,068.17 during the past year to keep the Extension Department's legal difficulties straightened out, and it

has cost some \$10,000.00 to take care of the legal difficulties of the Directors and Management.

It would also seem that in the report of the Extension Department that the Association's funds have been expended rather liberally for hotel bills, taxicab hire, pullman service and railroad tickets, as the following will show.

The Director of Extension is listed as receiving a salary of \$5,000.00, traveling expenses, \$2,498.67; Dairy Specialist is listed as receiving a salary of \$4,440.00, traveling expenses, \$2,928.68; Field Manager, a salary of \$4,334.59, traveling expenses, \$2,872.04, and Calf Club Manager, a salary of \$4,350.00, traveling expenses, \$2,378.13.

In the Auditor's Report we find listed the following disbursement:

"SCIENTIFIC RESEARCH WORK, \$7,000.00"

THIS IS A NEW ONE TO US! It surely would be interesting to know who got the money and what services were rendered.

Under "Cash Disbursements" in the Treasurer's Report from January 1 to June 8, 1924, we find: Services, Chairman of Executive Committee, \$3,000.00; Services, Chairman Finance Committee, \$1,000.00.

Under "Cash Disbursements" in the Treasurer's Report from November 8 to December 31, 1924, we find: Salary, Treasurer, \$1,000.00.

Under "Cash Disbursements" in the Treasurer's Report from November 8 to December 31, 1924, we find: Services, Chairman Executive Committee, \$1,750.00; Salary, Treasurer, \$288.89.

At the present time the office of Chairman of the Executive Committee and the office of Treasurer are held by the same person. It would be interesting to know just what part of the above sums were received by him.

We believe that in an organization of some 25,000 members there are enough capable, honest men to fill the offices so that no one member would be drawing duplicate salaries. In politics such a practice is often followed, but we believe the breeders generally will sustain us in our stand that such a practice should not be inaugurated in conducting the affairs of the Holstein-Friesian Association.

Pennsylvania Cattle Owners Are Interested

ON May 15th, Governor Gifford Pinchot signed the Haines Bill which appropriated three million dollars for cattle tuberculosis eradication indemnities in the State of Pennsylvania. Governor Pinchot cut the amount to \$1,799,000 all of which is for indemnity purposes. The Bureau of Animal Industry is at present maintained by funds derived from taxes on dogs, under what is generally termed the dog law. This tax is estimated to bring in one and one-half million dollars during the next biennium. Of this amount \$450,000 is used in the enforcement of the law and to pay damages, etc., caused by dogs. Then \$750,000 is devoted to the maintenance of the Bureau of Animal Industry, the payment of salaries, etc. The balance, estimated at \$300,000, will be set aside for tuberculosis indemnities so that during the next two

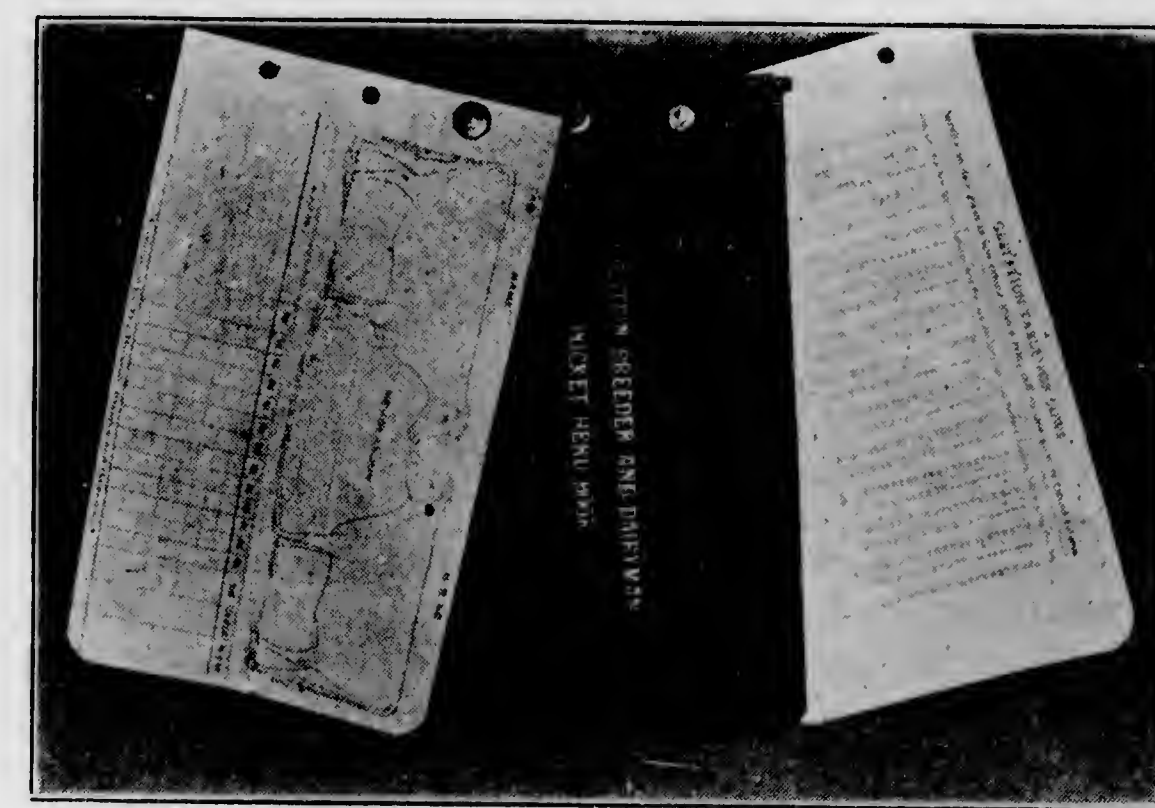

years, the amount available for this purpose will be \$2,099,000.

The action of the Governor is expected to give an impetus to the tuberculosis eradication movement in this State. Some Pennsylvania dairymen are fearful of losing their milk markets if their herds are not tuberculin tested. Large amounts of milk are produced in Pennsylvania and shipped to New York City and Baltimore and some is shipped to Cleveland. Baltimore has already signified that she will not accept milk after the beginning of next year unless it comes from tested herds. Rumors of action by Cleveland are rife and those best informed would not be at all surprised to hear of a similar announcement by the health authorities of New York City. Pennsylvania pays less indemnity than almost any other eastern state so that the amount appropriated will go further than it would in Ohio or in New York State.

State Veterinarian's Action

WHEN registered cattle of any breed are slaughtered in Pennsylvania as reacting to the tuberculin test administered by a veterinarian connected with the Pennsylvania Bureau of Animal Industry, Dr. T. E. Munce, the State Veterinarian of Pennsylvania notifies the breed association of the fact. This action of Dr. Munce is appreciated by the association secretaries for, despite the fact that the rules of most breed associations require the owner to send notification when an animal dies or is killed, there are a large number of owners who never pay any attention to this requirement. It is not at all unlikely that other state veterinarians will follow the example of Dr. Munce and so help the breed secretaries to keep closer tab on the breeders and the animals in their herds.

The troubles of the Holstein-Friesian Association began when the politicians found out that it was possible to tax the members by increasing transfer fees. The unlucky cattle owner had his choice, he could continue doing business and pay the tax or he could quit the business.

This is a picture of the Pocket Herd Book which we are offering as a premium for a two years' subscription to THE HOLSTEIN BREEDER & DAIRYMAN for \$1.00, new or renewal.

This is the most convenient, practicable, up-to-date Pocket Herd Book on the market. If you are not satisfied with the Book, return it and we will refund your money.

THE PRACTICAL DAIRYMAN

SUMMER FEEDING SUGGESTIONS

In his May letter to dairymen of Pennsylvania R. H. Olmstead, feeding expert at State College makes some valuable suggestions on summer feeding to dairymen. In his talk he says:

Grass is a bulky feed containing approximately 75 to 90 per cent water, depending on its maturity. It is rich in mineral matter, medium high in protein but low in energy producing nutrients. The protein and mineral matter in grass are of a high quality which combined with its succulent nature give it a superior power to stimulate the secretion of milk. Due to its succulent nature it is impossible for a cow to consume enough grass to supply the required nutrients for high milk production. Without additional feed the cow must call on her own reserve to make up the deficiency. This means a loss of flesh which may not show in the milk pail immediately but will result in a lower production during late summer and the following winter. Profits are not made on high production during the pasture season alone but on high yearly production.

Grain feeding to cows on pasture is absolutely essential for high yearly production. Home grown grains such as corn, oats or barley are sufficient for cows of average milk production. With high production an additional protein feed is necessary. Early pasture or short pasture should be supplemented with a good quality hay, summer silage or soiling crops in addition to one of the following rations:

- 600 lb. corn and cob meal
- 400 lb. oats or bran
- 700 lb. corn and cob meal
- 200 lb. gluten
- 100 lb. cottonseed or oil meal
- 400 lb. corn and cob meal
- 100 lb. 24% ready mixed ration
- 300 lb. hominy or corn meal
- 200 lb. oats
- 100 lb. bran
- 600 lb. corn and cob meal
- 300 lb. oats or bran
- 100 lb. cottonseed or oil meal
- 200 lb. corn and cob meal
- 100 lb. 20% ready mixed
- 200 lb. corn meal
- 100 lb. gluten
- 100 lb. bran
- 300 lb. corn and cob meal
- 100 lb. oats or bran
- 100 lb. 24% ready mixed ration

When first turned on pasture the cows should be fed the same amount they were getting while on dry feed. As the pasture becomes more abundant and matures the grain feed should be withheld for Holsteins giving less than 25 lb. daily. Holstein cows producing more than this amount should be fed one pound of grain to each six or seven pounds of milk produced daily.

STAR BOARDERS

Nothing swats a farmer's wallet—pocket book, if so you call it—as do hungry non-producers in the barnyard or the pen; cows that rush the silage cutter yet give neither milk nor butter for the efforts and the acres of enthusiastic men; hogs that chew ground feed sublimely, yet quit growing most untimely and devote their lives to raising merely bristles, nose and tail; colts

that relish oats insanely yet grow awkward and ungainly, and throw fright into the bidders when they're offered at a sale; turkeys that are nation beaters in the world of heavy eaters, yet could scarcely fill the platter on the table of a dwarf; geese that eat in spite of weather yet grow neither flesh nor feather, as they kick and churn the water like a schooner at a wharf. In the world of cows I blundered for I fed them by the hundred since I first went into farming in the valley years ago, cows that gave poor milk, if any; cows that weren't worth a penny, cows that never made a balance or a bank deposit grow. But at last, aroused from slumber, I took down the name and number of each cow that shirked her duty in a cheap shameless way—started counting gains and losses, and I found just two old bossies in my herd of gentle critters that were ever known to pay! Would a farmer be a hoarder he must banish each star boarder that he finds among his chickens, or his bossies, or his goats; he must clear his farm of loafers, as he'd clear his land of gophers, or he'll waste a heap of fodder and a lot of corn and oats!—J. Edw. Tuft.

WHITEWASH RECIPES

Two recipes for whitewash paints are given by F. H. Smith, Chemist at the Georgia Experiment Station, who says that these mixtures will obviate the "flaking off" met when ordinary lime wash mixtures are used. Dr. Smith adds the caution that, whenever casein or milk forms one of the ingredients, only enough of the formula should be made for use that day.

Soak 5 pounds of casein in about 2 gallons of warm or hot water until thoroughly softened (about two hours). Dissolve 3 pounds of trisodium phosphate in 1 gallon of water and add to the casein solution. Allow the mixture to dissolve. Prepare a thick cream by mixing 50 pounds (1 sack) hydrated lime in 7 gallons water, stirring vigorously. Dissolve 3 pints formaldehyde in 3 gallons of water. When the lime paste and the casein solution are both thoroughly cool, slowly add the casein solution to the lime, stirring constantly and vigorously. Care MUST be taken not to add the formaldehyde too rapidly, as the carelessness may cause the casein to "jell out," and spoil the batch. (In place of the hydrated lime a cold lime paste from the slaking of 38 pounds of burnt lime may be substituted).

In the following formula, simpler, but not so durable as the above the "stickability" is obtained from the casein in skim milk:

Slake carefully 20 pounds burnt lime, by adding 6 gallons water in small portions. In a wooden vessel dissolve 1 pound zinc sulphate in 1 gallon of water. When dissolved, add the sulphate solution to the lime. Then add about 1 gallon of skim milk. When applying it is necessary to keep this mixture stirred.

The first formula may be applied either with spray or brush. The latter is for brushing on.

GOVERNMENT WHITEWASH RECIPE

The following directions are given by the United States Department of Agriculture for the preparation of a whitewash for outdoor work. Slack one-half bushel of lime in boiling water, covering to keep in the steam. Strain the liquid and add a peck of salt previously dissolved in warm water, three pounds ground rice boiled to a thick paste and stirred in while hot, one-half pound of Spanish whiting and one pound of glue dissolved by soaking in cold water and then hung over a slow fire over a glue pot. To this mixture add five gallons of hot water. Stir well and let stand for several days, covered from dust. It is best applied hot.

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

CLUB ACTIVITIES

COMMUNITY CLUB WORK

Groton, South Dakota has a real live community club which co-operates with community clubs in the various townships around that city. As a result last year, so the commercial club officials say, Groton shipped out more than \$893,000 worth of farm products between March 1, 1924 and March 1, 1925. Less than half of this or \$425,000 was for wheat. Butterfat brought \$81,000. Livestock and poultry amounted to \$390,000. There have been no bank failures and no business failures in Groton during the year and the banks have on deposit \$1,707,000.

Groton has 15 purebred Holstein herds in the immediate vicinity and the number is rapidly increasing.

The community clubs hold monthly suppers and the members of the clubs not only attend the suppers in their own community but occasionally attend those in other communities, thus getting well acquainted.

IN BUFFALO COUNTY

The Buffalo County Holstein Breeders Association met at the Court House at Alma, Wisconsin, April 25.

The following officers were elected for the coming year: Bert Ayres, Gilmanston, president; F. B. Rohrer, Alma, vice-president; L. J. Rosenow, Waumandee, sec-treas.; Oscar Weinandy, Cochrane; Arnold Koepp, Mondovi; Raymond Schultz, Alma, directors.

The annual picnic will be held at Gilmanston early in June. A County Holstein Show Herd will represent Buffalo County at a number of fairs this coming fall and committees were appointed to have charge of both enterprises.

LEAGUE MILK PRICE REDUCED

The Dairymen's League Coöperative Association has announced a reduction in the price of Class 1 or fluid milk from \$2.80 to \$2.33 per hundred pounds effective May 18. This is the base price for one hundred pounds of 3% milk delivered in the base zone, 201-10 miles from New York City.

According to the statement issued by the League, the cause of this one cent per quart drop in price of fluid milk is almost entirely due to the demoralized condition which has developed in the wholesale milk market in New York during the past two weeks. Brought about, League officials say, by price cutting on the part of competitors. The usual seasonal increase in milk

production has not been of sufficient volume to justify so great a decrease in the price at this time. The action of the League in reducing the fluid price to dealers became necessary in order to protect the League farmers' market. Following the League announcement distributors in New York City announced a reduction of one cent per quart in the retailers price.

BIG HOLSTEIN RANCH CHANGES HANDS

The ranch owned by J. S. Gibson Company located at Williams, California, has been sold to E. S. Hass of Los Angeles. The ranch which contains 1,300 acres became the property of J. S. Gibson in 1852 who used it for many years as a breeding establishment for race horses. Then his son, the late Gion Gibson, built up one of the leading Holstein herds in California. Gion Gibson died about two years ago and in settling up his estate it was thought advisable to sell the ranch. Mr. Hass plans to sell a portion of the property and to move his large Holstein herd on the remainder.

IOWA DAIRY CLUBS

Iowa will have at least 44 dairy calf clubs this season. All 33 of last years clubs will be maintained or renewed and 11 new ones formed, reports Floyd Johnson, secretary of the Iowa Dairy Association. Quite a number of these clubs are purely Holstein organizations, others own animals of several breeds.

The state dairy association plans a publication of a breeders directory listing the purebred dairy breeders of the state.

NEW COUNTY CLUB

The Will County Holstein-Friesian Association was formed at Joliet, Illinois, April 29th at a meeting of cattlemen held in the farm bureau office. H. C. Klett was elected president, August Teske, vice-president, Fred Herath, secretary-treasurer. These officials with Guy Fuller and John Cryder form the Board of Directors.

FOOTING THE BILL

After June 24 claims will be paid for California's portion of indemnities for animals and property destroyed in the campaign to exterminate the epidemic of foot and mouth disease. Governor Richardson, late in April, signed the measure appropriating \$2,239,108 as California's portion of the bill.

SPECIAL

We offer TWO Bull calves born March 1st. Both are from cows that produced over 22 lb. butter, 500 lb. milk in 7 days as three-year-old heifers. Both are by our high class herdsire. Also have other choice calves—male and female—from good producing dams.

This herd has been established 22 years and is on the ACCREDITED list.

MRS. MARY F. WITTER
& SON

Allegany Co., Cuba, N. Y.

HOW DO YOU LIKE HER?

She is one of a number of big producers in our Accredited Herd and she is as good as she is handsome.

Such cows are bred to our herdsire

KING PIEBE OF YORK 20TH

a show ring prize winner whose dam produced 16,198.2 lb. milk, 648.73 lb. butter in 10 months.

Choice Bull Calves for Sale.

W. A. WITHERS

Elizabethtown, Lancaster Co., Pa.

All the Cattle in Crawford County, Pa.

Have been tuberculin tested TWICE under the Accredited Area Plan. In the second test 99.2% passed CLEAN.

When buying Holsteins, purebred or grade, why not come to Crawford County. The producing capacity and individuality of our cattle equal their health record.

Any of the men listed below would be pleased to supply your needs or put you in touch with responsible breeders who can.

The seven day record of Pocono Constance Pietje was the largest Pennsylvania record reported for the testing year of 1923 and 1924. Her thirty day record has never been equalled by any Pennsylvania bred cow. The record of her daughter, Hillside Pocono Constance, is a world's record for age for thirty days by over four pounds of butter. Pocono Constance Pietje and Hillside Rhododendron are the only two cows in any herd in Pennsylvania each to have a thirty day record above 147.5 lb. butter and both of them have milk records above 2,700 lb. The seven day records of Pocono Constance Pietje, Hillside Rhododendron, Hillside Pontiac Rose and Hillside Elsie average 34.97 lb. butter. No other herd in Pennsylvania with Pennsylvania bred cows can equal these four records. Hillside Pontiac Rose is the only cow the world has yet produced to average over fifty pounds milk daily with an average percent of butterfat of 7% or more. Hillside Pontiac Rose and Hillside Pietje Honora are the only two cows found in one herd in the United States or Canada each with a seven day record of over 7% butterfat. Hillside Pontiac Rose, Hillside Pietje Honora and Hillside Pontiac Jean, all bred at Hillside and Springbrook Farms, have seven day records that average 7.10 percent butterfat. No other breeder in the world can show three cows with seven day official records with as high a percent of butterfat. Hillside cows have made six different records,

SEVEN 30 LB. COWS IN THE HILLSIDE HERD
Reading from Right to Left they are: Pocono Constance Pietje, Hillside Rhododendron, Hillside Pontiac Rose, Hillside Pietje Honora, Akinside Dottie Pietje Pontiac, Hillside Saxon and Hillside Cisthene. The 7 day records of these seven cows average 534 lb. milk, 32.98 lb. butter, 4.94% fat.

five of them for seven days, and one for fourteen days, each one above 6% butterfat, and the average for the six is 6.62%. Hillside cows have made ten different records that average over 6% butterfat. The record of Hillside Rosemary and her daughter, Hillside Pontiac Rose average 6.25% butterfat which has never been equalled by any mother and daughter.

King Pontiac Maple Knoll Ormsby is the sire of Hillside Pontiac Rose and Hillside Pontiac Jean. He is the only sire in the world with two daughters each with a seven day record with a percent of butterfat above 6.85% and to average 7.12%. The record for 30 days made by Hillside Pontiac Rose at the age of two years one month and nine days, has never been equalled by any cow of her age in Pennsylvania. She was also the youngest cow in the United States or Canada to make one hundred pounds butter in thirty days for the testing year of 1923 and 1924. Hillside Pocono Constance, aged one year,

POCONO CONSTANCE PIETJE
662.8 lb. milk, 36.18 lb. butter in seven days; 2,710.3 lb. milk, 149.20 lb. butter in thirty days.

ten months and twenty-eight days has finished her thirty day official record as follows: Milk, 2,059.5 lb.; butter, 95.57 lb. This is a world's record for age. The highest record previously made by a cow under twenty-three months of age is 1,835.1 lb. milk, 91.44 lb. butter. The Hillside cow produced 224.4 lb. more milk and 4.13 lb. more butter and has set a new mark for cows under twenty-three months of age.

Hillside Pietje Honora with her record of 7.05 percent butterfat made in her eight-year-old form and her record of 6.53% butterfat made in her ten-year-old form is the only cow in the world with two official seven day records made in different years to average as high as 6.76% butterfat. She also is the only cow in Pennsylvania to make 30 lb. butter in seven days at the age of ten years.

Vander Lei Superb 2d was the first cow in Pennsylvania to make 28 lb. butter in seven days. Hillside Annette was the first cow in Pennsylvania to make 30 lb. butter in seven days. Both were members of this herd. Hillside and Springbrook

HOLSTEIN BULL IN LAW SUIT

Farms are still blazing the way and it is a rare year that they do not bring out some new state or national champion. The above thirty-one seven day records were made, one by a cow under 23 months of age, one by a cow under 26 months of age, six by three-year-old cows, and two by four-year-old cows. Ten of the above records were made in heifer form. The average for the above thirty-one records is 497.8 lb. milk, 29.35 lb. butter, 4.72% fat.

King Echo Sylvia Posch No. 426513 now stands at the head of the Hillside herd. He is a son of Champion Echo Sylvia Pontiac. His three nearest dams average 34.97 lb. butter and

HILLSIDE RHODODENDRON
543.8 lb. milk, 35.15 lb. butter in seven days; 2,759.7 lb. milk, 147.95 lb. butter in thirty days.

880.7 lb. milk. The four direct generations on the dam's side are all 700 lb. cows and their average is 725.3 lb. Also on the sire's side there are three direct generations of 700 lb. cows, their average being 811.2 lb. The average for seven dams is 762.2 lb., a world's record for seven dams. His sire, Champion Echo Sylvia Pontiac, is the only sire to have four 30 lb. two-year-old daughters. He is the only sire to have seven daughters each to produce over 700 lb. milk in seven days. He also has sixteen daughters that have seven day records above 30 lb. butter.

Father (when Willie had returned from his first day at school): "What did you learn at school to-day?"

Willie: "I learned to say, 'Yes, sir,' and 'No, sir,' and 'Yes, ma'am,' and 'No, ma'am.'"

Father: "Did you?"

Willie: "Yep."

In the Circuit Court of Porter, Indiana, an action was commenced April 15 to settle ownership of a Holstein bull. This animal, Winterthur Ormsby No. 263485 was owned jointly by the late Francis X. Bushore, who together with Thomas Keene, John Froberg and Charles Ohlfest, well known Indiana Holstein breeders, purchased the animal at a sale at St. Paul, Minn., for \$5,000. Since the death of Mr. Bushore the animal has been in possession of Mr. Froberg. The administrator of the Bushore estate is very desirous of realizing on this asset but was unable to locate a purchaser. Therefore he brought action and asked the court to appoint a receiver to collect the outstanding accounts for the animal's services, to sell the animal and to divide the proceeds among the owners.

Winterthur Ormsby is a son of King Korndyke Colantha Ormsby and the great record cow, Bess Johanna Ormsby. He was six years old on the 30th day of December last.

WILD CATS OR WILD OATS

A linotyper, who was working on a bulletin of the Pennsylvania Department of Agriculture lately, made a mistake that had it passed unnoticed might have caused some confusion in the Commonwealth. Among other things the bulletin discussed the oat crop and while working on this the operator consistently hit the "c" key when "o" should have been hit, with the following result:

The cat crop ranks third in importance. Cats traditionally constitute the banner horse feed of the world, and 3 per cent is used for human consumption. The cat crop is subject to several diseases, chief of which are loose and covered smuts, stem rust and crown rust.

Then follows a discourse on wild cats, tame cats, broken cats and wilted cats. The main varieties in the United States are given as Swedish select, silver mines and white tartar.

LEAGUE POOL PRICE

A net pool price of \$2.135 per hundred pounds for milk delivered to the Dairyman's League during the month of April is announced by that association. This is the highest April price in the history of the association, .385 higher than April a year ago and .415 above the average April pool price since the pool has been in operation.

The April report of the Association shows total deductions for administrative expenses, depreciation, etc., .065 per hundred pounds, which is a one-half cent decrease below the same figure for March. Ten cents per hundred pounds is deducted for Certificates of Indebtedness.

Choice Bull Calves

from big producing dams of choice individuality and breeding. They are grandsons of the noted sire and show bull, Prince Aaggie of Berylwood recently reported sold for the world's record price of \$110,000.00. That makes no difference with OUR prices—they are always low.

Cow Testing Association Reports

SOUTH DAKOTA COW TESTING

Guy McKibben, of Webster, S. D., is the owner of a registered Holstein cow that produced 2,701.7 lb. milk, 102.66 lb. butterfat during April while enrolled in the Day County Cow Testing Association. She led the entire state just beating out Leda Ormsby Lyons, a registered Holstein owned by the Penitentiary Farm at Sioux Falls. Leda had 102.17 lb. fat to her credit from 2,322 lb. milk. A registered Holstein owned by Crothers & Son, of Badger, was third with 81.76 lb. fat. Grade Holsteins were fourth, fifth and ninth, purebred Holsteins being sixth, seventh, eighth and tenth.

The Crothers herd consisting of fourteen purebred Holsteins, led the entire state by averaging 48.82 lb. fat from 1,246.6 lb. milk, their average test being 3.91%. The penitentiary herd of twenty-five purebred Holsteins averaged 46.88 lb. butterfat, 1,296 lb. milk, average test 3.61%. Ten purebred Holsteins owned by F. M. Brown, of the Watertown Association averaged 45.48 lb. fat, 1,282 lb. milk, average test 3.60%. The five highest herds consisted of black and white cows.

In the entire state 209 herds containing 2,793 cows were tested and their average was 700.1 lb. milk, 26.68 lb. fat. The penitentiary cow, Leda Ormsby Lyons, returned the most income over the cost of feed. Her product was valued at \$40.87 and she was charged with a feed bill of \$12.29 leaving \$28.58 net income. Her daily ration consisted of 30 lb. silage, 5 lb. alfalfa hay, 5 lb. prairie hay and 20 lb. grain mixture consisting of four parts oats, two parts corn and cob meal, two parts bran and one part oilmeal.

In each of nine associations, the most profitable cow received silage and alfalfa

and in the other, the most profitable cow received 15 lb. alfalfa. The well deserved popularity of these two feeds for dairy cows is increasing.

The price received for butter fat averaged 40 cents for the month, the highest that it has been for a year.

HOLSTEINS LEAD IN IDAHO

Three hundred and thirty-seven cows were tested in the Ada County, Idaho, Association during April with an average production of 777 lb. milk, 29 lb. butterfat, reports Thomas E. Maberly, supervisor. Fifty-three animals exceeded 40 lb. butterfat in the month. The leader was Helen, a grade Holstein owned by Mariners Dairy at Boise. She is credited with 1,479 lb. milk, 71 lb. fat. Louise, a registered Holstein was second with 1,872 lb. milk, 61.8 lb. fat. She is owned by Christ Lillegard.

The high herd consisted of eleven grade and registered Holsteins owned by Alfred Records of Eagle, their average production being 1170 lb. milk, 41.3 lb. fat. Eleven registered and grade black and whites owned by L. C. Burns of Boise were second with 1,055 lb. milk, 36.9 lb. fat.

HOLSTEINS AT MASONIC HOME

At the Illinois Masonic Home, Sullivan, Ill., they have a herd of twenty-six cows, nearly all purebred Holsteins. In this herd is Acacia Pipey Deneen Pietje, the leader of the Moultrie County Dairy Improvement Association for April. This cow's record was 2,109 lb. milk, 65.4 lb. butterfat. Her net profit for the month was \$31.22.

The herd averaged 37 lb. butterfat, tying for second place in the association.

The equipment in the Home Dairy is as modern as could be secured and some dairymen have gained the impression that this herd is kept up regardless of cost. A. E. McCorvie, who is superintendent of the Home, says this is an erroneous idea. "It would be easier to buy the milk if we could get it cheaper that way. We keep the herd just to furnish the Home with milk." Some surplus male stock has been sold but there has been very little attempt to advertise the herd and the heifers are raised to replenish cows that begin to fail as milkers.

The land on which this herd is kept grows large amounts of alfalfa of good quality. In the summer the cows run on alfalfa pasture and get alfalfa hay in the winter. The grain fed is mixed in ton batches, the ration consists of 500 lb. ground oats, 500 lb. ground corn, 200 lb. bran, 200 lb. oil meal and 600 lb. dairy feed.

PLAN FOR HOLSTEIN COMMUNITY

A tract of land containing 70,000 acres in Southeastern Manitoba is controlled by the Manitoba Dairy Farms, Limited, a company financed by St. Paul, Minn., capitalists. On this land the company has a force of sixty men clearing the land and erecting buildings. Late in April the Company unloaded a number of carloads of purebred Holstein cattle purchased in Western Ontario. It is intended to eventually settle 400 families in the district.

REGISTERED HOLSTEIN BULLS.—Two months to two years. Sire over 1,000 lb. Prices and terms best ever. W. A. BEACH, Mankato, Minn.

HOLSTEINS SHINE HERE

A. K. Rothenberger, of Norristown, Pa., owned the Holstein herd that led the Montgomery County Association for the month of April, his fourteen cows averaging 1,175 lb. milk, 44.34 lb. fat. The Ursinus College herd was second for both milk and fat, the eight cows averaging 1,140 lb. milk, 39.17 lb. fat.

A Rothenberger cow was high individual producer with 75.82 lb. butterfat, 2,106 lb. milk. Another purebred Holstein owned by Wm. H. Landis was second with 70.69 lb. fat, 2,142 lb. milk.

With three exceptions every cow producing 40 lb. or more fat in the month of April was a black and white, purebred or grade.

During the month 330 cows in twenty-six herds were tested. There were thirty-eight that produced over 40 lb. fat, thirteen over 50 lb. while thirty-two were credited with 1,200 or more pounds of milk by tester Carl A. Sager.

JONES AND ONGLEY DIVIDE HONORS

When Harry Wood, official tester for the Titusville Cow Testing Association, made up his March report, he listed three registered Holsteins owned by the Maple Grove Stock Farm at Centerville, Pa., and two registered Holsteins owned by Merle Ongley of the same town in the leading ten cows. Another registered Holstein owned by C. T. Kerr of Titusville was in third place so that six of the ten highest cows were registered black and white cows. Among the ten was a grade Holstein owned by Albert Hasbrouck and a mixed Holstein and Durham owned by R. M. Clark also of Centerville. The other two were registered Jerseys.

Maple Grove Stock Farm owned the leader, she producing 77.1 lb. butterfat, 2,062 lb. milk, testing 3.7% fat. An Ongley cow was second with 66.6 lb. butterfat, 1,959 lb. milk. The Kerr cow was credited with 60.3 lb. butterfat, 1,724 lb. milk. A Maple Grove Farm cow was

fifth with 58.2 lb. butterfat and 1,662 lb. milk and another was seventh with 57.2 lb. fat, 1,789 lb. milk.

In the association there were 264 cows tested during the month and of these, eighteen produced over 50 lb. fat, forty-eight over 40 lb. and thirty-one exceeded 1,200 lb. milk.

IN THE FIRST THREE PLACES

Registered Holsteins occupied the three leading positions in the April report of the Mifflin County Cow Testing Association, says tester S. Rupert Harshbarger of McVeytown, Pennsylvania. Solomon Peachey owns the cow that stands in first position with 1,536 lb. milk and 70.6 lb. fat, second was owned by A. C. Yoder, with 1,872 lb. milk, 58.0 lb. fat, and the cow in third place was owned by J. B. Byler, with 1,719 lb. milk, 56.7 lb. fat. R. N. McCullough had a registered cow in the list of ten leaders with 1,173 lb. milk, 49.3 lb. fat.

A. C. Yoder owned five of the ten biggest milk producers and his herd stood first by averaging 37.7 lb. fat. During the month 28 herds containing 266 cows were tested. Four cows exceeded 50 lb. of fat, fifteen produced over 40 lb. and fourteen are credited with over 1,200 lb. of milk.

A GROWING HERD

J. J. Hartway, of Armada, Mich., in June, 1919, purchased two well-bred purebred Holsteins. One was Deep Run Rose Korndyke De Kol and the other Deep Run Johanna De Kol and they were half sisters. He now has a nice little herd. Deep Run Rose Korndyke De Kol made an official seven-day record of 451 lb. milk, 21.59 lb. butter as a three-year-old and now has three daughters while Deep Run Tulip Johanna De Kol has four daughters and a granddaughter now two and one-half years old.

The bull at the head of the Hartway herd is Segis Inka Champion, a grandson of Johan Hengerveld Lad, one of the leading sires of the breed.

SHOW COW AND PRODUCER

On April 14, V. P. I. Veeman Johanna DeKol, owned by the Virginia Polytechnic Institute, Blacksburg, Va., completed a yearly record of 21,841.4 lb. of milk containing 808.9 lb. butterfat, or 1,011 lb. butter.

This cow freshened on March 11, 1924, and was a most consistent milker throughout her entire testing period, the best month being May when she produced 2,528 lb. of milk; while in her last month on test she was milking over 40 lb. daily. She was over 11 years old when she began her record.

V. P. I. Veeman Johanna DeKol was raised in the institute herd. She is a daughter of Star Farm Johanna Lad and V. P. I. Veeman DeKol. She is one of the outstanding examples of Holstein type in the college herd and was grand champion cow of the 1920 Virginia State Fair. It is planned to fit this cow and exhibit her at some of the leading Virginia fairs next fall, and in her present form she will certainly be a strong competitor for highest honors.

PRODUCTION IN UNIVERSITY HERD

Three purebreds in the Holstein herd owned by the University of Minnesota have just finished 365-day production records. They were milked three times a day by the students of the College of Agriculture and were fed grain according to their milk production together with all the alfalfa hay and silage they could clean up, reports Professor O. G. Schaefer, of the university's dairy staff.

Minnehaha Segis Ormsby Korndyke, a senior two-year-old, produced 19,345 lb. milk, 635 lb. butterfat.

Mercedes Ormsby Byema, a junior three-year-old, produced 18,995 lb. milk, making 754 lb. butterfat.

Korndyke Eusebia Ormsby, a five-year-old, produced 24,112 lb. milk, containing 855 lb. butterfat.

THE BROWNWOOD REDUCTION SALE

Both Alex. C. Brown, owner, and Fred M. Mack, superintendent of Brownwood Farms, report that they are quite well satisfied with the prices at the Brownwood Herd Reduction Sale held on the farm at North Bloomfield, Ohio, May 5, especially in view of the fact that most of the calves, yearlings and young stuff were sold to local dairymen. These local dairymen are gradually becoming more interested in purebreds and Mr. Mack says that they are bound to retain their interest because of the results they will get from heifers of the class they purchased.

In all there were thirty-eight animals sold and as the total receipts were \$4,210, the average price was \$111. The young heifer calves sold low, maybe for the reason they were less than two months old. The average for the nine was \$26. A heifer less than a year old brought \$102.50. Yearling heifers also brought low prices—the six head averaging \$98. There were twelve head between two and three years old and their average price was \$138. Practically all of these were just past two years old. The average price for the nine head, four years old or more, was \$177. The females one year old or over averaged \$142. The only bull calf in the sale brought \$35.

The highest price was \$275, which H. S. Firestone, of Akron, Ohio, paid for a cow. L. W. Zahn and F. R. Jones, of Leetsdale, Pa., each bought two cows, the prices being \$187.50, \$150, \$197.50 and \$235.

Mr. Mack reports that the buyers made prompt settlement for their purchases and that among the crowd attending, were many who had travelled a considerable distance to look over the animals and bid on the offerings.

GOING AFTER BUYERS

It is announced that a sale of sixty registered Holsteins will be held on the State Fair Grounds at Sacramento, Calif., May 29. The sale is notable because the cattle will be brought in from the state of Washington. There are no California owned animals to be offered. Ten head come from the herd of Hoehn & Buck and fifty head are sent by the Carnation Milk Farms. Evidently these owners expect that the California dairymen who lost cattle during the campaign to eradicate foot and mouth disease, will be inclined to stock up with purebred Holsteins at this time. California will start to pay her portion of the indemnity July 1 so the sale managers will fix the terms of sale as one-half cash, balance in four and eight months. Evidently the Washington cattlemen believe that if the buyers do not come to the breeding establishments, the breeding establishments should go after the buyers.

THE TROY-CANTON SALE

At the annual sale of the Troy-Canton Breeding and Sales Association, held at Troy, Bradford Co., Pa., May 9, fifty-seven purebred Holsteins brought \$9,460, an average of \$165.96. The top price was \$350, received for a five-year-old cow. Last year the top price was \$325.

Twenty-seven mature cows brought \$200 each; fourteen heifers, two to four years of age, averaged \$186; five calves, between six months and one year, averaged \$90 and three calves under six months of age averaged \$54. The eight bulls ranging in age from one month up averaged \$105.

Buyers were present from a number of counties in northern Pennsylvania, from Lancaster County, Pa., and from New York State.

ALWAYS ATTRACTS ATTENTION

On September 23, at Montrose, Pa., will be held the fourth annual Susquehanna County Breeders' Sale. The Susquehanna County Breeders' Sale is watched with interest by sale managers and owners who make a practice of offering animals at consignment sales, because of the unique rule adopted by members of this sale

company. This rule not only prohibits any by-bidding but goes farther and prohibits any consignor to this sale bidding on any of the cattle offered. This rule has been called drastic but as one of the officials has said, "We have 364 days to look over each others herds and make offers for cattle in them. We save this one day a year for would-be purchasers who are nonmembers of the company." The result is that the Susquehanna County Breeders' Sale has obtained the confidence of the buyers to a greater degree than any other sale held, national, state or general. Dr. L. M. Thompson has been again elected sale manager and all correspondence and requests for information should be addressed to him at Montrose, Pa.

THE EARLVILLE SALE

The Annual Earlville Spring Sale was held on May 12th and 13th at Earlville, N. Y. and resulted in a total of \$16,697.00 for 131 head—making an average of \$128.55. This average is very satisfactory when the large number of young animals which were sold are taken into consideration. The 76 animals of milking age including three over ten years of age and four with blemished udders averaged \$155.85.

Ernest Karlin of Rome, N. Y. purchased the highest priced animal in the sale—Sadie Pietertje Lyons—a 23-lb. four-year-old, consigned by A. A. Hartshorn Holstein Co. of Hamilton, N. Y., for \$350.00. He also purchased the second highest animal, Middleton Sir Netherland Echo, a son of a 33-lb. cow, for \$310.00. K. S. Hartshorn of Lebanon, N. Y. paid \$250.00 for a last September bull calf, whose 19 nearest dams averaged 33.75, his own dam a 23-lb. two-year-old. This youngster was also consigned by A. A. Hartshorn Holstein Company. Twelve animals were sold at \$200.00 or more, and all the consignors were well satisfied.

One out of state buyer was present, Mr. Joel I. Roope of Westminster, Maryland, who purchased seventeen head.

This sale again vindicated the importance of proper fitting and the seller who had properly fitted his animals was well paid for his time and effort.

The sale was managed by R. Austin Backus of Mexico, N. Y. who was requested to hold another sale at the same place on October 27th and 28th, 1925, and Mr. Charles Lamb of Poolville, N. Y. entered his three time 30-lb. cow as one of the headliners for this sale.

YOUNG STOCK SALE

The fourth annual spring consignment sale of the McLeod County Holstein Friesian Association was held at Glencoe, Minnesota, April 21. There was a big crowd and the sale was reported a success by Secretary Joseph W. Uhlis.

The twenty-seven head brought \$2,164.50 or a little over \$80 a head. Only five cows were offered, most of the animals being quite young. A six-months-old bull calf, consigned by August Block & Son, topped the sale at \$202.50. He was purchased by George Dasher of Buffalo Lake.

HOLSTEINS ON BIG FRUIT RANCH

Near Zelzah, California, is the Sunshine Ranch consisting of 4,200 acres, owned by M. H. Mosher. The investment in this ranch exceeds one million dollars. There are 850 acres of citrus fruits, 1,200 head of registered swine, 100 head of purebred Holstein cattle and other valuable adjuncts.

Zelzah advertises itself as "The town with all the natural advantages." It has a population of about 1,500. The

chief business in the vicinity is truck gardening and the growing of beans, lettuce and other vegetables. This year Heinz and Company put up over 3,000 barrels of pickles at their Zelzah plant. Alfalfa and sugar beets are shipped from this neighborhood as well as many car loads of melons and vegetables.

The Zelzah zone has more than 2,000 acres of orange and lemon groves. There are more than 1,000 acres in walnuts and 2,000 acres in apricot and peach orchards and about 1,000 acres in Kadota figs.

Not only is this herd ACCREDITED but there has never been a case of Abortion in it.

THE HEAD OF LIME ROCK HERD

King Piebe of York 7th is the very handsome bull heading the herd of Hubert S. Miller of Myerstown, Pa. He is a son of King Piebe of York and Pearl Pietertje De Kol Pontiac, an A. R. O. cow with a 365 day record made as a four-year-old of 19,038.4 lb. milk, 796.90 lb. butter. This cow is a granddaughter of King of the Pontiacs and is from a granddaughter of Lord Netherland De Kol.

King Piebe of York has a number of daughters that have made large milk and butter records as junior two-year-olds and his offspring have won many prizes in the show ring. He was by Piebe Laura

KING PIEBE OF YORK 7th

He heads the accredited herd owned by Hubert S. Miller, Myerstown, Lebanon Co., Pa.

Ollie Homestead King and therefore brother to May Walker Ollie Homestead, 1,523.23 lb. butter, 31,610.6 lb. milk in a year. His dam is a daughter of King Segis Pontiac Count and produced 20,546.4 lb. milk, 1,032.41 lb. butter in a year as a junior three-year-old, her average test being 4.05% butterfat.

Mr. Miller owns thirty head of accredited purebred Holstein-Friesians. His cows are large, well grown animals, carrying udders that please for both size and shape. Mr. Miller is a comparatively young breeder but he has had a lifelong experience with purebred Holsteins as he is a son of J. F. Miller who for the past twenty years has been a well known breeder of purebred black and white cows.

CREAMERY EXTENSION WORK

The Beatrice Creamery Company operates in twenty-nine western and south-western states. In an endeavor to increase their business, they have been giving purebred heifer calves in statewide competitions. The winners are boys and girls who have been successful in obtaining the largest number of new customers for the Creamery. The Kansas prize was won by Virgil Wilson of Tecumseh who was awarded Clema Wayne Sylvia Waldorf, a daughter of King Echo Sylvia Waldorf and Clema Wayne Oakdale. This calf was selected by Prof. O. E. Reed, formerly of the Kansas State Agricultural College and now at the University of Minnesota and Prof. A. L. Hoker, formerly of the University of Nebraska. The animal came from the Woodlawn Dairy Company's herd at Lincoln, Nebraska.

Virgil Wilson is now eighteen years old and is a former student of the Tecumseh high school.

LIGHTFOOT 3D'S DE KOL 2D

SUPPOSING

you had a bull with 21 sisters that had each made over 1,000 lb. butter in yearly test?

And that his dam produced 636.3 lb. milk, 35.14 lb. butter in seven days, and was dam of a 30 lb. cow with over 1,000 lb. butter in a year that in turn was dam of a 30 lb.—1,000 lb. four-year-old?

And your bull was by ORMSBY KORNDYKE LAD, was a fine individual and sired dandy stock?

You'd think you had a REAL herd-sire.

Let us tell you about ours.

We offer his sons and some good heifers.

CHENEY BROTHERS & JONES

Randolph Virginia
This herd is ACCREDITED.

PIETJE ALCARTRA FAYNE

is a daughter of my senior sire,

KING PONTIAC ALCARTRA PIETJE

She produced 707.7 lb. milk, 30.03 lb. butter in 7 days and averaged 101 lb. milk a day for 15 days.

Come to the Fountainhead for seed stock. My cows are producers as well as show ring prize winners.

A. E. ROBINSON
Susquehanna Co. Montrose, Pa.

Back of our Herdsire

King Pietje Aaggie Pontiac

are four direct descendant dams

	lb. milk	lb. butter
First	564.2	31.79
Second	542.4	25.31
Third	679.4	31.05
Fourth	659.2	34.32
Average	611.3	30.61

He is a real show bull. His offspring look good and ARE good. Let us supply YOUR NEEDS.

Herd under State and Federal Supervision.

ROBERT I. SPRINGER,
R. D. 1, Susquehanna Co., Factoryville, Pa.

HANDSOME AND WELL BRED

Mahwin King Johanna Rue is the name of the young bull heading the purebred herd at the Old Home Farm at Allamuchy, N. J., owned by Eugene B. Bennett. His sire, King of the Johanna Lads, is a son of Colantha Johanna Lad from Lady Princess Beets, 30.88 lb. butter in seven days as a four-year-old. His dam is Oakland Rue Fayne. As a junior two-year-old she produced 21.47 lb. butter, 448.3 lb. milk in seven days. As a senior three-year-old she is credited with 642.1 lb. milk, 31.96 lb. butter in seven days, 2,640.3 lb. milk, 123.97 lb. butter in thirty days. Then calving again in less than a year, she produced 30.33 lb. butter, 651.9

MAHWIN KING JOHANNA RUE

His dam, as a heifer has two different years made over 30 lb. in seven days averaging over 90 lb. milk a day during the weeks of her tests.

lb. milk in a week and averaged over 94 lb. milk a day for thirty days. Her dam was a 25 lb. daughter of Mooie Fayne Burke and her sire was by Sir Korndyke Pontiac Artis, a bull with a long list of good record daughters and granddaughters.

The herd at the Old Home Farm has been selected for breeding, individuality and production. The farm is operated by the Drew Brothers who are working partners of Mr. Bennett and who have been running the place for the past five or six years.

REDDELIEN'S NEW BULL

A bull calf about five months old was recently purchased by H. E. Reddelien and Son of Oconomowoc, Wis., from the Bridgford Holstein Company of Patterson, Calif. The sire of this calf is by the noted show bull, King Segis Alcartra Prilly and was from the famous Adirondac Wietske Dairy Maid. The dam of the calf is Nattalene Walker, formerly owned by E. A. Vandervort. She has an official seven-day record of 34.63 lb. butter and a 365 day record of 28,353.6 lb. milk, 1,132.76 lb. butter. She is a cow of superior individuality. When she was young, she won a number of show ring prizes and her dam was one of the great show cows formerly in the Vandervort show herd.

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

Every Animal

in my herd of 60 head with the exception of my young herdsire has been raised on

Early Rise Stock Farm

This herd is under State and Federal Supervision and is just the place where you can buy good young animals at reasonable prices.

Menzo A. Brooker

R. D. 2 South New Berlin, N. Y.

KING SYLVIA PONTIAC PIETJE

combines individuality of a high order with remarkable breeding.

His sire is Champion Echo Sylvia Pontiac and his dam, who made 659.8 lb. milk, 26.23 lb. butter in 7 days as a junior four-year-old, is a granddaughter of May Echo Sylvia and the 33-lb. cow Alma Clyde.

The only reason I would sell him is that my herd of 60 purebreds contains many of his daughters.

Come and see him and my herd which is now on the ACCREDITED list.

WAPLE NOW A DISTRIBUTOR

A year or two ago C. M. Waple of Tyrone, Pennsylvania, disposed of his purebred Holsteins owing to other business needing his attention at that time. Mr. Waple then owned and managed the Ward House at Tyrone. He has since leased his two farms and sold the hotel. He was also, with his two sons, interested in a milk distributing business in Tyrone. Now he takes life easier but, like many active men of mature age, still wants to work and personally operates the two pasteurizers in the milk distributing plant besides supervising many of the details.

A large trade has been built up by the Waples in Tyrone and surrounding villages. The milk trade alone calls for 700 gallons daily which is retailed at 12c a quart. The quality of the product can be appreciated when we learn that the bacterial count at the inspection made late in April was 1,550 per cubic centimeter for one sample, and 2,200 for the other sample, these being the lowest for the list of dealers distributing milk in Tyrone. Mr. Waple gives the State College Dairy Department considerable credit for this splendid showing as he consulted the experts there before going very deeply into his new enterprise and occasionally has one of them down to look things over, suggest improvements, etc. Mr. Waple says "If you are in business and can't have a product a little the better of any of your competitors you had better quit the business." And those who are acquainted with this former Holstein breeder know that in all his business enterprises he adopted this motto.

In addition to the milk and cream business a large ice cream trade has been built up and at the present time amounts to 500 gallons weekly. "C. M." says that this end of the business is run entirely by one of his sons and that his two sons attend to most of the managing as well as the financial worries of the dairy end.

GOOD DEMAND IN MICHIGAN

A. B. George, of Carland, Mich., is experiencing a good demand for purebred Holsteins and recently sold two cows to Jay Purvis of Burton and a three-year-old bull to Edward Vincent, of Ovid, Mich.

The cows are half sisters, both being from Lottie Alene 2d, a daughter of Sir Beryl Duchess De Kol. Princess Alene Abbekerk Pontiac the older of the sisters was born January 24, 1919. She was sired by Prince Abbekerk Pontiac, a son of Owosso Pontiac Combination and Lady Fee Abbekerk.

Princess Alene Rag Apple, the younger of the sisters was dropped December 25, 1919, so that there was just eleven months and a day between the birthdates of the pair. The younger sister was sired by Rag Apple Buttercup, a son of Rag Apple Pontiac Onyx 3d, and Mercedes Paul Buttercup.

Netherland Korndyke Walker Prince is now three years old. His sire, Traverse Ryma Walker Prince, is a son of

Traverse Prince Inka Lad from Traverse Ryma Walker, 28.28 lb. butter, 594.3 lb. milk in seven days, a daughter of Admiral Walker Colantha. K. S. P. H. Netherland Korndyke, the dam of this bull, has a creditable official record and was sired by King Segis Pontiac Howell, a son of King Segis Pontiac and K. P. Queen, one of the first daughters of the double century sire, King of the Pontiacs.

BOUGHT A PROVEN HERDSIRE

King Hengerveld Segis FINDERNE, the sire that for several years has headed the herd of John W. Myers of Colfax, Wisconsin, has been sold by Mr. Myers to John Farner of the same town.

King Hengerveld Segis FINDERNE is a son of FINDERNE Netherland Korndyke and Colantha Hengerveld De Kol 3d. FINDERNE Netherland Korndyke was from FINDERNE Pontiac Netherland, 627.5 lb. milk, 31.05 lb. butter in seven days and was sired by King Pontiac Segis Korndyke whose dam was a 30-lb. daughter of Pietertje Hengerveld's Count De Kol while his sire was a son of the 37-lb. cow, Pontiac Clothilde De Kol 2d.

Colantha Hengerveld De Kol 3d, as a junior four-year-old, made an official record of 20.13 lb. butter, 399.3 lb. milk in seven days. Her dam is an A. R. O. daughter of Hengerveld Sir De Kol and her sire Homestead Jr. De Kol 2d, is a brother to Grace Fayne 2d's Homestead, 35.55 lb. butter in seven days, world's record at time of making.

ANOTHER TENNESSEE SALE

Our May 8 issue carried a report of the sale of two good bulls by the Bellwood Dairy and Stock Farm at Maryville, Tenn. This establishment a few days later sold a nice heifer, Bellwood Johanna Ixi-on Vale 2d, to Forrest Moss of East Chattanooga, Tenn., who obtained this heifer for a calf club project. Her dam is an A. R. O. cow and her sire was King Winona Johanna, a son of Winona Belle De Kol Segis and Napol Sir Piebe Johanna, whose sire was from the noted Keystone Beauty Plum Johanna, Pennsylvania's four-year-old world's champion for official yearly work.

The Bellwood Farms are owned by J. L. Clark, a prominent business man of Memphis and are under the management of Paul M. Reaves, who will graduate from the University of Tennessee in June. The herd is federally accredited and has a splendid reputation for production as well as health.

As a certain well-known preacher delivered a fervent sermon on social evils, he came to the matter of alcoholic liquor, and remarked:

"If I had anything to do with whisky, beer, rum, or any intoxicating drinks, I should have them thrown into the river."

In a few minutes he announced the closing hymn, which had been chosen by the choirmaster.

It was, "Shall We Gather at the River?"

BECOME ACQUAINTED WITH

ORMSBY SENSATION 3D
now heading Spring Brook Herd.
His sire, Ormsby Sensation, you know, of course.
His dam, as a two-year-old, produced 14,331.8 lb. milk, 628.3 lb. butter in a year.
His daughters, in my herd, are bound to please you. You know one of his sisters produced 853.07 lb. butter, 20,564 lb. milk in 305 days, the world's record for a two-year-old.

ROSE MAUD COLANTHA
99 lb. milk in a day, 654 lb. milk, 27.46 lb. butter in seven days as a four-year-old. Raised and tested at Sylvdale. Sylvdale herd is Accredited and is headed by Sir Champion Sylvia whose 7 nearest dams average 35.43 lb. butter. We offer calves, either sex, carrying the blood of May Echo Sylvia.

GLENN L. WARNER
Cuba, R. D. 5, Allegany Co., N. Y.

NOT VERY CRAZY

When in January 1920, A. F. Cuno of Grygla, Minn., purchased two purebred Holstein cows paying what his neighbors thought was a big price for them, they said he had gone "sure crazy." Five years have elapsed since then. To-day he has fifteen females, eight of them in milk; has sold nine bull calves and has a couple more left and he says he has always had larger cream checks than any of his neighbors with the same number of cows. Some of his neighbors have changed their opinion of his action.

One of the cows Mr. Cuno purchased was Pearl Sadie Vele Beets. Although she is now eleven years old, she is giving about 66 lb. milk daily on twice a day milking. She was from a daughter of Drosky Cornucopia Beets and her sire was Sir Piebe Beets by Sir Segis Beets De Kol from Calista Piebe, a record daughter of Prince Bryonia Madrigal.

Mr. Cuno sold the other cow he bought, Francis Beets, to Carl Nygaard also of Grygla. She is now eight old, is from a tested daughter of Paul Como De Kol and was sired by Sir Piebe Beets.

The present head of the Cuno herd is Canary Homestead Ormsby Lad. His sire is King Pietertje Mercedes Ormsby, a son of Sir Pietertje Ormsby Mercedes from Minita Korndyke Ormsby, a 30-lb. cow with a year record of 27,565 lb. milk, 1,155.72 lb. butter. The dam of the Cuno herdsire is Canary Homestead Nellie with records of 605.1 lb. milk, 35.372 lb. butter in a week and 21,098.2 lb. milk, 918.8 lb. butter in a year.

EDUCATOR RAISED ON HOLSTEIN FARM

Dr. H. M. Crothers, Dean of the Engineering Division of the South Dakota State College, was raised on a Holstein farm and his father and brother are Holstein breeders being the well-known firm of P. R. Crothers and Son of Badger, Kingsbury County, S. D.

Dr. Crothers took his Bachelor of Science degree at the South Dakota State College in 1910; then, after taking post graduate work at the University of Wisconsin, taught mathematics at the State College of his native state for a year, returning to Wisconsin for further study in 1913. In 1920, he received his degree of Doctor of Philosophy and after teaching at Madison came to Brookings in 1923 to assume charge of the electrical engineering department.

BUYERS AROUND WATERTOWN, WISCONSIN

A very fair demand for purebred Holsteins is reported by Heino Groth of Watertown, Wis. He recently sold two cows, one a ten-year-old and the other a four-year-old to Wm. Coogan of Watertown. The ten-year-old cow, Nancy Alice Inka is a daughter of King Piebe of Westland and Alice Inka 2d, whose dam was a daughter of Schoone Inka Pietertje. The four-year-old, Sylvanums Jessie Snow Champion, is from a daughter of Mooie De Kol Vanish and was sired by Hartog Gewina, a son of Pabst Hartog Belle Pontiac and Lilly Segis Gewina,

629.7 lb. milk, 25.54 lb. butter in seven days; 20,629.5 lb. milk, 954.18 lb. butter in a year.

Mr. Groth sold a four months old heifer calf to Tom Darcey and another to F. Tomas of Oconomowoc, Wis.

At the head of the Groth herd is a grandson of Sir Pietertje Ormsby Mercedes 37th and Mr. Groth reports that he is the nicest and best handling bull that he has ever owned. His daughters are about ready to breed now and as the Groth herd is small he will have to be disposed of and another bull obtained.

The area test is not yet in operation around Watertown but as in many other places, the owners of registered Holsteins are taking the lead and testing regularly and doing what they can to promote the adoption of the area test for tuberculosis eradication.

MARTIN SELLING YOUNG BULLS

When a man's neighbors purchase stock from him it is a pretty good indication that he has a producing herd. O. I. Martin of Cambridge Springs, Pa., has been selling a number of young bulls to local dairymen who own herds containing both purebred and grade Holsteins. To F. B. Siverling went Martin Segis Tobe Alcartra, a son of May Bell Hendrick De Kol Segis.

To George Culbertson went King Tobe Alcartra Hendrick, a son of May Bell

RIGHT ON THE JOB
This steady worker is owned by O. I. Martin, Cambridge Springs, Pa.

Hendrick De Kol the dam of May Bell Hendrick De Kol Segis. This cow is one of the big producers in the Martin herd; her pedigree includes the names of animals famous in the show ring and also noted as producers and foundation animals.

The sire of these two young bulls was King Tobe Alcartra De Kol. This bull is a descendant of famous animals as his dam, sire's dam and sire's sire's dam were all world's champions. He was by King Segis Pontiac Alcartra and his dam was Lady Tobe De Kol, 36.59 lb. butter, 631 lb. milk in seven days, 141.24 lb. butter in thirty days. She was the world's champion senior three-year-old at the time these records were made.

The younger females of the Martin herd are nearly all daughters of King Tobe Alcartra De Kol and Mr. Martin is building his herd upon this stock. To mate with them he has purchased Grey View King Sylvia whose sire was a son of Carnation King Sylvia and Heilo Ormsby De Kol, a daughter of Sir Pietertje Ormsby Mercedes with 34.55 lb. butter in seven days, 895 lb. butter and nearly 20,000 lb. milk in 295 days.

A Fine Pair

At a Bargain Price

Bull, born Nov. 4, 1924. Sire: Maple Grove Ybma Glista, our 27 lb. Glista bred herdsire. Dam: Maple Grove Mercedes Glorinda, 672.6 lb. milk, 25.18 lb. butter A. R. O. in our herd.

Heifer: born October 24, 1924. Sire: Clever Model Glista—from the 34-lb. cow Glista Coreva. Dam: Maple Grove Pontiac Belle, an A. R. O. daughter of King Pontiac Jupiter, he by King of the Pontiacs from a daughter of Hengerveld De Kol.

SHEEP RAISED FOR "FUR"

Advocates of the "Truth in fabrics" movement believe that all cloth containing reworked materials should be so labeled but Alex Albright of Dundee, Texas, goes even farther and says that when natural black and gray wools can be raised on the farm, black dye should not be generally used to color clothing as such dye may do harm both to fibre and health.

Mr. Albright is a breeder of Karakul sheep and is claimed to have the largest flock in the country. He says the true Bokhara Karakul Arabi sheep produce nothing but glossy, figured, black lamb and such lambskins cannot be made any other color. The literal meaning of the word Karakul is Black Lake, the name of the place where Russian traders first went to buy sheep from herders of the Bokhara desert, the original home of this variety.

Furriers have various names for the valuable pelts that come from Bokhara and are generally termed Broadtail, Persian Lamb or Astrachan. These pelts are imported in the raw stage and are dressed in New York City. They come in bundles of 100 or more, the prices averaging from \$10 to \$12.50, some of the finer ones bringing \$20. Ladies' cloaks made from them sell at prices ranging from \$1,200 to \$3,000.

Karakul ewes in good shape weigh 100 to 125 pounds. Rams, 125 to 200 pounds. Their wool is close and curly and they differ from ordinary sheep by having a heavy tail weighing from four to twelve pounds. At about a year old, Karakul sheep start to turn gray, every year becoming a little lighter.

Breeding stock from the Albright flock has been shipped to many of the states, to Canada, South America, Japan and Manchuria during the past ten years.

BOLD THIEVES

At Lincoln, Nebraska, April 30, thieves drained the gasoline from two cars, stole the license plates from a truck and fastened them to another truck which had no license tags; put in the gasoline and drove away from a warehouse. They drove the truck to the J. B. Branson farm and stole a purebred Holstein heifer valued at \$200, using an old door which lay in the yard as a loading chute.

A NEW HERD FORMING

A car of registered Holstein cattle from the Fred Scholljegerdes farm, Meridan, Minn., will be shipped to the Wahpeton Indian School at Wahpeton, N. D., to form the foundation of a herd at the government institution.

AS IT SHOULD BE

Maurice B. Mentzer, of Chambersburg, Pa., owns a valuable herd of registered Holsteins. This herd was tested for tuberculosis the middle of April and all passed satisfactorily.

Join the Amateur Picture Contest. If you have not mailed us photographs of some of your good animals, do so at once.

If You Want Fresh Cows, Springers, Heifers or Young Bulls

BRED IN THE PURPLE, you can secure them in Susquehanna and Wyoming Counties, Pennsylvania, from the following breeders and dairymen whose establishments are within easy driving distance of Tunkhannock, Thompson, or Montrose. You are invited to inspect these herds and make your own selection.

BUELL TAKES A REST

Otto Buell, of Sherburne, New York, recently sold his entire dairy of accredited purebred Holsteins to Clayton Sisson, of Earlville, retaining only his herdsire Buello Pontiac Echo Vale.

Mr. Buell has been interested in the purebred business for about twenty years and has had the satisfaction of breeding and developing one of the largest producing herds in Chenango County.

For some time he has not been in very good health, has been advised to take it easy for a time and so has planned his work so that he will not have any milking for a time. He retains his interest in black and white cattle and will endeavor to develop a young herd in the near future.

Dorothy, six years old, was used to hearing more or less shop talk at home, both her parents having been, at one time, in the advertising business.

Last Sunday she brought home from Sunday school a golden text. Her mother, seeing something in her hand, asked what she had. Dorothy immediately replied, with a shrug of her shoulders, "Oh, only an ad about God."

Come to Chenango County for Good Holsteins!

Chenango is one of the four leading counties of New York State for number of Registered Holstein-Friesians. Every owner is a practical Breeder and Dairyman, and each herd here listed is under State and Federal Supervision and is periodically Tuberculin Tested. These herds are within a short distance of Sherburne and Norwich. Good Roads and splendid railroad facilities.

RECORD COWS CHANGE OWNERSHIP

Harry Gould & Sons, of Wauseon, Ohio, recently sold to Fred N. Burr, of the same town two purebred Holstein cows, Virginia Akeroyd and Bonnie Conn, both daughters of Willow Meadow King Pontiac. Virginia Akeroyd, tested as a seven-year-old, made a seven-day record of 494.8 lb. milk, 31.32 lb. butter; as a six-year-old she produced 540.2 lb. milk, 29.39 lb. butter in seven days and 2,622.6 lb. milk, 104.25 lb. butter in thirty days. She has two daughters that have each made over 30 lb. butter in a week. Hulda Akeroyd De Kol Mechthilde made 31.67 lb. butter from 550.8 lb. milk and Pleasant Ridge Pearl Akeroyd Segis as a junior three-year-old produced 30.70 lb. butter, 540.7 lb. milk.

Bonnie Conn as a four-year-old made 601.3 lb. milk, 24.92 lb. butter in seven days and as a seven-year-old made 509.5 lb. milk, 27.79 lb. butter in seven days, 2332.4 lb. milk, 113.59 lb. butter in thirty days. She recently closed another official record of 734.3 lb. milk, 28.08 lb. butter in a week, 2,773.8 lb. milk, 111.8 lb. in thirty days. She has a daughter, Bonnie Conn Little De Kol, with 32.01 lb. butter, 610.5 lb. milk in a week as a junior four-year-old.

The establishment of Gould & Sons is named Pleasant Ridge Stock Farm. The Pleasant Ridge herd is on the accredited list and has passed seven clean tests. It is headed by King Pawnee Ophelia whose dam Pawnee Queen made 30.82 lb. butter, 665.6 lb. milk in seven days and is now on long time test promising to make well over 1,100 lb. of butter and 29,000 lb. of milk in a year.

BOUGHT BULL NEAR HOME

After looking for a herdsire for two years, Charles Hampke, of Manitowoc, Wis., thinks he has obtained the bull he really wanted right in his own county from Theodor M. Pritzl, of Cato. This is Sir Bess Ormsby Netherland 12th, winner of first prize at the Manitowoc County Fair last fall.

He is a grandson of Sir P. O. M. 37th and his dam has a 27 lb. seven-day record made as a three-year-old and was from a 30 lb. dam, and both these cows have good long-time records.

HARPER LOSES GOOD COW

W. R. Harper of Middleville, Mich., had the misfortune to lose one of his best cows recently. A post mortem showed that she had swallowed a six-inch piece of wire which had ruptured her stomach. The cow had a 32-lb. seven-day butter record, was enrolled in cow testing association work and was well on her way towards making a 500-lb. fat record.

There was once a fellow, named Fisher, Who, while fishing, fell into a fissure; Tho' the fissure's been fished for other poor fish They're now fishing the fissure for Fisher.

READY FOR SERVICE

Hillside Volunteer

A handsome young bull born March 21, 1924, extra well grown and 75% white.

Published in the Interest of Breeders and Dairyman Everywhere

OFFICES: EVANGELICAL BUILDING
BOX 110, HARRISBURG, PA.

AMATEUR PICTURE CONTEST

To the Breeders and Dairyman:

Send us pictures of your good Holsteins. We are offering One Hundred One Dollars in prizes for the Twenty Best Amateur Pictures received.

We will pay Twenty-five Dollars for the first Prize Picture, Fifteen Dollars for the second Prize Picture, Ten Dollars for the third Prize Picture. Other prizes as follows:

\$101.00 IN CASH PRIZES

Twenty-five Dollars for the first Prize Picture	\$25.00
Fifteen Dollars for the second Prize Picture	15.00
Ten Dollars for the third Prize Picture	10.00
Five Dollars each for the next four Prize Pictures	20.00
Three Dollars each for the next five Prize Pictures	15.00
Two Dollars each for the next eight Prize Pictures	16.00

One Hundred One Dollars in all \$101.00

Join in the contest by sending a picture of your best Holsteins. Let us show our readers the kind of cattle you own and breed. You are just as likely to receive the Twenty-five Dollars First Prize as anyone. Surely you ought to be able to win at least one of the prizes.

Only pictures of mature cows will be accepted. The name and address of the sender should be marked plainly on the back of each picture.

Pictures of single animals should be marked with the name and number of the animal. Group pictures should be accompanied with a letter, telling something about the animals or the herd of which they are a part.

Not more than two pictures will be accepted from the same contestant, one of which must be of a single animal and the other a group of animals. All Prize Pictures will be published with a story of the herd.

All subscribers to *The Holstein Breeder and Dairyman* are eligible to participate in this contest. If you are not a subscriber send in your subscription with the pictures. Join the Contest and win a prize.

Very truly yours,

THE HOLSTEIN BREEDER AND DAIRYMAN.
